Z	Zimmermann catalogue [Purcell]
zar(s)	zarzuela(s)
zargc	*zarzuela género chico*

Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

Siglum	Library
A	Admont, Benediktinerstift, Archiv und Bibliothek
DO	Dorfbeuren, Pfarramt
Ed	Eisenstadt, Domarchiv, Musikarchiv
Ee	——, Esterházy-Archiv
Eh	——, Haydn-Museum

A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

Abbreviations in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

Alphabetization of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

Bibliographies are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

Cross-references are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

Signatures where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

Work-lists are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

Contents

A

[continued]

Aristoxenus (*b* Tarentum, Magna Graecia, *c*375–360 BCE; *d* ?Athens). Greek music theorist, philosopher and writer. According to the *Suda* he was the son of a musician called Mnesias or Spintharus who gave him his early musical education. It is not known to which philosophical or musical school Mnesias belonged, but he may have been one of the Pythagoreans whose political influence had been dominant in Magna Graecia, particularly in Tarentum, with which Archytas had long been associated. Mnesias could have known a number of prominent figures both in Magna Graecia and in Athens: the musicians Archytas, Damon and Philoxenus, as well as Socrates and perhaps even the Theban general Epaminondas. Aristoxenus himself followed the teachings of Lampros of Erythrae, and then, in Athens, of Xenophilus the Pythagorean. He spent most of his life in Greece. A fragment of one of his works indicates that he lived for some time at Mantinea in Arcadia, where music, which was held in high esteem, was subject to the kind of conservative laws that appealed to his austerity and love of ancient traditions.

At some unspecified date Aristoxenus renounced Pythagorean doctrines, although he retained his admiration for Archytas, whose biography he wrote. He then followed the teachings of Aristotle and seems to have become one of the master's most eminent disciples, for Aristotle apparently considered appointing him his successor as head of the Lyceum. When Theophrastus gained the post instead, Aristoxenus broke with the school entirely and began teaching on his own account, concentrating mainly on music. However, he evidently did not reject the Aristotelian doctrines, because authors in antiquity consistently described him as a 'follower of Aristotle'. As a pure first-generation Peripatetic, Aristoxenus brought the new science of music into the Lyceum, the 'studio of all the arts'.

Aristoxenus was a prolific author with many interests: as well as writing on education and music he also produced biographies and histories of institutions. The *Suda* credits him with 453 works, although this is surely an exaggeration. Only 139 fragments of his memoranda, miscellanea and other small works have survived (ed. Wehrli); these reveal his interest not only in the theory of harmonics and rhythm, but also (unusually for a Greek theorist) in the history of music, musicians and musical institutions.

Aristoxenus's principal work, the one that gained him the reputation of supreme *mousikos* throughout antiquity, was the treatise *On Harmonics*, which has come down to us under the probably erroneous title *Harmonic Elements* (*Harmonika stoicheia*). It is the oldest work of music theory written in Greek to have been preserved in substantial fragments, and was the first part of a larger work *On Music*, in which the author studied the various branches of the subject, in particular rhythm. Only fragments of the *Rhythmic Elements* have survived, either through quotations by later authors (Aristides Quintilianus and more particularly Michael Psellus, an 11th-century Byzantine writer), or through papyri; it is possible that *POxy* 9 + 2687 contains part of the *Rhythmic Elements*.

In so far as the history of musical thought in ancient times is concerned, the doctrines of Aristoxenus represent an epistemological revolution whose importance was acknowledged by all later theorists, whether they agreed with him or not. Before him, the Pythagoreans (such as Philolaus and Archytas) and the Platonists had regarded the science of music as part of mathematics. Aristoxenus, on the other hand, believed that music should be an autonomous discipline, one entirely separate from arithmetic and astronomy. No longer could music be a matter of calculating intervals expressed by the relationship of two numbers, for its concern is not mathematical entities but sound, and musical sound as distinct from noise or the sounds of spoken language. Its tools are rational thought (*dianoia*) and auditory sensation (*akoē* and *aisthēsis*). Reason establishes musical principles through the investigation of theorems (*problēmata*), some of which are also the subject of demonstrations. As for auditory sensation, Aristoxenus was the first musical theorist to insist on the necessity of training the ear to make hearing more precise, and on the control to be exercised over it by rational thought. On this basis he constructed a science of music whose methods, terminology and principles derive directly from Aristotelian scientific doctrines.

The first part of the *Harmonic Elements* is an examination by Aristoxenus of the doctrines of his predecessors; he proves to be highly critical, less on points of detail than on the actual foundations of their teachings. He criticized the Pythagoreans (without naming them) for regarding intervals not as pure musical entities but as numerical ratios, which are superparticular when they 'define' consonant intervals: octave (2:1), 5th (3:2), 4th (4:3) and tone (9:8). For Aristoxenus, music consisted of sounds structurally organized within a sound-space, and the function of the science of harmonics was to describe and

regulate their spatial and dynamic relations. Unlike the Pythagoreans, he postulated and demonstrated that the tone can be divided into two equal semitones, not a limma (*leimma*) in the ratio 256:243 and an *apotomē* in the ratio 2187:2048. He also took the exact semitone as the unit of measurement for all musical intervals, and he differed from the Harmonicists, whose diagrams exhibit 28 consecutive *dieses*, which are devoid of any musical reality since more than two quarter-tones are never heard in succession.

Aristoxenus himself endeavoured to describe the musical system in all its coherence and complexity, setting out from the simplest of entities (musical sound) and proceeding to increasingly complex combinations of intervals and 'systems', envisaged simultaneously according to their 'range', 'disposition' and 'function'. The last part of the treatise is a set of theorems setting out the laws of harmonics. Aristoxenus was the first to formulate the concept of the genus (*genos*), defined by the position of the two movable notes within a tetrachord (spanning the interval of a 4th), which divide it into three intervals of varying sizes. He described three genera: the enharmonic ('the oldest and finest'), the chromatic and the diatonic. The enharmonic tetrachord consists of a ditone followed by two quarter-tones, moving from top to bottom; the chromatic – a tone-and-a-half, a semitone and a semitone; and the diatonic – a tone, a tone and a semitone. The chromatic and diatonic genera permit 'coloration' or 'nuances' (*chroai*) in which the extent of the intervals varies within limits set out by Aristoxenus.

Finally Aristoxenus defined the *tonoi*, a term probably of his own coining and destined to replace the old concept of *harmonia*. On approaching this important subject he rejected all the classifications and dispositions advanced by his predecessors and proceeded 'from basics', with a view to bringing order to the confusion then prevalent in music. The *tonoi* are related to the positions of the voice 'in which each of the *systēmes* is placed in singing a melody'. In other words, the *tonoi* represent transpositions of the scales. Unfortunately the passage in which Aristoxenus enumerated the *tonoi* has not survived. Their names as given by Cleonides are: Hypermixolydian (also called Hyperphrygian), high and low Mixolydian (also respectively called Hyperiastian and Hyperdorian), high and low Lydian (the low also called Aeolian), high and low Phrygian (the low also called Iastian), Dorian, high and low Hypolydian (the low also called Hypoaeolian), high and low Hypophrygian (the low also called Hypoiastian) and Hypodorian. They are grouped on the principle of the 'affinity' of their tones, allowing modulation from one to the other with more or less ease. They are not, therefore, modes, as has so often been thought, but transposition scales rising from semitone to semitone.

Aristoxenus excluded musical practice and in particular musical composition from the science of harmonics, and consequently anything to do with musical notation, on the grounds that such subjects involve skill (*technē*) and not science (*epistēmē*).

Many Greek and Latin writers on music, including CLEONIDES and GAUDENTIUS, were directly inspired by the writings of Aristoxenus. Those theorists belonging to schools of philosophy opposed to the Aristoxenian musical doctrines tried either to refute them or, like THEON OF SMYRNA and PTOLEMY, to integrate certain of the demands of Aristoxenus into their own theories. However, such a reconciliation of doctrines constructed on irreconcilable principles could never be entirely successful.

From what has survived of the *Rhythmic Elements*, it seems that Aristoxenus had adopted the same approach to rhythm as to harmonics: the determination of a small number of basic 'principles', the choice of a unit of measurement (the 'primary time' – *prōtos chronos*), the choice of criteria (hearing and judgment), and the articulation of the constituent elements of rhythm. Aristoxenus was the first to distinguish rhythmics from metrics, and he seems also to have been the first to write on the mutual relationship of musical durations, fundamentally distinct from words, melody or gesture, which were things that can be 'set in rhythm (*ta rhuthmizomena*)'.

ANNIE BÉLIS

Arizaga, Rodolfo (*b* Buenos Aires, 11 July 1926; *d* Buenos Aires, 12 May 1985). Argentine composer and writer on music. He received his initial musical training at the National Conservatory in Buenos Aires, where his teachers were Alberto Williams, José Gil (harmony) and Luis Gianneo (composition). He also studied law at the National University and philosophy at the Free Institute of Higher Studies. In 1954 he settled in Paris, where he

studied composition with Messiaen, Boulanger and Martenot. He later taught at the Higher Institute of Music of the National University in Rosario (1960–61) and at Buenos Aires University (1967–9). In his later compositions he employed 12-note serial technique, modal writing and notation providing performers with an element of choice. An active journalist, he served as critic for the daily *Clarín* (1946–64), wrote articles and reviews for numerous Argentine and foreign journals, and published the monographs *Manuel de Falla* (Buenos Aires, 1961) and *Juan José Castro* (Buenos Aires, 1963). His *Enciclopedia de la música argentina* (Buenos Aires, 1971) surveys 20th-century Argentine composers.

JOHN M. SCHECHTER

Arizmendi, Fermín de (*b* Puente La Reina, Navarra, bap. 11 June 1691; *d* Avila, 15 Dec 1733). Spanish composer. From 1705 to 1714 he was a *siese* in the choir of the church of the Primature of Toledo, where he was a pupil of Miguel de Ambiela. In July 1711, at the age of 20, he applied for the post of *maestro de capilla* at Jaén Cathedral, which fell vacant on the death of Pedro de Soto. However, the successful candidate for the position was Juan Manuel García de la Puente, like Arizmendi a *seise* at the cathedral of the Primature of Toledo. On 1 September 1714 he was appointed *maestro de capilla* of Avila Cathedral, succeeding Juan Cedazo, and remained there for the rest of his life. He was succeeded by Juan Oliac y Serra. A number of his religious works survive in manuscript (*E-Ac*, *E*).

GUY BOURLIGUEUX

Arizo [Arizu, Arizcum], **Miguel de** (*b* ?Arizu or Arizcun, Navarra, *c*1593; *d* Madrid, 15 May 1648). Spanish composer and singer. Between 1601 and 1604 he entered the choir school of the Spanish royal chapel and studied with its *vicemaestro*, the composer Gabriel Díaz Bessón. On 1 January 1614, after his voice had broken, he was appointed alto in the same *capilla*. On 1 March 1629 his salary was doubled, and on 28 February 1642 he was granted an annual allowance of 350 ducats, followed by another of 250 ducats on 20 March 1645 (though his salary was no longer doubled). In addition to his duties in the *capilla* Arizo was responsible for the musical instruction of the Bourbon Queen Elisabeth's ladies-in-waiting for at least ten years (1618–28), during which period he must have been in touch with the queen's chamber musician, Álvaro de los Ríos.

Arizo's two extant secular compositions are a four-part canción, *Filis del alma mia*, and a three-part *romance*, *Vistióse el prado galán*, both in a cancionero assembled by Claudio de la Sablonara in 1624 or 1625 (*D-Mbs*, *E-Mn*; ed. J. Aroca, Madrid, 1918; ed. J. Etzion, London, 1996; the canción also ed. in MME, xxxii, 1970, and ed. M. Querol, *Cancionero musical de Lope de Vega*, ii, Barcelona, 1987). They exemplify the vocal chamber repertory of the Madrid court at that time. In both works a homophonic, declamatory style prevails over a pseudo-imitative one. Hemiola is used consistently in triple metre and there are chromatic false relations and unprepared dominant 7ths. A villancico, *Por coronar a Maria las flores se deojaron*, attributed to Arizo (*US-NYhsa*) consists of an introduction, *estribillo* (refrain) and *coplas* (verses). In the *coplas* solo vocal passages alternate with sections sung by the other three voices with instruments. The work is in triple time, with numerous hemiolas.

LUIS ROBLEDO

Arkad'yev, Mikhail Aleksandrovich (*b* Moscow, 15 March 1958). Russian musicologist, pianist and composer. In 1978 he entered the Gnesin Academy of Music, where he studied the piano with A.V. Aleksandrov and the theory of music with Yu.N. Kholopov, M.G. Kharlap and L.A. Mazel'. He completed his postgraduate studies there on the piano in 1988. In 1992 he began teaching at the Russian Academy of Choral Art in Moscow, becoming professor of the piano department in 1995. He is well known for his concert playing activities, as a soloist and ensemble player, and as an accompanist to the baritone Dmitry Hvorostovsky. His compositions include works for the piano, chamber and choral music, and a *Missa brevis* for mixed choir and organ, which is recorded on CD. He was made an Honoured Artist of Russia in 1995.

Arkad'yev's scholarly interests include the issues of time, rhythm and articulation in music. He gained the doctorate in 1993 with a dissertation on temporal structures in late 20th-century European music. His discussion relies on both the phenomenological and the hermeneutic traditions of Brentano, Husserl, Heidegger and Hadamer. The chief premise of his research is the existence of two modes for the structural organization of time: the 'sounding' and the 'non-sounding'. He demonstrates the fundamental difference in the relationships between these modes in music of the Baroque, Classical and Romantic periods and suggests that this difference is an important typological factor that characterizes each age.

MARINA RAKU

Arkhangel'sky, Aleksandr Andreyevich (*b* Staroye Tezikovo, Penza, 11/23 Oct 1846; *d* Prague, 16 Nov 1924). Russian choral conductor and composer. He studied music theory while at the imperial chapel in St Petersburg, gaining also a wide knowledge of Russian church music. In 1880 he founded a mixed choir which soon won a reputation for high standards of performance. At first the choir comprised 20 voices but was later increased to 90; its repertory was extensive and included folksongs and pieces by Classical and contemporary composers. Arkhangel'sky took his choir on a tour of the major cities of Russia (1899–1900), and in 1907 and 1912 they went to western Europe, where their concerts of Russian church music were well received. He supported the movement to reform Russian church music, and his experiment of substituting women's for boys' voices in sacred music was widely adopted. He composed two masses, a requiem and many unaccompanied choral pieces. He also arranged folksongs for his choir and made transcriptions of Russian hymns and other liturgical pieces.

JENNIFER SPENCER/MARINA FROLOVA-WALKER

Arkhipova, Irina (Konstantinovna) (*b* Moscow, 2 Dec 1925). Russian mezzo-soprano. She graduated in 1948 from the Moscow Institute of Architecture, where she learnt singing in N. Malïsheva's group, and in 1953 from L. Savransky's class at the Moscow Conservatory. She sang with the Sverdlovsk Opera (1954–6) and made her Bol'shoy début as Carmen in 1956. Her voice, of wide range, was remarkable for its emotional warmth and variety of tone-colour. Her roles included Lyubasha (*Tsar's Bride*), Pauline and Lyubov' (*Queen of Spades* and *Mazepa*), Amneris and Eboli, and Massenet's Charlotte. She participated in many Bol'shoy first performances, including Khrennikov's *Mat'* ('Mother'; Nilovna, 1957), Prokofiev's *Story of a Real Man* (Klavdiya, 1960), Shchedrin's *Ne tol'ko lyubov'* ('Not Love Alone'; Varvara, 1961) and Kholminov's *Optimisticheskaya tragediya* ('An Optimistic Tragedy'; Commissar, 1965). She sang throughout eastern Europe and in the USA, Japan, Austria and Scandinavia. After appearances in Naples in 1960, as Carmen, she sang Hélène with the Bol'shoy at La Scala in 1964, returning as Marfa (1967 and 1971) and Marina (1968). She scored a great success as Azucena at Orange in 1972, and this led to her Covent Garden début in the same role in 1975. She subsequently sang Ulrica at Covent Garden (1988), and appeared as the Countess (*Queen of Spades*) in performances by the Kirov Opera in New York in 1992.

I.M. YAMPOL'SKY/R

Arkor, André d' (*b* Liége, 23 Feb 1901; *d* Brussels, 19 Dec 1971). Belgian tenor and administrator. He was trained in Liège and made his début there as Gérald in *Lakmé* in 1924, moving then to Lyons and Ghent. In 1930 he became principal lyric tenor at La Monnaie, Brussels, and in his 17 years there sang more than 40 roles, taking part in several premières, including that of Lattuada's *Le preziose ridicole*. In 1937 he sang in Lehár's *Der Zarewitsch* and in 1940 in *Das Land des Lächelns*. He appeared at the Opéra-Comique, Paris, in 1931 as Des Grieux in *Manon*. He later became director of the Théâtre Royal de Liège; during his 20 years there more than 50 new productions were mounted. He was an accomplished singer with admirably even voice production and an extensive upper range, features well represented in his recordings.

J.B. STEANE

Arkwright, G(odfrey) E(dward) P(ellew) (*b* Norwich, 10 April 1864; *d* Highclere, Hants., 16 Aug 1944). English music scholar. He studied at Eton and Oxford, where he was subsequently editor of the *Musical Antiquary* (1909–13/*R*). He edited a large body of English vocal music of the 16th, 17th and 18th centuries – madrigals and songs by Weelkes, Ferrabosco and Blow, and sacred works by Tye and Milton – published in 25 volumes in the Old English Edition (London and Oxford, 1889–1902/*R*). For the Purcell Society he edited *Three Odes for St Cecilia's Day* (London, 1899) and *Birthday Odes for Queen Mary*, i (London, 1902). He also compiled a *Catalogue of Music in the Library of Christ Church, Oxford* (London, 1915/*R*). The composer Marian (Ursula) Arkwright was his sister.

E. VAN DER STRAETEN/R

Arkwright, Marian (Ursula) (*b* Norwich, 25 Jan 1863; *d* Highclere, nr Newbury, 23 March 1922). English composer. She received both the MusB (1895) and MusD (1913) from Durham University. In 1893 she was one of the founders of the pioneering English Ladies' Orchestral Union, and was the orchestra's secretary as well as playing the double bass and timpani. She was the conductor of the Newbury Amateur Orchestral Union and was also involved in the Rural Music Schools movement. Arkwright was one of the few women members of the Society of British Composers (founded 1905) and her orchestral works, which do not appear to have survived, received critical acclaim. In 1906 her orchestral suite *Winds of the World*, inspired by the Kipling ballad 'The Flag of England', won *The Gentlewoman* prize for an orchestral work by a woman. It was first performed at Newbury in 1907 and repeated that year by the Bournemouth SO, conducted by Arkwright herself. Other works performed by the Bournemouth SO included the Variations on an Air of Handel (1897) and *Japanese Suite* (1911). Her

Suite for strings was written for the Australian Exhibition of Women's Work of 1907. The few works by Arkwright that have survived, such as the Requiem Mass and the Two Concert Pieces for viola and piano, show an assured and inventive style.

SOPHIE FULLER

Arlen, Harold [Arluck, Hyman] (*b* Buffalo, NY, 15 Feb 1905; *d* New York, 23 April 1986). American composer. The son of a cantor, he sang in the choir at his father's synagogue as a child, and at the age of 15 played the piano in local movie houses and on excursion boats on Lake Erie. Smitten by the new and distinctively American popular music of the post-World War I period, he organized his own band, the Snappy Trio, and later joined another which (as the Buffalodians) went to New York in the mid-1920s. He made some band arrangements for Fletcher Henderson but worked mostly as a pianist and singer on radio, in theatre pit orchestras and in dance bands; he recorded as a singer with Benny Goodman, Red Nichols and Joe Venuti. In 1929 he began a songwriting collaboration with the lyricist Ted Koehler and achieved his first success with the song 'Get Happy', which appeared in the *9:15 Revue* (1930). From 1930 to 1934 the two men went on to write several memorable songs for a series of revues at Harlem' Cotton Club, a cabaret that featured black entertainment for white audiences, including 'Between the Devil and the Deep Blue Sea' and 'Stormy Weather'. Such songs blended the forms and idioms of Tin Pan Alley with blues and jazz-based inflections, and through their commercial success helped to popularize the sounds of black music among a wider audience. During this period he also provided songs for numerous Broadway productions, including 'I Gotta Right to Sing the Blues' and 'It's Only a Paper Moon', and cemented his resolve to pursue a songwriting career.

In 1934 Arlen composed his last important Broadway revue, *Life Begins at 8:40*, and began to write for Hollywood films. During the next two decades he created a body of significant songs with the lyricists Johnny Mercer, Ira Gershwin and E.Y. Harburg, including 'Over the Rainbow' (1939; lyricist, Harburg) and 'The Man that Got Away' (1954; lyricist, Gershwin), both for the singer Judy Garland. Unlike many Hollywood composers in a period when the studio system prevailed, Arlen managed to preserve a strong musical identity. Many of his film songs also place an emphasis on the functions of narrative and character rather than on sheer spectacle and dance; *The Wizard of Oz* (1939; see illustration), the film for which Arlen's work is best remembered, is among the earliest film musicals to attempt to integrate the use of song into the development of character and plot.

From 1941 to 1945 in Hollywood, Arlen also worked closely with Mercer on developing such boldly jazz-influenced songs as 'Blues in the Night', 'That Old Black Magic', 'One for my Baby' and 'Ac-cent-tchu-ate the Positive'. In the mid-1940s he turned his attention to the theatre once again, this time providing songs for 'book' musicals. Of his five subsequent Broadway shows *House of Flowers* (1954), written with Truman Capote, is considered by many his most distinguished score. While Arlen's contributions remained of a consistently high level (for example 'Right as the Rain' and 'I Never has Seen Snow'), most of these shows were marred by serious weaknesses in their librettos or productions.

Arlen's style shows an affinity with African-American musical expression, and many of his shows were written

Harold Arlen (right) with E.Y. Harburg, who wrote the music and lyrics for 'The Wizard of Oz' (MGM, 1939)

directly for black performers (the Cotton Club revues, *St. Louis Woman* and its later expansion as the 'blues opera' *Free and Easy*, *House of Flowers*, and *Jamaica*), while others deal with themes relating to the lives and concerns of African Americans (*Bloomer Girl* and *Saratoga*). Much of his songwriting was influenced by the blues, most often in the form of blue melodic or harmonic inflections applied to the traditional song structure ('Stormy Weather'), but also more radically in an attempt to incorporate the blues structure itself into a new expanded form of popular song ('Blues in the Night'). Arlen frequently broke the mould of a 32-bar, *AABA* popular song form to write melodies both unconventional in length and asymmetrical in their phrase and sectional make-up. He extended the traditional eight-bar section of a song from ten bars ('Ill Wind') to 20 bars ('Out of this World').

As a songwriter, Arlen belongs with the handful of composers most responsible for the brilliant flowering of American popular song that occurred in the second quarter of the 20th century. Much in his output reflected the popular mood in America during the Great Depression and World War II; and, while most of his later songs did not have a similar cultural resonance, the best of them remain among the most exquisite examples of musical craft and invention within the popular domain.

WORKS

STAGE

all are musicals and all dates are those of first New York performance, unless otherwise stated

librettists and lyricists are listed in that order in parentheses

You Said It (J. Yellen, S. Silvers; Yellen, T. Koehler), orchd H. Jackson, 19 Jan 1931 [incl. Sweet and Hot, While You are Young, It's Different with Me, Learn to Croon, If He Really Loves Me]

Life Begins at 8:40 (revue, D. Freedman, H.I. Phillips, A. Baxter, H.C. Smith, F. Gabrielson; I. Gershwin, E.Y. Harburg), orchd H. Spialek, 27 Aug 1934 [incl. You're a Builder-Upper, Fun to be Fooled, Let's Take a Walk Around the Block, I Couldn't Hold My Man, What Can You Say in a Love Song?]

Hooray for What? (H. Lindsay, R. Crouse; Harburg), orchd D. Walker, 1 Dec 1937 [incl. God's Country, Moanin' in the Mornin', Down with Love, In the Shade of the New Apple Tree, Buds Won't Bud, I've Gone Romantic on You]

Bloomer Girl (F. Saidy, S. Herzig; Harburg), orchd R.R. Bennett, T. Royal, 5 Oct 1944 [incl. The Eagle and Me, Right as the Rain, It was Good Enough for Grandma, Evelina, Sunday in Cicero Falls]

St. Louis Woman (A. Bontemps, C.P. Cullen; J. Mercer), orchd Royal, A. Small, M. Salta, W. Paul, 30 March 1946; rev. as Free and Easy (addl lyrics, Koehler), orchd Q. Jones, B. Byers, Amsterdam, Netherlands, 17 Dec 1959 [incl. Come Rain or Come Shine, Any Place I Hang my Hat is Home, I had Myself a True Love, Legalize my Name, I Wonder what Became of Me]

House of Flowers (T. Capote; Capote, Arlen), orchd Royal, 30 Dec 1954 [incl. A Sleepin' Bee, Two Ladies in de Shade of de Banana Tree, Bamboo Cage, I'm Gonna Leave Off Wearin' my Shoes, I Never has Seen Snow, Don't like Goodbyes]

Jamaica (Harburg, Saidy; Harburg), orchd P.J. Lang, 31 Oct 1957 [incl. Pretty to Walk With, Push de Button, Cocoanut Sweet, Take it Slow Joe, Leave the Atom Alone]

Saratoga (M. DaCosta; Mercer), orchd Lang, 7 Dec 1959 [incl. Petticoat High, Love Held Lightly, Goose Never be a Peacock, You or No One]

FILMS

Let's Fall in Love (Koehler), 1934; Gold Diggers of 1937 (Harburg), 1936; The Singing Kid (Harburg), 1936; Stage Struck (Harburg), 1936; Strike me Pink (L. Brown), 1936; At the Circus (Harburg), 1939; The Wizard of Oz (Harburg), orchd H. Stothart, 1939 [incl. Over the Rainbow]; Blues in the Night (Mercer), 1941 [incl. Blues in the Night, This Time the Dream's on Me]; Star Spangled Rhythm (Mercer), 1942 [incl. That Old Black Magic]; The Sky's the Limit (Mercer), 1943 [incl. One for my Baby, My Shining Hour] Here Come the Waves (Mercer), 1944 [incl. Ac-cent-tchu-ate the Positive]; Kismet (Harburg), 1944; Up in Arms (Koehler), 1944; Casbah (L. Robin), 1948 [incl. For Every Man there's a Woman, What's Good about Goodbye?]; My Blue Heaven (R. Blane, Arlen), 1950; The Petty Girl (Mercer), 1950; Mr. Imperium (D. Fields), 1951; Down Among the Sheltering Palms (Blane, Arlen), 1953; The Farmer Takes a Wife (Fields), 1953; The Country Girl (Gershwin), 1954; A Star is Born (Gershwin), 1954 [incl. The Man that Got Away]; Gay Purr-ee (Harburg), 1962; I Could Go on Singing (Harburg), 1963

SONGS

(*selective list*)

except for films, all dates are those of first New York performance

The Album of my Dreams (L. Davis), 1929; Get Happy (Koehler), in 9:15 Revue, 1930; Out of a Clear Blue Sky (Koehler), in Earl Carroll Vanities, 1930; Linda, Song of the Gigolo (Koehler), in Brown Sugar, 1930; I Love a Parade, Between the Devil and the Deep Blue Sea (Koehler), in Rhythmania, 1931; I Gotta Right to Sing the Blues (Koehler), in Earl Carroll Vanities, 1932; Satan's Li'l Lamb (Harburg, Mercer), in Americana, 1932; I've got the World on a String (Koehler), in Cotton Club Parade, 1932

Cabin in the Cotton (I. Caesar, G. White), Two Feet in Two Four Time (Caesar), in George White's Music Hall Varieties, 1932; It's Only a Paper Moon (B. Rose, Harburg), in The Great Magoo, 1932; Stormy Weather (Koehler), in Cotton Club Parade, 1933; Ill Wind (Koehler), in Cotton Club Parade, 1934; Last Night when We were Young (Harburg), 1935; How's by You?, Song of the Woodman (Harburg), in The Show is On, 1936; Happiness is a Thing Called Joe (Harburg), in Cabin in the Sky (film), 1943

INSTRUMENTAL

(*selective list*)

Minor Gaff, blues fantasy, pf, collab. D. George, 1926; Rhythmic Moments, pf, 1928; Mood in Six Minutes, orchd R.R. Bennett, 1935; American Minuet, orch, 1939; Americanegro Suite (Koehler), vv, pf, 1941

LARRY STEMPEL

Arles. City in Provence in France. Originally a Gallo-Greek settlement, it became a Roman colony in 46 BCE and prospered as a maritime trading centre. It soon had a theatre, an amphitheatre, arenas and a circus. Archaeological finds now in the Musée d'Archéologie show that there was a lively interest in music at the time: the sarcophagus of Julia Tyrannia is decorated with carvings of two hydraulic organs, panpipes and a three-string kithara, and other sarcophagi preserved in the Alyscamps Roman cemetery are ornamented with reliefs showing kitharas and depictions of the aulos, barbitos, syrinx and hydraulic organ.

1. Sacred music. 2. Secular music.

1. SACRED MUSIC. Christianity came early to Arles. In 314 the Emperor Constantine called the first of the 19 councils held in the city, and excommunicated the *theatrici*, actors and instrumentalists who were regarded as symbolic of paganism. Arles became the second city in the empire, and was designated the capital of the Gauls in 392, a title confirmed by Honorius in 418. During the 4th century it became a centre for Gallican chant.

St Caesarius, a monk from the abbey of Lérins and Bishop of Arles from 502 to 543, proposed the introduction of a repertory of hymns in the form of dialogues between the congregation and the clergy. In his sermons, he condemned his flock for preferring love songs to religious chant, thus anticipating later debates on the conflict between sacred and secular music. His *Vigiliae* were adopted for use in the monasteries of Arles (*Regula ad virgines*, *c*534) and introduced the regular daily singing of the canonical hours into the cathedral. The *Admonitio synodalis*, a text attributed to him, forbade dancing in or immediately outside churches and nocturnal incantations on the tombs in the Alyscamps cemetery. The cathedral chapter was founded in 796 and dedicated to St Etienne and St Trophime. It developed into a major centre for Gregorian chant. In 879 Arles became the capital of the kingdom founded by Boson, brother-in-law of Charles the Bald, and then in 1032 passed into the hands of the German emperors. Frederick Barbarossa was crowned King of Arles and Burgundy in the cathedral of St Trophime on 30th July 1178. On 29 April 1251, in the château of Tarascon, Charles I of Anjou signed the document whereby Provence annexed Arles. Contemporary accounts vouch for the existence and provenance of antiphoners, missals and choirbooks, and indicate the lively practice of religious music during the 12th and 13th centuries. Musical instruments became indispensable adjuncts to church festivals, and there is documentary evidence of their use during the procession of St Antoine on 17th January 1432. The first organ was installed in the cathedral of St Trophime by Jean Robelin in 1469. It was followed by other organs up to the time of the French Revolution, built in a style that synthesized the organ traditions of Provence and northern France.

When the city became part of France in 1481, ecclesiastical affairs were little affected. A chapter choir school was founded in 1493 at St Trophime, the only church in Arles permitted to have a *corps de musique*. In the early 17th century, post-Tridentine religious fervour in the aftermath of the Council of Trent breathed new life into the chapter, which added to the splendour of its ceremonies and enriched its musical repertory. Music was regularly performed on violins, cornetts and serpents as well as the organ, and a document of 1614 contains the first mention of bowed string instruments being played in French churches.

In the 17th and 18th centuries the choir school had six choirboys, and employed singers and instrumentalists recruited, like the *maîtres de chapelle*, from all over France. About 1650 there were two choristers, a baritone, a *concordant*, a tenor and an alto. Two additional singers make their appearance in 1785. Cornetts, a serpent and the organ were the basic instruments in regular use about 1650, with strings sometimes added. They became an established feature in the 18th century, and the cathedral had a permanent ensemble of four violins and three cellos in the 1770s. This instrumental ensemble, sometimes supplemented by musicians from the neighbouring towns of Avignon, Tarascon and Beaucaire, played for the Sunday services and church festivals and provided musical accompaniment for processions. As at court, Low Mass was accompanied by *grands motets*, which, unusually, were also inserted into the Ordinary sung during High Mass. The repertory was essentially French, and is known to us from three inventories of the chapter's collection of musical material drawn up in 1736, 1749 and 1760. Works by the local *maîtres de chapelle* were performed along with those of such composers as M.-R. de Lalande, A.E. Blanchard, Desmarets, Campara, Mondonville and Nicolas Bernier.

Works by many of the musicians of St Trophime have been preserved. These include those of the *maîtres de chapelle* André Campra, Sauveur Intermet, Nicolas Saboly, Annibal Gantez, François Estienne, P.-C. Abeille, Alexandre de Villeneuve, Jean Audiffren, Jean Clavis, Joseph Boudou and Antoine Hugues, in addition to compositions by the organist J.-B. Vallière, the choristers Laurent Belissen and Vincent Archimbaud, and Guillaume Poitevin, formerly a choirboy at St Trophime, who became *maître de chapelle* at St Sauveur in Aix. The *grands motets concertants* of these Provençal musicians were strongly influenced by those of Lalande, Campra and other Versailles composers, although their choruses were usually in four rather than five parts. In the 18th century there were organs in Dominican and Carmelite monasteries, while there are records of the practice of plainchant by the Augustinians. In 1857 a large 16-foot organ by J.E. Isnard was installed at St Trophime. It was replaced in 1874 by a small Cavaillé-Coll instrument. Today four churches in Arles have organs: St Trophime, Notre Dame de la Major, St Césaire and St Julien.

2. Secular music. There is documentary evidence of the existence of two municipal trumpeters in the 15th century and in 1574 the city hired three violinists to play for the Carnival festivities. A group of four violinists was established in 1620 to play with the drummer Simon Rinqier, and until the Revolution there were bands of instrumentalists playing violins, oboes, trumpets, fifes and drums, to which the local Provençal *galoubet* (pipe and tabor) was sometimes added. From the end of the 16th century festivities with musical accompaniment were organized by the Jesuit college founded in 1636. *L'histoire de Jonas*, a tragedy by Father Verdier, was performed in 1600; *Le triomphe de la paix*, 'adorned with machinery and changes of scene', with music by Laurent Belissen, was staged in 1714; and in 1729 the ballet *La jalousie* by Father Marion was inserted into the tragedy of *Asdrubal* as an *intermède*. These spectacles continued even after the eviction of the Jesuits in 1762.

Major concerts were given at the Arles Académie, founded in 1668 and officially ratified by letters patent of Louis XIV. The festivities held on the occasion of the birth of Louis XIV's grandson at Versailles in 1682 included the performance of works (now lost) by Campra. In February 1687 rejoicings to celebrate the king's recovery from illness included pieces by Aubert, *maître de chapelle* at St Trophime. An Académie de Musique was founded in 1715, and although its activities were disrupted by the plague in 1721, it was revived in 1729. Its orchestra, conducted by Jean Clavis – who was also conductor of an ensemble of *bons vivants* called the Chambre Noire – took part in the festivities for the birth of Louis XV's son in October 1729.

In 1696 the Marseilles opera company conducted by Pierre Gautier gave performances of Lully's *Alceste*, *Atys*, *Bellérophon* and *Armide* on one of its many tours. The Lyons opera company, directed by Leguay, visited Arles in 1700. There was also a good deal of musical activity in the salons of the aristocracy; and the inventories of private libraries, containing scores and separate parts for *tragédies*

lyriques and *opéras comiques*, suggest that performances were staged. Operas by Lully, Campra, Mouret, Destouches, François Rebel and Rameau featured in these libraries, together with *grands motets* by Lalande and Mondonville and cantatas by Bernier. The libraries also contained *opéras comiques* and operas by Gluck and Sacchini. The popularity of the violin is attested by works by Corelli, Mondonville, Leclair and Guillaume Navoigille. There was an equally lively interest in chamber and orchestral music, with works by Handel, Quantz, Wagenseil, Johann Stamitz, Haydn, Pleyel, J.C. Bach and others.

The municipal theatre, inaugurated in 1839, mounted performances by touring companies from Nîmes, Avignon and Marseilles, staging operas by Meyerbeer, Gounod, Verdi and Wagner. In the mid-19th century private libraries contained operas by Bellini, works by Clementi and trios and quartets by Beethoven. A string quartet led by Joseph Alavène was founded in the city in 1850 and the Quatuor Gallo-Romain was founded in 1897.

After 1860 open-air ensembles became very popular. The Arlésienne (a brass band), the Estudiantina (an orchestral ensemble) and the Société Philharmonique (a wind band) gave regular concerts consisting of dances, overtures and numbers from fashionable operas and operettas. In 1903 a new bandstand was inaugurated with lavish festivities. In the late 19th and early 20th centuries symphony concerts were given by the orchestra of the Marseilles Société Populaire des Concerts de Musique Classique.

In the 20th century the musical life of Arles went into decline: the city no longer has a conservatory, and there are no resident chamber ensembles or orchestras. However, concerts are sometimes given in the city's churches, while the St Trophime Cloister Concerts and other summer events are popular with tourists.

MARC SIGNORILE

Arlt, Wulf (Friedrich) (*b* Breslau [now Wrocław], 5 March 1938). German musicologist. He studied musicology at the universities of Cologne (1958–60), and Basle (under Schrade), where he obtained the doctorate in 1966 with a dissertation on the Beauvais Office for the Feast of the Circumcision. As an assistant he maintained and expanded the Basle microfilm archives, and became editor of *Palaeographie der Musik*, prepared by Schrade. In 1965 he was appointed lecturer at Basle University, where he completed his *Habilitation* in musicology in 1970 with a work on the theory and practice of Ars Subtilior; he was appointed supernumerary professor in 1972. From 1971 to 1978 he was also director of the Schola Cantorum Basiliensis, the teaching and research institute for early music in Basle, and editor of the journal *Basler Jahrbuch für historische Musikpraxis*. He was made professor and chair of musicology at Basle in 1991.

In his research Arlt has concentrated on music of the Middle Ages. He is concerned with creating a productive relationship between the musicology of the past (in the tradition of Schrade and Handschin) and current approaches in the discipline. His writings focus on the genre, notation, analysis and interpretation of medieval, 17th- and 18th-century music, and he is particularly concerned with investigating the connections between music and text. Best known for his publications on medieval music, he has examined liturgical genres (particularly the trope and the lied), early polophony, the motet, Machaut and the history of the chanson. In his work with the Schola Cantorum Basiliensis, he has successfully fused new findings in musicology with new standards of performance, assisted by international specialists in early music. His contribution in this area is exemplified by his collaboration with Dominique Vellard, whom he has advised on performing practice and style for a recording series which includes 11th-century polphony, tropes from the St Gallen Codices 484 and 381, and the 'nova cantica' of the Engelberg Codex 314.

JÜRG STENZL/R

Arma, Paul [Weisshaus, Imre] (*b* Budapest, 22 Oct 1905; *d* Paris, 28 Nov 1987). French composer, pianist and ethnomusicologist of Hungarian birth. He studied the piano at the Budapest Academy of Music with Bartók (1921–4), whose advice on composition he often sought in later years and who kindled his love for folksong and collection. (In a lecture given at Harvard in 1943, Bartók spoke of Arma's textless song for solo voice on one pitch with variations of vowel sound, dynamic and rhythm.) Arma began his career as a member of the Budapest Piano Trio (1925–6). Between 1924 and 1930 he gave many recitals in Europe and the USA and lectured on contemporary music at American universities. He settled in Germany in 1931, and for a time he led the musical activities at the Dessau Bauhaus, lecturing on modern music and experimenting with electronic music produced on gramophone records. Later he lived in Berlin and Leipzig, where he conducted several smaller choirs and orchestras.

The advent of the Nazi regime in Germany forced Arma's move to Paris, where he made his permanent home. At first he was associated with the RTF, notably as founder-director of the Loisirs Musicaux de la Jeunesse (1936–40). He was a member of the Commission Interministrielle des Loisirs de l'Enfance (1936–8), he published the *Nouveau Dictionnaire de Musique* (1947) and he lectured at the Phonothèque Nationale and at the University of Paris (1949); from the 1950s he was associated with the RTF *musique concrète* group. In 1962 he was made a Chevalier of the Ordre des Arts et des Lettres and a life member of the Institut International des Arts et des Lettres. He has been active in the collection of French folksongs, French Resistance songs (his material includes some 1600 such) and black American spirituals. As a composer he is known chiefly for his experimental work, though he has also published didactic pieces and folksong arrangements. He was made a member of the Légion d'Honneur in 1983.

VERA LAMPERT

Armandine. A large gut-strung psaltery, resembling a harpsichord without a keyboard, invented by PASCAL TASKIN.

Armatrading, Joan (*b* 9 Dec, 1950, St Kitts, Leeward Islands). English singer-songwriter. One of five children,

she spent the first few years of her life with her grandparents in the West Indies, following the rest of her family to Birmingham in 1958. An introverted youngster, she taught herself piano and guitar and as a teenager, inspired initially by Marianne Faithfull, she began writing and performing her own songs in clubs.

While singing in the touring production of *Hair*, Armatrading met Pam Nestor with whom she recorded an album, *Whatever's for Us* (Cube, 1972). Produced by Gus Dudgeon, who had also worked with David Bowie and Elton John, it was a critical success but a commercial failure. *Back to the Night* (A&M, 1975) established Armatrading as a solo artist. However, she gained both critical and popular acceptance with her next album, *Joan Armatrading* (A&M, 1976), which included her best-known hit single *Love and Affection*. She established her name in the USA in 1980 with the release of her fourth album for A&M, *Me, Myself, I* which featured Sly Dunbar and Robbie Shakespeare. Throughout the 1980s and 1990s Armatrading maintained a schedule of recording and touring, retreating from public view between outings. In 1996 an anthology was released entitled *Love and Affection* which contained her songs from the first twenty years of her career.

Armatrading has a rich, dark voice that carries her distinctive melodies well, framed by imaginative, uncluttered arrangements. Her disciplined, sophisticated and rather formal songs such as 'Down to zero', 'Willow', and 'Show some emotion' (*Show Some Emotion*, A&M, 1977) are good examples of her own blend of blues, jazz and reggae. She is significant as being the first black female singer-songwriter to achieve popular success in Britain.

Armeeposaune (Ger.: 'army trombone'). A model of valve TROMBONE developed by V.F. Červený for use in bands.

Armenia, Republic of (Armenian Hayastan). Country in Transcaucasia. It borders Turkey, Georgia, Azerbaijan and Iran and covers approximately 29,800 km². At the end of the 20th century its population stood at just under four million, most of which is Christian and belongs to the Armenian Apostolic Church. Formerly a republic of the USSR, it became independent in 1991. Its capital is Yerevan.

Situated on the border between Europe and Asia, Armenia has a culture and history that spans more than a millennium. This is attested by archaeological finds that can be dated to the 5th and 4th millennia BCE as well as by numerous rock paintings and ancient written sources. Originating within the Armenian uplands, and assimilating in the course of its history several ancient peoples on the edges of Asia and in Anatolia (the Hurrians, the Assyrian-Aramaic and Urartian peoples), Armenia was already a slave-owning state with a single language and with its own distinctive culture by the 3rd millennium BCE. By then, the monodic character of Armenian vocal music had been fully formed, and lasted for an entire millennium. Armenian traditional instrumental music, however, contains elements of polyphony; the melody is often accompanied by a steady drone and the 'rhythmic' voice of a percussion instrument.

Armenian musics combine features of both Asian and European musics. They draw on traditions from the Middle East in that they are essentially monodic and modal with a strong tonal centre, and have auxiliary notes that provide an antithesis to the tonic assisting in the unfolding of the melody. At the same time, they share the dynamics and temporal organization of melodic development found to the West.

Characteristic Armenian melodies occur in traditional folk and art music, as well as in the music of the Armenian Church. They are used also in contemporary professional compositions, which developed from the mid-19th century in the mainstream of Western art music.

I. Folk music

1. SOURCES. The antiquity of Armenian folk music is attested by monuments of material and spiritual culture, including folksongs. In the high mountain areas of Armenia are thousands of rock paintings of the 3rd and 2nd millennia BCE. In the many hieroglyphs are detailed dance scenes, probably of ritual dances. They are important in that they depict a circle-dance and war dances that are still performed. No instrumentalists are shown, as most Armenian folkdances are accompanied only by the singing of the dancers themselves.

Archaeological excavations in Armenia have yielded relatively few musical artefacts, which can be explained by the fact that in ancient times instruments were made of highly perishable materials – reeds, wood or leather. But the findings include small bronze handballs, *bozhozh* (small oval-shaped bells) and clappers from the 2nd millennium BCE, these also having been used in rituals; a horn with a simple line ornament from the 1st millennium BCE, found on the south-east bank of Lake Sevan (the part preserved is 17 cm long, with a lower diameter of 3 cm); and bronze cymbals from the 7th century BCE found in Karmir Blur (near Yerevan), which are not essentially different from the modern small cymbals. The bird-bone pipes found in Garni and Dvin date from the period between the 5th century BCE and the Middle Ages, and are similar in playing technique to the modern *blul* (end-blown flute). One of the better-preserved pipes has five finger-holes, producing a scale whose intervals, according to modern measurements, are a semitone above the open note, then another semitone, a whole tone, a semitone, and an interval of three semitones.

Early historians of Armenia paid considerable attention to manifestations of national music. Movses Khorenatsi and Faustus of Byzantium, for example, recorded in their 5th-century chronicles the names of song genres and of musical instruments, fragments of epic song texts, descriptions of their performance and of the performers

themselves, and descriptions of some rituals accompanied by music. This relates to a period beginning in the pre-Christian era. Artistic miniatures, gravestone carvings and also old engravings provide early illustrations of the performance of folk music.

From the early Middle Ages the Armenians had an advanced musical aesthetic that included such concepts as the aim and calling of music, the relation of sacred and secular elements and nature as the source of art. They interpreted in their own way the ancient classical teachings on sound and harmony and they also created systems of musical notation. In the 8th century *khaz* notation, basically a type of neumatic notation, was devised; after the 10th century it entered its second period of development, when it was made more exact (see below, §II). Manuscripts of *khaz* notation from the 8th century to the 18th have survived, many of ritual and non-ritual church music, but secular music and folksongs are also found. After the 15th century *khaz* notation became so complex and awkward that it gradually fell into disuse, but the spiritual songs continued to be transmitted orally until they were eventually written down in an appropriate notation.

Copies of many poems on folk models from the 16th century to the 18th have survived, many of which must have been sung, judging by the structure of the poetry and the presence of refrains. But their melodies were not fixed, although some have survived orally. In 1813 Hambardzum Limondjian (1768–1839) created a simple and accessible modern Armenian music notation, which was useful for the transcription of medieval chants as well as for the notation of folksongs. Many handwritten songbooks also contain a wealth of material for the study of Armenian folk music.

Armenian folk music began to be collected systematically in the last quarter of the 19th century. The most productive work among the many collectors was that of Komitas (1869–1935), a gifted ethnographer, scholar and composer. Other notable collectors, both pupils of Komitas, were Spiridon Melik'ian (1880–1933) and M. T'umadjian (1890–1973). Since the 1950s the Institute of Arts and the Institute of Archaeology and Ethnography of the Academy of Sciences and the department of folklore at the Yerevan Komitas State University have assembled over 30,000 examples of Armenian folk music. Further collections are found in the Institute of Archaeology and Ethnography of the Armenian Academy of Sciences and the State Museum of Literature and Art; many recordings are also housed in the archive of recorded sound at Pushkin House (the Institute of Russian Literature) in St Petersburg. The songs were notated only by ear until 1913, when Melik'ian first used the phonograph. From 1939 recordings were made by cutting discs on celluloid X-ray negative plates, using equipment designed by Djivan Kirakosian. Magnetic recording has been used exclusively since 1950. Scholarly study of Armenian folk music also began at the end of the 19th century, the most important studies again being by Komitas, who analysed several fundamental questions of peasant music. The work by K'ristofor K'ushnarian (1890–1960), investigating the problems of history and theory of Armenian folk and medieval professional vocal music, is also particularly significant.

2. History. The Armenian highland was one of the centres of ancient world civilization. In Armenian territory the first traces of man date from the Palaeolithic era. A highly developed copper metallurgy existed there in the 5th and 4th millennia BCE; in the 3rd and 2nd millennia agriculture and cattle-raising were advanced, as was a certain spiritual culture. The earliest ancestors of the Armenian people were the Urumeians, inhabitants of the north-eastern sector of Asia Minor, which was called Armatana from the 16th century BCE to the 14th according to Hittite inscriptions, and later, in the 14th and 13th centuries, Hayasa. From there they invaded Assyria, in the region of Shupra, which the Assyrians came to call Urme or Arme. In the 8th century BCE the land of Arme united with the increasingly powerful state of Urartu, but after the fall of this state it became independent and the Armenian state rose in power. Persian texts of the 6th century BCE mention the broad land of Armina. Thus from the most ancient times two names have been used for the people and the country: Armen and Armina (or Armenia), used by outsiders, and Hay and Hayk' (subsequently Hayastan), as the Armenians called it themselves. Over the years Armenian culture strengthened and developed through contact with that of other races of the ancient world, and as the language of the people evolved, so the national characteristics of folk music became established.

The Armenians adopted Christianity in 301. Comparison of historical records and old church music, which can be dated with reasonable accuracy, enabled K'ushnarian to give an approximate date of origin to the surviving folk music. With this chronological study he showed that the monodic form of Armenian music, as well as its basic means of expression, were fixed long before the modern era, and that its early categories were defined as peasant, *gusan* (a professional singer of epics) and religious. Traces of archaic modes, genres and forms of this prehistoric period are found in the exclamatory phrases of the *hörovelner* (ploughing songs), in songs of work at home and in some dance-songs. Survivals of musical accompaniment of rites, described in the works of Movses Khorenatsi and Faustus of Byzantium, are found in wedding songs, laments and so on.

The Armenian people lived through countless wars and destruction, constantly struggling against foreign aggressors. In Armenian political, economic and spiritual life there were deep depressions and brilliant highpoints. Certain periods, and stages in Armenian culture generally, were reflected in the development of folk music. The period from the 5th century to the 7th is especially important from this point of view. At this time of struggle for liberation and of powerful peasant revolutionary movements there was an unprecedented upsurge in all Armenian culture, which began with the creation of the modern Armenian alphabet in 404. New forms and themes of folklore came into being; the modal basis of the music and the range of melodic structures were broadened; melodic singing (i.e. in a cantilena style) became more important. Evidence for this is found in certain surviving lyrical love-songs and work songs of the peasants, and in heroic dances. In the same period a similar upsurge took place in the art of the *gusanner* (see §4 below). This is confirmed not only by the chroniclers, who remarked upon the important place of *gusan* art in the life of various classes of people and described their singing and instrumental ensembles with their various tone qualities, but also by the menacing charge of the synod at Dvin of 649

levelled against the *gusanner*, and by some earlier authorities of the Armenian Church. In the struggle against the spread of *gusan* influence, the Church characterized it as 'the work of the Devil'.

Another important period was the 10th century to the 13th, when the Armenians expelled their aggressors, the Arabs and Seljuk Turks, and established their independence, achieving a new and important cultural advance. Almost every historian of this period referred to folk music, either to 'the muting of the sounds of singing and instruments' when describing the land laid in ruin by the invaders, or to 'the constant sounding of song and lyre' when discussing the new well-being of the people. The ideas of love of life and humanism which were characteristic of Armenian art in this period (in poetry, miniatures, architecture etc.), and which brought it close to the early Renaissance, were already evident in folk music in the epic *Sasuntsi Davit'* ('David of Sasun'). This epic took form under the influence of the Armenian struggle for freedom in the 8th and 9th centuries, and proclaims Mankind's right to freedom. The same trend of thought was characteristic of the peasant songs of that period, which are perfect models of harmony of form and content. Finally, in this period the rapid development of the *tagh* (a monophonic, aria-like vocal form of a lyrical, dramatic and laudatory character) took place (see §5 below). By contrast, in the mid-16th century, after the division of Armenia between Turkey and Persia, a particular type of 'natural selection' took place in folk music both in subject and in mood, and songs of anguish and sorrow predominated, with the rise of corresponding genres.

Among the interesting questions for the scholar in the history of Armenian folk music is that of Armenian contact with the cultures of the ancient world and the Middle Ages, the results of these mutual influences, and 'dialect' characteristics. The study of collateral data has led scholars to the conclusion that the early contiguity with Hittite and Assyrian-Aramaic cultures must have been important for Armenian music. Also important was the assimilation by the Armenians of the culture of Uranu, which was advanced for its time, as well as closer contact with the culture of ancient Persia and the exchange of creative experience with the cultures of the peoples included in the Seleucid Hellenistic kingdom.

A partial result of the creative intercourse which took place in the 12th and 13th centuries was the appearance of elements of the *mugamat* (Arabic *maqāmāt*; *see* MODE, §V, 2) in Armenian urban instrumental music. The *mugamat* – a genre found among many Middle Eastern peoples – was favoured in these centuries among the upper levels of the urban population, and until recent times Armenian instrumentalists were among the best performers of the Persian-Azerbaijani branch of *maqāmāt*, naturally leaving an impression on certain levels of urban music. In some Persian-Azerbaijani *maqāmāt*, however, especially in instrumental sections with a dance character, the influence of Armenian urban songs and dances can still be detected. The Armenian *ashughner* (professional folk poets: see §6 below) assimilated certain features relating to Middle Eastern *ashugh* poetics during the 17th and 18th centuries. In spite of these common cultural characteristics and mutual influences, the Armenians have retained a specific national culture.

The Armenian language encompasses about 60 clearly differentiated dialects. Analogous distinctions can also be observed in the traditional folk music styles of the speakers of these dialects, in the general character and features of timbre of their music, in the preferences for certain modal intonations and genres, and in the preference for certain instruments. The study of this subject, begun by Komitas (1907), still continues.

3. PEASANT SONG AND INSTRUMENTAL MUSIC. In enumerating stylistic subdivisions, Komitas divided Armenian peasant songs first of all geographically into songs from the mountains, and songs from the plains: the former are relatively harsh in sound, with greater importance given to recitative; the latter are softer, with a predominance of smooth cantilena style. He then divided them according to the larger regions of origin, that is, according to dialect: for example, songs from Shirak, Aparan, Alashkert (now Eleşkirt in Turkey), Van, Mokk, Mush (Muş in Turkey), Akn and Kharberd (places in historical Armenia). Next he divided them according to the most important centres of song creation within these regions.

The peasant song is generally monophonic (performed solo or by a unison chorus), but some types are performed antiphonally. Some peasant songs depend on conditions of place and time, and are linked with specific aspects of village life. Thus work songs and many everyday songs are performed only in appropriate situations. The ritual songs were created in ancient times but were performed and developed exclusively in the process of practising the rituals. The performance of very old epic-narrative and historical songs (which came to peasant life from the *gusanner*) is not linked with specific circumstances, however, nor is the creation and performance of songs about love and nature, those on social themes and certain others.

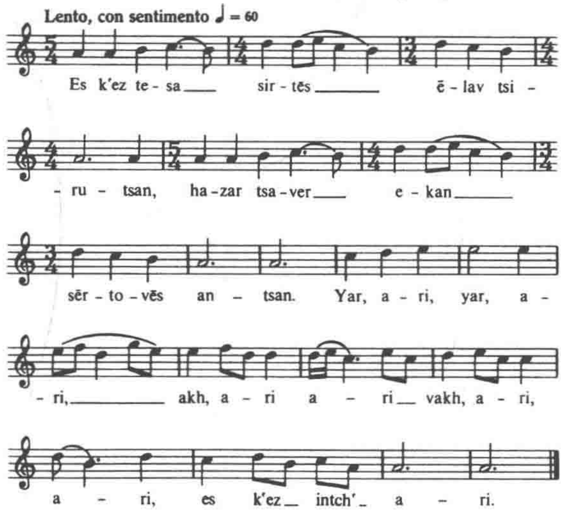
(i) Work songs. The most interesting work songs are the *hȯrovelner* (ploughing songs). The term *hȯrovel* derives from the joining of the exclamation 'ho' and the word 'ar̈avel', which designates the unploughed strip between two fields. 'Hȯrovel' became a cry used by ploughmen. The words and music of *hȯrovelner* are improvised, and these songs consist of a main part, a refrain and many exclamations. Although the purpose is to stimulate work and enliven the ploughmen and the working animals, the singers also express personal feelings. The main subjects of the texts are work, grain and nature, but there are elements of prayer and thanksgiving, appeals and commands, complaints and expressions of satisfaction, and reflections of ancient customs and beliefs. The length of texts and melodies varies; one stanza of a *hȯrovel* from the Lori region, corresponding to ploughing one furrow, takes 90 lines of text and 301 bars of notation (see below, ex.13, transcr. Komitas). In all *hor̈ovelner* powerful descending recitative phrases are followed by tranquil cantilena sections: the modal basis is rich (scales including an augmented 2nd predominate) and the rhythm and melodic phrases are varied. The *hȯrovel* is a consistent and common type of song for a large group of people; an especially beautiful exchange of calls results, giving rise to a natural form of polyphony.

Also important are bullock-cart songs, performed while wheat is transported from the field to the threshing floor, and threshing-floor songs, sung while the wheat is being threshed by a board drawn by oxen. This work does not demand great effort, so the texts consist almost entirely of affectionate words addressed to the animals, and the melodies are flowing and lyrical. Among the women's

Ex.1 Women's wheat-grinding song, transcr. Komitas (Komitas archive, Museum of Literature and Art, Erevan)

work songs in the field, the hoeing songs are outstanding for their supple melodies, which are in mixed metre.

Some women's domestic work songs are linked with the rhythm of the work, to make it easier: for example, a wheat-grinding song sung as a dialogue (ex.1). Others, though subject to the motor movement of the work, contain clearly-expressed emotional elements.



(ii) Ritual songs. These can be subdivided into those of the calendar cycle, celebrated by everyone, and the ritual episodes of family life. Both generally consist of integral cycles. Little has survived from the first category because of the changes in the social conditions and customs of the people. The colourful songs of foretelling the maiden's future on the festival of Ascension and the songs of Shrovetide have proved especially persistent. Traces have also survived of songs of certain ancient pagan rituals, such as *tŕndez*, the ritual of fire worship.

Among the family ritual songs is the wedding cycle, consisting of over 100 items, which must be sung at specific moments. These songs have many local variants. They are varied in poetic and musical themes, relating to the groom or bride, to their parents, friends and other participants in the wedding, or to special rituals such as the blessing of the wedding tree. A broad spectrum of emotions is portrayed, from the humble prayer to the sharp-witted joke, from deep sorrow to unconstrained hilarity. There are women's and men's recitative and melodic songs, solo and choral songs, dialogues between soloist and chorus, two soloists or two choruses and so on. The songs of praise and of consolation of the bride appear to be very old, as do those of the bride's leavetaking. There are solemn songs to the groom and to his parents, and humorous riddle songs. The wedding ritual also includes special dance-songs. Other family ritual songs are the *voghb*, or lament, the earliest examples of which were performed in pagan times by special women mourners and, according to the description by Faustus of Byzantium, were accompanied by funeral dances.

(iii) Lyrical and other songs. A large proportion of peasant songs are lyrical love-songs. They are characterized by remarkable concentration of thought and feeling, strict definition of image and mood, laconic expression and depth of content. Their flowing cantilena style is developed within a narrow range, usually a 4th to a 7th, based on simple diatonic scales. Nature is always part of the subject matter of love-songs. Expansion of the form of lyrical love-songs (although their brevity is unaltered) is effected in two ways: internally, when the question–response parts of one section are themselves expanded, resulting in a romance-like structure (ex.2); and externally, when one or two independent sections of a light, sometimes dance-like nature are added to the basic cantilena section (ex.3).

Among the everyday songs are those sung to and by children, and joking songs. There are songs for all the important events of the child's life: particularly beautiful, with the most interesting texts, are the lullabies, in which the mother often expressed her misery at oppression. The experiences of the peasant, oppressed by feudal lords, gave rise to songs with social themes. The hardest lot, however, is described in the *pandukht* songs, those of the

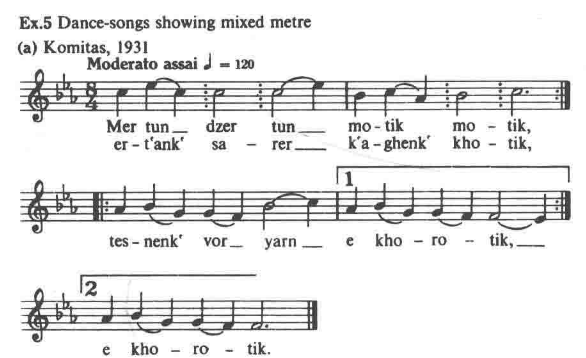
Ex.2 *I saw you,* love-song; transcr. Komitas (Komitas, 1931)

Ex.3 Love-song (Melik'yan and Ter-Ghevondyan, 1917)

Ex.4 *Pandukht* **song, 'Song of the homeless'; transcr. Komitas (Komitas archive, Museum of Literature and Art, Erevan)**

people who went abroad to work. In the late Middle Ages these folksongs constituted a special genre. A classic example of the heartbreaking sadness expressed in these songs is the 'Song of the homeless' (ex.4), in which the mode and the melodic structure are also of interest.

(iv) Dance-songs. By contrast, the *parerger* (dance-songs), the most widespread genre of peasant music, reflect optimism and enjoyment of life. Their melodic structure is based on the repetition of a rhythmic pattern. The rhythmic and metrical patterns of the different dances show endless variety; mixed metres are often found, with many variations of their internal division (ex.5). The dance-songs are also varied in tempo and emotional tone: they can be heavy or light, serene or energetic, slow or fast, lyrical or virile, joking or heroic. There is a further division into everyday and feasting dances, and ritual and epic dances (i.e. those danced to sung epics). In extant folklore lyrical dances predominate, performed chiefly by young people.

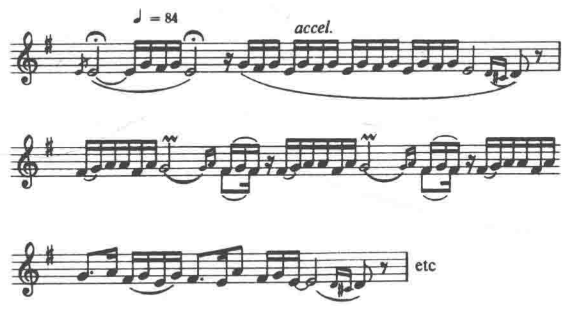


The dance movements have great variety: in the stance of the dancers, the frequency and direction of the movements, and the order and type of step – on the spot, walking and leaping. Dance-songs may be performed in various ways: with a soloist (who is also the director of the dance) and chorus; two soloists (question–response) and chorus (refrain); two soloists and two choruses; one or two choruses without soloists and so on. These all conform to the verse forms and the sequence pattern of the introduction, the refrain and exclamations. The refrain may be at the beginning, middle or end of a stanza, and often appears in more than one position, interwoven with the basic text.

Circle-dances with instrumental accompaniment are also part of Armenian peasant life, although they are less important. They are danced to tunes of a chiefly ritual or epic-heroic character, which are always traditional. There are comparatively few peasant solo and couple-dances: they may be men's or women's dances, lyrical, humorous, pastoral or warlike. The last two types often use accessories such as a shepherd's crook, sabres or shields.

(v) Instrumental music. Peasant instrumental music is generally akin to song. It may be pastoral (ex.6) or epic-narrative in nature. Melodies may be performed on the *blul* (also called the *sring*), an end-blown flute of nasal tone quality, usually with seven finger-holes and one thumb-hole, or sometimes on the *t'ut'ak* (or *shvi*), a fipple flute. The *duduk* (or *nay*) is a cylindrical double-reed instrument with eight finger-holes and one thumb-hole, and a soft, slightly nasal timbre. Slow song-like melodies with lively dancing refrains are performed on two

Ex.5 Dance-songs showing mixed metre



(a) Komitas, 1931

(b) Melik'yan, 1949–52, vol. ii

Ex.6 Pastoral tune played on the ***blul:*** **transcr. R. At'ayan**

dudukner, the second *duduk* providing a tonic drone. Expansive ritual songs (which may be for weddings, funerals, pilgrimages, meeting the sunrise etc.) are performed on two or three *zuřna* (conical oboes with a pirouette, producing a sharp timbre) or on the *parkapzuk* (bagpipe with a double chanter but no drone), accompanied by a *dhol* (double-headed cylindrical drum, beaten with sticks). The dances mentioned above, and all kinds of song, are performed with such instruments. Often the music is improvised.

4. The 'gusanner'. The oldest evidence of this branch of folk music is found in 5th-century sources, which indicate that at that time the *gusanner* were already divided into several categories. These included tellers of tales, singers, instrumentalists, male and female dancers, comedians and tragic actors. They took part in theatrical performances, weddings, funerals and other rites, and always performed at feasts that were purely for entertainment. They appeared singly or in groups, at royal palaces and courts, and also among the common people. Apparently at that time the tellers of tales were considered most important and enjoyed special prestige, recalling in many ways the Greek rhapsodes. They presented the national myths and epics in word and song. The *gusanner* were professionals: their performances always involved an audience, demanding preparation and a ready repertory. Beginning probably in pagan times, the *gusanner* gradually developed a favourite set of themes, forms, devices and means of presentation. Characteristic features evolved which were handed down from master to disciple and acquired the force of tradition. Although the art of the *gusanner* did not sever its ties with real folk creativity (as is apparent from surviving examples), it took on distinctive professional characteristics.

Movses Khorenatsi wrote that he heard the singing of the *gusanner* who 'transmitted these tales singing, in songs of dances and performances, with the accompaniment of the bambiř'. (Occasionally spelt *bambiřn*, this may have been a medieval plucked string instrument, although some scholars believe it was a kind of castanet.) Faustus of Byzantium, in a description of the royal feast at which King Pap (4th century) was murdered, also recalls 'the colourful throng of gusanner' who beat the drum, played the flute, the lyre and the horn, producing a diversity of sound'. The music of the *gusanner* presumably had artistic merit corresponding to the high quality of their poetry. An idea of the melodies of the oldest epic songs of the *gusanner* can be obtained from the fragments of the epic *Sasuntsi Davit'* that are sung (much of it is spoken). Although these have survived in village folk music, they still retain a style distinct from that of peasant music (ex.7). The 'angularity' of the melodic contours of the example, its diatonic scale (emphasis on the fourth degree in relation to the tonic is a basic characteristic of Armenian folk music) and the general character of the music convey the heroic spirit of the epos. Other examples of the epic have the same scale contours but a more developed melody: comparison of such examples suggests that the epic music of the *gusanner* developed in the direction of ever greater melodic complexity. It is also apparent from the many historical references to *gusanner* that from the 10th century to the 13th their art expanded increasingly, and that they played a leading role in all kinds of entertainment. During the next period (from the 13th century, according to M. Abeghian, 1951) the genre of

Ex.7 from *David of Sasun*, epic song; transcr. Komitas (Shaverdian, 1959)

the *gusan hayren* was created. The *hayren* form had existed for a long time in Armenian folk poetry and was taken over by professional poets, among whom Grigor Narekatsi (Gregory of Narek, 950–1003) used it with particular brilliance in his *tagher*. The *hayrenner* are verses composed in the 'Armenian' metre (*hayren*: 'in Armenian'): doubled seven- and eight-foot distichs, with dynamic displacement of accents.

When conditions once more became difficult, the *gusanner* drew closer to the people; there was more subjective lyricism in their works and the influence of folk music became more noticeable. *Hayrenner* are among the songs collected at the end of the 19th century in the town of Akn, where an abundant *gusan* tradition survived. The few surviving examples of *hayrenner* show the regard for tradition in *gusan* singing, which was accompanied by instruments, usually strings and percussion. In the 17th century the art of the *gusanner* merged with folk music, making way for the *ashughner* (see §6 below).

5. Religious folksongs and secular 'tagher'. Armenian folk and religious songs are closely related melodically. This reflects the early interchange between the two genres. From true religious songs there arose folk variants which were sung until modern times. There also exist independent religious songs, not intended for church use, which were composed in true folk style. These form a limited but characteristic genre in Armenian folklore; the rather short examples of songs for the Annunciation (close to village dance-songs) and the extended cantilena ones have an epic-narrative character.

At the point of convergence of Armenian folk and religious art there arose the secular and religious *tagher*. These were sung poems, lyrical, dramatic or solemnly laudatory, often with texts similar to the *hayrenner*, and dedicated to the lives of the Virgin Mary, Christ and the saints, but in essence reflecting the real life of human beings, expressing not ascetic but human feelings. The *tagher* were forerunners of the renaissance of Armenian art, and heralded the new humanistic trend in Armenian poetry and music of the 10th century. The earliest *tagher* (words and melodies) are by the l0th-century poet Grigor Narekatsi. The secular branch of the *tagher* developed somewhat later. From the 13th century to the 18th there

Ex.8 from *tagh Havik* ('The bird'), transcr. Komitas (Komitas, 1950)

was a large group of highly gifted secular poets to whom the people gave two names: *tagherguner* ('creators of *tagher*') and *taghasatsner* ('performers of *tagher*'), although in most cases composer and performer were one person. The chief representatives were Frik (13th century), Kostandin and Hovhannes Erznkatsi (13th–14th centuries), Mkrtich Nagharsh (15th century), Hovhannes T'lkurantsi and Grigons Aght'amartsi (15th–16th centuries), and Hovnat'an Naghash and Paghtasar Dpir (17th–18th centuries). Private and social feelings, for instance love, delight in nature and criticism of human life and morals, protest against social inequality and condemnation of foreign usurpation are reflected in the secular *tagher* of these authors, and in the many anonymous *tagher*.

The *khaz* notation of religious and secular *tagher* cannot yet be read. The *tagh* melodies which are now accessible were written down in the 1870s. From the time when *khaz* notation became unintelligible until their notation in the late 19th century the *tagher* were transmitted orally in the same way as genuine folksongs, thus losing some characteristics of professional compositions and almost becoming folksongs.

The religious *tagher* are extended, aria-like ornamented melodies, whose virtuoso structure shows the influence of urban folk music (possibly of *gusanner*); tense emotional passages are sometimes juxtaposed with meditative sections. The secular folk *tagher* are, however, lighter in form and more akin to arioso; feeling is expressed on one plane only. They show the influence of peasant lyrical songs, but are distinguished from these by greater melodic development and somewhat more open emotion. Ex.8 shows the *tagh Havik* ('The bird'), which is based on folk motifs but is elaborated in a religious spirit. Some sources ascribe this version to Narekatsi. A very simple example of a secular folk *tagh* – one of the most popular folksongs – is the song Krunk ('The crane'; ex.9), in which a *pandukht* (a man who must work abroad), bitterly complaining of his unhappy state, asks the crane for news of his home and family. In the 18th century the *tagher* merged partly with folksong, partly with the art of the *ashughner*.

6. THE 'ASHUGHNER'. The art of the *ashughner* spread in Armenia in the 17th and 18th centuries, although the term *ashugh* was found earlier in Armenian literature, in the 15th and 16th centuries. This art has some features in common with that of the *gusanner*, which it replaced. The name *ashugh*, which is found in many languages, is derived from Arabic and means 'in love'. Tradition has it that unhappy love turned three men into *ashughner*, who wandered the world seeking the meaning of life. Like the *taghergu* and *gusan*, the Armenian *ashugh* came mostly from a simple urban background, and performed for audiences of aristocrats and common folk alike. *Gusanner* and *ashughner* had the same social role and professional character, but the form and content of their music and certain features of performance differed.

The Armenian *ashughner* used personal and social themes. The subject of love was basic, sometimes expressed with touching directness or in striking imagery, always hyperbolic. In addition, prominence was given to social, philosophical and moralizing themes, to the celebration of human virtues and the censure of negative

Ex.9 from *tagh Křunk* ('The crane'), transcr. Komitas (Komitas archive, Museum of Literature and Art, Erevan)

aspects of society or of the lives of individuals. There are also historical descriptions, jokes, riddles, Armenian versions of Middle Eastern *ashugh* tales and so on. In the course of time themes of public significance and themes of national liberation also entered their repertory, and new national *ashugh* tales arose. Armenian *ashughner* originally wrote in folk dialects, but later went over to the more generally accessible literary language. Some were fluent in many languages, wanting in Persian, Osmanli, Georgian and Azerbaijani as well as Armenian, and sometimes they composed macaronic verses. Classical versification was predominantly used by the *ashughner*, who developed it to a high standard. They adapted it to meet the demands of their language and ideas, creating new variants of classic forms of *ashugh* versification and even new forms. Especially prized is the medial 'complex rhyme' in each line. The *ashughner* often improvised (especially in competitions), employing a variety of technical devices.

Schools of *ashughner* with special traditions arose and were named after their centres: Vagharshapat (now Edjmiadsin), Alexandropol (now Gyumri), Tbilisi, and schools of Persian Armenians, Turkish Armenians and so on. They differed in dialect and manner of expression, in poetic subject and in details of musical style, both in composition and performance. The poems of distinguished *ashughner* were preserved in their authors' manuscript books, which were later printed. The melodies survived through oral transmission and from the end of the 19th century were also notated and later published.

In *ashugh* compositions the poetry was usually more important than the melody. Armenian *ashughner* used many traditional improvisatory motifs (there were up to 60), a general Middle Eastern feature. But alongside these they often composed original melodies. This was already a national feature, so that for the Armenian *ashugh* 'song' meant not only verses (as it often did among other *ashughner*) but a unified musical-poetic work. They maintained another Middle Eastern tradition, an *ashugh* pseudonym, which was always mentioned in the last couplet of each song, the aim being to preserve the knowledge of the song's authorship.

Compared with *gusan* melodies, those of the Armenian *ashughner* show more overt emotion, tension and pathos. The recitative, cantilena and dance character of the melodies is more apparent than in peasant folk music. Melodies are usually extended, mixed metres are widely used and ornamentation is relatively rich; they also have individual features that may reflect the creative personality of the *ashugh* and his folk music source. Like the *gusanner*, the *ashughner* used musical instruments, but only string ones: the *saz*, a lute with a long pear-shaped body and long neck, usually with six to eight metal strings and ten to thirteen frets; the *chunguṙ*, a four-string lute, one of the strings being shorter than the others with its peg halfway down the neck; the *t'aṙ*, a long-necked lute, with a body in the shape of a figure-of-eight, a skin soundboard and five to nine, 11 or 14 strings; the *k'anon*, a trapeziform zither with 24 triple courses (72 strings in all); the *sant'ur*, a trapeziform dulcimer; and the *k'yamancha*, a long spike fiddle with three or four strings and a round skin-covered body, often beautifully decorated. The *ashughner* appeared alone (singing and playing), or together with others who performed an instrumental or a vocal accompaniment. Mimicry, movement and dramatization were not used by Armenian *ashughner*.

The first famous Armenian *ashughner* were the last *taghergunner*: Hovnat'an Naghash (1661–1722) and Paghtasar Dpir (1683–1768). Among the classical representatives of this art (one of the world's greatest masters of 'sound-painting' according to the poet Valery Bryusov) was Sayat'-Nova (Arut'in Sayadian, 1717–95), born in Aleppo, who served as court singer and musician to the Persian Nadir Shah, later to the Georgian ruler Iraklii II, and spent his last years in Sanahin (Armenia). He composed in Georgian and Azerbaijani as well as Armenian. Djivani (Serob Levonian, 1846–1909) was born in Akhalkalaki, lived and was active in Alexandropol and later in Tbilisi. His chief themes were social ones, notably the liberation of his people. The sources of his music were the songs of the Armenian peasants. Sheram (Grigor Talian, 1857–1938) of Alexandropol, was another famous *ashugh*, an ardent singer of happy love.

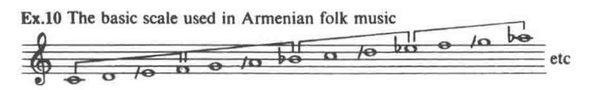
7. Urban folksong and instrumental music. Little of the music of the medieval Armenian cities has survived. The folk music now played and sung in the cities is the product of the last two or three hundred years. Melodic patterns from all branches of folk music, mixed with elements of *sazandar* music, which is found throughout Transcaucasia, together with some Slavonic and European elements, have been assimilated into a nationally unified and characteristic style. Urban folksongs, especially lyrical ones, are emotionally more intimate than the peasant songs; the modal basis is practically identical, but the development of the melodies is achieved by simpler means: there are elements of periodicity in their structure, and the rhythm is also simpler. In urban songs the local features can be heard more clearly, so that, for example, there are clear distinctions between the songs of Yerevan, Gyumri (formerly Alexandropol), Shush, Van and other towns. The texts, unlike those of peasant songs, are mostly by professional poets. The love-song is characteristic; there are also everyday, student, entertainment and table songs, songs for solo and couple-dancing and so on. Much urban folk music consists of national patriotic songs, which developed intensively from the 1860s. The theme of liberation appeared in slow songs, including romances and even lullabies, as well as in marches. Also widespread were translations and Armenian adaptations of the Marseillaise and of Russian revolutionary songs.

Urban instrumental music, used to accompany songs and a great variety of solo dances, some of which are found throughout the Caucasus, included ritual melodies, slow extended improvisatory pieces (usually with refrains in slow rhythm) and potpourris, in both solo and ensemble performance. Ensemble performance was in unison with elements of improvisatory heterophony, and a sustained part was widely used.

In the medieval cities of Armenia folk instruments were very widespread. This is known not only from chronicles, miniatures and archaeological findings, but also from manuscripts in the Matenadaran (the Institute of Ancient Manuscripts in Yerevan). Some of these instruments have disappeared and others have changed. The 10th-century poet Grigor Narekatsi referred to a string instrument called *djut'ak*, which is the modern Armenian word for violin. In the excavations of Dvin, one of the medieval capitals of Armenia, a vase from the 11th century shows a musician holding on his shoulder an instrument like the

violin. The decrease in the number of folk instruments in the towns was also related to the introduction of European instruments.

The string instruments of the Armenian urban ensembles of later centuries have general Near Eastern distribution, and include the *k'yamancha* (fig.1) and the *k'amani* (the latter being a long rectangular three- or four-string fiddle); the *ud*, a short-necked unfretted lute, with 11 strings in six courses plucked with a plectrum; the *t'aṙ* (also plucked with a plectrum); and the *k'anon* and *sant'ur*. In the 1920s the musician and composer Vardan Buniyatian (1888–1960) constructed a family of *t'aṙyer* and *k'yamanchaner* of different pitches and timbres, from which an Middle Eastern symphony orchestra was created. These instruments have now spread to Dagestan and other Central Asian republics. Among the newer string instruments is a special type of folk cello in two sizes, which has been given the name of the old instrument *bambiṙ*. The wind instruments used include the *duduk* and *zuṙna*; the percussion includes the *dhol* (double-headed drum), the *dap'* or *ghaval* (a single-headed frame drum, sometimes with rattles or rings inside the frame, played with the fingers), and the *naghara* (two single-headed drums of the kettledrum type). There are string and wind ensembles, and combinations of both. The most easily formed ensemble, consisting of a *t'aṙ* player, a *k'yamancha* player and a *ghaval* player (the latter is also the singer), is called a *nvagurd* in Armenian, while the general Transcaucasian word for it is *sazandar*. In all these ensembles the dynamic of the performance rests primarily on the percussion instrument, which varies and develops the rhythmic intensity.

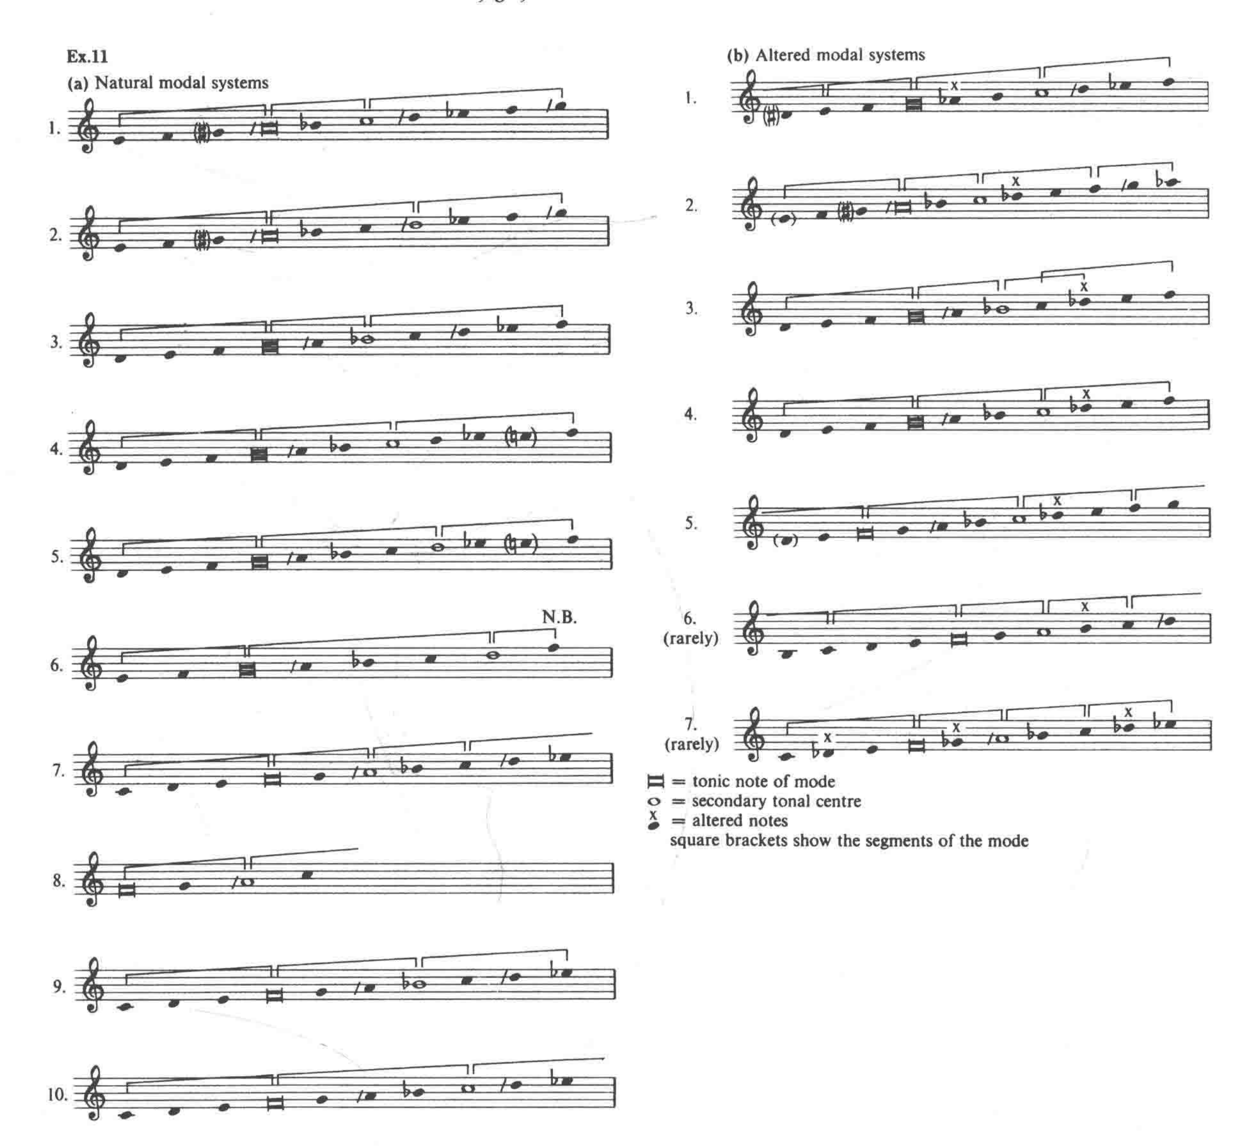


8. THEORETICAL BASIS AND STRUCTURE. The types of Armenian folk music described above and also the medieval religious music are monodic: they are formed exclusively from melodic elements. A basic diatonic scale gradually evolved, consisting of identical major tetrachords linked so that the highest note of one is the lowest

1. *K'yamancha player*

of the next tetrachord. The scale is not equal-tempered: in folk vocal and instrumental performing practice the third degree of each tetrachord is slightly flatter than the corresponding degree of the tempered scale. Thus there is a great variety of intervals. In addition to tempered major and minor 2nds, there are 'wide' minor 2nds and 'narrow' major 2nds. This applies also to 3rds and other intervals. The major 7th and augmented 4th do not appear as melodic intervals, and augmented intervals are absent. The diminished octave exists as a diatonic interval. The basic diatonic scale is shown in ex.10 with the slightly

Ex.10 The basic scale used in Armenian folk music



flattened untempered degrees preceded by a small slanted line.

As the relations between the degrees are repeated after every fourth note, three types of mode can be formed naturally, corresponding to the G, A and B modes; these constituted the original basis of Armenian music. In the process of development of the melodic contours of the tunes, some degrees of the basic diatonic row were altered. These alterations may be divided into those of less than a semitone, when a partly raised variant occurs in the scale together with the original lower degree, and those of a semitone, which results in a new degree. Both types of alteration occurred from the earliest times and became increasingly frequent. Some modes formed with a semitone alteration (see ex.11*b* scales 1 and 2) appeared in simple forms in very early agricultural improvisations containing elements of pagan incantations to natural phenomena. Some (see ex.11*b*, scale 3) occurred with the development of the medieval *tagher* and the *gusan hayrenner* between the 10th and 13th centuries, while others (see ex.11*b* scales 6 and 7) occurred in the music of the *ashughner*; in the 17th and 18th centuries.

Chromaticism has no place in Armenian folk music. The basic degrees of the scale and their altered variants appear separately in practice as diatonic degrees. The scales are not confined to the octave and, in addition the notes of the mode above and below that octave are not automatically repeated; if a note is repeated an octave higher, it has a different melodic function in the mode. For example, if the final note occurs in the mode an octave above the actual *finalis*, the higher note will not be a final degree. As a result the mode has only one *finalis*: this usually appears in the middle of its scale, so that the modes are chiefly plagal. They are also centripetal in that the degrees below the *finalis* are raised notes and those above it are lowered: thus from both directions there is a tendency to move towards the *finalis*. The medians degrees also assume the role of leading notes.

The modes are made up of several joined segments which may be dichords, trichords, tetrachords or pentachords. A relatively full form of each mode usually consists of three segments, more rarely of four or five (see ex.11). The maximum range of a mode is generally a 10th or slightly more. The most important segment, defining its structure and expressive character, is the tonic segment, whose highest note (the beginning note of the segment above) has the role of a secondary tonal centre, slightly less stable than the tonic. In practice the complete stability of the tonic is felt most clearly when a folk melody is performed on two instruments (e.g. two *dudukner*), with

one holding the tonic throughout. Similarly the fair degree of stability of the secondary tonal centre is clear when three instruments are played and two hold the notes of the two tonal centres of the scale. At the end all come together on the *finalis*. The secondary tonal centre acts as the dominant note, from its frequent occurrence in the melody, its metrical emphasis and its more important role in the melodic contour in relation to the other degrees. It may be a 3rd, 4th or 5th above the tonic. In the closing part of the melody the secondary tonal centre usually relinquishes its role to the degrees immediately below, which then lead the melody in sequence to the *finalis*. In the process of melodic development each segment of the mode can serve as a new tonic segment, and if the melody is non-modulating the original tonic segment reestablishes its function later.

The *finalis* of each mode is linked with a certain degree of the basic diatonic scale and can be transposed only by a perfect 4th. For this reason the modal systems are in a sense also tonal systems. The scales of the chief modes are shown in ex.11 with their complete range of a 10th, to illustrate their differences fully.

In the old theory of Armenian music the concept of mode was part of a broader concept of *dzayn* ('voice'), which when used in relation to religious music implied specific melodic patterns and ways of developing the cantilena, to be linked with the various modes. The modes are all independent systems with a definite semantic character, and each of these is peculiar to a particular range of emotional expression. Within the limits of one cantilena they can occur in various combinations, as modal (sometimes also modal-tonal) modulation or deviation leading to an increase in melodic tension; in the old Armenian music theory such a modulation was called *zartughut'yun*. Possibilities include a combination of modes with various tonics (in the simplest cases with various secondary tonal centres) within the same scale; a combination of modes with various scales using the same tonic; and a combination of modes with various scales and various tonics. In the first and third cases the second

(modulated) tonic is usually a major 2nd above or below the original or a major or minor 3rd or perfect 4th below it. The modes which are combined may have the same or different tendencies; when modulation occurs it is (in descending order of frequency) a transition from major to minor, from minor to minor or from minor to major. The relationship of the modes (or modal tonalities) is based on common traits.

The characteristics of the modal system apply to all branches of Armenian folk music with a slight reservation: in peasant music as well as in the old *gusan* music and the folk *tagher* natural modes are predominant, with fairly simple alterations and combinations, while in urban folk music and especially in *ashugh* songs complex alterations and combinations are also widely used. This also applies to melodic contour.

The melodic pattern ('intonation') of Armenian folk music is also diatonic. In the expressive sense it is distinctively natural and balanced, and is close to spoken intonation; indeed in village and *ashugh* songs certain musical phrases are often perceived as melodized speech. In spite of the close tie between the musical contour and the words (both in general mood and in details), each retains its own logic of development. The musical side dominates because melismatic development of the melody is often found alongside the syllabic principle. The melody also governs the general form; the text, which is expanded by repetition and exclamations, is subordinate to the musical form. Melodically, a flowing wave-like movement prevails, usually even but also with a short rising and a relatively long descending pattern. Skips (primarily upwards) occur, if at all, in opening structures, which are always completed with a wave-like movement.

One of the most typical forms of composition of the peasant melody is as follows: at the beginning the core motif appears, composed of the tonic or secondary modal centre (heard either at once or preceded by an upward skip) and the notes surrounding it. This motif (or part of it) is then varied rhythmically and melodically, constantly expanding horizontally or vertically, and a definite rhythmic-melodic structure develops; phrases and sections are usually unequal, and the melodic culmination stands out. A rapid opening is usually followed by a slow denouement. Ex.12*a* shows a song, ex.12*b* its motivic structure. It is this principle of varying the core motif that makes it possible to create an expanded and expressive melody from only four or five notes. Sometimes the basis of a melody is a complete phrase, and its relatively developed modal-melodic variant becomes an independent 'central section' (see above, ex.2), after which the first phrase is repeated in part or in full (reprise). In professional lyric monodies the form expanded by variation is still more highly developed Such devices of melodic structure are distinctive adaptations of motivic-thematic development. In one form or another they are characteristic of songs in all the branches of Armenian folk music. A second rule can also be discerned: these elementary melodic cells have their own characteristic melodic structure and modal features in the different song types, in accordance with the genre and emotional mood of the song. In this way the emotional mood, the modal-melodic features and the genre to which the cantilena belongs all have a determining effect on each other, and this interdetermination has traditional stable forms. The use of grace notes and mordents in Armenian melodies is

Ex.12 Lyric song, with its motivic structure; transcr. Komitas (Komitas, 1931)

rather limited, and they are more charactenstic of *ashugh* songs. In peasant songs, however, the notes which appear to be ornamental are often basic to the melody, even if they are short.

The possibilities of rhythmic variation in Armenian folk music seem limitless, as may be seen in the improvisations of the players of the *dhol* and the *zuṙna*. Three types of rhythmic form may be distinguished. The first is the dance form in which relatively short rhythmic figures follow each other, repeated or slightly varied, with simple correlation of durations and with much use of dotted rhythms and syncopation. In songs of this type the number of rhythmic units usually equals the number of syllables. The second is the song form in which the rhythmic figures are quite broad and usually unrepeated. When they are repeated the metric sequence is changed; in any case the metric units do not correspond to each other. In songs in this form there is melismatic development, so that the number of rhythmic units is always greater than the number of syllables. The third is the recitative or improvisatory form in which the metre is free and the pulsation of time is produced not by metric but by separate rhythmic units, which can themselves change; the relation between the lengths is more marked and is irregular. In the songs with this rhythmic form a vocalization on one syllable follows every syllabic motif. These three rhythmic forms are characteristic in both vocal and instrumental music. Each may be said to be more charactenstic of certain genres of song than others, but there is often a combination or interpenetration of two or all three forms. The special quality of rhythm in Armenian folk music is also emphasized by metric variety: along with the simple and compound metres many mixed metres are used (5/8, 7/8, 8/8, 9/8, 10/8, 11/8 etc.).

Polyphony has been little studied. Armenian folk music has traditionally been regarded as monophonic, although Komitas observed that in it 'one finds cases which show signs of true two-part singing'. A sustained part or drone, probably taken from folk instrumental music, was known in the Middle Ages in professional vocal monodic music

(called *dzaynařut'yun* in old Armenian music theory). In folksinging with instrumental accompaniment and in ensemble playing this part is held by a single instrument or group of instruments. On a single instrument it may be played by one or two strings, or on a bagpipe by one pipe. The sustained pitch, usually the tonic, may be on the level of the melody or below or above it. It may be unbroken or interrupted; on percussion instruments it may be in the form of tremolo. It may consist of one note or of an ostinato phrase. The modal digressions of the melody can take place against the background of this part. Where a melody revolves directly around the sustained note and the untempered intervals (especially those smaller than a semitone) are more clearly perceived, sharp dissonances occur and the sustained note produces a remarkable artistic effect. In addition players of the *dhol* or *dap'* often strike various parts of the skin obtaining different pitches and timbres so that the instrument produces two-part music. Of general interest also is a polyphony of timbre in ensemble playing at the octave or in unison, when short phrases are added to the basic melody at its rhythmic pauses; heterophony also occurs. These are improvisatory devices, but they are linked with definite traditions.

Polyphonic elements are widely used in antiphonal vocal music: antiphony is divided into that arising spontaneously in natural conditions and that created de liberately. The former, like heterophony, is directly connected with improvisation and occurs in work songs, at home and in the field, performed by two or three people: ex.1 above is such a domestic work song, for grinding grain. Here the woman with the best voice or the leader of the work sings the main melodic line, and her co-worker performs the added phrases or exclamations. The antiphony during farm work, especially during ploughing, is more elaborate. Each member of the working group has his specific function in the work and in the singing. Ex.13 is an excerpt from a *hořovel* noted down by Komitas (for full version see Shaverdian, 1959, p.339).

What has been called a 'premeditated' type of antiphony is that found in ritual songs (wedding and carnival songs and songs of young girls foretelling the future), love-songs and other duets and dance-songs. This is basically traditional responsorial singing by a soloist and a chorus, or two soloists or two choruses: ex.14 shows a girls' lyrical dance-song. Komitas found an example of two-part singing during a circle-dance, in which the second part was in harmony with the first, an unusual feature: in songs with polyphonic features, one of the parts is almost always a continuation of the other.

The characteristics common to Armenian folk arts can be observed in the general 'emotional tone' and also in details of composition. The two most important of these are: the asymmetry of the component parts which form a balanced whole, a 'symmetry of asymmetry', while producing an internal dynamism; and the economy of expressive means and the avoidance of extremes, resulting in a particular restraint of expression, a concentration of thought and feeling. These characteristics are manifested in music and also in architecture, bas-reliefs, artistic miniatures, carpets and embroideries.

9. FOLK MUSIC DURING THE 20TH CENTURY. During the 20th century, especially since the beginning of Soviet rule in 1920, the life and ways of the Armenian people changed radically. The security of life, the decisive reconstruction and the swift development of the economy have brought

Ex.13 *Horhovel*, Vardablur, Lori region; transcr. Komitas (Shaverdian, 1959)

Ex.14 Girls' lyrical dance-song, transcr. Komitas (*Zeitschrift für armenische Philologie*, i/1, 1901)

about new intellectual interests. These were also reflected in folk music, the chief genres of which have continued to exist. Those connected with the old way of life and old forms of work died out, some were modernized and some new ones arose. Themes acquired new elements: alongside the eternal personal motifs there were also contemporary social ones. Television and radio as well as the recording industry have also exerted an important influence over the development of Armenian music, especially in the urban centres where such technologies have increased enormously the interaction between the cultures of various nations.

The *ashugh* tradition continues, in spite of the fact that there are now many centres of professional training in literature and music, but with one important change: the *ashugh* songs are not only spread orally but also published. Contemporary *ashughner*, obviously wishing to emphasize their devotion to the ancient national art call themselves *gusanner*. The songs of these modern *gusanner*, while retaining traditional *ashugh* poetic and musical forms (especially the oratorical manner of expression) have also become relatively simple and clear optimistic subjects and views of life predominate. Among the many 20th-century *gusanner*, some of the most gifted were Gusan Sheram (1857–1938), Havasi (1896–1978), Ashot (1907–86), Shahen (1909–90), and Lgit' (1908–96).

Folksong and dance ensembles and orchestras of folk instruments were organized by professional musicians as early as the 1880s, and these brought folk music to the concert stage. A pioneer in this activity was the composer and choral conductor Khristofor Kara-Murza (1856–1902). The teaching of traditional instruments is now a professional activity and an integral part of the programme for all the educational establishments specializing in music in Armenia. The modern Armenian State Folk Song and Dance Ensemble was created and for a long time directed by the choral conductor T'atul Altiunian (1901–73); this group has gained recognition far beyond the borders of its own country. Old and new folksongs and *ashugh* songs are also performed on the stage, for radio and for television by folk musicians. Special organizations such as the House of Folk Creation and the Choral Society of Armenia arrange competitions for these musicians and for professional and amateur folk music ensembles, and organize song festivals for the entire country.

Folksong has played a great role in the development of Armenian composed music. In the 19th century the creative genre of folksong arrangement arose; it still retains its importance today. Folk music formed the basis of a significant part of the nationalistic compositions of Komitas, and such melodies or their stylistic features have been used in various forms in the works of Alexander Spendiarian, Romanos Melik'ian, Armen Tigranian, Aram Khachaturian and many other composers.

BIBLIOGRAPHY

COLLECTIONS

Komitas: *Shar Akna zhoghovrdakan ergeri* [Series of Akn folksongs] (Vagharshapat, 1895) [in Armenian notation]
S. Demurian: *K'nar*(St Petersburg, 1908) [in European notation]
S. Melik'ian and A.Ter-Ghevondian: *Shiraki erger* [Songs from Shirak] (Tbilisi, 1917)
S. Melik'ian and G.Gardashian: *Vana zhoghovrdakan erger* [Folksongs from Van] (Yerevan, 1927–8)
Komitas: *Zhoghovrdakan erger* [Folksongs] (Yerevan, 1931)
Sayat'-Nova: *Erger* [Songs] (Yerevan, 1946, 2/1963)
Sheram: *Erger* [Songs] (Yerevan, 1948, 2/1959)
S. Melik'ian: *Hay zhoghovrdakan erger ev parerger* [Armenian folksongs and dances] (Yerevan, 1949–52)
Komitas: *Hay zhoghovrdakan erger ev parerger* [Armenian folksongs and dances] (Yerevan, 1950)
Djivani: *Erger* [Songs] (Yerevan, 1955)
Gusan Ashot: *Erger* [Songs] (Yerevan, 1958)
H. Harut'unian: *Manyak: zhoghovadsu hay zhoghovrdakan ergeri* ['Manyak': a collection of Armenian folksongs] (Yerevan, 1958)
S. Lisitsian: *Starinnïye armianskiye plyaski i teatral'nïye predstavleniya* [Old Armenian dances and theatrical presentations] (Yerevan, 1958–72)
Gusan Havasi: *Erger* [Songs] (Yerevan, 1961)
Gusan Shahen: *Erger* [Songs] (Yerevan, 1964)
M. T'umadjian: *Hayreni erg u ban* [Folksongs] (Yerevan, 1972–86)
A. K'ocharian: *Hay gusanakan erger* [Armenian gusan songs] (Yerevan, 1976)
A. P'ahlevanian: *Hayreni erger* [Folksongs] (Yerevan, 1980)

II. Church music

1. History. 2. Chant genres. 3. Notation. 4. Modal system and style.

1. History. In 301 CE St Grigor the Illuminator converted King Trdat III (Tiridates) to Christianity; Armenia thus became the first officially Christian state. Having participated in the first three ecumenical councils only, the Church of Armenia belongs to the Lesser Eastern Orthodox group of churches. At the beginning of the 5th century, during the Catholicate of St Sahak Part'ew (387–436), St Mesrop Mashtots (*d* 440) devised the Armenian alphabet. The translation of the Bible into Armenian, which immediately followed, became the starting point for the development of a distinctive tradition of liturgical music. *Grabar*, the classical Armenian language, has remained the ritual language of the Armenian Church. The Divine Liturgy (*Patarag* is based on the liturgy of St Athanasius of Alexandria and the Alexandrian text of St Basil of Caesarea; it was reformed in the 12th century by Catholicos St Nerses IV Klayetsi, known as 'Shnorhali' ('Gracious').

Knowledge of the early periods of Armenian liturgical music is scarce and derives primarily from events and facts documented in medieval sources (information that was formerly transmitted orally). However, the historical development of the early rite and its music can be reconstructed from liturgical manuscripts, in which the archaic structure is largely preserved. During the first centuries of Christianity in Armenia, the greater part of the liturgy consisted of psalms and canticles whose chants were probably adapted from local melodies. Hymns such as *P'ark' i bardzuns* (Gloria in excelsis), *Luys zevart'* (*Phōs hilaron*) and *Surb Astuads* (Trisagion) were also gradually introduced. The organization of traditional melodic patterns into an eight-mode system is ascribed to the 8th-century theorist and hymnographer Step'anos Siwnetsi.

As the liturgy evolved, the number of chants increased and new forms appeared. Sacred song blossomed during the Armenian renaissance of the 10th–13th centuries, a period of political stability that favoured urban expansion and the flourishing of art and trade. By this time there was already a substantial repertory of liturgical chants whose music, with its diverse melodic turns and elaborate melismas, was often quite complex and ornate. A complete Proper repertory of the texts, of which there were regional melodic variants, was established by the 15th century, and many new chants continued to appear up to the 19th. The main melodic variants to have come down into the 20th century developed in diaspora centres such as Constantinople (where several schools existed), the Mekhitarist monastery in Venice, the Armenian monastery in Jerusalem and the Armenian communities of Egypt and

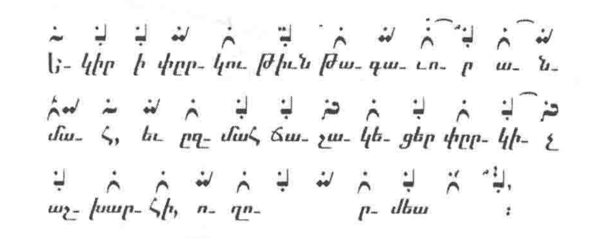
Iran. The origins of these variants derive from the musical traditions of the monasteries of Cilicia and Greater Armenia.

2. Chant genres. The Armenian liturgy is completely interwoven with music. Only the prayers and collects are spoken; the rest consists of three main forms of musical interpolation: (1) sung recitative, such as simple psalmody, introits and litanies, with a limited range; (2) chants, including the majority of *sharakan* (canonical hymns), based on traditional melodic patterns; and (3) chants with particular melodies, such as the *tagh*, *meghedi* and *erg*. The forms in all three categories are used for psalmody, for the chants of the Divine Liturgy and for the Office chants of the Book of Hours (*zhamagirk'*).

The substance of the Armenian Church's musical system is the *sharakan* repertory of more than 1300 cyclically organized chants contained in the Book of *Sharakan* (modern term *sharaknots*), which developed from the hymnbook compiled by Barsegh Tjon in the 7th century. In the earliest period these were sung during Offices, alternating with psalms and canticles; later, they replaced several psalms and canticles, the first verses of which were retained as introductions and intonations. Little is known about their early history: *sharakan* authors were listed only from the 13th century onwards, and their names reflect the hieratic character of the repertory. Thus, St Mesrop Mashtots and St Sahak Part'ew are traditionally considered to be the first composers of the genre, although the oldest attested chant of the present Book of *Sharakan* dates from the 7th century. Almost a fifth of all present canonical *sharakan* chants were composed by Catholicos St Nerses IV Klayetsi (1112–73). The melodic patterns of the *sharakan* have their own developed structure, but they are subordinate to the texts and are adapted according to the prosody of the words. Depending on the occasion, the same *sharakan* may be sung in its rapid, medium or slow variants, for which the melodic pattern is again adapted. (For a transcription of a *sharakan* for Resurrection Sundays see below, ex.15*b*.)

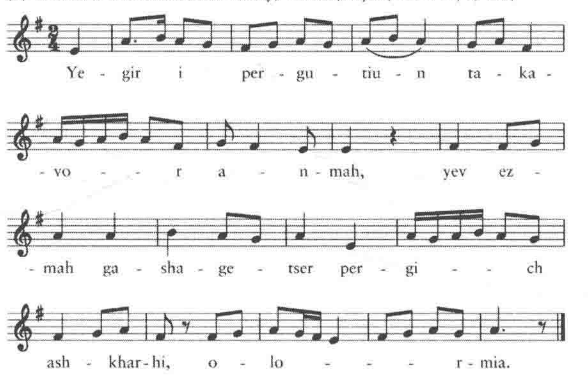
The *tagh* and the *meghedi*, which are no longer clearly distinct genres, are thought to have developed in about the 10th and 11th centuries. Their rich ornamentation and long phrases may have influenced some slow *sharakan* chants. The *gandz*, which have all but disappeared from the repertory, were originally litanies, usually in recitative style and of limited range; the handful that remain are no longer in litany form but have been transformed into chant-like melodies. The *erg* ('song'), the oldest of the genres, is the term used for the chants of the Book of Hours, most of which survive in numerous variants.

With the development of Armenian church ritual over the centuries, several liturgical books were compiled at different periods: the *zhamagirk'* (Book of Hours), *Pataragamatyuts* (Book of the Divine Liturgy) and the Book of *Sharakan* are for daily use; the *tagharan*, *gandzaran* and *ergaran* are specific collections of optional chants (the *zhamagirk'* also includes optional chants); and the *mashtots* contains canons for ordinations, baptisms and funerals, among other rites.



3. Notation. An ekphonetic notation developed from prosodic accents was introduced into the Armenian Church in about the 9th century and was used primarily for the liturgical recitation of the Bible. During the same period a system of neumes, known as *khaz* notation, also appeared (fig.2). The latter subsequently developed during the period of the Cilician kingdom (1187–1375) and was later adapted to the evolving traditional melodic patterns and new chant forms.

The most important reform of *khaz* notation and compiling of *khaz* transcriptions of the Book of *Sharakan* was undertaken by Grigor, nicknamed 'Khul' ('deaf'), during the reign of Levon II (1187–1219). Manuals called *manrusum*, in which chants notated in *khaz* are arranged according to the degree of difficulty, date from the Cilician period. The continuous contact of monks from Greater Armenia with the Cilician monasteries promoted musical exchange and evolution; it was through such interaction that the development of *khaz* notation was brought from the Cilician kingdom to Greater Armenia. Though highly elaborate, *khaz* notation remained a series of indications, valid only within the context of an orally transmitted, living tradition.



During the 16th century the teaching of *khaz* notation began to decline, and the transmission of liturgical chants was increasingly dependent on oral methods. In 1812 a modern system with diastematic characteristics, called 'church notation', was developed in Constantinople through the collective efforts of Baba Hambardzum Limondjian (1768–1839), Fr Minas Bejeshkian (1777–1851) of the Venice Mekhitarist congregation, Andon Duzian (1765–1814) and Hagop Duzian (1793–1847). Now known as 'Armenian modern musical notation', it was used to transcribe the canonical repertory of liturgical chant in different variants. (An example of this notation, together with a transcription into Western notation, is given in Ex.15.) The official publication of the transcriptions began in 1874 at the instigation of Catholicos Georg IV (1813–82), who had received his musical training at

(b) Version of Mekhitarist Monastery, Venice (Dayan, 1960-76, v, 450)

2. *'Khaz' notation in a 'Sharaknots' (Book of 'Sharakan'), 1312 (Vienna, Library of the Mekhitarist Monastery 202, ff.88v–89r)*

Constantinople. When these transcriptions were begun, however, the elaborate melodies of numerous chants had already been forgotten; with the destruction of Armenian monasteries in 1915–16, further loss of the repertory occurred as many songs and variant traditions disappeared. Several books using Armenian modern musical notation have since been published, and manuscript notebooks belonging to ordained choristers remain in use or are preserved in libraries. Western notation has also been used since the early 20th century, especially for polyphonic versions of the Divine Liturgy and other frequently performed chants. Modern studies of *khaz* notation began with the work of Eghia Tntessian (1834–81) and Fr Komitas (1869–1935).

4. Modal system and style. Because no medieval Armenian music treatise has survived, information on chant theory must be sought in the repertory itself, especially from the *sharakan* chants, which are organized according to the system of the eight modes (*Ut' dzayn*). The Armenian *oktōēchos* is formally divided into four modes called *dzayn* ('voice'; equivalent to the Byzantine *ēchos*) and four termed *koghm* ('side'; the Byzantine *ēchos plagios*). There are also a number of modes called *dardzuatzk'* ('strophe'), ex.15 *steghi* ('branched') and *zartughi* ('deviated'), each classified under one or other of the eight modes. Approximately 20 modes are combined in the Armenian *oktōēchos*, each containing a number of different melodic patterns. The modes are defined by their characteristic melodic formulae and interval combinations. Pythagorean diatonic, natural diatonic and chromatic intervals are used with varying divisions. The definition also includes such characteristic features as the hierarchy of the fundamental, final, leading note and other degrees, as well as the interpretation required for each degree, for example, use of the full voice, vibrating the voice within a very small interval, or making minor pitch changes according to the upwards or downwards motion of the melody.

The main characteristics of melodic development in Armenian chant include movement within the natural 4th, direct passage between intervals of 3rds and 4ths, and slow upwards and rapid downwards (somewhat ornamental) progressions. A drone sung on the vowel '*u*', either on the fundamental degree or on the first degree of the basic interval (which in many cases is the same pitch) is frequently used to accompany solo singing and slow group songs such as processional chants.

In the 19th century, with the participation of polyphonic choirs and the organ in the celebration of the Divine Liturgy, equal temperament was introduced. Settings of the Divine Liturgy include those of Makar Ekmalian (1856–1905), Levon Chilingirian (1862–1932), Fr Komitas (1869–1935) and Khoren Mekhanedjian (*b* 1937). During the latter half of the 20th century the singing of traditional modal chant at the liturgy declined, and knowledge and teaching of the Armenian *oktōēchos* – still the musical basis of the Offices – has also diminshed. The practice has nevertheless been kept alive by groups of ordained choristers led by precentors. Although notation is used to a certain extent, the musical training of such choristers relies mainly on oral transmission.

III. Opera, ballet, orchestral and chamber music

The growth of musics influenced by European art forms in the second half of the 19th century was brought about predominantly by the incorporation of two areas of eastern Armenia into Russia (one from Persia in 1828 and one from Turkey in 1878). Enforced emigration and the dispersal of Armenians in Europe and the East determined the development of Armenian culture; various Armenian societies, cultural and educational centres and publishing organizations sprang up, in Armenia as well as in Moscow, Tbilisi, St Petersburg, Baku, Constantinople, Paris, Venice and Vienna. Important roles were played by the Lazarian Institute (Moscow, 1815), the Nersessian College (Tbilisi,

1824), the Gevork'ian Theological Seminary (Vagharshapat [now Edjmiadsin], 1874) and by the K'nar musical society, set up in Constantinople on the initiative of G. Yeranian and Tigran Chukhajian, which published the periodicals *K'nar arevelian* ('Eastern lyre', 1857) and *K'nar Haykakan* ('Armenian lyre', from 1861). From the mid-19th century, arrangements of traditional and popular songs were made. Solo and choral performances became more frequent and the first small symphony orchestras were formed. Constantinople and Tbilisi became the biggest centres of musical culture for western and eastern Armenia; there were links with Western traditions in Constantinople and with Russia in Tbilisi. Various European genres, including opera, chamber music and romance, were adapted; Tigran Chukhajian, G. Yeranian and G. Korganian were the first composers of this trend. In 1868 Chukhajian composed the first Armenian opera, *Arshak Erkrord*, based on a historical patriotic theme. In the 1880s the systematic collection of folksongs and folkdances began. Khristofor Kara-Murza, Makar Yekmalian, Nikoghayos Tigranian, T'ashchian and Komitas laid the foundations of a new Armenian instrumental and choral culture, both secular and sacred, and were also associated with the nationalistic development of polyphony inspired by the harmonic style and tunes of folk music and by medieval Armenian church music. The central figure of the period was Komitas, who created a national compositional style and established Armenian musical scholarship.

In the early 20th century the first Armenian symphonic works were written, together with a new kind of national opera closely bound up with traditional music, for instance Armen Tigranian's lyrical opera *Anush* (1912). Armenian symphonic poems, overtures, suites, chamber music and vocal music were written by Aleksandr Spendiarian, Tigranian, Romanos Melik'ian, A. Ter-Ghevondian and Sarkis Barkhudarian. Spendiarian was the leading Armenian symphonic composer; his works, notable for their rich and expressive timbre, greatly influenced later Armenian composers. Skilful use of timbre and harmony is also characteristic of Melik'ian, the creator of a new style of romance (*Zmrukhti*, 1920). In the first few years after the establishment of the Soviet regime (1920–91) Yerevan, the capital of Armenia, became the centre of musical activity. In 1921 the Musical Studio was organized on the initiative of Melik'ian; in 1923 it was transformed into the conservatory (now the Komitas State Conservatory). Melik'ian also encouraged the formation of the first state choral ensemble. The opera and ballet theatre was opened in 1933; two years later it became the Spendiarian Armenian Theatre of Opera and Ballet. The Armenian PO, Choral Society and Composers' Union were founded in 1932, while the Komitas String Quartet was established in 1925. The highlights of native composition were the suite *Yerevan Sketches* (1925) and the opera *Almast* by Tumanian, as well as works by Ter-Ghevondian and Melik'ian, and organ music by K. K'ushnarian.

Armenian musicians were trained in the conservatories of Moscow and, particularly, Leningrad. Through the efforts of many composers over several decades, Armenian music developed a distinctive style that had reached maturity by the 1930s. Khachaturian laid down the principles of new symphonic thinking which, in addition to Spendiarian's idiom, became the determining factors for the development of Armenian music. He also influenced cultural development in Georgia, Azerbaijan and Soviet Central Asia.

In the 1930s Haro Stepan'ian composed several operas in a style novel for the period (including *Kaj Nazar*); operas and ballets were also written by A. Mailian, A. Ter-Ghevondian, A. Ayvazian, Sarkis Barkhudarian and Sergey Balasanian. Thematic versatility and associations with national literature, as well as the desire to depict contemporary events, were characteristic of the music of this period. There was also rapid development in choral music, romances, songs and arrangements of folktunes, which in turn influenced opera. The composers who became prominent in the 1940s and 1950s continued to base their work on Armenian heritage and to develop further the artistic principles of Spendiarian and Khachaturian. In this period the most important genre was the symphony, and works of the 1940s are notable for the increasing importance of patriotic themes, which determined the large scale and dramatic nature of the music. Khachaturian's Second Symphony (1943) is among the best-known wartime Soviet symphonies; other examples are Grigor Yeghiazarian's symphonic poem *Armenia* (1942) and Step'anian's two symphonies (1943–5). The patriotic theme was brilliantly expressed in Alexander Harut'unian's vocal symphony *Cantata on the Homeland* (1948). In the 1950s instrumental music flourished. The dramatic, epic and lyrical elements typical of Armenian music were integrated into a broader symphonic style, manifested in Khachaturian's ballet *Spartacus* (1954), the symphonies of Yeghiazarian, Harut'unian, Edgar Hovhanesian and Jivan Ter-Tatevosian, Harut'unian's Trumpet Concerto, A. Khudoian's Cello Concerto, the *Introduction and Perpetuum mobile* for violin and orchestra by Eduard Mirzoian, and Arno Babadjanian's *Herosakan Ballad*. Symphonic principles also found their way into chamber music.

A feature of Armenian music in the 1960s and 1970s has been the diversity and interaction of stylistic trends and genres: A. Adjemian's Symphony no.2 includes a solo voice; choral ballets have been written by K. Orbelian and Hovhanesian, and an opera-oratorio with pantomime by Avet Terterian; while Terterian's Symphony no.2 includes a solo tenor and choir. Composers have experimented with neo-Classical elements (e.g. Mirzoian in his Symphony, Mansurian in his Partita for orchestra, Harutunian in his Simphonietta, L. Sarian in his Violin Concerto and Gagik Hovunts in his orchestral Inventions); dodecaphony (in *Shest' kartin* (Six Pictures) for piano by Arno Babadjanian, Ter-Tatevosian's Second String Quartet, Mansurian's Piano Trio and E. Hayrapetian's oratorio *1915th*); and aleatory procedures (Terterian's second and third symphonies and Aristakesian's Simphonietta).

Since the 1970s Armenian composition has been characterized by the search for possibilities within the national style. Aram Khachaturian's music has been particularly influential on younger generations of composers, who increasingly regard Armenian music as part of the wider international culture. Within the stylistic variety, however, two main directions can be detected. Some composers have sought inspiration in the traditional monodic music. For example, E. Hovhannesian's opera-ballet *David of Sasun* is based on an Armenian epic and L. Astvatsatrian has used the modal structures of ancient Armenian music in his First Symphony. Other composers

following a similar path include G. Hovunts (piano and violin concertos), S. Arghajanian (*Polymonodies* for strings), A. Voskanian (vocal works), Y. Erkanian (opera *St Shushanik*) and Hovhannesian. The other main direction has focussed on avant-garde techniques and the use of modern technology. Composers of such music include G. Eghiazarian, whose ballet *Ara Beautiful and Shamiram* uses both neo-impressionist and neo-expresssionist styles, L. Sarian (Symphony and Passacaglia), Mansurian (*Preludes* for orchestra), Astvatsatrian (who uses spatial techniques and tape), and A. Zobrabian, whose chamber work *Elegy* employs microtonal heterophony.

Armenreich, Bernhard. *See* AMENREICH, BERNHARD.

Armer, Elinor (*b* Oakland, CA, 6 Oct 1939). American composer and pianist. She studied composition at Mills College (BA 1961), the University of California, Berkeley (1966–8), and California State University, San Francisco (MA 1972). Her teachers included Milhaud and Leon Kirchner (composition), and Alexander Libermann (piano). In 1976 she was appointed to teach at San Francisco Conservatory of Music, where she was head of composition from 1985 to 1996. Eschewing such directions as serial writing and minimalism, she has developed an individual voice that draws together diverse materials through strong articulation of phrasing and gesture. Her compositions are often programmatic yet avoid musical literalism. Written in collaboration with the author Ursula K. Le Guin, *Uses of Music in Uttermost Parts* represents an imaginative cycle of eight separate works for various forces. In this fantasy journey through an archipelago each island puts music to extraordinary uses; for example as food, aphrodisiac, geology or as a means of survival. The first piece in this cycle, *The Great Instrument of the Geggerets*, employs a variety of styles, producing a wide range of expression: dense textures of sound mass occur alongside extended instrumental techniques, a tuneful waltz and allusions to ragtime. *Open and Shut*, the fifth work in the cycle, exemplifies her successful mix of playful and abstract elements. Her rich harmonic vocabulary is atonal – but not exclusively – and her scoring imaginative and vivid.

WORKS
(*selective list*)

Orch: Pearl, 1986; The Great Instrument of the Geggerets (U.K. Le Guin), nar, orch, 1989 [Uses of Music in Uttermost Parts no.1]

J. MICHELE EDWARDS

Armes, Philip (*b* Norwich, 15 Aug 1836; *d* Durham, 10 Feb 1908). English cathedral organist, teacher and composer. After training as a chorister at Norwich Cathedral (1846–8) and at Rochester Cathedral (1848–

50) Armes became pupil-assistant to J.L. Hopkins at Rochester (1850–56). He was subsequently organist of Trinity Church, Gravesend (1855–7), St Andrew's, Wells Street, London (1857–61), Chichester Cathedral (1861–2) and Durham Cathedral (1862–1907). He took the Oxford BMus in 1858 and DMus in 1864. He was resident examiner in music at the University of Durham from 1890 and became its first professor in 1897; he was examiner at Oxford from 1894. During the 1880s Armes collated and indexed the four sets of manuscript partbooks surviving at Durham. These contained the service music together with separate organ parts of a wide repertory from Tallis to Purcell, formerly used in the cathedral. He composed three oratorios, various anthems, services and other church music.

BERNARR RAINBOW

Armingaud, Jules (*b* Bayonne, 3 May 1820; *d* Paris, 27 Feb 1900). French violinist and composer. A pupil of Alard, he attempted to enter the Paris Conservatoire in 1839 but was refused admission, according to Fétis, because of his advanced and individualistic talent. He played in the orchestra of the Opéra-Comique, and in the revolution of 1848 he was active, with Edouard Lalo, in the leftist Association des Artistes Musiciens. In 1855 he formed, with Lalo, Joseph Mas and Léon Jacquard, a string quartet in which he played first violin. The quartet enjoyed a great reputation for the works of Mendelssohn and Beethoven; many of their quartets had seldom been performed before. Clara Schumann apparently played with the Armingaud quartet during visits to Paris in 1862 and 1863. The ensemble was later transformed, by the addition of wind instruments, into the Société Classique. Armingaud was praised for his graceful but solid playing and his beautiful tone. His compositions, which run to at least op.53, are primarily light works for violin and piano, described by van der Straeten as 'florid [and] showy', but they also include a fantasy on themes from *Lohengrin* and a chorus with orchestra. He published two books of musical aphorisms, *Consonances et dissonances* (Paris, 1882) and *Modulations* (Paris, 1895).

Armonia di flauto (It.). *See* TRIFLAUTO.

Armonica. A sophisticated form of MUSICAL GLASSES, invented by Benjamin Franklin in 1761, in which a row of glass bowls are nested within one another concentrically on a horizontal axle, which is turned with a pedal.

Armonica a bocca (It.). *See* HARMONICA (i).

Armonica a manticino (It.). *See* ACCORDION.

Armonioso (It.: 'harmonious'). An expression mark denoting a harmonious style. It was particularly favoured by Liszt, who used it in his piano music for long sections to be played under the sustaining pedal.

Armonipiano. *See* SOSTENENTE PIANO, §4.

Armsdorff, Andreas (*b* Mühlberg, nr Gotha, 9 Sept 1670; *d* Erfurt, 31 Dec 1699). German composer and organist. He studied law as well as music. He held organ posts at Erfurt, successively at the Reglerkirche, Andreaskirche and Kaufmannskirche. Although he wrote little because of his early death, his chorale-preludes were very popular in his day, judging from the numbers of manuscript copies of them circulating in Germany. *Allein Gott in der Höh' sei Ehr* is a charming trio, with the modified tune in the discant in canon with the real tune in the pedals, while *Allein zu dir, Herr Jesu Christ* exemplifies the ornamental discant chorale. Such pieces bear out Jakob Adlung's view in the following century that Armsdorff wrote music grateful to the ear.

WORKS

31 chorale-preludes [3 atrrib. Armsdorff by Beckmann], org; ed. K. Beckmann, *Samtliche Orgelwerke: Johann Friedrich Alberti, Andreas Armsdorff* (Messstetten, 1996); 4 ed. in EDM, 1st ser., ix (1937)

G.B. SHARP

Armstrong, Frankie (*b* Workington, Cumbria, 13 Jan 1941). English traditional singer, writer and teacher. She began singing American songs in 1957 with a band, Skiffle Group, which eventually adopted a repertory of British traditional songs. From the early 1960s Armstrong, partially sighted, combined a singing career with that of social worker. Influenced by singer Louis Killen, she studied traditional singers and analysed the synthesis of content, style and form in traditional performance. In 1964, she joined Ewan MacColl and PEGGY SEEGER's Critics Group. In New York in 1973 she attended a Balkan singing class run by Ethel Raim, a meeting that had a long-term influence on her both as a singer and teacher and as an activist in the Women's Movement. In 1975, Armstrong began teaching Voice Workshops which aimed to help singers and non-singers to express themselves through voice and song. Since the late 1980s, she has run joint voice workshops with her husband, Darien Pritchard, a movement and relaxation specialist. A politically committed artist, who frequently performs for women's peace and environmental groups, Armstrong has one of the most distinctive and emotive voices of the Folk Revival.

DAVE ARTHUR

Armstrong, Louis [Dippermouth, Pops, Satchelmouth, Satchmo] (*b* New Orleans, 4 Aug 1901; *d* New York, 6 July 1971). American jazz trumpeter, singer and bandleader.

1. LIFE. Armstrong's father abandoned his mother around the time of his birth, and the family lived in poverty in New Orleans, near the saloons and dance halls whose music, along with what he heard and sang in church, was his first musical influence. As a child he worked at odd jobs and began performing on the streets with a vocal quartet. In 1912 he was arrested for delinquency and sent to the Colored Waifs' Home in New Orleans, where he started to play the cornet and received his first formal musical tuition from Peter Davis, a member of the staff. After his release at the age of about 14, he again held various jobs and lived with his mother. He was befriended, taught and given his own cornet by his lifelong idol, the jazz cornettist Joe 'King' Oliver. Soon he began to play professionally, working with many New Orleans jazz musicians who later moved to the north, and in 1918 he joined Kid Ory's band, replacing Oliver himself, who had left for Chicago. At this time he also began working in Fate Marable's riverboat bands on excursions from New Orleans and St Louis.

In 1922 Oliver sent for Armstrong to join his successful Creole Jazz Band at Lincoln Gardens, Chicago. This offer was crucial for Armstrong, who maintained that he would have left New Orleans for no-one else; he now played with the finest and most influential New Orleans group in the north. He was recorded for the first time in Oliver's noteworthy 1923 series. The discipline and sensitivity of his improvised second cornet parts to Oliver's lead are specially apparent in the third chorus, first statement, of *Mabel's Dream*. While with Oliver's group Armstrong married the band's pianist, Lillian Hardin (they were divorced in 1938). Her influence and his own growing discontent with the band's restricting style led him reluctantly in 1924 to accept Fletcher Henderson's invitation to join his big band in New York. As a section player in a larger group, Armstrong made his ensemble playing conform to the stiff rhythms then favoured by Henderson (for example, *Copenhagen*, 1924, Voc.). His sophisticated, flowing solos, however, introduced a novel style into the city's jazz and dance music and exerted a wide influence on New York musicians, among them the band's arranger, Don Redman, who soon found orchestral counterparts for many of Armstrong's devices. While in New York, Armstrong made several recordings with other groups, including the striking *I ain't gonna play no second fiddle* (1925, Voc.) with Perry Bradford's Jazz Phools, a noteworthy series with Clarence Williams's groups (for example, *Texas Moaner Blues*, 1924, OK) and as an accompanist to such blues singers as Bessie Smith (*St Louis Blues*, 1925, Col.).

In 1925 Armstrong returned to Chicago, where he played with groups led by his wife, Carroll Dickerson and Erskine Tate and, for most of 1927, with his own ensemble. In 1925 he also began a series of recordings under his own name. His originality and range as an improviser and the power and beauty of his ideas, as revealed in these remarkable early recordings, established his international reputation as the greatest and most creative jazz musician. The series also traces the search for an accompaniment appropriate to his increasingly virtuoso solo manner. The earliest of these – the Hot Five and Hot Seven recordings with his wife, the Dodds brothers, Kid Ory and Johnny St Cyr – were modelled on New Orleans ensembles, leading to such masterpieces of the later New Orleans style as *Big Butter and Egg Man* (1926, OK), *Potato Head Blues* (1927, OK) and *Struttin' with some Barbecue* (1927, OK). Then in 1928 he turned to a more modern small band, which included the pianist Earl Hines, and made greater use of arranged material, as in the remarkable *Weather Bird*, a duet with Hines, *West End Blues* and *Beau Koo Jack* (all OK). Finally, in mid-1929 Armstrong adopted the format he was to use until 1947: a big band as a neutral accompaniment to his playing and singing, which by now was dominated by large-scale, virtuoso conceptions. At the same time he began to concentrate on a popular repertory.

There is controversy about Armstrong's big-band period. Although his technical innovations had ceased, his performing still had artistic merit, and he made recordings of great power, beauty and maturity, such as *Body and Soul* (1930, OK), *Star Dust* (1931, OK), *Sweethearts on Parade* (1930, Col.) and *I gotta right to sing the blues* (1933, Vic.). He toured and recorded with large groups, particularly that of Luis Russell (1935–44), in the USA and in Europe (1932–5). He made film appearances, the first in *Pennies from Heaven* with Bing Crosby (1936), and hundreds of recordings with his own and other groups, becoming increasingly influential as a singer of popular music and reaching a wider audience. The serious jazz content of his playing diminished, and he was criticized for the low quality of his bands, his

Louis Armstrong

repertory and his failure to live up to the promise of his earlier achievements.

After successful appearances with small groups in 1947, including one in the film *New Orleans*, Armstrong formed his All Stars, a sextet on the New Orleans model with which he worked until his death. Its personnel, but not its instrumentation, varied, and at times included the clarinettists Barney Bigard and Edmond Hall, the trombonists Jack Teagarden and Trummy Young, Armstrong's earlier associate Hines and the drummers Sid Catlett and Cozy Cole. With this group Armstrong again showed his superlative quality as a jazz musician, playing less elaborately than he had for some time. Among the best recordings from this period is a collection of new versions of his classic performances, *Satchmo: a Musical Autobiography* (1956–7, Decca). At the same time he continued to make popular recordings, such as *Mack the Knife* (1955, Col.), *Hello Dolly* (1963, Kapp) and *What a Wonderful World* (on the album *Louis Armstrong with his Friends*, 1970, Amsterdam). The All Stars toured with great success in the USA, Australia, East Asia, Europe and South America. In 1960 they toured Africa twice, and their international travelling in the 1960s earned Armstrong the nickname 'Ambassador Satch'. Illness incapacitated him several times in the late 1960s and took its toll on his playing. In public appearances from mid-1969 to September 1970 he was able only to sing; he then resumed playing, but he suffered a heart attack in March 1971.

2. WORK. Armstrong's importance in the history of jazz is inestimable. The testimony of contemporary jazz musicians shows that his playing greatly impressed all who heard him. Much of his power lay in the grace, sensitivity and poise of his work, features not susceptible to imitation; but his concepts of tone and range, or rhythm and phrasing (both to some extent initially influenced by Oliver), and his sophisticated pitch choice were imitated. Almost all aspects of jazz technique and style, whether played or sung, were influenced directly by Armstrong's innovations of the 1920s.

Armstrong acquired a basic beauty and strength of sound early in his career, and it is apparent even in his work with Oliver and Henderson. His studies with Oliver and his New Orleans background had made him familiar with the expressive possibilities of timbre; but he developed still more expressive ways of attacking and sustaining notes, often, for example, increasing ambitus of vibrato after an attack to give an accumulating energy and a kind of interior rhythm to individual notes and an additional propulsion to entire phrases. Even in the relatively early *Potato Head Blues* (1927, OK) he showed a repertory of devices for varying timbre, including alternative fingerings for the same note (ex.1, bars 9–10). This was coupled with a dramatic expansion of his instrument's range: he had cultivated a solid low register as auxiliary cornettist with Oliver and Henderson, and he now gradually extended his range upwards to encompass an unprecedented three octaves, throughout which he could play with equal fluency and fullness of tone. His rhythms drew on the flowing New Orleans style and again on Oliver's example, but he was able to free his playing still further from the rhythmic predictability of early jazz by using short spans and later whole phrases that seemed at first to contradict the underlying pulse, only to merge with it again. This was a basic element in his lyricism that

Ex.1 Chorus from Armstrong's solo on *Potato Head Blues* (1927, OK) (rhythm section plays only on first beat of odd-numbered bars)

for a long time set him apart. Further, Armstrong was able to link phrases without the characteristic problem in early jazz of vacant or formulaic cadences. He had acquired from Oliver a dynamic ability to imply harmony through line and pitch, yet to this basic technique he added a harmonic awareness far in advance of his contemporaries, for example, the augmented passing harmonies in bars 6 and 22 of ex.1 and the implicit II^7–V^7 in bar 20. Further, although Armstrong did not introduce 9ths, 13ths and chromaticisms into jazz harmony, he used them so systematically and with such effective placing that his choice of pitch sounded completely fresh. The cogency of his technical innovations, each solving a particular problem faced by the jazz soloist, and his untiring wealth of lyric improvisation, enabled him to extend his solos for several choruses and to structure entire performances, another aspect of his originality.

Armstrong was equally noteworthy for his singing, particularly for his scat performances (see ex.1), some of

which are among the earliest recorded examples (*Heebie Jeebies*, 1926, OK; *Gully Low Blues*, 1927, OK; *Hotter than that*, 1927, OK). His unique 'gravelly' voice, a mid-tenor but with an enlarged range, was a natural extension of his instrument: he elaborated a given melody or improvised new lines on the principles found in his trumpet playing. When applied to his singing his rhythmic subtleties were all the more striking, and he introduced a freedom and jazz sensibility that continue to be an important influence in popular singing.

Armstrong's publications for trumpet include *Fifty Hot Choruses* and *125 Hot Breaks* (both 1927), *Louis Satchmo Armstrong's Dixieland Trumpet Solos* (1947) and *Trumpet Method* (1961).

JAMES DAPOGNY

Armstrong, Richard (*b* Leicester, 7 Jan 1943). English conductor. An organ scholar at Corpus Christi College, Cambridge, he joined the musical staff of Covent Garden in 1966, moving to the WNO in December 1968 as assistant musical director to James Lockhart. He made his conducting début with *Le nozze di Figaro* in 1969, and he was musical director from 1973 until 1986, when he became principal guest conductor at Frankfurt. This period covered the company's biggest expansion, including several foreign visits. His conducting repertory included an acclaimed cycle of five Janáček operas, the first Welsh *Ring* cycles, André Engel's production of *Salome*, and numerous Verdi productions, including the Peter Stein *Otello*.

Armstrong conducted two *Ring* cycles when the WNO became the first regional company to visit Covent Garden in 1986, and took their *Falstaff* to New York and Milan in 1989. In May 1990 he conducted the première of John Metcalf's *Tornrak*, also for the WNO. In 1993 he became musical director of Scottish Opera, where he has conducted numerous operas, including *Tristan und Isolde* and Schnittke's *Life with an Idiot* (which he also conducted for the ENO). He has appeared with the leading British orchestras, the Japan Philharmonic and the Berlin Symphony Orchestra, and conducted operatic productions in Berlin, Geneva, Brussels and Amsterdam.

KENNETH LOVELAND

Armstrong, Sir **Thomas (Henry Wait)** (*b* Peterborough, 15 June 1898; *d* ? Olney, Bucks, 26 June 1994). English organist, conductor and educationist. He was trained by Haydn Keeton, organist of Peterborough Cathedral, where he was assistant organist, 1915–16. He then studied at the Royal College of Music and Keble College, Oxford. He became successively assistant organist of Manchester Cathedral (1921–2) and organist of St Peter's, Eaton Square, London (1922–8); during the later period he studied at the RCM with Holst and Vaughan Williams. He took the Oxford DMus in 1929. From 1928 to 1933 he was organist of Exeter Cathedral. In 1933 he was appointed organist of Christ Church, Oxford, and remained there until he was appointed principal of the Royal Academy of Music in 1955, a post from which he retired in 1968. He was knighted in 1958. While organist of Exeter Cathedral he was also director of music to the University College of the Southwest and this experience stood him in good stead at Oxford, where he achieved success as a tutor and lecturer and – in succession to Hugh Allen – as conductor of the Bach Choir and the Orchestral Society.

Armstrong was a sought-after adjudicator and an excellent music broadcaster to schools. Through these activities he reached a wide public. In his earlier days he was influenced by Hamilton Harty, for whom he worked at Manchester, and by his teachers Vaughan Williams and Holst but probably above all by Allen, director of the RCM and then professor of music at Oxford. As principal of the RAM he travelled abroad extensively, gathering ideas that would broaden the basis of the RAM and encourage an outward-looking attitude among its students. An extremely competent and versatile musician, he published two short books (on Mendelssohn's *Elijah* and Strauss's tone poems, both in 1931) and a few articles, and composed in the smaller choral forms.

BERNARD ROSE/R

Arnaoudov, Georgi (*b* Sofia, 18 March, 1957). Bulgarian composer. From 1978 to 1985 he attended the State Music Academy in Sofia, graduating from the composition classes of Bozhidar Spasov and Aleksandr Tanev; he also studied with Ton de Leeuw during international workshops in 1985 and 1991. From 1983 to 1989 he was secretary of the young composers' section of the Bulgarian Composers' Union. He was professor of composition and

harmony at the State Academy (1985–95) and in 1993 became a leading representative of Musica Nova, the international music festival held in Sofia. In 1995 he was appointed associate professor in the New Bulgarian University's theatre department and has since become secretary-general of the Bulgarian section of the ISCM.

Arnaoudov is perhaps the most original of his generation of Bulgarian composers; he is also among the first to have embraced minimalism. In his musical style he deliberately eschews folksong as a source of inspiration turning instead to the mystical and ritualistic. His immediate antecedents are Crumb, Messiaen, Gorecki, Pärt, Kancheli and Korndorf. Arnaoudov employs a unique combination of minimalist devices, serial techniques, dynamic and registral extremities, silence and sonorous effects to forge a highly personal musical language. Favouring transparent textures and developmental stasis, his works are often built around a single musical element such as a pitch or interval. This is particularly apparent in his piano miniatures and *Footnote (. . .und Isoldens Winkfall lassen)* for voice and chamber orchestra (1991).

ANNA LEVY, GREGORY MYERS

Arnaud, François (*b* Aubignan, Carpentras, 27 July 1721; *d* Paris, 2 Dec 1784). French man of letters. As a boy he mixed with the many musicians in the service of the Italian prelates, attracted to Carpentras by generous stipends. Arnaud came to Paris from Provence in 1752 as attaché to Prince Louis of Würtemberg. He was Abbé de Grandchamp (1765), librarian to the Comte de Provence and historiographer to the order of St Lazare, and in 1771 became a member of the Académie Française. He was a classical scholar and accomplished linguist and translator, and collaborated with his close friend J.B.A. Suard (whose wife was said to be his mistress) on the *Journal étranger*, *Gazette littéraire de l'Europe*, *Variétés littéraires* and other writings. His humour, historical knowledge and vigorous polemical style make him stand out among the many literary writers on music of the second half of the 18th century.

Arnaud was a member of the Encyclopedist generation and deeply influenced by its ideas, but he did not share Marmontel's or Rousseau's exclusive admiration for Italian music. The *Lettre sur la musique* of 1754 sketches an unrealized plan for a major historical work; La Borde included it in his *Essai sur la musique*. In 1757 Arnaud also helped Rameau to write his *Code de musique pratique*. Arnaud was particularly interested in prosody, arguing that every language should have its own melody or 'déclamation lyrique'; his ideas had considerable influence on Grétry. Arnaud had long advocated operatic reform, and his fervent admiration for Gluck, who seemed to revive antique tragedy, led to his being nicknamed the 'St Paul of the Gluck religion'. He engaged in a duel of wits with Marmontel, in whose *Polymnie* he figures as Trigaut. He saw Gluck's synthesis of French and Italian elements as the logical outcome of Encyclopedist ideas, especially those of d'Alembert, and attacked the superficiality of Italian opera in his 'Profession de foi en musique' (*Journal de Paris*, 1777). The pamphlet *La soirée perdue à l'Opéra* is attributed to him in his posthumous *Oeuvres*, in the *Mémoires pour servir à l'histoire de la révolution opérée dans la musique par M. le Chevalier Gluck*, and by Bricqueville, but it may be the work of Pascal Boyer. When he died Arnaud was beginning work on the musical part of Panckoucke's *Encyclopédie méthodique*.

JULIAN RUSHTON/MANUEL COUVREUR

Arnaut, Daniel. *See* DANIEL, ARNAUT.

Arnaut de Mareuil [Mareulh, Maroill] (*fl* *c*1170–1200). Provençal troubadour. He was apparently born at Mareuil-sur-Belle in the diocese of Périgord. According to his romanticized biography, he was by profession a scribe and notary, but abandoned his poorly paid duties in favour of a more enjoyable existence as troubadour; in the latter capacity he was first at the court of Roger II, Viscount of Béziers, and his wife Adelaide, and afterwards at the court of William VIII, Count of Montpellier. Of the 26 chansons attributed to him, six survive with music; 13 more works are ascribed to him in various sources, but are not likely to be his. In addition, he wrote both *saluts d'amours* (poetic love-letters), five of which survive, and an *ensenhamen*, a didactic, moralizing poem commenting on contemporary customs. He was among the first to

cultivate these genres. His poetry was much appreciated by Petrarch. He preferred evolving tonalities and structures to centralized ones: only *La grans beutatz* is cast in bar form, the second *pes* recurring in varied form in the cauda and set off by new material, and only in this melody is the final predictable from the opening phrase. Although characteristic motifs may recur in other melodies in either symmetrical or irregular fashion, entire phrases are not repeated. For the most part the melodies progress in neumatic style, interspersed occasionally with largely syllabic phrases. Ranges between a 7th and a 9th are normal, although the unusual *Si·m destrenhetz* apparently has a range of an 11th. There is no strong evidence for regularity of rhythmic organization.

THEODORE KARP

Arnaut de Zwolle, Henri (*b* Zwolle, late 14th or early 15th century; *d* Paris, 6 Sept 1466). Franco-Flemish physician, astrologer, astronomer and author of a treatise on musical instruments, of which he was presumably also a maker. Even if he did not, as has been assumed, study at the University of Paris, he would have become familiar with much of its curriculum through Jean Fusoris, whom Arnaut called his master. Fusoris, who had received degrees in theology, arts and medicine at the University, was a physician, astrologer, astronomer and prolific maker of astronomical and horological devices. By 1432 Arnaut had entered the service of Philip the Good, Duke of Burgundy, as 'professeur en medecine', 'astronomien' and 'maistre . . . en astrologie'. Between 1454 and 1461 he left the Burgundian court in Dijon and entered the service of the French king in Paris (Charles VII, and later Louis XI), where he died of the plague.

Arnaut is known chiefly for a manuscript (*F-Pn* lat.7295), mostly autograph, which contains treatises in Latin, tables and technical drawings about subjects including astronomy, hydraulics and the construction of astronomical instruments. Other devices are described, including a folding ladder and a machine to polish gems. Of particular musical interest are a copy of Johannes de Muris's *Musica speculativa* and a treatise on the design of musical instruments, both in Arnaut's hand. The latter, presumably of his own authorship (except for a brief section on clavichord scaling which he attributes to a certain Baudecetus), furnishes detailed information on the design and construction of the lute and various keyboard instruments, including the harpsichord, clavichord, *dulce melos* and organ (for his diagrams, *see* CLAVICHORD, fig. 2; DULCE MELOS, fig.1; HARPSICHORD, fig.2; and LUTE, fig.8). Also bound into the volume are notes written in several later 15th-century hands, mainly giving technical information about organs. Arnaut's manuscript probably existed as a collection of separate fascicles and sheets until they were bound together during the first half of the 16th century. The watermark in the paper used for the musical-instrument treatise suggests that it was written between about 1438 and 1446, whilst Arnaut was living in Dijon.

The treatise is an invaluable organological source: it gives the earliest known technical description of a large number of instruments. Often it documents earlier stages of development than can be observed in surviving examples, which, except for some fragments of organs, come from later periods. Arnaut's information about the portative and the dulce melos is especially significant, since no example of either instrument survives. Equally valuable is his unique record of the composition of the ranks in several *Blockwerk* organs.

Correspondences between Arnaut's designs and later 15th- and 16th-century organs, harpsichords, clavichords and lutes, as well as details known from other documentary and iconographical sources, demonstrate that he worked within the mainstream traditions of instrument making. His account of the harpsichord, which he called the *clavisimbalum*, is particularly interesting since it was written at a very early stage of the instrument's development. He explains that any one of four actions can be used; none is quite like the jack action that later became standard. One of these, a form of primitive hammer action not unlike that of a pianoforte, he associates particularly with the dulce melos, a rectangular keyed dulcimer which was probably his own invention. By suggesting that a plucking action could be applied to the clavichord, he also envisioned the virginal.

JOHN KOSTER

Arndt, Felix (*b* New York, 20 May 1889; *d* Harmon, NY, 10 Oct 1918). American composer and pianist. After studying the piano at the National Conservatory of Music in America and taking private lessons with Alexander Lambert, he pursued a varied career in New York, writing material for vaudeville entertainers, serving as a staff pianist for various publishers and recording extensively both on piano rolls (Duo-Art, QRS) and discs (Victor). Arndt's compositions combine salon gentility with occasional ragtime syncopation, foreshadowing the novelty-piano works of the 1920s by such composers as Confrey and Bargy. They include *Clover Club*, *Desecration*, *Love in June*, *Marionette* and the well-known *Nola* (1916).

RONALD RIDDLE

Arndt, Günther (*b* Charlottenburg, Berlin, 1 April 1907; *d* Berlin, 25 Dec 1976). German choral conductor and radio producer. He studied at the Akademie für Kirchen- und Schulmusik in Berlin and at the university there. A choirmaster and lecturer in music at the Berlin Volkshochschule (1932–40), he also taught music at a secondary school (1932–4) and was co-founder and conductor of the Berlin Heinrich Schütz Chorale. With the resumption of postwar musical life in Berlin he was appointed head of Berlin radio's chamber music department and from 1949 was a specialist adviser on symphonic music for RIAS. He founded the Berlin Motet Choir in 1950 and was its conductor to 1960, and he was also conductor of the RIAS Chamber Choir (1955–72). From 1964 until his retirement in 1972 he was deputy head of music for RIAS, and from 1965 he was also music director at Berlin's Freie und Technische Hochschule. Arndt gave the RIAS Chamber Choir an international reputation through numerous broadcasts and concert tours; he did much to promote contemporary music, giving many first performances including works by Bialas, Henze, Krenek, Schoenberg, Genzmer, Milhaud, Reimann and Sakač. Arndt was awarded the Grosse Verdienstkreuz der Bundesrepublik Deutschland in 1971.

RUDOLF LÜCK/R

Arne, Michael (*b c*1740; *d* Lambeth, 14 Jan 1786). English composer. He was previously thought to be the 'natural son' of Thomas Arne mentioned by Burney. This comment, however, is now thought to refer to another son, Charles Arne, who was christened on 9 January 1734, before Thomas Arne's marriage to Cecilia Young. There is no record for Michael Arne at St Paul's, Covent Garden, where most of the Arne family were christened. His aunt, Mrs Susanna Cibber, was responsible for his upbringing. Under her guidance he is said to have made his stage début as the Page in Otway's tragedy *The Orphan*. He first appeared as a singer in Manfredini's concert on 20 February 1750, but his career as actor and vocalist was brief. Burney comments that 'his father tried to make him a singer, but he was naturally idle and not very quick. However, he acquired a powerful hand on the harpsichord'. He showed an early gift as a composer. *The Floweret*, his first collection of songs (1750), contains 'The Highland Laddie', a song in the Scottish style which became popular and as late as 1775 was adapted by Linley in *The Duenna*.

On 5 February 1751 he first played one of his father's organ concertos, of which he was the principal exponent for 30 years. Thereafter he found his true vocation as keyboard player and composer to the theatres and pleasure gardens. From 1756 onwards he contributed songs to various dramatic productions and in 1764 collaborated with Battishill in setting Richard Rolt's *Almena*, which enjoyed a limited success. His most famous song, *The Lass with the Delicate Air*, first appeared in 1762. He was elected to the Madrigal Society on 20 March 1765. On 5 November 1766 he married Elizabeth Wright, a young singer whom he had heard at Ranelagh in 1763. The marriage register indicates that he was a widower, though nothing is known of his first wife. His second wife sang the leading roles in many Drury Lane productions, including Arne's setting of Garrick's *Cymon* in 1767; this was his biggest success. In the same year he is reputed to have built a laboratory at Chelsea in order to study alchemy, which led him to a debtors' prison. When Mrs Arne died, on 1 May 1769, Burney bluntly placed the blame for her early death on the overwork to which her husband had subjected her.

In 1771–2 he toured Germany with a pupil, Ann Venables, and conducted the first public performance in Germany of Handel's *Messiah* on 21 May 1772 at Hamburg (preceded by a private performance on 15 April). On his return to England he married Miss Venables. In December 1776 he was engaged by Thomas Ryder to produce *Cymon* in Dublin, where his new wife was a popular attraction. But the lure of alchemy again prevailed; he took a house at Clontarf to resume the search for the philosopher's stone, which again drove him into debt. While confined to a Dublin sponging-house, he was assisted by Michael Kelly's father, who provided him with a piano in return for young Kelly's daily lesson. Returning to London, he was engaged as composer at Covent Garden for several seasons. One unusual engagement was to provide a harpsichord accompaniment for a display of moving pictures, *Eidophusikon*, in 1781. In 1784–5 he directed the Lenten Oratorios at the Haymarket. After his father's death he retained many of his unpublished manuscripts, including the organ concertos, and in 1784 announced his intention of publishing them. But he died, leaving his wife destitute, without having done so. The concertos were preserved and published in 1787 by John Groombridge.

His daughter Sarah was a leading singer at Drury Lane from 1795 to 1800. The daughter who nursed him in his last illness, however, was called Jemima. Whether they are one and the same person or whether he had two daughters is uncertain.

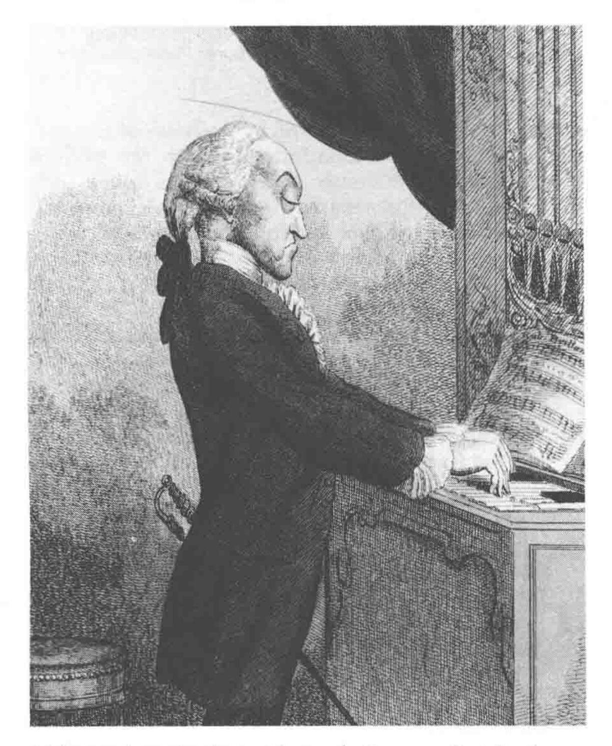
JOHN A. PARKINSON/R

Arne, Mrs. English soprano, wife of Thomas Augustine Arne; *see* YOUNG family, (3).

Arne, Thomas Augustine (*b* London, 12 March 1710; *d* London, 5 March 1778). English composer, violinist and keyboard player. He was the most significant figure in 18th-century English theatre music.

1. LIFE. Arne inherited his first name from his grandfather and father, London upholsterers and undertakers and office holders in the London Company of Upholders. As a child he adopted the middle name Augustine, apparently to show his allegiance to the Roman Catholic faith of his mother, Anne. His father rented a large house in King Street, Covent Garden, where he ran a thriving business, the Two Crowns and Cushions, although he apparently allowed his own father and brother Edward to die in debtors' prisons. According to Charles Burney, who became his apprentice in 1744, Arne was sent to Eton, where a passion for music soon became evident: he tormented his fellow pupils 'night and day' by playing the recorder, practised the spinet secretly at night during the holidays, 'muffling the strings with a handkerchief', and studied composition on his own before taking violin lessons with Michael Christian Festing; Burney wrote that Arne and Festing were both present on 12 November 1725 to hear Thomas Roseingrave win the competition for the post of organist of St George's, Hanover Square.



The next year Arne was apprenticed for three years to a London attorney, Arthur Kynaston, but he soon abandoned the law for music. Burney wrote that Arne's father was reconciled to the change by the chance discovery of his son playing first violin in a concert at the house of a neighbour. The opposition cannot have been strong or prolonged, for Thomas Augustine was soon teaching his younger sister Susanna and his brother Richard to sing, and his father had some hand in the company formed in 1732 to put on English operas at the Little Theatre in the Haymarket; he sold tickets for the performances and probably provided financial backing. The company began in March with John Frederick Lampe's setting of Henry Carey's *Amelia*, and followed that with an unauthorized stage production of Handel's *Acis and Galatea* (17 May).

That autumn, however, the company split: Lampe remained at the Haymarket while Arne put on a production of *Teraminta* by Carey and John Stanley at Lincoln's Inn Fields (20 November) – the first definite record of his theatrical activities – and his own opera *Rosamond* (7 March 1733), a setting of Joseph Addison's 1707 libretto. The next season Arne put on his afterpiece setting of *The Opera of Operas, or Tom Thumb the Great* at the Little Theatre in the Haymarket in competition with a revival at Drury Lane of Lampe's full-length

setting of the same text. Arne's setting ran for 15 nights and his masque *Dido and Aeneas* also did well, running for 17 performances.

Arne's position in the London theatre was strengthened by his sister Susanna's marriage in April 1734 to the actor and playwright Theophilus Cibber, whose company was in residence at Drury Lane. As a result he became house composer at Drury Lane, and wrote music for a number of plays and pantomimes over the next few years. Another profitable alliance was his own marriage to the soprano Cecilia Young on 15 March 1737, despite her father's objection to his Catholicism. He now had at his disposal the greatest tragedienne of her time (his sister) and the finest English female singer (his wife), and they contributed to his first enduring success, his setting of Milton's 1634 masque *Comus* as adapted by John Dalton (1738); it held the stage beyond the end of the century. *Comus* exploited the current fashion for old plays, the beginnings of a pre-Romantic interest in the past, though its success also had much to do with Arne's charming music; it was imitated by Handel in his Milton oratorio *L'Allegro, il Penseroso ed il Moderato*, written two years later.

By 1738 Arne was one of the leaders of musical life in London. That year he was one of the founder-members of the Society (later Royal Society) of Musicians, along with Handel, Boyce and Pepusch. In 1740 he was commissioned to set David Mallet and James Thomson's masque *Alfred* for performance in an entertainment given by the Prince of Wales in the gardens of Cliefden (Cliveden) House, near Maidenhead. The original work seems to have contained only seven musical numbers (including 'Rule, Britannia'), although Arne rewrote it a number of times, turning it in 1745 into an all-sung oratorio, and in 1753 into an all-sung opera. In the theatrical season

1. Thomas Augustine Arne: caricature by Francesco Bartolozzi, etching with watercolour, c1770 (National Portrait Gallery, London)

1740–41 he composed music for the Drury Lane productions of *The Tempest*, *As You Like It*, *Twelfth Night* and *The Merchant of Venice*, including songs such as 'Where the bee sucks' and 'Under the greenwood tree' that have never been surpassed or forgotten since they were written. Arne had another major success in spring 1742 with Congreve's 1700 masque *The Judgment of Paris*, presumably inspired by the unidentified setting performed with *Alfred* at Cliveden in 1740.

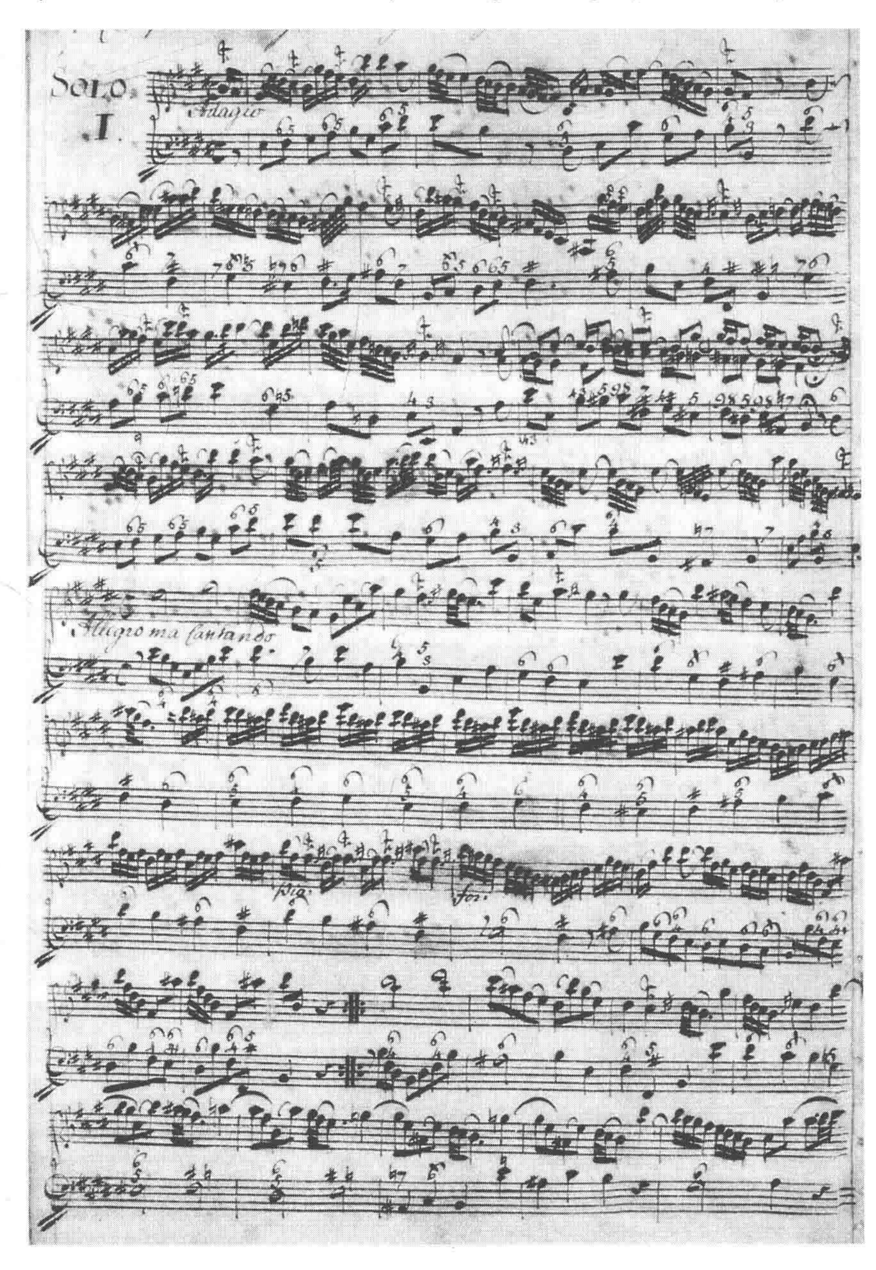
Up to this point, Arne had worked mostly in London. But his sister took refuge in Dublin in December 1741 from the scandal surrounding the failure of her marriage to Cibber, and sang there with Handel in spring 1742, notably in the first performance of *Messiah* on 13 April. Handel's success in Dublin presumably inspired Arne to try his luck there: he arrived with his wife and the tenor Thomas Lowe on 30 June and worked there for two seasons. He spent most of his time performing existing compositions, including a number of Handel oratorios, though his own oratorio *The Death of Abel* was first given at the Smock Alley Theatre on 18 February 1744. On his return journey in August he passed through Chester, where he met the young Charles Burney and agreed to take him to London as his apprentice without the usual fee.

Over the next few years Arne continued his work at Drury Lane, and had a hit with his setting of *God bless our noble king*, which was sung every night during the crisis caused by the Young Pretender's rebellion in September 1745. His long association with London's pleasure gardens also seems to have started that summer, when vocal music formed part of the entertainments at Vauxhall for the first time. According to Burney, Arne's dialogue *Colin and Phaebe* was 'constantly encored every night for more than three months', and was published in September in the first collection of Vauxhall songs, *Lyric Harmony*; Arne's later song collections, notably in the series *Vocal Melody* (1749–64), also contain many songs from the pleasure gardens.

The 1750s were not very fruitful years for Arne. David Garrick, joint patentee at Drury Lane from 1747, began to prefer other composers, and Arne had several flops, including the all-sung afterpieces *Henry and Emma* (1749) and *Don Saverio* (1750). Things came to a head when Susanna Cibber defected to Covent Garden with several other actors at the beginning of the 1750–51 season. Arne followed her and a battle ensued between the two theatres, beginning with competing productions of *Romeo and Juliet* put on on the same day, 28 September, with rival settings by Arne and Boyce of processional dirges at the end of the play. Arne's dirge continued to be performed longafter Boyce's was forgotten, but in general he was no more successful at Covent Garden than at Drury Lane, and he had to put on his next major work, the all-sung opera *Eliza*, at the Little Theatre (1754); it was suppressed after one performance 'by an Order from a superior Power'. He returned to Drury Lane briefly with his setting of David Mallet's masque *Britannia* (1755), though in October that year he returned to Dublin with his wife, his pupil Charlotte Brent and his niece Polly Young.

It soon became apparent that Arne's marriage was in trouble. He attributed the situation to Cecilia's frequent illnesses, which he claimed resulted from her 'passions, equal to raving madness', while she complained of his repeated philandering. At the end of the season he

2. Scene from Arne's pasticcio 'Love in a Village' with Edward Shuter as Justice Woodcock (left), John Beard as Hawthorne (centre) and John Dunstall as Hodge: painting by Johan Zoffany, c1767 (Royal National Theatre, London)



returned to London with Charlotte Brent, now his mistress, while Cecilia remained in Dublin with Polly Young. He agreed to support her with £40 a year, though in 1758 Mrs Delany found her 'much humbled', teaching singing in Downpatrick: 'She has been severely used by a bad husband, and suffered to starve, if she had not met with charitable people'. However, he evidently attempted to raise money at this period by publishing collections of his music with John Walsh, including *Six Cantatas for a Voice and Instruments* (1755), *VIII Sonatas or Lessons for the Harpsichord* (1756), *VII Sonatas for Two Violins with a Thorough Bass* (1757) and the scores of *Britannia* (1755), *Alfred* (1757) and *Eliza* (1757).

With Charlotte Brent at his disposal, Arne's fortunes rapidly revived. After Garrick refused her services at Drury Lane, she scored major successes at Covent Garden in Arne's revision of *The Beggar's Opera* (1759), his comic operas *The Jovial Crew* and *Thomas and Sally* (both 1760), his Metastasio opera *Artaxerxes* and his comic opera *Love in a Village* (both 1762), as well as his oratorio *Judith*, given at Drury Lane on 27 February 1761. He finally achieved a measure of official recognition on 7 July 1759 with an Oxford doctorate. Arne could not sustain this level of success for long: his comic opera *The Guardian Out-Witted* only lasted for six performances in December 1764, while the lost *L'olimpiade*, an *opera seria* in Italian, failed after only two nights in April 1765. Things were not helped in 1766 by the death of his sister and the marriage of Charlotte Brent to the violinist Thomas Pinto, and in the late 1760s he found little employment at either theatre. He found some compensation in his membership of the Noblemen and Gentlemen's Catch Club and the Madrigal Society, and in the profitable concerts of catches and glees he gave from 1767, although he was evidently in financial difficulty by 1770, when Cecilia's lawyer threatened legal action because he was £10 in arrears with his support payments.

Despite this, the last decade of Arne's life saw the production of some fine works, including *An Ode upon Dedicating a Building to Shakespeare* (7 September 1769), written for Garrick's Shakespeare festival at Stratford-upon-Avon, the masque *The Fairy Prince* (1771), the music for William Mason's Greek-style tragedy *Elfrida* (1772) and the lost music for Mason's tragedy *Caractacus* (1776), a score that according to Samuel Arnold contained 'some of the brightest and most vigorous emanations of our English '*Amphion*''. In October 1777 Arne was reconciled with his wife, though two months later he fell ill and made his will. He died of a 'spasmodic complaint', and was buried in the churchyard of St Paul's, Covent Garden, on 15 March 1778; his effects, including 'a remarkably fine toned double key'd harpsichord, two guitars, a mandolin, a lute and other valuable effects', were disposed of on 8 April.

2. Works. Arne was one of the most prolific composers of his day, though much of his output is lost, and the circumstances of his life restricted him to only a few genres. As a Catholic, he did not write anything for the Anglican liturgy or any organ voluntaries, and was denied the sort of official patronage given to his most important English contemporaries, William Boyce and John Stanley. Furthermore, he showed little interest in writing concert music: he did not contribute to the concerto grosso repertory, his symphonies or overtures mostly derive from stage works, and his keyboard concertos, like Handel's, also seem to have been mainly a by-product of his work in the theatre. For most of his life, Arne was essentially a theatre composer, and dominated the various genres of English theatre music.

It is unfortunate that most of Arne's stage works are, for one reason or another, unlikely to be revived in the modern theatre. Some of the best, such as *The Judgment of Paris* (1742), *Artaxerxes* (1762) and *The Fairy Prince* (1771), only survive incomplete; few of his manuscripts survive, and those works that were printed usually appeared without choruses, dances or recitatives, and often only in vocal score. Many works use spoken dialogue (the norm at the time in the two main London theatres) rather than recitative, he set a number of poor texts – some his own work – and he was surprisingly reluctant to abandon the outdated conventions of the heroic masque, even towards the end of his life. Nevertheless, he was a consistent and courageous theatrical innovator. He seems to have been largely responsible for the revival of English opera in the early 1730s, and for alerting Handel to the commercial possibilities of large-scale works in English. He was the first English composer to experiment with Italian-style all-sung comic opera, unsuccessfully in *The*

3. Autograph manuscript of the opening of the Adagio from Arne's Violin Sonata in E (GB-Lbl Add.39957, f.34)

Temple of Dullness (1745), *Henry and Emma* (1749) and *Don Saverio* (1750), but triumphantly in *Thomas and Sally* (1760). *Thomas and Sally* was the first of three highly successful works by Arne of the early 1760s that created new genres in English theatre music, and determined much of its subsequent development. *Artaxerxes* (1762) was the first attempt to set a full-blown *opera seria* in English; it held the stage until the 1830s. *Love in a Village* (1762) was equally novel (fig.2). It was a modernized ballad opera, with borrowed Italian arias and specially composed numbers as well as folk tunes, all orchestrated in an up-to-date manner. It began a vogue for pastiche opera that lasted well into the 19th century.

Ex.1 'O too lovely, too unkind' from Act 1 of *Artaxerxes*

Arne was also an important musical innovator. Charles Burney wrote that he introduced into *Comus* 'a light, airy, original, and pleasing melody, wholly different from that of Purcell or Handel, whom all English composers had either pillaged or imitated'. He used this tuneful folklike style throughout his life, particularly in his songs for the pleasure gardens, though in his later stage works he began to develop a more advanced italianate style. Burney, who could never resist a sly dig at his former teacher, accused him of 'crowding the airs' of *Artaxerxes* with 'most of the Italian divisions and difficulties which had ever been heard at the opera', though in reality Arne was just the first English composer to go beyond the Baroque vocal technique established in England by Handel. His innovations, brilliantly demonstrated in performance by Charlotte Brent, were soon taken up by other English composers.

Similarly, Arne's orchestration developed greatly during his career. He wrote effectively for the orchestra in a Handelian idiom from the beginning of his career, but in the 1750s he began to be much more adventurous. He was the first English composer to use the clarinet (in *Thomas and Sally*), and in his later works he deployed wind instruments with verve and brilliance, though in such a way that the sound of a complete *galant* orchestra could be produced by about a dozen players: oboe, flute and clarinet parts normally alternate, so that they can be taken by the same players, while the occasional trumpet and timpani parts might have been taken by spare violinists. *Artaxerxes* is particularly imaginative in this respect: the opera opens with a striking evocation of the dawn, portrayed by a wind band with double bass and continuo, but without cellos, while the flowing river in 'Water parted from the sea' from Act 3 is beautifully rendered by dense writing for pairs of clarinets, horns, bassoons and strings. Arne could achieve equally striking effects just with strings, as in 'O too lovely, too unkind' from Act 1, where he muted the violins, divided the violas and mixed pizzicato and arco (ex.1).

Perhaps the most striking feature of Arne's music is its stylistic diversity. Even in *Comus* there is a distinction between his own tuneful folklike style and the numbers in a more elevated Handelian idiom, such as the beautiful air 'Nor on beds of fading flow'rs'. In his later works he began to use the *galant* idiom as well, often in order to aid characterization. In *Artaxerxes* he reserved the most advanced and richly scored airs for the main characters, mostly using the older idioms for the minor characters. 20th-century criticism, influenced by 19th-century notions of progress and stylistic unity, has tended to see this practice as a weakness, although Arne doubtless thought it made large-scale works agreeably varied, and it was taken up by his younger contemporaries, such as Thomas Linley (ii) and Samuel Wesley; it was the compositional equivalent of the retrospective concert repertory that was developing in England at the time.

Arne's sets of instrumental music are similarly diverse in style. In the *Eight Overtures in 8 Parts* (1751), nos.3 and 5 are italianate works in the fast–slow–fast pattern, while the others are broadly cast as French overtures, starting with an introduction in dotted rhythms and a fugue. Nos.3, 7 and 8 come from *Henry and Emma* (1749 setting), *Comus* and *The Judgment of Paris* respectively, though it is likely that they are all theatrical in origin. The *Four New Overtures or Symphonies* (1767), by contrast, are all in the modern three-movement pattern, and may have been composed as concert works. They suggest that Arne had been studying the *galant* symphonies of J.C. Bach and Abel as well as the series of Periodical Overtures published in London by Bremner from 1763, though they have a nervous brilliance in places that is closer to C.P.E. than J.C. Bach. Arne's *VIII Sonatas or Lessons for the Harpsichord* (1756) and *VII Sonatas for Two Violins with a Thorough Bass* (1757) are even more diverse in style and structure, and were probably hurriedly assembled for publication from works composed over a long period. Newspaper reports suggest that at least some of the *Six Favourite Concertos for the Organ, Harpsichord or Piano Forte* were written for Arne's son Michael in the 1750s, though they were not published until 1793, and there are signs of later revisions: an early variant of no.1 exists in manuscript, while the keyboard part of no.3 appears to have been modernized, presumably to make it more suitable for the pianoforte.

Arne's non-theatrical vocal works have generally been neglected, though the best of them deserve to be much better known. *Judith* (1761), with its lyrical airs and surprisingly un-Handelian, forward-looking choruses, is arguably the finest oratorio by an Englishman before *The Dream of Gerontius*. *An Ode upon Dedicating a Building to Shakespeare* (1769) unfortunately only survives in an incomplete vocal score, without the music that accompanied Garrick's melodramatic declamation of the text, although it does contain 'Thou soft flowing Avon', one of Arne's loveliest songs. *Whittington's Feast* (1776), his last major work apart from the lost *Caractacus*, survives complete in orchestral score and contains some fine, elaborate music, though its puerile text (a line-by-line parody of *Alexander's Feast*) has prevented modern revivals. *The Morning*, with its magical 'sunrise' opening, stands out among his smaller cantatas, as do *Cymon and Iphigenia* and *The Lover's Recantation*, witty explorations of rustic love.

Arne was undoubtedly an uneven composer. He was often hasty and slapdash, he was too easily satisfied by poor texts and he was content to use the language of the *galant* style without exploring its formal implications very far. Nevertheless, at his best he was capable of far outshining his more consistent contemporaries. He has been praised for his easy, natural sense of melody, though it is often his profound command of harmony and his simple yet highly effective orchestral writing that stays in the memory. As William Stafford put it in 1830:

> Arne was neither so vigorous as Purcell, nor had he the magnificent simplicity, and lofty grandeur of Handel: but the ease and elegance of his melodies, and the variety of his harmony, render his compositions attractive in the highest degree: and we may justly be proud of his name, as an honour to English music.

PETER HOLMAN, TODD GILMAN

Arneiro, José Augusto da Ferreira Veiga, Visconde do. *See* VEIGA, JOSÉ AUGUSTO FERREIRA.

Arnell, Richard (Anthony Sayer) (*b* London, 15 Sept 1917). English composer and conductor. He studied at the RCM (1936–9) with Ireland (composition) and Dykes Bower (piano), winning the Farrar composition prize in 1938. He was music consultant to the North American service of the BBC (1939–45). In 1948 he became a professor of composition at Trinity College of Music. He made extended visits to the USA as a Fulbright Visiting Lecturer (1967–70). He was appointed music consultant to the London International Film School (1972) where he founded the course in music in film. He edited *Composer* magazine 1961–4 and served as chairman (1965–6 and 1974–5) and vice-president (from 1991) of the Composers' Guild.

Arnell's early works included three symphonies and concertos for violin and piano. His music was conducted by Stokowski, Herrmann and by Beecham, who conducted the première of the *Sinfonia quasi variazioni* at Carnegie Hall in 1942. In 1941 Arnell wrote his first film score for Robert Flaherty's documentary, *The Land*. Arnell's Second Symphony opens intensely, with a taughtly argued first movement. His *Canzona and Capriccio* (1943) is more restful, as is the Third String Quartet (1945), reflecting calm after the tensions of war. The ballet *Punch and the Child*(1947), for Balanchine's New York City Ballet, was also made into a suite. Arnell conducted its first concert performance during the Festival of Britain (1951). The American influence in Arnell's music has often been noted: the slow movement of his Fourth Symphony is reminiscent of Copland.

Arnell's 1953 *American Variations* for violin and piano are more stringent than earlier works: the neo-classical second movement recalls Prokofiev rather than Stravinsky. The unusual 1951 piano-duet *Sonatine* is also neo-classical. Several of Arnell's symphonies were first performed at Cheltenham in the 1950s.

Arnell's music has an immediately recognizable style. As a composer, he is known mainly for his instrumental music, including six symphonies: but he has also written

distinctive stage and film music. Ireland's influence is largely absent from Arnell's music, except for an occasional burgeoning Romanticism, as in the Third String Quartet's second movement.

From boyhood Arnell made films, and later scored many documentary and feature films. Recalling his good fortune in having works performed by Beecham, Arnell's *Ode to Beecham* (1986) celebrated the RPO's 40th anniversary.

Arnell is an unusually effective conductor of his own works.

WORKS
(*selective list*)

Op: Moon Flowers, op.83 (Arnell), 1958

Ballets: Punch and the Child, op.49, 1947; Harlequin in April, op.63, 1951; The Angels, op.81, 1957

Orch: Classical Variations, op.1, str, 1939; Divertimento no.2, op.7, chbr orch, 1940; Vn Conc., op.9, 1940; Sinfonia quasi variazioni, op.13, 1941; Sonata, op.18, chbr orch, 1942; Sym. no.1, op.31, 1943; Pf Conc., op.44, 1946; Abstract Forms, op.50, str, 1947; Sym. no.4, op.52, 1948; Lord Byron, op.67, sym. portrait, 1952; Conc. capriccioso, op.71, vn, orch, 1954; Sym. no.5, 'The Gorilla', op.77, 1956–7; Landscape and Figures, op.78, 1956; Robert Flaherty Impression, op.87, 1960; Food of Love, op.112, ov., 1968; Ode to Beecham, spkr, orch, 1986

Choral: The War God, op.36, cant., chorus, orch, 1949; Ode to the West Wind, op.59, chorus, orch, 1949; Town Crier, op.118, spkr, chorus, orch, 1970; Xanadu, chorus, orch, 1993

Wind ens: Cassation, op.45, wind qnt, 1946; Serenade, op.57, wind, db, 1949; Brass Qnt, op.93, 1961; My Lady Greensleeves, op.119, band, 1965

Str qts: no.1, 1939; no.2, op.14, 1941; no.3, op.41, 1945; no.4, op.62, 1951; no.5, op.99, 1961

Solo inst: Org Sonata no.2, op.21, 1942; 22 Variations, op.24, pf, 1943; Partita, op.30, va, 1943; Pf Sonata, op.32, 1946; Sonata no.2, op.55, vn, pf, 1949; American Variations, vn, pf, 1953; Suite, d, op.73, 2 pf, 1955; Fox Variations, op.75, pf, 1956; Chorale Variations on 'Ein' feste' Burg', op.89, org, 1960

Songs, song cycles, film scores, mixed-media compositions

Principal publishers: Associated, Gray, Hinrichsen, Lorien, Mills, Peer, Robbins, Schott, Southern

CHRISTOPHER PALMER/MICHAEL DAWNEY

Arnestad, Finn (Oluf Bjaerke) (*b* Christiania, 23 Sept 1915; *d* Oslo, 30 Jan 1994). Norwegian composer. He took violin lessons with Eilif Gunstrøm (1930–34) and with Øivin Fjeldstad at the Oslo Conservatory, where he also studied the piano, the organ, harmony and theory. Apart from orchestration lessons with Bjarne Brustad, he was more or less self-taught as a composer. In 1952 he spent a year in Paris, studying Arab and East Asian folk music in particular and attending contemporary music festivals. In Norway he initially supported himself as a conductor.

In the late 1930s, looking for a theoretical basis for his composition, Arnestad began to develop what he called 'interference tonality', based on the phenomenon of COMBINATION TONES. These he regarded as consonant and irreducible harmonic products, and the insights he derived from studying them he developed into a compositional principle, though never a formal theory as such. The resulting music is neither tonal nor atonal; instead, it confidently walks a line between the two, using long, elegant melodies that sound essentially tonal but generally avoid committing themselves to a particular key. The orchestral music in particular has elements of Hindemith, coloured by the example of Fartein Valen, and often enlivened with a bluff, sprightly sense of humour. His relatively free treatment of rhythm, especially in his early music, occasionally recalls Stravinsky. In several pieces (not least *INRI* of 1954, perhaps his best-known piece), Arnestad develops another stylistic feature, a swift alternation between homophonic and polyphonic textures. From the late 1950s and early 60s onwards, he began to incorporate elements of dodecaphonic and serial practices into his music, but just as he had taken care not to elevate 'interference tonality' to a point of doctrine, so he felt free to incorporate those elements of modernism he felt useful to himself.

MARTIN ANDERSON (with NIKOLAI PAULSEN)

Arnič, Blaž (*b* Luče, nr Kamnik, 31 Jan 1901; *d* Ljubljana, 1 Feb 1970). Slovenian composer. After studies at the Ljubljana Conservatory he was a pupil of Rudolf Nilius in Vienna (1930–32) and then studied composition in Warsaw (1938) and Paris (1939–40). He taught music at Bol on the island of Brač (1934–5) and at the Intermediate Music School of the Ljubljana Academy (1940–43) before his appointment in 1945 as composition teacher at the academy. Influenced at first by Bruckner and the Russian 'Five', he developed a neo-romantic style, deeply attached to the landscape and people of Slovenia. His music is essentially symphonic with a powerful dramatic touch.

ANDREJ RIJAVEC

Arnim, Bettine von [Elisabeth]. *See* BRENTANO, BETTINA.

Arnold, Denis (Midgley) (*b* Sheffield, 15 Dec 1926; *d* Budapest, 28 April 1986). English musicologist. He studied music with F.H. Shera at Sheffield University from 1944 to 1948 (BMus 1948). He was awarded the MA for a dissertation on Weelkes in 1950 and was appointed a lecturer at Queen's University, Belfast, in 1951. He became reader in music in 1960, and in 1964 went to Hull University as senior lecturer. In 1969 he became

professor of music at Nottingham University, where he instituted a postgraduate course on the editing and interpretation of Renaissance and Baroque music, and in 1975 Heather Professor of Music at Oxford University. In 1976 he became joint editor of *Music and Letters*, in 1978 he was named president of the Royal Musical Association, and in 1982 he was elected to the directorium of the International Musicological Society. As a writer of criticism, he contributed regularly to *The Listener* and *Gramophone*. In 1980 he was awarded honorary degrees from Queen's University, Belfast (MMus), and Sheffield University (DMus).

Arnold was a lively and prolific writer, with a wider range of interests than his list of publications indicates. His research was predominantly concerned with Italian (most of all Venetian) music from the mid-16th century to the mid-17th, an interest that developed from his early work on the English madrigal. His archival studies cast light on performing styles and on educational methods at the Italian conservatories, while his critical work (exemplified by his Master Musicians study of Monteverdi and his volumes on Marenzio and Giovanni Gabrieli in the Oxford Studies of Composers series) has helped establish historical perspective in the study of style changes at the beginning of the Baroque period.

DAVID SCOTT/ELIZABETH ROCHE

Arnold, F(rank) T(homas) (*b* Rugby, 6 Sept 1861; *d* Bath, 24 Sept 1940). English musical scholar. He was educated at Rugby and Trinity College, Cambridge, and in 1886 became a lecturer in German at the University College of South Wales and Monmouthshire (Cardiff), a post he held for 40 years until his retirement. His lifelong interest in music, particularly as an amateur cellist, led him to make an exhaustive study of the tradition of writing and playing from a figured bass, which culminated in his comprehensive treatise on *The Art of Accompaniment from a Thorough-Bass as Practised in the 17th and 18th Centuries* (London, 1931/*R*). He studied an enormous number of sources, both practical and theoretical, and produced his findings authoritatively in this book, which was declared by Newman 'the greatest work of musicography ever produced in this country' and is still of value. Arnold's collection of editions of contemporary treatises on figured bass was bequeathed to Cambridge University library.

H.C. COLLES/MALCOLM TURNER

Arnold, Georg (*b* Feldsberg, Lower Austria [now Valtice, Czech Republic], bap. 23 April 1621; *d* Bamberg, 16 Jan 1676). Austrian composer and organist, active in Germany. As early as 1640 he was organist of St Mark, Wolfsberg, formerly in the possession of the Franconian bishopric of Bamberg. After the end of the Thirty Years War, on 14 September 1649, he was appointed court organist at Bamberg through the influence of Prince-Bishop Melchior Otto Voit of Salzburg, who also began the Baroque restyling of the interior of Bamberg Cathedral and called on Arnold to provide a new repertory of masses, vespers and motets. The inclusion of a mass by Tobias Richter in Arnold's op.2 and a *Laudate pueri* by G.G. Porro in his *Psalmi vespertini* indicates that he had contacts with Mainz and Munich, while the presence of 22 of his motets in the Düben Collection and a canon in J.G. Fabricius's *Liber amicorum* testifies to his reputation outside the Bamberg area. As an organ expert he was connected with Spiridion and Matthias Tretzscher and helped with the reconstruction of the organs in Bamberg

that had been destroyed in the war. He became Hofkapellmeister at Bamberg in 1667. A painting of 1675 by his son Georg Adam, who was appointed court organist in 1685, shows the interior of the restored cathedral with the splendid Baroque organ on the left wall; Arnold is seen standing next to it in court dress and wig.

There was a long tradition of polyphonic music in Bamberg, to which Arnold added the Venetian polychoral style, possibly to some extent inspired by the layout of the cathedral, with apses at either end of the nave. The use of the term 'sacrarum cantionum' in the titles of his 1651 volume and op.4 is indeed reminiscent of Giovanni Gabrieli and Schütz; intended as open-air music, their contents are well suited to the forces at his disposal. In his masses Arnold adopted the large-scale, south German concertante style: in the single choir works of 1665 the concertante principle is expressed in the alternation and different groupings of the obbligato instruments, while the parody masses of 1672 rely more on dynamic contrasts. In the double choir masses of 1656 Arnold introduced the spatial effects of polychoral writing into this style; his development is also marked by the integration of elements of contrapuntal settings. The marked antiphonal style of the psalms of 1662–3 owes something to Monteverdi and Viadana, in contrast to the more seamless polyphony of op.3, most of whose 47 pieces are canzonas. But it is in the more intimate concerted motets that Arnold is at his most inspired, particularly in the settings of non-liturgical mystical texts.

WORKS

Liber primus [21] sacrarum cantionum, 1–4vv, 2–3 vn/va, bc (Nuremberg, 1651)
Liber I, [4] missarum, [12] psalmorum et [2] magnificat, 5vv, 2 vn/tpt, va; 4vv, 3 trbns/viols ad lib, bc (org), op.2 (Innsbruck, 1656)
[45] Canzoni, ariae et sonatae, 1–4 vn/va, va/bn ad lib, bc (org), op.3 (Innsbruck, 1659)
Liber secundus [28] sacrarum cantionum , 1–5vv, 2–4 vn/va, bc, op.4 (Innsbruck, 1661); 10 ed. in DTB, new ser., x (1994)

HANNS DENNERLEIN/GERHARD WEINZIERL

Arnold, Gustav (*b* Altdorf, canton of Uri, 1 Sept 1831; *d* Lucerne, 28 Sept 1900). Swiss conductor, organist and composer. After instruction in singing (with Aloys Zwyssig) and the piano, Arnold studied music in Engelberg (1842–4) and in Lucerne (1844–7), where he was active as a choral singer, organist and pianist and began to compose. In 1850 he went to England, where he was appointed organist and choirmaster at the Roman Catholic church in Lancaster and taught the piano and languages. Moving to Salford in 1854, he became organist and choral director at the cathedral. He studied with Charles Hallé, who greatly influenced him, and had singing lessons with Manuel García. From 1856 he took positions in Manchester, first at St Augustine's and subsequently at St Wilfrid's church.

Arnold returned to Switzerland permanently in 1865 to become musical director of Lucerne. His duties included conducting various choirs and an amateur orchestra for the performance of masses (at the cathedral), operas and oratorios. He founded an orchestra of professional musicians in 1875. Although he retired in 1883 he continued to adjudicate at singing festivals, worked to improve church music and became a music critic. He received honours from Lucerne and was elected president of the Schweizerischer Tonkünstlerverein in 1900.

Arnold's earliest publications include solo songs and piano music; later he wrote much sacred and secular music for male and mixed choruses, a mass, cantatas and incidental music for the theatre. He was best known for his works for male chorus, of which his cantatas *Siegesfeier der Freiheit* and *Der Rütlischwur* are particularly noteworthy.

GAYNOR G. JONES

Arnold, György (*b* Paks, 6 June 1781; *d* Szabadka [now Subotica, Serbia], 25 Oct 1848). Hungarian composer and church musician. He studied music with his father József Arnold (1751–96), cantor of the Catholic church in Hajós, and Pál Pöhm, cathedral choirmaster in Kalocsa. In 1800 he was appointed music director of the town and *regens chori* of St Theresa's church in Szabadka, posts which he held until his death. In order to enlarge his establishment, which in 1803 consisted of only five musicians, he gave free musical tuition to 12 boys from 1805 to 1814. His first known compositions are offertories based on themes from fashionable operas (Grétry's *Richard Coeur-de-Lion*, *Don Giovanni* and Weigl's *Die Schweizerfamilie*). In 1815, on the return of Pope Pius VII from captivity in France, he composed an offertory for which he received a letter of thanks from the pope, and in 1826 he was given a gold medal for an offertory composed for the coronation of Pope Leo XII; another papal breve (1831) thanked him for his offertory for the coronation of Gregory XVI. From 1836 he was an honorary member of the music society in Pressburg.

As well as church works, which were influenced by the Viennese Classical tradition, Arnold also composed secular music including stage works and dance music. As a stage composer experimenting with Hungarian themes, he was one of the pioneers of this art form in his country and is thus a predecessor of Ferenc Erkel. In his Hungarian dances, which were published in the largest collection of Hungarian dance music in the first three decades of the 19th century, *Magyar táncok Veszprém vármegyéből*

('Hungarian dances from County Veszprém'), Arnold expressed himself in the national musical idiom of the *verbunkos*. His other works include *Pismenik iliti skupljenje pisamâ razlicsitih za nadiljne, svetacsne i ostale dneve priko godine podobnih, za vechu slavu boxju i kriposli duhovne naroda Iliricskoju* (Eszék, 1819), a collection of religious songs in the Illyrian language, and an unpublished four-volume German dictionary of composers (1826).

WORKS

SINGSPIELE

Kemény Simon (after K. Kisfaludy), Szabadka, 1826
Mátyás királynak választása [The Election of Matthew as King] (after L. Szentjóbi Szabó), Kassa, 1830, collab. J. Heinisch
A gotthardhegyi boszorkány [The Witch of Mt Gotthard] (after A. Schuster), Debrecen, 1837

OTHER WORKS

Sacred choral: 13 offs, 11 hymns, 3 Libera me, 2 Tantum ergo, TeD, 3 masses (incl. Ger. mass, Hung. requiem), Regina coeli, Et incarnatus; religious songs to Illyrian texts
Inst.: 4 ovs., orch; numerous Hung. dances, pf

FERENC BÓNIS

Arnold, Johann Gottfried (*b* Niedernhall, Württemberg, 1 Feb 1773; *d* Frankfurt, 26 July 1806). German cellist. The son of a schoolmaster, who gave him preliminary musical training, he made local appearances with the cello when he was eight; in 1785 he was apprenticed to the town musician at Künzelsau, where he spent five years, followed by a period with his uncle, who held a similar position at Wertheim. But ensuing attempts to start a solo career, making short tours in southern Germany and Switzerland, proved abortive, hampered by the absence of proper training. Accordingly, he went first to Regensburg for some months' study with Max Willmann, the first cello teaching he had received. He proceeded to Hamburg in 1796; here, he profited greatly from the tuition and fine example of Romberg, who helped him to develop great technical ability and recommended his engagement, a year later, as solo cellist of the Frankfurt Opera. Arnold is said to have been described by his contemporaries as a great virtuoso, with a 'consistently enchanting' tone. He died of a lung infection at the age of 33 and was greatly mourned by the people of Frankfurt. His compositions include five cello concertos (published 1802–8), which became favourite items of Dotzauer's repertory; the third was republished by Karl Schröder (ii) in 1880. He also wrote a *Symphonie concertante* for two flutes and orchestra, and various works for piano, cello, guitar and chamber ensembles.

Arnold's son Carl (*b* Neukirchen, nr Mergentheim, 6 May 1794; *d* Christiania, 11 Nov 1877) studied the piano first at Frankfurt with C.A. Hoffmann and Aloys Schmitt, and then, after his father's death, at Offenbach with J.A. André and J.G. Vollweiler. After concert tours in Germany, Poland and Russia (where in 1820 he married the singer Henriette Kisting), he settled in Berlin in 1824. He spent 16 years composing but gave up after the failure of his opera *Irene* in 1832. In 1835 he became music director at Münster, and in 1847, director of the Philharmonic Society at Christiania, where in 1857 he also became organist of the Trefoldighetskirke. His own son, Karl (*b* Berlin, 8 June 1824; *d* Christiania, 9 Aug 1867), studied the cello with Max Bohrer and became cellist of the court chapel at Stockholm. (*MGG1*, W. Matthäus)

LYNDA MACGREGOR

Arnold, John (*b* ?Essex, *c*1715; *d* Great Warley, Essex, March 1792). English psalmodist. He was a singing teacher, parish clerk and (at least in 1790) organist at Great Warley, Essex, and compiled several publications designed for country parish churches. The most important was *The Compleat Psalmodist* (seven editions, 1741–79) which was in general modelled on earlier books of the same kind, containing a didactic introduction, psalm tunes, hymns and anthems of the parochial kind. But it was unusually ambitious in including also a number of chants for the prose canticles and a complete setting of Morning and Evening Prayer (*see* ROBERT BARBER (i)). Many of the tunes and anthems were his own; others were supplied by members of his choir at Great Warley; the rest were taken from earlier collections.

Arnold published four other books of similar purpose and scope, and also *The Essex Harmony* (three editions, 1767–86) which contained songs, catches and glees from various sources. His prefaces give a colourful and informative picture of the musical life of an 18th-century village. The most expansive of these are in the fifth edition of *The Compleat Psalmodist* (1761) and in *Church Music Reformed* (1765).

NICHOLAS TEMPERLEY

Arnol'd, Jurig (Karlovich) von. *See* ARNOL'D, YURY.

Arnold, Sir **Malcolm (Henry)** (*b* Northampton, 21 Oct 1921). English composer. He was descended on his mother's side from William Hawes. Arnold's musical gifts were soon apparent, and he began to receive private composition lessons. At the age of 16 he won a scholarship to the RCM, where he studied trumpet with Ernest Hall and composition briefly with Patrick Hadley, then with Gordon Jacob. The decimation of professional orchestras by the demands of World War II meant that Arnold regularly appeared in their ranks even before graduating, and he was acknowledged as a trumpeter of the first order. He played in the LPO (1941–2) and, after two unhappy years of war service (1944–5), which ended when he deliberately shot himself in the foot, and one season with the BBC SO, he returned to the LPO in 1946. However, the award of the Mendelssohn Scholarship (1948) changed his life and gave him the confidence to pursue a full-time composing career. For 20 years he maintained a double life of prodigious energy, writing up to six film scores a year as well as a full and varied list of concert works, from symphonies and concertos to highly idiomatic music for brass and woodwind, pieces for amateurs and children and for the famous Hoffnung humorous concerts. Eventually the strain told and he

abandoned film; by this stage, though, he had already experienced recurrent bouts of illness. A further crisis in the early 1980s saw him in hospital for a long period, and after a noticeable decline in his powers he eventually abandoned composition altogether, soon after completing his last symphony. His achievements were recognized by the award of numerous honours, culminating in a knighthood (1993).

At the heart of Arnold's output stand nine symphonies. Completed at regular intervals over the length of his composing career, they stand like milestones definitive of particular periods – the London years, the Cornish period (1965–72), the move to Ireland (1972), breakdown (from 1979) and return home. They are the works by which Arnold himself preferred to be judged. They range from a First Symphony (1949) clearly intended as a calling-card and marking a rite of passage from player-composer to fully-fledged professional, to a valedictory Ninth (1986) clearly modelled on Tchaikovsky and Mahler. The Second (1953) follows in the line of English Pastorals that stretches back to Holst and Vaughan Williams and even earlier, and was and remains widely played; while the Third (1957), in somewhat similar vein, proved in places over-extended and was less successful. The Fourth and Fifth (both 1960) were conceived virtually as a pair, the latter, as Arnold acknowledged at its première, virtually the antithesis of its predecessor. The early influence of Sibelius, textural and emotional, is replaced by the more all-embracing aspirations and even the thematic contours of Mahler. Along with Berlioz, these composers were regularly described by Arnold as forming his private pantheon. The Seventh (1973), written in Dublin and seeming in its conflict-ridden outer movements to confront a personal drama in almost tragic terms, is the most Mahlerian of the canon; the Sixth (1967) and Eighth (1978), while no less characteristic of Arnold's individual voice, add the virtues of discipline and conciseness.

Malcolm Arnold, 1986

Formally and stylistically the symphonies offer few surprises. Arnold's musical idiom is essentially conservative. His harmonies are seldom more adventurous than the conservative orthodoxies of Parry and Stanford a generation earlier, though making occasional use of bitonality to powerful expressive effect, as for example in the opening movement of the Seventh. Arnold also toyed with serial techniques from the Fifth Symphony onwards, but never obtrusively, and perhaps only out of characteristic bravado: they are never integral either to his melodic invention or his often modally-inflected harmonic schemes. Structurally his symphonies are all either in three or four movements, sometimes dispensing with a full-blown scherzo, sometimes integrating it into the middle movement, as in the Third Symphony; only the Ninth reverses the customary sequence and ends with an extended Adagio. First movements tend to be constructed in orthodox sonata form, with contrasts achieved not so much through key relationships as through thematic differentiation: Arnold's greatest strength was always as an endlessly inventive, fresh and memorable melodist. As a single instance, the return of the slow movement theme at the climax of the finale of the Fifth Symphony is overwhelming.

Further strength is sometimes added to his symphonic aspirations when there is a background agenda at work. The Notting Hill race riots of 1960 not only provoked the composer's outright public condemnation (his liberal credentials were always impeccable), but also prompted him to include an extensive Caribbean percussion section in his Fourth Symphony. In this work he also explores popular idioms of the 1960s in a manner calculated to provoke outraged criticism. Undaunted, Arnold included a homage to the saxophonist Charlie Parker in the Sixth, an imitation of an Irish folk band in the Seventh, and – with a nostalgia reminiscent of Vaughan Williams – an Irish marching-tune as the first subject of the opening Allegro of the Eighth. Prominent as these and other moments are, however, they remain incidental to the symphonic and emotional argument, which is always clear and properly proportioned. The two most prominent emotions in the later symphonies are anger and despair, but even the Ninth, almost as bleak as the violent Seventh, ends on a root-position D major triad.

In the remainder of Arnold's output the mood is generally more relaxed, though he continues to make occasional references outside his standard idiom, sometimes with startling effect. The superb Guitar Concerto, written for his longstanding friend Julian Bream, includes a blues that pays homage to Django Reinhardt. (Arnold's love of jazz, though strong, surfaces surprisingly seldom in his overall output.) A single-movement Fantasy for piano and orchestra, for John Lill, written in Dublin, is a concerto in all but name; it starts out innocently from a nocturne by the Irish composer John Field but develops into a heroic, even savage battle between soloist and orchestra that once again suggests a hidden agenda. Arnold described all his 20-odd concertos as portraits of the soloists to whom they are dedicated, the majority of whom were also close personal friends. The list is impressive, including Dennis Brain, Yehudi Menuhin, Leon Goossens, Richard Adeney, Benny Goodman, Larry Adler, Julian Lloyd Webber and Michala Petri, thus

testifying to his generous and gregarious nature as a musician. Arnold was seldom if ever found in an ivory tower, and his work-list includes numerous occasional pieces that have outlasted their immediate purpose: the *Padstow Lifeboat March*, for the launch of a new lifeboat near the Cornish village where Arnold was then living, is a popular and typical example.

This virtuosity was sometimes held against him. An unashamed eclectic, Arnold was regularly accused in his symphonic as well as smaller works of allowing speed and sheer facility to get the better of his instinct for self-criticism. The occasional undeniable outbursts of vulgarity, as in the finale of the Second Clarinet Concerto, are in fact rare, but Arnold was an easy target, not only because he was prolific in so many areas of concert life, but also because he was a successful film composer who understood both the requirements and limitations of that medium, and refused to acknowledge any difference of aspiration in the music he wrote for different audiences. Like many extroverts, however, Arnold was also deeply sensitive, and like Britten (with whom he otherwise had little in common), he found criticism hard to bear. Seldom given to public utterances of any kind, least of all about his own music – he tended, rather, to throw out red herrings to put people off the scent – he was goaded more than once into attacking music critics as the scourge of musical life, and to see them as a contributory factor in his decline into alcoholism, illness and depression.

Because films can have only a short screen life, apart from their occasional revival on television, only a handful of Arnold's nearly 120 film scores are familiar: *Whistle Down the Wind*, *The Inn of the Sixth Happiness* and a trilogy for the director David Lean: *The Sound Barrier*, *Hobson's Choice* and *The Bridge on the River Kwai*, for which, incredibly, he was given a mere ten days' writing time. These are just the most famous, and the last deservedly won an Oscar. There are powerful and original moments in many of the other scores: for example, the integration of Indian modes, rhythms and instruments in *Nine Hours to Rama*, a film about the assassination of Gandhi, is strikingly assured. There is room for comprehensive research in this area.

Perhaps because of his long involvement in films, Arnold never wrote a full-length opera. He claimed never to have found the ideal subject or librettist. By all accounts, though, despite his lack of formal education, he was exceptionally well-read, and it is possible that far from being insensitive to words he was if anything over-responsive. Choosing texts for the *Five William Blake Songs*, he went to the early poems, claiming that good poetry had no need of music. Arnold's art was an abstract one, in which the play of sounds was the first consideration, and his strongest works – the later symphonies, the guitar, flute and horn concertos, the magnificent Symphony for Brass, the Second String Quartet – need no special pleading. They are easily recognizable for their individual voice, and their exceptional musical craftsmanship allied to emotional integrity of the highest order.

PIERS BURTON-PAGE

Arnold, Samuel (*b* London, 10 Aug 1740; *d* London, 22 Oct 1802). English composer, conductor, organist and editor. He was the son of Thomas Arnold, a commoner, and, according to some sources, the Princess Amelia. Arnold received his education as a Child of the Chapel Royal (*c*1750 to August 1758) and on leaving became known as an organist, conductor and teacher, and composed prolifically. In autumn 1764 he was engaged by John Beard as harpsichordist and composer to Covent Garden; there he compiled several pastiche operas, including the popular *The Maid of the Mill* (1765), which is among the supreme examples of the form. In 1769 Arnold bought Marylebone Gardens, and during the next six summers produced several short all-sung burlettas, composing or at least contributing to four new examples (now lost). These productions were simply written (from the literary point of view at least) and would have appealed to an audience with no previous experience of operatic music.

In 1771 Arnold married Mary Ann Napier, sometimes described as wealthy; but whatever the family fortune, the criminal activities of an employee at Marylebone lost Arnold most of his money and the Gardens were sold. The eldest of Arnold's four children, Samuel James, his only son, was the author of some weak opera librettos which his father set; he became the first manager of the Lyceum Theatre. Unsurprisingly, Arnold pursued his early composing career with a sequence of oratorios on biblical subjects; *The Prodigal Son* (1773) was performed at Oxford at the installation of Lord North as Chancellor at the Encaenia of 1773. The university also offered Arnold the honorary degree of Doctor of Music, but he declined, preferring to take it in the ordinary manner. His other early compositions include songs for the London pleasure gardens and some keyboard sonatas.

Arnold resumed his professional association with the patent theatres when, in 1777, he was engaged by George Colman the elder as composer and music director for the Little Theatre in the Haymarket. As a result of an inheritance, Colman had just bought the theatre; he and Arnold had collaborated when they were on the Covent Garden staff in the 1760s, and were always close friends. Arnold composed for the Little Theatre for 25 years; from 1789 George Colman the younger was manager. There is little documentary material related to Arnold's residency at the theatre, except through evidence of the production and reception of his works performed there. With his afterpiece opera *Lilliput* (1777) and, in the same year, an arrangement of the full-length ballad opera *Polly* (text by Gay and original music attributed to Pepusch) – Arnold's only operatic material to survive orchestrally – was begun a successful series of his stage works, which achieved maturity in the full-length pasticcio 'comic opera' *The Castle of Andalusia* (1782). By that time Arnold was in a position to combine his summer directorship at the Little Theatre with several other posts in London, as organist and conductor. He was organist and composer to the Chapel Royal (from 1783) and organist to Westminster Abbey (from 1793). In 1786 Arnold (together with Thomas Linley (i)) succeeded John Stanley as manager of the Lenten oratorios at Drury Lane, and in 1787 he established the Glee Club with J.W. Callcott, who later helped him compile a large volume of psalm settings. In 1789 Arnold became official conductor of the Academy of Ancient Music, and in 1790 founded the Graduates' Meeting, a society of academic musicians which included Haydn among its associates; he was also an active member of the Anacreontic Society and appointed president in December 1791. Arnold's generous spirit is reflected in his continuous support for those in reduced circumstances, especially musicians; he established a Choral Fund in 1791, was for 40 years an active member of the Royal Society of Musicians and also, from 1796, conducted the annual performance at St Paul's for the benefit of the Sons of the Clergy. A long-standing freemason, Arnold, from 1795, conducted the societies' concerts in aid of the female orphans. Of importance to English musicology was the appearance in 1786 of Arnold's proposals for a complete Handel edition, 180 parts of which were published between 1787 and 1797. Other editorial enterprises by Arnold include *The New Musical Magazine*, together with Thomas Busby (*c*1783–6), *Harrison's New German-Flute Magazine* (1784–5) and a four-volume continuation of Boyce's *Cathedral Music* (1790). In autumn 1798 Arnold fell off his library steps, suffering injuries which eventually led to his death; he was buried on 29 October 1802 in Westminster Abbey. During his last three years he wrote three novel pantomimes and an oratorio, *The Hymn of Adam and Eve*, presumably composed for the Haymarket Lenten oratorio season.

Arnold's achievement was greatest as a dramatic composer who, besides pantomimes and incidental music, wrote, or contributed to, over 70 operas. Although some of his writing is lacking in compositional finesse, having been produced at great speed and with little thought, the number of editions and stage productions of his operas testifies to Arnold's popularity in the last quarter of the 18th century. Statistics show that Arnold's more successful operas, such as *The Agreeable Surprise* (1781) and *Inkle and Yarico* (1787), an early anti-slavery opera, were among the most frequently performed of all operas of the time.

No doubt Arnold's prominence as a musical figure and his position at the Little Theatre had something to do with the frequency of performances, but we can be sure that the operas found appreciative audiences. Arnold well knew the resources of his stage, the capabilities of his actor-singers and the taste of his audience, and in his best comic operas he managed to attain some individuality and to write dramatically vivid music. In his early works, Arnold closely adhered to the tradition of the Italian burletta, and in his first surviving all-sung opera, *The Portrait* (1770), he not only revealed an ability to write effective italianate ensembles full of bustling and amusing stage action, but also demonstrated how flexible the burletta form was and how easily it could be adapted to commentary on contemporary life.

For the Little Theatre Arnold wrote 'dialogue' operas, but whereas the operas of his middle creative period – for instance, *The Castle of Andalusia*, *The Spanish Barber* (1777), *Two to One* (1784) and *Turk and No Turk* (1785) – are bound to the conventions of English comic opera, with its mixture of serious and comic elements, Arnold attempted in his later works, such as *The Battle of Hexham* (1789), *The Surrender of Calais* (1791), *The Mountaineers* (1793) and *Zorinski* (1795), to develop a historical-hybrid form – a play for the chief characters but an opera for the subsidiary ones, set in the distant past – which released the romantic strain in his imagination. If the middle-period operas are principally successful in the portrayal of individual characters in music, for freely constructed ensembles as finales, for the frequent use of folktunes and for music composed in the folk idiom, the operas of Arnold's last period make greater dramatic use of the overture and chorus, and intermittently include instrumental music of an illustrative or 'programmatic' character and also ballet. Whereas the serious characters are generally allotted full-scale arias with florid vocal divisions, the comic characters sing mostly simple melodies in ballad style.

Samuel Arnold: portrait by George Dance, pencil, 1795 (National Portrait Gallery, London)

Of special importance are the ensembles, which often show that Arnold clearly understood the nature of music drama and was moved to match dramatic event with musical gesture. The tempo, the rhythm, the key, and the number of singers are constantly varied; duetting is mainly confined to 3rds and 6ths, and block chordal harmony predominates in the choruses. There is an excellent trio at the end of Act 1 of *The Siege of Curzola* (1786), and striking choral writing in *The Surrender of Calais* and in *The Shipwreck* (1796); the last was composed for Drury Lane and reveals how effectively Arnold could write for large instrumental and vocal resources.

Judging by the orchestral cues given in many of the published vocal scores, Arnold's instrumentation was remarkable for its variety and originality; wind cues abound, and there is occasional use of such instruments as the flageolet (in *The Children in the Wood*, 1793), harp (*Cambro-Britons*, 1798) and tubalcain, a glockenspiel in its original form of a miniature carillon (*The Veteran Tar*, 1801). Arnold showed his professionalism chiefly in his regard for singers – almost every aria is adapted to the special character and qualities of the person assigned to the role. Among his best are the coloratura arias with flute obbligato written for Elizabeth Bannister, such as 'The tuneful lark' in *The Agreeable Surprise* and 'Ah solitude' in *The Castle of Andalusia*. The use of English folksongs is one of the most important features of Arnold's operas, for example 'Peggy of Derby O' in *Two to One* and 'We go up Holborn Hill' in *Peeping Tom* (1784).

Arnold set a number of previously unrecorded songs; for instance, *The Children in the Wood* includes a version of 'The Truth sent from above' that in the 20th century has been associated with Vaughan Williams. Colourful Irish songs in Arnold's scores are the result of his successful collaboration with an Irish librettist, John O'Keeffe, who sometimes wrote lyrics to fit the tunes he remembered from his youth. Arnold's long theatrical experience gave him sufficient knowledge to borrow sensibly; an unusual number of citations from Haydn and Mozart occur in the Jamaican-outlaw pantomime *Obi, or Three-Finger'd Jack* (1800).

ROBERT HOSKINS

Arnold, Samuel James (bap. London, 28 Dec 1774; *d* Walton upon Thames, 16 Aug 1852). English librettist and impresario, son of SAMUEL ARNOLD. Though trained as an artist, from the mid-1790s he worked with his father at the Little Theatre in the Haymarket, writing afterpieces set by the elder Arnold. He himself wrote the words and music for one such work there, *Foul Deeds Will Rise* (18 July 1804). In 1809, when Drury Lane burnt down and its company moved to the Lyceum in Wellington Street off the Strand, Arnold then became associated with that theatre and began to stage his own plays with music. The Drury Lane company left in 1812 and Arnold retained the Lyceum, naming it the English Opera House during summer seasons. In 1815 he obtained the lease and had the theatre almost completely rebuilt; it was formally opened as the English Opera House on 15 June 1816, presenting original works, many to Arnold's own texts, as well as adaptations of foreign pieces. Until his productions of *Der Freischütz* in 1824 and *Tarare* in 1825 (the earliest of those works in England), such adaptations had mostly been revivals of popular English plays with borrowed music, especially Mozart or Rossini, rather than versions of genuine continental operas. The Lyceum (uninsured) burnt down in February 1830, but after a successful public subscription it reopened in July 1834 as the English Opera House, Royal Lyceum, for 'the presentation of English operas and the encouragement of indigenous musical talent'. From this period dates the first real flowering of authentic English Romantic operas, by Loder (notably *Nourjahad*, to an S.J. Arnold libretto), Barnett, Thomson, and later Balfe and Macfarren. Arnold retired in the mid-1840s.

For a complete list of his librettos see *GroveO*.

LEANNE LANGLEY

Arnol'd, Yury (Karlovich) [Jurig von] (*b* St Petersburg, 1/13 Nov 1811; *d* Karakesh, nr Simferopol', Crimea, 8/20 July 1898). Russian writer on music, teacher and composer. His father was a state councillor. After studying political economy at the German University of Dorpat in Estonia, he served in the army during the Polish campaign (1831–8). On resigning his commission he decided to make a career in music, studying harmony with Johann Leopold Fuchs and counterpoint with Joseph Hunke. In 1839 his cantata *Svetlana*, to words by Vasily Zhukovsky, was awarded a Philharmonic Society prize and subsequently performed in *tableaux vivants* in both St Petersburg and Moscow. He was a friend of the leading Russian musicians of his day, and his memoirs, published in three volumes in 1892–3, are a valuable record of 60 years of Russian musical life. From 1841 he contributed criticisms and reviews to a number of journals (the *S.-Peterburgskiye vedomosti*, *Biblioteka dlya chteniya*, *Literaturnaya gazeta*, *Severnaya pchela*, *Panteon* and others) under a variety of pseudonyms, including Meloman, Karl Karlovich, A. Yu., Harmonin and Karl Smelïy.

From 1863 to 1871 Arnol'd was in Leipzig, where he contributed to *Signal* and the *Neue Zeitschrift für Musik* (1863–5) and edited the *Neue allgemeine Zeitschrift für Theater und Musik* (1867–8). It is likely that at this time he was employed as an espionage agent by the tsarist police, and it is possible that the articles which appeared above his name were in fact written by a certain Peshenin who was handsomely rewarded for his silence. From 1871 to 1894 Arnol'd taught music privately in Moscow. He was an external lecturer in 'musical science' at Moscow Conservatory in 1888 and was invited to speak on Russian music in Leipzig the next year. From 1894 to his death he taught singing in St Petersburg. He published several useful monographs on the history of Russian church music, but his views on the origins of Russian folksong are now generally discredited. His most ambitious theoretical work, *Nauka 0 muzïke na osnovanii ėsteticheskikh i fiziologicheskikh zakonov* ('The science of music on the basis of aesthetic and physiological laws') (Moscow, 1875), is praised as an original (if flawed) early monument of Russian speculative theory.

Arnol'd's compositions are mainly of academic interest. They include the operas *Tsïganka* ('Gypsy Girl', completed 1836) and *Posledniy den' Pompei* ('The Last Day of Pompeii', completed 1860); the operettas *Der Invalide* (completed and performed 1852) and *Za Bogom molitva, a za tsaryom sluzhba ne propadayut, ili Noch' pod Ivana Kupala* ('Prayer to God and Service to the Tsar are never wasted, or St John the Baptist's Night', performed 1853); sacred choral music; over 50 songs to words by Koltsov, Mey and others; and an orchestral overture to Pushkin's *Boris Godunov* (1861) – in his day the best-known and most frequently performed of all his works.

Arnoldo Fiamengo [Arnoldus Flandrus]. *See* FLANDRUS, ARNOLDUS.

Arnold of St Emmeram (*b* c1000; *d* before 1050). Benedictine writer and composer. He was a monk, and later prior, of St Emmeram in Regensburg and the author of a new plainchant Office for the patron saint of his monastery; he also wrote extensively about St Emmeram and on other matters. The Office, which survives in *D-Mbs* Clm 14870 (Arnold's autograph or at least a contemporary source) and in a number of later manuscripts, includes over 40 antiphons and 20 responsories arranged in numerical order of mode. According to Arnold, the Office was first celebrated while he was visiting Hungary, by the cathedral clergy at Esztergom.

□

Arnold Schoenberg Choir. Austrian choir. It was founded in 1972 by Erwin Ortner, who in 1996 was appointed rector of the Hochschule für Musik in Vienna. The choir's name reflects three of its main emphases: Austrian music, new music, and a commitment to the works of Arnold Schoenberg. The choir is made up largely of students and former students of the Hochschule für Musik and expands or contracts according to the works it performs. For example, the choir was reduced to 12 voices for Messiaen's *Cinq rechants* and was augmented to 120 for his opera *Saint François d'Assise* (1992 and 1998, Salzburg Festival). Whatever the numbers, the Arnold Schoenberg Choir always aims for a chamber musical transparency of texture. The choir has recorded Schubert's complete choral music under Ortner and Harnoncourt, and has toured the USA with Harnoncourt (1997); it has recorded the major choral music of Mozart, Haydn and Beethoven under Harnoncourt. It has also given broadcasts of contemporary Austrian music. In 1993 it began giving an annual concert series for the Gesellschaft der Musikfreunde in Vienna. In the 1990s it performed at the Salzburg Festival giving the first performance of Berio's *Cronaco del Luogo* in 1999. The choir has also collaborated with the Berlin PO (1998) and the Vienna PO (1999) in performances at the festival.

Arnone [Arnoni], **Guglielmo** (*b* Milan, c1570; *d* Milan, 1630). Italian composer and organist. We know from the

dedication of his *Partitura del 2° libro delli motetti* (1599) that he was Milanese and a pupil of Claudio Merulo, with whom he probably studied between 1584 and 1586 in Mantua. On 12 December 1591 he was appointed organist of Milan Cathedral at a salary of 400 imperial lire, and he kept this post until his death. The influence of Merulo is recognizable in his works 'in the clarity of the counterpoint and the nature of the invention' (to quote his own words). Banchieri numbered him among the most celebrated organists of his time.

WORKS

Partitura del 2° libro delli motetti, 5–8vv (Milan, 1599)
Il 1° libro de madrigali, 6vv (Venice, 1600); 4 repr. in 1613[10]
Sacrarum modulationum, 6vv, liber tertius (Venice, 1602), lost
Missa una, motecta, Magnificat, Litaniae B. Maria Virginis, falsis bordonis et Gloria Patri, 8vv, bc (org), op.6 (Venice, 1625)
Motets in 1608[13], 1610[1], 1611[1], 1612[3], 1615[13], 1617[1], 1619[4], 1622[5], 1626[6]
Pieces in 1605[6], 1610[10]; 2 pieces in L. Beretta I° libro delle canzoni (Milan, 1604)
Pater noster, 5vv, *I-Md*, also in 1619[4]

MARIANGELA DONÀ

Arnot, Robert. *See* CARVOR, ROBERT.

Arnould [Arnoult], **(Magdeleine)** [Madeleine] **Sophie** (*b* Paris, 13 Feb 1740; *d* Paris, 22 Oct 1802). French soprano. A precocious child, she studied Latin and Italian and received a solid general education. Her performance in sacred music impressed the royal family and Mme de Pompadour, and she was appointed to the Opéra, studying declamation with Clairon and singing with Marie Fel. Her voice was sweet and expressive, not powerful, supported by fine diction and acting. She was the leading Opéra soprano from 1757 (début in Mouret's *Les amours des dieux*) to 1778. She sang over 30 roles, by Lully, Rameau, Rousseau (*Le devin du village*) and others; several she created, but her greatest was Telaira in Rameau's *Castor et Pollux*. She adapted to Italian-influenced music such as Monsigny's *Aline*, and the climax of her career was in *Iphigénie en Aulide* (1774, at Fontainebleau as late as 1777; see illustration). Less successful as Eurydice, she was mortified by Gluck's choice of Rosalie Levasseur for *Alceste*. The Dorothy Parker of her day, she entertained the *philosophes* while alienating colleagues; she bore three illegitimate children to the Count of Lauraguais. Her colourful career inspired several biographies, two comedies, and an opera by Pierné.

JULIAN RUSHTON

Arnschwanger, Johann Christoph (*b* Nuremberg, 28 Dec 1625; *d* Nuremberg, 10 Dec 1696). German poet and theologian. He spent virtually his entire life at Nuremberg. He was educated at the St Egidien Gymnasium (whose director from 1642 was J.M. Dilherr), and from 1644 at Altdorf University. He gained the master's degree at Jena in 1647. In 1648 he went to Leipzig and then travelled to Hamburg but arrived completely destitute after risking his life in an escape from marauding soldiers. During 1649 he participated in a disputation at Helmstedt on Original Sin chaired by the controversial syncretist G.C. Calixtus. In 1650 he returned to Nuremberg and in 1651 was appointed curate, and in 1652 deacon, of the Egidienkirche. He officiated as Monday preacher at St Salvator and, after being ordained at Altdorf on 14 May 1653, was from 1654 morning preacher at St Walpurg auf der Vesten. In 1659 he became deacon of St Lorenz, the leading church in Nuremberg, where in 1679 he was promoted to senior rank and in 1690 to chief minister.

From 1675 until its dissolution in 1680, Arnschwanger was a member of the Fruchtbringende Gesellschaft, the oldest language society in Germany. He published two collections of sacred poems, with melodies, and included others in his various theological writings. The two collections are: *Neue geistliche Lieder* (Nuremberg, 1659) and *Heilige Palmen, und christliche Psalmen, das ist Unterschiedliche neue geistliche Lieder und Gesänge* (RISM, 1680[1]) (32 poems from both volumes in Fischer and Tümpel, nine melodies in Zahn). It may be noted that the second collection coincided with the dissolution of the Fruchtbringende Gesellschaft, that its title refers to the

society's emblem, a palm tree, and that Arnschwanger signed it with his name in the society, 'Der Unschuldige' ('The Innocent'). In the preface to the 1659 volume he stated that its artistry 'does not aspire to individual treatment of the words nor to the exceedingly high standard of contemporary German poetry' but that 'music lovers are amply compensated for shortcomings in the texts by the beautifully worked settings of Nuremberg's leading organists and directors of music'. The poems in both volumes in fact were written to familiar melodies and newly set to music for solo voice and continuo by Nuremberg musicians. The composers of the 1659 collection are Paul Hainlein, A.M. Lundsdörffer, David Schedlich, Heinrich Schwemmer and G.C. Wecker. Johann Löhner replaced Schedlich in the 1680 volume, which also includes a melody by an otherwise unknown musician, A.C. Hültz, the only one Arnschwanger did not mention in his preface. Unlike the poets of another leading Nuremberg literary society, the Pegnesische Blumenorden, he used popular diction in his verses. The musical settings offer a good cross-section of German continuo song of the period. 23 items were taken into the *Nürnberger Gesangbuch* (1690), though divorced from their new settings, and only the chorale *Merk, Seele, was du dir hast vorgenommen* (1680) appears with its new melody (by Wecker) among the 42 texts reappearing in J.B. König's *Harmonischer Lieder-Schatz* (Frankfurt, 1738).

LINI HÜBSCH-PFLEGER

Arnt von Aich. *See* AICH, ARNT VON.

Arnulf of St Ghislain [Arnulphus de Sancto Gilleno] (*fl* ?*c*1400). Writer on music. He was presumably from St Ghislain in Hainaut and was possibly a member of its Benedictine community. One work by him is known, the *Tractatulus de differentiis et gradibus cantorum*, found only in St Paul im Lavanttal (*A-SPL* 264/4). Using highly coloured language, it surveys various kinds of musician. These comprise, firstly, those who know nothing about music, and who sing their parts in the reverse of the way they should; secondly, laymen, often ignorant of the art, who cultivate trained musicians so that natural industriousness and practice makes good their deficiencies, including certain clerics who compose difficult pieces for instruments; thirdly, those whose voices are defective but who study music and teach their pupils what they cannot perform themselves; and fourthly, those with fine voices and a knowledge of musical art, singing according to rule with *modus*, *mensura*, *numerus* and *color*. Among this latter group are female musicians who divide semitones into indivisible microtones. Medieval music theory does not lack passages that categorize musicians, usually according to the place of *ars* and *usus* in what they do, but Arnulf's treatise is exceptional for being devoted entirely to this subject.

The date of his treatise is hard to discern, and it could perhaps be substantially later. If so, there is a distinct possibility that Arnulf is to be identified with the Florentine singer and composer ARNOLFO GILIARDI and/or the writer and musician ARNOUL GREBAN.

CHRISTOPHER PAGE

Arom, Simha (*b* Düsseldorf, 16 Aug 1930). Israeli and French ethnomusicologist. After studying the french horn with Jean Devémy at the Paris Conservatoire (1951–4), he was first horn in the Israel Broadcasting Authority SO in Jerusalem (1958–63). In 1963 he founded the Musée National Boganda at Bangui in the Central African Republic, and was its director until 1967, and on returning to Paris he undertook musicological studies with Chailley at the Sorbonne (1968–73). He entered the CNRS in 1968 and his subsequent career has been with that institution. In 1993 he was appointed lecturer at the Ecole des Hautes Etudes en Sciences Sociales, Paris. He was an associate professor at Tel-Aviv University (1979–83) and music director of the Israel Broadcasting Authority (1980–82). He has been awarded the Grand Prix International du Disque de l'Académie Charles Cros (1971, 1978 and 1985), and the silver medal of the CNRS (1984). In 1992 he won the ASCAP Deems Taylor Award for excellence in music literature.

Simha Arom has devoted himself chiefly to the systematic study of oral traditional music, particularly the polyphonic and polyrhythmic music of Central Africa. He has devised new methodological procedures including a process, first used in 1972, for the analytical recording of polyphony and polyrhythm, enabling such music to be transcribed and analysed, and an interactive experimental method, introduced in 1989, for the perception of the organization of musical scales in cultures of oral tradition. His theoretical works concentrate on the structuring of time in music, particularly the relationship between metre and rhythm, on the modelling of orally transmitted music and on the cognitive aspects of musical practice in such cultures.

JEAN GRIBENSKI

Aron, Pietro *See* AARON, PIETRO.

Aronowitz, Cecil (*b* King William's Town, South Africa, 4 March 1916; *d* Ipswich, 7 Sept 1978). British viola player of Russian-Lithuanian parentage. He studied the violin with Achille Rivarde at the RCM, London, and played in the major London orchestras until the war, after which he changed to the viola. He became principal viola with the Goldsbrough Orchestra (later the English Chamber Orchestra) in 1949 and with the London Mozart Players from 1952 to 1964. In the English Opera Group orchestra he played in the early performances of Britten's church parables. However, it was chiefly in chamber music that he achieved distinction; he was a founder-member of Musica da Camera (1946), the Melos Ensemble (1950) and the Pro Arte Piano Quartet (1965). He had a particularly polished technique and an easy manner of integration, qualities very evident when he played as extra viola with the Amadeus String Quartet in quintets, blending with those players to produce performances of outstanding merit. He married the pianist Nicola Grunberg, with whom he formed a duo ensemble. He was professor of the viola and chamber music at the RCM from 1948, head of strings at the RNCM from 1973 to 1977 and director of studies in strings at Snape Maltings from 1977.

WATSON FORBES/R

ARP. American company of SYNTHESIZER manufacturers. It was founded as ARP Instruments by Alan R. Pearlman (and named from his initials) in Newton Highlands, near Boston, in 1970; it later moved to nearby Newton and Lexington. Models included the modular ARP 2500 (1970; for illustration *see* SYNTHESIZER, fig.1), the Odyssey (1971) and the digital Chroma (*c*1980; developed though not manufactured by ARP). The firm ceased to operate in 1981. *See also* ELECTRONIC INSTRUMENTS, §IV, 5(ii).

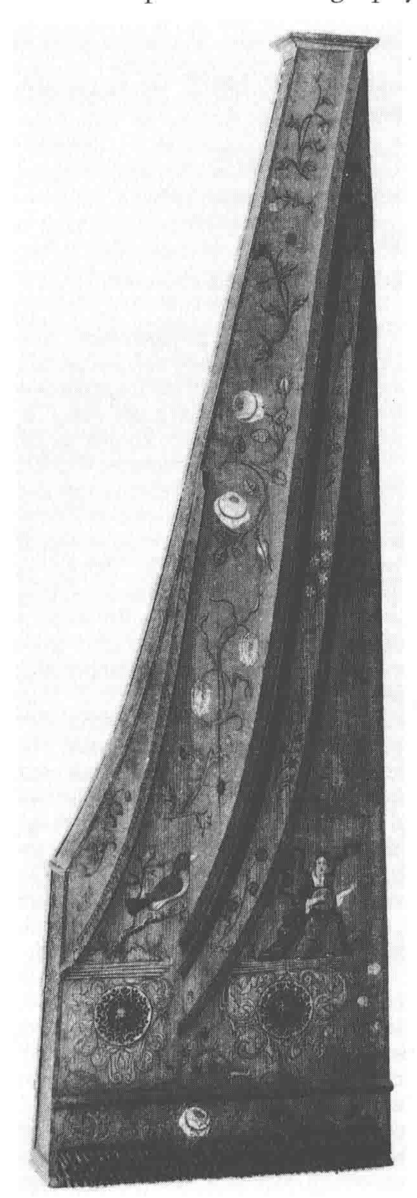
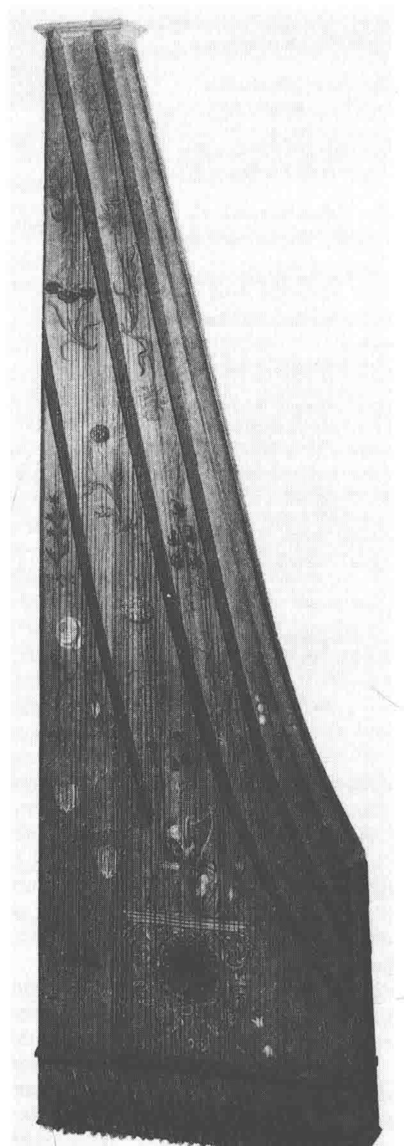
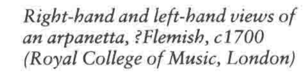
Arpanetta (It.; Fr. *Arpanette, harpe pointue*; Ger. *Spitzharfe, Harfenett*; Sp. *Arpaneta, arpa-citara*). An upright double psaltery, with each main side of the trapezial box acting as a soundboard; it is classified as a box zither. In Germany the instrument was sometimes known as the *italienische Harfe* ('Italian harp'; e.g. Brockhaus; Welcker von Gontershausen). As shown in Renaissance and Baroque paintings, the instrument was placed on a table or on the seated player's lap, with the shortest strings at closest reach. Those associated with the right-hand soundboard (see illustration) were of case-hardened iron and were used for the melody; those at the left were of brass (or some similar copper alloy heavier than iron) and, with their curved bridge quite near to the upper edge of the box, provided a bass accompaniment.



A height of some 90 cm was common, but instruments between perhaps 60 and 150 cm tall were also made. The total range might vary between two-and-a-half and four octaves: Majer (1732) gave a range of only two octaves and a third (*C–e'* for the left hand side and a range of two octaves and a fifth (*b–f'''*; chromatically *f–d'''*) for the right hand side); Eisel (1738) gave a range from *f* to *d'''*, chromatic except for the lowest 5th. The seven diatonic notes in each octave were each supplied with double courses while the five chromatic notes were single-strung.



Surviving instruments date from 1621 to about 1730. The arpanetta's first appearance in the West may have been in Italy, but it had its greatest popularity in Germany (an example, made by J.H. Appel and dated 1713, survives in Hamburg) and the Netherlands after 1650. J.G. Walther's *Musicalisches Lexicon* of 1732 refers to three types of *Harfe*, the first of which was the 'common one, known everywhere, strung with wire and called *harpanetta*'. On account of its shape the instrument is occasionally referred to as a harp-psaltery, or psaltery-harp (e.g. Norlind, 1936).



Whilst the arpanetta enjoyed great popularity with amateur (especially female) players until the second half of the 18th century it is not known whether the instrument ever had a repertory of its own (the question is explored in Wackernagel, 1997). A modern revival of the instrument may be attributed in part to the English harpist Andrew Lawrence King, who played an arpanetta (and a harp of David) in public for the first time at the Berlin Bachtage festival in 1991.

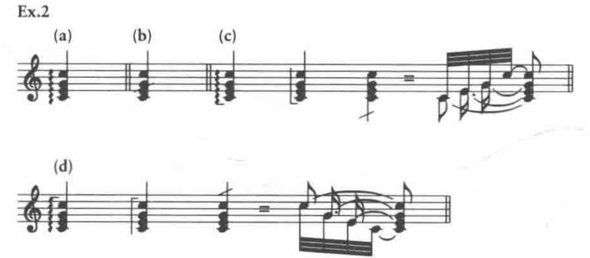
ALEXANDER PILIPCZUK

Arpeado (Sp.). *See* ORNAMENTS, §2.

Arpeggiation (i). Use of arpeggio patterns. Arpeggiation as a regular feature of accompaniment in keyboard music dates from the mid-18th century (*see* ALBERTI BASS); earlier examples exist, for instance in Bach's Violin Sonata in C minor BWV1017. Such passages are normally written out in full, but even earlier than this the term 'arpeggio' ('arpeggiato', 'arpeggiando') may be found to indicate that a player is to interpret a series of chords by playing them in arpeggiated fashion, as shown in ex.1; sometimes the arpeggiation of the first chord in such a sequence is

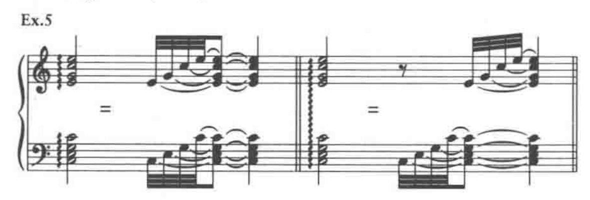


Ex.1 J. S. Bach: Violin Sonata in A BWV1015

written out in full to indicate the required manner of performance for the entire passage.

The arpeggiation of a single chord (*see also* ORNAMENTS) may be notated in a number of ways. The commonest method in present-day notation is shown in ex.2*a*; ex.2*b* shows the notation generally used by Mozart,

Hummel and others of the late 18th and early 19th centuries. Ex.2*c* and *d* show Türk's notation for upwards



and downwards arpeggios respectively (*Clavierschule*, 1789). Ex.3 shows notations used when certain of the arpeggiated notes are not to be held for the full duration

of the main note, and ex.4 shows notations and interpretations of arpeggiated chords with acciaccaturas or

appoggiaturas. A distinction should properly be made between arpeggiation in the two hands separately and the two together (ex.5).

See also Bow, §II, 2(ix) and 3(xi).

FRANKLIN TAYLOR/R

Arpeggiation (ii) (Ger. *Brechung*). In Schenkerian analysis (*see* ANALYSIS, §II), the movement of the bass from the root of the tonic to its fifth (the dominant) and back again as an encapsulation of the basic harmonic plan of a piece; the lower part of the URSATZ. Also a method of PROLONGATION by which any part is elaborated in the form of a broken chord. In both cases, a vertical configuration (an interval or a chord) is made linear or 'horizontalized' (Ger. *horizontalisiert*). The arpeggiation of the bass I–V–I, which Schenker specifically referred to as *Bassbrechung*, brings the tonic chord to life, and represents the three elements essential for a piece to have tonal shape: establishment of tonic, move to a dominant

preparation, return of the tonic. Its fundamental importance in this respect led Schenker to give it the epithet of 'the sacred triangle' (*Der freie Satz*, 1935 §19).

As a method of prolongation, arpeggiation is used frequently in the service of a structurally important note in the upper voice; for example, in the Minuet from Mozart's String Quartet in D minor K421/417*b* the first violin part rises from *d″* through *f″* to *a″* (as indicated by the slurs in ex.1); *a″* is also the first note of a linear progression (ZUG (i)) through a fifth, *a″–g″–f″–e″–d″*, in bars 3–10.

Arpeggiation may similarly be used to serve a harmony of structural importance (STUFE), as illustrated by the arpeggiation *e′–c–A* at the opening of Chopin's Etude in A minor op.25 no.11 (ex.2; after *Der freie Satz*,

fig.100/3*c*). Sometimes an arpeggiation appears in conjunction with another method of prolongation (especially REACHING OVER), and often it effects an ascending or descending REGISTER TRANSFER.

It is not necessary for the arpeggiated chord to be a triad; Schenker illustrated the use of arpeggiation of a diminished chord at the start of Chopin's 'Revolutionary Etude', in his *Fünf Urlinie-Tafeln* (1932); for a reproduction of these graphs, see ANALYSIS, figs.20. Nor does it have to be modally 'pure' at a middleground level: in his analysis of *Auf dem Flusse* from Schubert's *Winterreise* (*Der freie Satz*, fig.40/2), the first note of the fundamental upper voice (URLINIE) is approached by the arpeggiation *e′–g♯′–b′–e″–g♮″*.

WILLIAM DRABKIN

Arpeggio (It. from *arpeggiare*: 'to play the harp'). The sounding of the notes of a chord in succession rather than simultaneously; also, especially in keyboard music, the breaking or spreading of a chord. The ability to play (or sing) arpeggio figuration fluently has traditionally been counted an important part of instrumental (or vocal) technique.

See also ARPEGGIATION (i).

Arpeggione [guitar violoncello, bowed guitar] (Fr. *guitarre d'amour*; Ger. *Sentiment*, *Bogenguitar*, *Violoncellguitarre*). A bowed string instrument. Both J.G. Staufer

Arpeggione by Johann Georg Staufer, Vienna, 1824 (Musikinstrumenten-Museum, University of Leipzig)

(Stauffer) of Vienna and Peter Teufelsdorfer of Pest claimed to be inventors of what came to be known as the arpeggione. Both built a new instrument they called a 'bowed guitar', and both introduced their respective instruments in the spring of 1823. The violin maker Johann Ertl of Vienna might also have contributed to the arpeggione's invention. The concept of the instrument possibly originated with J.G. Leeb of Pressburg, who may have experimented with the construction of a bowed guitar 20 years earlier.

The instrument was essentially a bass viol with a guitar-type tuning, *E–A–d–g–b–e′* (see illustration). The body was coarser in structure and the frets, 24 in number, were, guitar fashion, metal strips fixed to the fingerboard. It was bowed like a cello. The body was smooth-waisted, in imitation of the guitar rather than as a revival of the early viol form. The arpeggione was especially suited to playing runs in 3rds, double stops and arpeggios. Virtuosos of the instrument included Heinrich August Birnbach (1782–1848) and Vincenz Schuster.

A number of Staufer's instruments have survived, along with some unsigned instruments built after his model. Instruments signed by J.G. Leeb, Anton Mitteis of Leitmeritz and Tomasz Pasamoński of Kraków have also survived. It was not until the 1870s that the instrument came to be called the arpeggione, after Schubert's famous sonata (D821) of the same name, written in November 1824.

GERALD HAYES/ESZTER FONTANA

Arpicembalo [arpi cimbalo] (It.). Term used in a Medici inventory of 1700 and by Frederigo Meccoli, a musician in the Medici court, to describe Bartolomeo Cristofori's newly invented piano. The prefix 'arpi' suggests either a harp-shaped case (a long-cased instrument with bentside) or a keyboard instrument producing a harp-like sound. Meccoli wrote that Cristofori's piano could imitate the sound of the harp.

STEWART POLLENS

Arpichordum [arpichordium, harpichordium] **stop.** A device most commonly found on Flemish virginals of the (MUSELAR) type, but also mentioned in connection with German harpsichords, in which a sliding batten brings a series of metal hooks or wires close to the strings at one end. When the strings are plucked, they jar against the hooks or wires, producing a buzzing sound. On muselars, the arpichordum is normally provided only for the strings passing over the straight portion of the right-hand bridge, i.e. from *C/E* to *f′*.

O'Brien suggests that only muselars, which pluck the strings in the middle rather than close to the left-hand bridge, provide sufficient amplitude of motion of the strings to make reliable contact with the hooks. Praetorius (*Syntagma musicum*, ii, 1618) describes the stop as giving a 'harp-like resonance', apparently likening it to the 'bray pins' commonly found on Renaissance harps (*see* HARP, §V, 1). The term *arpichordum* is not used to define a type of instrument, and should not be confused with ARPICORDO.

For discussion of the use of such effects on plucked keyboard instruments, *see* REGISTRATION, §II.

EDWIN M. RIPIN/DENZIL WRAIGHT

Arpicordo [alpichordo, ampichordo, harpichordo] (It.). Term most commonly used in 15th- and 16th-century Italy for a polygonal VIRGINAL (see Cervelli). Other, less popular, names at this time for the same instrument were *clavicordio* and *spinetta*. Despite the etymological similarity, it is not to be confused with the harpsichord or the ARPICHORDUM STOP. The name probably derives from the layout on a polygonal virginal of the bridges and strings, which resemble the shape of a harp (It. *arpa*). Some early instruments were made with curved case sides also suggesting a harp shape (see Winternitz, pl.50*a*). It is unclear whether a rectangular-cased virginal would have been called an arpicordo, but in any case, these were not common in the 16th century. The term *arpicordo leutato* was coined by Adriano Banchieri (*L'organo suonarino*, 2/1611) to describe several instruments he had seen with a sound between a harpsichord and a lute (*see* LUTE-HARPSICHORD).

DENZIL WRAIGHT

Arpicordo leutato (It.). A gut-strung ARPICORDO that sounded like a lute. *See* LUTE-HARPSICHORD.

Arpitarrone. A keyboard instrument designed by Adriano Banchieri and described in the 1611 edition of his *L'organo suonarino*, pp.3–4. Banchieri mentions having seen 21 instruments he called 'arpicordo leutato' in Milan, which had a sound between that of an arpicordo (i.e. a polygonal, wire-strung virginal) and a lute (*see* LUTE-HARPSICHORD). Inspired by the chitarrone, he added more notes to the bass end of the *arpicordo* and gave the new instrument a name derived from both instruments, saying also that it had the quality of a chitarrone in the bass and a harp (It. *arpa*) in the treble. As harps and chitarroni often used gut strings (although wire strings were sometimes used) it seems most likely that the arpitarrone was a gut-strung instrument. An arpitarrone was made for Banchieri by a Milanese instrument maker (of French origin) named Michel de Hodes (who had also made an *arpicordo leutato*), with the unusual compass of *CD–e‴* (i.e. lacking C♯).

DENZIL WRAIGHT

Arquier [D'Arquier], **Joseph** (*b* Toulon, 1763; *d* Bordeaux, Oct 1816). French composer. He went to Paris in 1790 or 1791, attracted by the proliferation of theatres following the abolition of the privilege system. The impresario and founder of the Théâtre Molière, Boursault-Malherbe, engaged him first as a cellist and then, after Scio left for the Théâtre Feydeau in 1792, as orchestral conductor. Arquier was subsequently appointed conductor at the Théâtre de la Gaîté (1793) and, with some periods of absence, at the Théâtre des Jeunes-Elèves between 1800 and 1807. When Napoleon closed that theatre he moved back to the south of France, where he had begun his career as a composer. His most notable work is probably *Marie-Christine* (1793), a trenchant satire on the aristocratic society of the Austrian Netherlands at the time of the French army's invasion; its music was judged to be 'pleasant'.

MICHEL NOIRAY

Arquimbau, Domingo (*b* 1760; *d* Seville, 26 Jan 1829). Spanish composer. After having served as *maestro de capilla* at Tortosa Cathedral and sub-*maestro* at Barcelona, on 4 July 1785, although not yet ordained a priest, he won the post of *maestro de capilla* at Gerona Cathedral, beating six competitors. On 1 November 1790, he became substitute *maestro de capilla* at Seville Cathedral with the right of succession. When Ripa died he took the post on 6 November 1795, occupying it until his death. In 1815, on submitting as a test piece his Maundy Thursday *Lamentación primera* for chorus, soloists and full orchestra, he was admitted to the Accademia Filarmonica at Bologna and on 23 November given the title *dottore*. Of his many sacred works in Seville listed by Rosa y López (1904), Anglès in 1928 encountered only the three *Magnificat* settings, three hymns, a *Pange lingua* and a four-voice mass concordant with a much used *Misa Semi Festiva* at Santiago, Chile. Arquimbau refrained from writing jaunty Spanish-text villancicos of Ripa's piquant type, confining himself, instead, to noble, fully orchestrated liturgical expressions in the vein popularized by his older contemporary, Francisco Javier García Fajer ('Il Spagnoletto').

WORKS

26 masses, 29 motets, 11 Lamentations, 11 hymns, 5 TeD, 3 Salve, 22 vesper psalms, 10 Mag, 2 Miserere with orch, 8 Miserere a cappella, 4 villancicos: all *E-Sc* (see Ayarra Jarne)

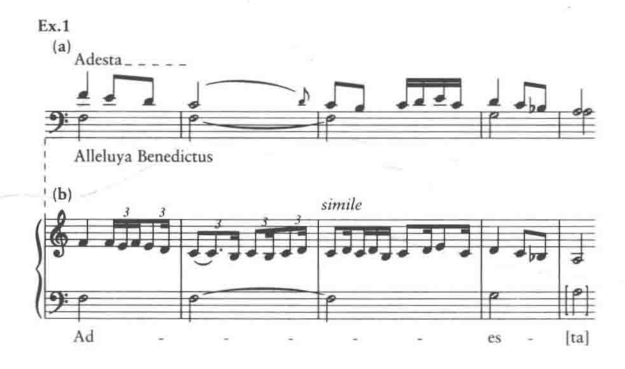
ROBERT STEVENSON

Arrangement (Ger. *Bearbeitung*). The reworking of a musical composition, usually for a different medium from that of the original.

1. Definition and scope. 2. History to 1600. 3. 1600–1800. 4. 19th and 20th centuries. 5. Conclusion.

1. DEFINITION AND SCOPE. The word 'arrangement' might be applied to any piece of music based on or incorporating pre-existing material: variation form, the contrafactum, the parody mass, the pasticcio, and liturgical works based on a cantus firmus all involve some measure of arrangement. In the sense in which it is commonly used among musicians, however, the word

may be taken to mean either the transference of a composition from one medium to another or the elaboration (or simplification) of a piece, with or without a change of medium. In either case some degree of recomposition is usually involved, and the result may vary from a straightforward, almost literal, transcription to a paraphrase which is more the work of the arranger than of the original composer. It should be added, though, that the distinction implicit here between an arrangement and a TRANSCRIPTION is by no means universally accepted (cf the article 'Arrangement' in *Grove 5* and the title-pages of Liszt's piano 'transcriptions').



Arrangements exist in large numbers from all periods of musical history, and though external factors have influenced their character the reasons for their existence cut across stylistic and historical boundaries. Commercial interest has played an important part, especially since the invention of music printing. Opportunist publishers from Petrucci onwards have looked for financial reward either from arrangements of established works or from the simultaneous publication of music in different forms. English madrigals were advertised as being 'apt for voices as for viols'; Dowland's songs were published in a form which allowed for performance either as a solo with lute accompaniment or as a partsong; in the 18th century the English market was flooded with arrangements of vocal and other music for the popular and ubiquitous flute; and ever since their composition popular 'classics' such as Rachmaninoff's C♯ minor Prelude and Rimsky-Korsakov's *Flight of the Bumble Bee* have been arranged for almost every conceivable instrument and instrumental combination. Practical considerations of a different kind govern the preparation of vocal scores of operas and choral works, in which the orchestral part is reduced and printed, usually on two staves, in a form more or less playable at the keyboard. Such arrangements require little more than technical competence on the part of the arranger, though creative artists of the first rank have occasionally undertaken the task, often in a spirit of homage to the composer. Bülow prepared the vocal scores of some of Wagner's music dramas, and Berg did a similar service for Schoenberg's *Gurrelieder*. Several composers have arranged the music of others as a means of perfecting themselves in a particular form, technique or medium. Bach and Mozart, for example, both made arrangements of other composers' concertos before writing any of their own.

A large number of arrangements originate because performers want to extend the repertory of instruments which, for one reason or another, have not been favoured with a large or rewarding corpus of original solo compositions. Until such players as Segovia and Tertis improved the status of their instruments, guitarists and viola players had to rely to a considerable extent on arrangements, and this is still the case with brass bands and (in so far as they exist) salon orchestras. Arrangements of this kind necessarily involve a transference from one instrumental medium to another, but there are also numerous examples of arrangements which alter the layout but not the instrumentation of the original. Virtuoso piano pieces have often been published in arrangements which place them within the scope of the amateur; others, such as Chopin's *Etudes* in Godowsky's arrangements, have been made even more difficult as a challenge to professional keyboard technique. Orchestral works have sometimes been reorchestrated, either to take advantage of improvements in the design of instruments (the brass parts of Beethoven's Third Symphony, for example, are not always heard as the composer wrote them) or because the original is considered to be in some respect deficient. Mahler's reorchestration of Schumann's symphonies and Rimsky-Korsakov's of Musorgsky's operas come into this category. There is also a relatively small group of arrangements made to accommodate a player's physical disability, for example those for the one-handed pianist Paul Wittgenstein, and those for the three-handed piano duo, Cyril Smith and Phyllis Sellick.

In considering all these and other categories of arrangements, any attempt to equate the motives of the arranger with the artistic merits of the result would be misleading. It is, however, possible to distinguish between the purely practical arrangement, in which there is little or no artistic involvement on the arranger's part, and the more creative arrangement, in which the original composition is, as it were, filtered through the musical imagination of the arranger. Arrangements by creative musicians are clearly the more important kind, both on account of their intrinsic merits and because they often serve to illuminate the musical personality of the composer-arranger; it is therefore towards this second type of arrangement that attention will be mainly directed in the historical conspectus that follows.

2. HISTORY TO 1600. Some element of arrangement is present in the medieval trope and clausula, as well as in those early motets where a vocal part is replaced by an instrumental one (or vice versa), but the most important type of arrangement in the period up to 1600 is the keyboard or lute intabulation of vocal polyphony. The earliest examples of such keyboard arrangements (indeed the earliest extant keyboard pieces of any kind) are in the early 14th-century Robertsbridge Manuscript (*GB-Lbl* Add.28550), whose contents include intabulations of two motets from the musical appendix to the contemporary *Roman de Fauvel* (*F-Pn* fr.146). Far from being simple transcriptions of the vocal originals, these intabulations feature a florid elaboration of the upper part which is unmistakably instrumental in conception, and this is something which remains characteristic of all later keyboard intabulations. Ex.1*a* shows the beginning of the motet *Adesta–Firmissime–Alleluya Benedictus*, and ex.1*b* the keyboard version of the same passage. Also from the 14th century are some of the keyboard arrangements in the important Faenza Manuscript 117 (*I-FZc*), which includes intabulations of vocal music by Jacopo da Bologna, Machaut, Landini and others. The principles governing these arrangements are similar to those of the

Ex.1

Robertsbridge Manuscript, but the finger technique required of the performer is more advanced.

Intabulations are also to be found in the Buxheimer Orgelbuch (*D-Mbs* Cim.352*b*), which dates from about 1470, as well as examples of a rather different type of arrangement (if it can be called that) which occurs in several other German organ books of the 15th century, including Conrad Paumann's *Fundamentum organisandi* (*D-Bsb* 40613) (1452). Where the original vocal source is a monody, this is often made to serve as cantus firmus in the left hand, supporting what is presumably a free and often very florid part in the right. The technique had been applied in the Faenza Manuscript to plainsong Kyries and Glorias, but is here used for secular melodies also. Ex.2 shows the opening of the song *Ellend du hast*: (*a*) from the Lochamer Liederbuch (*c*1450, *D-Bsb* 40613); (*b*) from Paumann's *Fundamentum*, with the melody in the left hand; and (*c*) from one of the six versions in the Buxheimer Orgelbuch (no.50). Clearly such pieces and similar ones based on basse danse melodies should be regarded as variations rather than as arrangements.

With the introduction of music printing and the wider dissemination of instruments in the 16th century, intabulations proliferated not only in Germany but in Italy, Spain and France as well (see *BrownI* for a list of all printed arrangements with their sources). To those for keyboard must be added a vast literature of similar pieces for lute and vihuela, beginning with Francesco Spinacino's first book of *Intabulatura de lauto*, published by Petrucci in 1507.

Lute intabulations have a particular interest for the scholar since the tablature does not directly indicate pitch but tells the player which fret to use for each note; consequently lute arrangements can assist in determining the application of *musica ficta* to 16th-century vocal polyphony. Among the most famous examples is the arrangement for vihuela by Luys de Narváez of Josquin's motet *Mille regretz* as *Canción del emperador*. Here melodic elaboration is not confined to the top part (ex.3). The lute's function as an accompanying instrument is exemplified in numerous arrangements of polyphonic music in which all voice parts but the top one are transcribed for the instrument, resulting in a solo song with lute accompaniment. Such arrangements were important in preparing for the new monodic style that emerged towards the end of the 16th century.

3. 1600–1800. The practice of transferring vocal music to instruments continued during the next two centuries and beyond. Among the many keyboard arrangements of vocal pieces in the Fitzwilliam Virginal Book (*GB-Cfm*) is one by Peter Philips of Caccini's well-known song *Amarilli mia bella*. Philips repeated the first part of the song as printed in Caccini's *Le nuove musiche* (Florence, 1601–2) and gave a different version each time, so that the result is both an arrangement and a variation of the original (ex.4). Arrangements of this kind are to be found throughout the Baroque period; the six 'Schübler' organ chorales by Bach (BWV645–50), at least five of which are transcriptions of movements from the cantatas, are much later examples in the same tradition.

However, the surge of interest in instrumental music of all kinds that characterizes the Baroque period brought with it a new type of arrangement in which vocal music was for the first time not involved. Transcriptions from one instrumental medium to another were particularly cultivated in the period (late 17th century and early 18th) which saw the rise and dissemination of the concerto. Francesco Geminiani, as well as arranging his own music for the harpsichord, adapted Corelli's opp.3 and 5 violin sonatas as concerti grossi, and some of Domenico Scarlatti's harpsichord sonatas were turned into highly successful string concertos by Charles Avison. At Weimar J.G. Walther and J.S. Bach adapted concertos by Albinoni, Torelli, Telemann, Vivaldi and others for the organ and for the harpsichord, almost certainly at the behest of their patron Prince Johann Ernst. In many cases Bach made an almost literal transcription of the original, but often he subtly altered the harmony or filled out the texture with new counterpoints. In ex.*5b*, from the slow movement of BWV975 (arranged from Vivaldi's op.4 no.6), he elaborated Vivaldi's straightforward violin melody (ex.*5a*) and enriched the harmony with a totally chromatic bass line, while replacing the original bass suspensions with others in the middle of the harmony. Bach's later arrangements include one of Vivaldi's Concerto for four violins and strings op.3 no.10 as a concerto for four harpsichords (BWV1065), and most of his other keyboard concertos with accompaniment are similarly arrangements of earlier works by himself or others.

Another aspect of Bach as arranger is his practice of re-using material from earlier, and sometimes quite different, works; the Mass in B minor furnishes several familiar examples. This practice, usually referred to as 'parody' (*see* PARODY (i)), was fairly widespread in a period when themes were largely fashioned on prototypes and when originality was measured as much in terms of craftsmanship as of melodic invention. Schütz incorporated music by Andrea Gabrieli, Alessandro Grandi and Monteverdi into his own compositions, and Francesco Durante transformed recitatives from Alessandro Scarlatti's secular cantatas into chamber duets; Handel's habit of re-using old music of his own, as well as appropriating music by other composers that suited his needs, is well known. The practice was justified by the extent to which the 'borrowed' material was refashioned. In the case of Handel this

amounted often to a complete recomposition which entirely transformed the original.

Haydn's three different versions of *Die sieben letzten Worte unserers Erlösers am Kreuze* (as an orchestral piece, 1786; for string quartet, 1787; and as an oratorio, *c*1796) provide a locus classicus in the history of arrangement. But the key figure of the late 18th century is Mozart. Mozart is important less for the number than for the nature of his arrangements. His piano concertos K37, 39–41 and 107, based on movements from sonatas by Raupach, Honauer, J.C. Bach and others, are not without interest, but of more far-reaching importance is the rescoring for string trio and quartet of fugues by J.S. Bach (including some from *Das wohltemperirte Klavier*) and the reorchestration of Handel's *Acis and Galatea*, *Messiah*, *Alexander's Feast* and *Ode for St Cecilia's Day*. These arrangements, all done for Baron van Swieten, an enthusiast for Baroque music, are significant in representing the attitudes of their time to earlier music; together with the works heard at the Handel commemoration of 1784, they stand at the head of a long line of Bach transcriptions and Handel reorchestrations which continued throughout the 19th and early 20th centuries, only to be discredited afterwards.

4. 19TH AND 20TH CENTURIES. The nature of arrangements during the 19th century was largely determined by two important developments. One was a new interest (already evident to some extent in the late 18th century) in instrumental colour for its own sake; the other was the rise of the piano as both concert and domestic instrument *par excellence*. The first of these developments brought with it the concept of the composer's creation as an inviolable entity, so that, while the 19th-century arranger would happily reorchestrate the music of the past, the 19th-century composer would go to considerable trouble to ensure that his own music was played only on those instruments for which it was conceived. It is difficult to find a Romantic counterpart to the Corelli–Geminiani or Vivaldi–Bach concerto. One result of this was that most creative arrangements of contemporary instrumental music were made by the original composer himself. Examples include Beethoven's arrangements of the Violin Concerto as a piano concerto and of the Second Symphony as a piano trio, and the various versions of Brahms's Piano Quintet.

The exception to most of these remarks is the piano arrangement, probably the most interesting and the most widely cultivated type of arrangement in the 19th century. Innumerable transcriptions brought the orchestral and chamber repertory into the homes of domestic pianists (or piano-duettists), but more interesting are those with which the travelling virtuoso dazzled and delighted his audiences. Pre-eminent are those of Liszt, whose operatic arrangements range from straightforward transcriptions (the Prelude to Wagner's *Tristan und Isolde*, for instance, presents fewer problems to the pianist than does Bülow's version in the vocal score) to elaborate paraphrases of enormous technical difficulty, such as those based on Mozart's *Don Giovanni*, Verdi's *Rigoletto* and several of Wagner's music dramas. Liszt's voluminous arrangements also include many Schubert songs, all the Beethoven symphonies and Berlioz's *Symphonie fantastique*; further, he was the first important Romantic pianist-composer to reflect the spirit of the Bach revival in arrangements of the organ music (six fugues), a tradition continued later in the century by Tausig, Busoni and others.

Arrangements of piano music for orchestra have usually been either by the composer himself, or by others working after his death. An example of the former is Brahms's orchestration of his Variations for two pianos on a theme of Haydn (1873); almost as well known (if less often played) is Joachim's orchestral version of Schubert's Sonata in C for piano duet D812 ('Grand Duo'). Similar orchestral arrangements exist in great numbers in the 20th century. In most cases some attempt is made to match the orchestration to the style of the music (provided this is later than Bach and Handel), but that is less often the case when the arranger was himself a real composer. In Ravel's orchestral version (1922) of *Pictures at an Exhibition*, for example, the black-and-white originals of Musorgsky are filled out with colours which are very much Ravel's own. It is interesting to observe how later composer-arrangers have crossed the stylistic divide between their own work and that of the past. Schoenberg's arrangement of Brahms's G minor Piano Quartet op.25 (1937), even more than his earlier ones of pieces by Monn, Bach and Handel, seems to constitute a conscious act of identification with (perhaps even nostalgia for) the past. Schoenberg uses a slightly expanded Brahmsian orchestra in a more or less Brahmsian way. Webern's orchestral version of the six-part ricercare from Bach's *Musical Offering* (1935), on the other hand, sets out with the opposite intention of adapting the past to the language of the present (ex.6). It is instructive to compare it with the version by Igor Markevich (published 1952), who aimed (but failed) 'to delve into and absorb as faithfully as possible Bach's own sonorities'. The parodic element in Webern's fragmented instrumentation is pursued to the point of distortion in the several arrangements and 'realizations' of Peter Maxwell Davies.

A number of external factors have affected 20th-century practice in the making of arrangements. The implementation of copyright agreements has made it illegal to adapt and arrange musical works which are the property of a copyright holder without prior permission. Radio and the gramophone have largely replaced the piano transcription as a disseminator of the chamber, orchestral and operatic repertory, and the Lisztian paraphrase now exists only in isolated examples such as Ronald Stevenson's Fantasy on themes from Britten's *Peter Grimes*. The harmonic crisis of the 1920s led many composers to delve into the past for the seeds of a new musical language, which they did by collecting and arranging earlier music. J.C. Bach, Haydn and Beethoven had responded to a vogue for folksong arrangements in Britain during the late 18th and early 19th centuries, but the folksong arrangements of Bartók and Vaughan Williams were directed towards quite different ends. They were a means by which both composers achieved a musical style which was at the same time nationalistic and intensely individual. Similarly, Stravinsky's move in an opposite direction (away from a recognizably Russian style and towards neo-classicism) was effected with *Pulcinella* (1920), a ballet based on music by Pergolesi and others. Stravinsky's lasting obsession with the past was evident in his arrangements of composers as diverse as Gesualdo, Bach, Beethoven, Grieg and Tchaikovsky.

The late 18th-century practice of reorchestrating choral masterpieces of the Baroque period, especially those of

Ex.6

Handel and Bach, was referred to above (see §3), and the provision of such 'additional accompaniments', as they are sometimes called, became still more widespread in the 19th and early 20th centuries. Arrangers were motivated no doubt by the practical requirements of large, well-established choral and orchestral societies – there were advantages in adapting the orchestration to the orchestra rather than the orchestra to the orchestration – and perhaps, in the case of mammoth performances, by a desire to magnify the original composer's reputation; but there was also often a genuine conviction that they were making positive improvements on the 'primitive' originals. Mozart's versions of Handel's oratorios gained currency (and were further 'improved') despite objections from some quarters. Among the objectors was Mendelssohn, who in his young days had provided additional accompaniments for Handel's 'Dettingen' *Te Deum* and *Acis and Galatea* and revised Bach's orchestration for a famous revival of the *St Matthew Passion*, but who later declined to do the same for Handel's *Israel in Egypt*.

I.F. von Mosel, C.F.G. Schwencke, Robert Franz, George Macfarren and Arthur Sullivan were among other 19th-century musicians engaged to provide new orchestrations for choral works by Bach, Handel and others, and their editions continued in use during the early part of the 20th century. However, the concern for historical accuracy in the performance of older music, which has gradually gained ground since about 1950, has profoundly influenced attitudes towards arrangements in general. Both the additional accompaniments of the 19th century and inflated orchestral versions of Baroque instrumental pieces, such as those by Elgar, Beecham, Harty and Stokowski, have been discredited. The 'edition' has replaced the 'arrangement', in critical esteem at least. Usually the distinction between one and the other is quite clear, but this is dependent to some extent on interpretation of the historical evidence. Raymond Leppard's versions of 17th-century Venetian opera, for example, purport to be editions, though many musicologists would class them as arrangements.

5. Conclusion. Few areas of musical activity involve the aesthetic (and even the ethical) judgment of the musician as much as does the practice of arrangement. This involvement is at its most intense in the case of those arrangements which set out to popularize an acknowledged masterpiece, either by adapting it for the stage or film (or, worse still, for the television advertisement), or by 'jazzing up' its rhythms and instrumentation. In either case the arrangement will often earn the musician's disapproval, and even his or her resentment. However, it is clearly inconsistent to deplore solely on aesthetic grounds the arrangements of Borodin's music in the musical *Kismet*, or the Bach arrangements made for the Swingle Singers, while using lack of 'historical authenticity' as the only stick to beat other, more seriously intentioned arrangements. Every arrangement creates its own historical authenticity, and Mozart's version of Handel's *Messiah* has been accorded the distinction of two scholarly editions and at least one complete, carefully prepared recording. Perhaps one day there will be 'historically accurate' performances of Ebenezer Prout's version (1902), with ornamentation restricted to frequent use of the portamento.

It would be unrealistic to propose that arrangements should be judged without reference to the original, but it is perhaps only by regarding the arrangement and the original as two different versions of the same piece that a solution to the aesthetic dilemma they so often create will be found.

MALCOLM BOYD

Arras. City in northern France, capital of the modern département of Pas-de-Calais, formerly the province of Artois. From the 12th century Arras was an important commercial centre and, increasingly in the 13th century, a bastion of the urban middle class. Much of its activity as a literary and musical centre originated with the Confrérie des Jongleurs et des Bourgeois d'Arras, a lay religious guild whose existence is documented from the last decade of the 12th century to about the mid-14th. During a plague in Arras (according to local legend) the Virgin Mary appeared separately to two *jongleurs*, Pierre Normand and Itier of Brabant, telling them to go to Arras and there reconcile their differences before Bishop Lambert. When they did this in the church of Notre Dame in Arras the Virgin appeared again and gave them a candle (the *sainte chandelle*); its wax was poured into the water used to treat the wounds of the plague-stricken, and they were miraculously healed. This prompted the Confrérie; and although written accounts of the miracle in both Latin and French place it at the beginning of the 12th century, the Confrérie was more probably founded nearer the end of the century.

The *Nécrologe* which records the deaths of the members extends from 1194 to 1361, and while the number of trouvère poets and composers it includes is considerably smaller than the figure of 180 found in many reference works, it nonetheless shows a considerable group to have come from or been active in Arras during the 13th century. A conservative list of these follows, many of them recorded in the *Nécrologe*: Adam de Givenchi, Adam de la Halle, Andrieu Contredit, Andrieu Douchet, Andrieu de Paris, Audefroi le Bastart, Gautier de Dargies, Gilles le Vinier, Gillebert de Berneville, Henri d'Amion, Hue, chastellain d'Arras, Jaques le Vinier, Jehan Bodel, Jehan Bretel, Jehan le Cuvelier d'Arras, Jehan Erart, Jehan Fontainnes, Jehan de Grieviler, Jehan de Neuville, Lambert Ferri, Moniot d'Arras, Oede de la Couroierie, Robert de Castel, Robert de la Piere, Sauvage d'Arras, Sauvale Cosset, Simon d'Authie, Villain d'Arras. As the names indicate many of these trouvères were probably tradesmen, and most were of the middle class. The two outstanding names are Jehan Bretel (*d* 1272), a prolific poet and the principal exponent of the jeu-parti, a genre cultivated extensively in Arras, and Adam de la Halle (*d* 1285–8), the only trouvère known to have composed polyphonic music and the author of the *Jeu de Robin et de Marion.*

With the decline of secular monophony in the 14th century musical activity was concentrated in the churches, and Arras became an important centre for the training of singers until the 17th century. During the late 15th century and the 16th Arras produced a number of composers, the best known of whom were (probably born there) Antoine de Févin, Philippe Rogier and Valérian Gonet. Musicians and composers from the area were to be found all over Europe during this period, and the Ste Chapelle in Paris regularly sought singers in Arras.

With the incorporation of Artois into France in 1659 Arras lost most of its former importance as a musical centre. Despite municipal subsidies for visiting opera and operetta troupes Arras remained a musical backwater throughout the 18th century. In the 19th century musical activity centred on a number of amateur societies and a municipal music school.

ROBERT FALCK

Arras, Chansonnier d' (*F-AS* 657). *See* SOURCES, MS, §III, 4.

Arras, Jean d' [Renverset, Jean] (*b* Arras; *d* ?Madrid, 1582). Flemish organist, active in Italy and Spain. On 1 January 1556 he was engaged at the ducal chapel of Parma. In 1580 he was organist in the chapel of Philip II of Spain, as is shown by a receipt that he signed for wages. His tenure there continued until his death. A madrigal by him, *Due rose*, is found in Josquino Persoens's first book of madrigals (RISM, 1570[28]). A chanson by him was published by Phalèse (RISM, 1575[4]).

Jean d'Arras should not be confused with a younger man of the same name who was listed in 1596 as a *mozzo de capilla* ('youth in the chapel') to Philip II, and to whom further references occur in listings of chapel personnel in 1598, 1599 and 1608.

LAVERN J. WAGNER

Arrau, Claudio (*b* Chillán, 6 Feb 1903; *d* Mürzzuschlag, Austria, 9 June 1991). Chilean pianist, naturalized American. A child prodigy, he gave his first public recital at the age of five in Santiago. After studying with Paoli for two years, he was sent, with the support of the Chilean government, to study at the Stern Conservatory in Berlin, where he was a pupil of Martin Krause from 1912 to 1918. He never went to another teacher. During this period he won many awards including the Ibach Prize and the Gustav Holländer Medal. He gave his first recital in Berlin in 1914, followed by extensive tours of Germany and Scandinavia, and a European tour in 1918. At this time he played with many of the leading orchestras of Europe under conductors including Nikisch, Muck, Mengelberg and Furtwängler. In 1921 he returned for the first time to South America, where he gave successful concerts in Argentina and Chile. He first played in London in 1922, in a concert shared with Melba and Huberman, and this was followed a year later by a tour of the USA, where he made his Carnegie Hall début and appeared with the Boston SO and the Chicago SO.

In 1924 Arrau joined the staff of the Stern Conservatory, where he taught until 1940, and in 1927 he further enhanced his international reputation by winning the Grand Prix International des Pianistes in Geneva. Notable among his European concerts before World War II was a series of 12 recitals in Berlin in 1935, in which he played the entire keyboard works of Bach. However, he gave up playing Bach in public, after deciding that his music could not be performed satisfactorily on the piano. In 1940 he left Berlin, returning to Chile to found a piano school in Santiago. A year later, after a further tour of the USA (which was greeted with the highest critical acclaim), he and his family settled in New York. Highlights of his subsequent international career included complete performances of Beethoven's piano sonatas in London, New York and elsewhere, including a broadcast of the cycle by the BBC in 1952, and world tours in 1968 and 1974–5.

Claudio Arrau, 1961

Reducing the number of concerts he gave annually (from as many as 100 to about 70) as he approached his ninth decade, he toured Europe, North America, Brazil and Japan in 1981–2. After a 17-year absence he made an emotional tour of Chile in May 1984, having been awarded the Chilean National Arts Prize the previous year.

Arrau acquired a special reputation for his interpretations of Brahms, Schumann, Liszt, Chopin and, above all, Beethoven, a reputation which is reflected by his many recordings. He had the technique of a virtuoso, but was one of the least ostentatious of pianists. His tempos were sometimes unusually broad, and even when they were not he gave the impression of having considered deeply the character and shape of each phrase. He could give performances so thorough in their consideration of detail that they seemed lacking in spontaneity and momentum. However, at its best his grand, rich-toned and thoughtful playing conveyed exceptional intellectual power and depth of feeling.

ROBERT PHILIP/R

Arraujo, Pedro de. *See* ARAÚJO, PEDRO DE.

Arregui, José Maria (*b* Villardo, *c*1875; *d* Aránzazu, 5 May 1955). Spanish composer. At the age of ten he entered the Franciscan college at Arántzazu, Guipúzcoa; he became a Franciscan in 1895 and then continued his music studies. After a missionary journey to Peru, he returned to Spain in 1912, completing his music education with Goberna and Borges. In addition to touring as a pianist, he became in 1918 conductor at the Capilla del Santuario, Arántzazu, which he reorganized. He also founded the Orfeon Caspolina in Caspe, Aragon, and conducted the Orquesta Seráfica Antoniana of Barcelona. Like other Spanish composer-priests, Arregui followed the directives of Pope Pius X's 1903 *moto proprio* on church music, sacrificing his personal voice and artistic concerns for an ecclesiastical style far removed from 20th-century aesthetics. His compositions, most of them sacred choral pieces, include *Himno a Bilbao* (1935), designated the official hymn of the Bilbao municipal government in 1936.

WORKS

ANTONIO RUIZ-PIPÓ

Arregui Garay, Vicente (*b* Madrid, 3 July 1871; *d* Madrid, 2 Dec 1925). Spanish composer. He studied at the Madrid Conservatory, where he won first prizes in piano and composition and the Spanish Rome Prize (1899). In 1910 he received the National Music Prize for the orchestral *Historia de una madre*. With the exception of the *Sinfonía sobre temas vascos* his works do not reflect the nationalist trends of the time. Rather, together with Monrique de Lara, Fecundo de la Viña and del Campo, he was a leading exponent of the German Romantic aesthetic in Spain, and his music shows the strong influence of Wagner, Richard Strauss and Franck. For many years up to his death he was music critic for the Madrid daily paper *El debate*.

ANTONIO RUIZ-PIPÓ

Arrested Development. American rap group. Formed in 1987 by 'Speech' (Todd Jenkins; *b* Milwaukee; rapper), they combined social comment and sampled beats with a non-aggressive stance. Other members included Rasa Don (drums), DJ Kermit (vocals), Nadirah Shakoor (lead vocals), Aerle Teree (poetry and vocals), the dancers Ajile and Montsho Eshe, and Speech's 60-year-old 'spiritual adviser', Baba Oje. They achieved US and European fame with their first album, *3 Years, 5 Months and 2 Days in the Life of*... (Chrysalis, 1992), which won two Grammy awards. Tracks such as 'Mr. Wendal' and 'People Everyday' combined the social comment of Speech's slow conversational rap with mellow funk samples and grooves. This continued the intelligent, gentle and commercially palatable rap begun by De La Soul and A Tribe Called Quest among others, and developed by the Fugees. Their appeal in live performance was proved with the live album *Unplugged* (Chrysalis, 1993). Speech adopted a different formula for the next album, *Zingalamaduni* (Chrysalis, 1994); named after the Swahili word for 'beehive of culture', it increased their earlier use of African vocals. In 1994 they performed in South Africa before Nelson Mandela but by the next year had split up. In 1996 Speech released an eponymous solo album, but did not achieve his earlier success.

IAN PEEL

Arresti [Aresti], **Floriano** (*b* Bologna, 15 Dec 1667; *d* Bologna, 1717). Italian organist and composer. The son of Giulio Cesare Arresti, on 6 April 1684 he became a member of the Accademia Filarmonica, Bologna; his musical attainments were sufficiently distinguished for him to serve there as its *principe* in 1715. In 1689 he studied keyboard and composition in Rome with Bernardo Pasquini, and was organist of S Maria in Trastevere for a time. He was *maestro di cappella* of S Lorenzo Martire in Sant'Oreste, to the north of Rome, until 1691. By 1703 he had returned to Bologna and was organist of the cathedral, a post he held until his death. He composed a quantity of music for both the church and the stage, but all his major works are lost.

JAMES L. JACKMAN/ANGELA LEPORE

Arresti, Giulio Cesare (*b* Bologna, 26 Feb 1619; *d* Bologna, 17 July 1701). Italian organist and composer. He spent his entire life in Bologna. He was a pupil of Ottavio Vernizzi whom he succeeded as second organist at S Petronio in 1649, being promoted to first organist ten years later. In December 1661 he was summarily dismissed following a vitriolic attack on the *maestro di cappella* MAURIZIO CAZZATI, circulated anonymously as the *Dialogo fatto tra un maestro ed un discepolo desideroso d'approfittare nel contrappunto*. While Gaspari attributed this work to Arresti, it is now considered unlikely that it is by him. Matters came to a head when Arresti published his *Messa e Vespro dell Beata Virgine* (1663), including the Kyrie of Cazzati's *Messe e salmi a 5 voci* (1655)

liberally marked with alleged errors. Cazzati was forced to reply in the lengthy *Risposta alle opposizoni fatte dal Signor Giulio Cesare Arresti nella Lettera al Lettore posta nell'opera sua musicale* (1663). After Cazzati's own dismissal in 1671, Arresti was reinstated as first organist, being pensioned in 1696. He also served at S Salvatore in 1668 and 1680 and at the Cappella del Rosario, S Domenico. He played a major part in the foundation (1666) of the Accademia Filarmonica di Bologna, which apparently originated in some highly successful concerts of his given at the home of its founder Count Vincenzo Carrati. Arresti became president of the academy in 1671. He had previously been a member of the Accademia dei Filomusi, with the name 'Il Sollevato'.

The pedantic dispute over the proprieties of the *a cappella* style have coloured later perceptions of Arresti's music. His *Sonate* (1665), however, are novel in their inclusion of *arie* obviously indebted to contemporary secular vocal music, and his *Sonate da organo di varii autori* (?1697), containing three of his own compositions, is an important anthology of late 17th-century Italian organ music. His contribution to the oratorio appears to have been significant but cannot be assessed in the absence of surviving scores.

WORKS

Messa e Vespro della Beata Virgine con l'inno, reali composte di 3 figure cantandosi senza battuta, 8vv, org ad lib, op.1 (Venice, 1663)

Messe, 3vv, bc (org), con sinfonie, e ripieni ad lib [2 vn], ... motetti, e concerti, op.2 (Venice, 1663; 2/1664 as Gare musicali, i)

[12] Sonate a 2, 3, vc ad lib, bc, op.4 (Venice, 1665)

Partitura di modulationi precettive sopra gl'hinni del canto fermo gregoriano con le riposte intavolate in 7 righe, org, op.7 (Bologna, after 1665; probably after 1685, according to Apel)

1 cant., 1685[1]

3 sonatas, org, *c*1697[8], ed. A.G. Ritter, *Geschichte des Orgelspiels* (Berlin, 1884)

Orats: L'orto di Getsemani, Bologna, 1661; Licenza di Gesù da Maria, Bologna, 1661; Lo sposalizio di Rebecca, Bologna, 1675; La decollazione di S Giovanni, Bologna, 1708: all lost

WRITINGS

Dialogo fatto tra un maestro ed un discepolo desideroso d'approfittare nel contrappunto (MS, 1659, *I-Bc* C.55), attrib. now thought doubtful

Arriaga (y Balzola), Juan Crisóstomo (Jacobo Antonio) de (*b* Bilbao, 27 Jan 1806; *d* Paris, 12/17 Jan 1826, bur. 17 Jan 1826). Basque composer. His father, Juan Simón Arriaga, had been organist, royal clerk and schoolteacher at Guernica, and had become associated with members of the Real Sociedad Bascongada de los Amigos del Pais, a society upholding the ideals of the Enlightenment, before moving to Bilbao in 1804 to become a merchant and shipowner. Arriaga's brother Ramón Prudencio, his senior by 14 years, played the violin and guitar. Both father and brother seem to have groomed the child for a musical career. They established contacts with musical amateurs and professionals, such as the aficionado José Luis Torres and José Sobejano, sometime organist and *maestro de capilla* at Santiago, Bilbao; with influential men of letters and musicians from Madrid court circles, such as the poet Alberto Lista and the violinist Francesco Maria Vaccari; and with the famous singer Manuel García. Reports on Arriaga's opera in the Spanish press presumably appeared on the initiative of his father and brother. The choice of texts for two patriotic hymns and the idea to set a Spanish opera also reflect the influence the family had on the boy.

By September 1821 Arriaga had produced about 20 works, only some of which are now extant. According to his father, Arriaga wrote his first piece at the age of 11, and the autograph of *Nada y mucho* seems to confirm this. Originally a trio for violins, the piece was revised by the addition of a bass and a text to the upper part. In 1818 he composed an overture (op.1) for nonet which, surprisingly, already shows many of the characteristic compositional strategies used in later works. In 1819 he wrote his opera *Los esclavos felices*, of which only the overture and fragments of several arias remain. A *romanza* for piano (published in Sobejano's *El Adam español*) may have been written when Sobejano was director of the Santiago *capilla* (1815–20). The motets *Stabat mater* and *O salutaris hostia* were probably composed for the *capilla*. The texts of the patriotic hymns *Ya luce en este hemisferio* and *Cantabros nobles* fit the political situation of the *trienio liberal* (1820–23). Variations are an important part of Arriaga's output. Op.17 for string quartet is a densely textured, heavily chromatic set of variations on a very simple diatonic melody; op.22 is a virtuoso set for violin with a very simple added bass.

In September 1821 (not 1822 as usually stated) Arriaga went abroad. He was introduced by García and Justo de Machado (the Spanish ambassador in Paris) to Cherubini, who was at that time one of the inspectors of the Paris Conservatoire. Arriaga was admitted to Fétis's newly created class of counterpoint and fugue and to the violin class of Pierre Baillot and his assistants. He won prizes for counterpoint and fugue in 1823 and 1824, and in the latter year Fétis made him teaching assistant.

Arriaga continued to be very industrious as a composer. In the course of revising some of his earlier works, he may have disowned some of them. At the request of Vaccari, the variations op.22 for violin and bass were arranged for string quartet in order to introduce them at court in Madrid. The overture to *Los esclavos felices* was revised: the form of the second version is more academic and Arriaga had some difficulty in cutting it down. A comparison of the two versions shows the composer's progress in orchestration.

His new compositions exhibit a continuing strength of invention. The prizes for counterpoint and fugue were not undeserved, as the *Canon perpétuel* for the album of Monsieur d'Henneville shows. Likewise, *Et vitam venturi*, a fugue for eight voices inspired by the corresponding section of Cherubini's C minor Requiem, 1816, was praised by Fétis. For all of his vocal works Arriaga chose texts that were well known in earlier settings. The three arias (*Hélas, hélas, d'une si pure flamme*, *Hymen, viens dissiper une vaine frayeur* and *Douce magie des lieux chéris*) had been set before by Sacchini, Cherubini and

Boieldieu in 1785, 1797 and 1803 respectively, and Arriaga certainly knew their settings. The texts of the cantata *Herminie* and the scena *Agar dans le désert* had been used already in the competition for the Prix de Rome. Three string quartets were published in 1824 by Philippe Petit, whom Arriaga probably knew through García. A symphony, showing the influence of Beethoven and uncannily reminiscent of Schubert's Fourth Symphony, was one of Arriaga's last works. Separate parts of both the symphony and the revised version of the overture to *Los esclavos felices* were copied, probably for professional performance in public. According to Fétis, some pieces of liturgical music and several romances, presumably for voice and piano or guitar, have been lost.

Arriaga's short career was heavily marked by a strong sense of competition. A dramatic impetus coupled with a flair for finding remarkably well-poised musical structures pervades all of his works, both vocal and instrumental. Melodies always seem to have come easily to him; a remarkable progression in the handling of accompaniment and orchestration can be seen. In his Parisian period Arriaga discovered a technique of continuous transformation of musical material. He was always fond of chromaticisms and used a chromatic *idée fixe* in most of his works from the very beginning.

Pedro Albéniz's letter to Arriaga's father and Fétis's report lead to the conclusion that Arriaga died from exhaustion and a pulmonary infection. After his death his belongings were sent to Bilbao and on the death of his father in 1836 his papers were divided between the five heirs. In 1868 Emiliano de Arriaga acquired what was believed to be the composer's violin and during the early 1880s he started gathering the documents concerning his ancestor. The present-day image of the composer has been created almost single-handedly by him. The nickname 'the Spanish Mozart', suggested by him and coined by Pascual Emilio Arrieta, stuck. The composer became an important symbol within the budding movement of Basque nationalism and thus was soon styled 'the Basque Mozart'.

Emiliano de Arriaga's son José continued his father's politics of divulgation. He had many of the works published before 1930, though in adulterated versions, and set up an international network for the propagation of Arriaga's music that was active from the 1920s to the 1950s. On José de Arriaga's instigation many of the works were published in arrangements.

WORKS

VOCAL

Los esclavos felices (op semiseria, 2, after L.F. Comella y Comella), 1819, Bilbao, 1820, mostly lost; 14 nos., inc.; ov., 2nd version, ed. (Bilbao, 1950)
Ya luce en este hemisferio la constitucion mas sabia, patriotic hymn, 1v, orch, ?1820–21
Cantabros nobles, la Patria a nuestras filas os llama, patriotic hymn, ?1820–21, mostly lost; T, B pts in *E-Bilbao*
Stabat mater dolorosa, motet, 3vv, orch, before July 1821, ed. (Bilbao)

WILLEM DE WAAL

Arrieta (y Corera), Pascual (Juan) Emilio (*b* Puente de la Reina, 21 Oct 1823; *d* Madrid, 11 Feb 1894). Spanish composer. Born to a family of poor labourers, he was orphaned as a child and raised by a sister in Madrid, who arranged for his first solfège lessons. She also took him on his first journey to Italy in 1838, where he returned on his own the following year aboard a smuggler's ship. He travelled to Milan under the name of Juan, but once there began using Emilio. He studied piano with Perelli and harmony with Mandacini before entering the Milan Conservatory, where he studied composition with Nicola Vaccai and became a good friend of his fellow student, Ponchielli. Extreme poverty and malnourishment did not prevent him from excelling in his courses, and his talent attracted the patronage of Count Litta, to whom he dedicated his first opera, *Ildegonda*, to a libretto by Temistocle Solera. Upon completing his studies in Milan, he returned to Madrid in 1846, where *Ildegonda* was produced in the theatre of the royal palace in October 1849. He was appointed singing teacher and court composer to Isabel II, who encouraged him to write another opera with Solera; the resultant work, *La conquista di Granata*, was first performed at the Teatro del Real Palacio in October 1850. After a year's stay in Italy supervising performances of his works, he returned to Spain to find the zarzuela in the ascendant. He collaborated with the dramatist Francisco Camprodón in the zarzuela *El dominó azul*, first performed at the Teatro del Circo in February 1853 to enthusiastic notices.

His most famous work, *Marina*, was first given as a zarzuela in September 1855, but without success. In 1871 he converted it to an opera through the addition of

recitatives, winning over both critics and public at the Teatro Real in March 1871. Of his dozens of theatrical works, it alone holds a place on the stage today. In 1857 he became a professor of composition at the Madrid Conservatory, where he counted Chapí and Bretón among his students. From 1868 to his death he served as director of the conservatory and made many important improvements. In addition to operas, he composed occasional pieces such as hymns and cantatas, often with political overtones. Though Arrieta's style was conservative and remained rooted in Italian opera, his zarzuelas employ folkloric references, and his stage works, especially *Marina*, were milestones in the development of Spanish musical theatre.

WALTER AARON CLARK

Arrieu, Claude [Simon, Anne Marie] (*b* Paris, 30 Nov 1903; *d* Paris, 7 March 1990). French composer. She received a *premier prix* in composition in 1932 at the Paris Conservatoire, having studied with Dukas, Roger-Ducasse, Nöel Gallon, Georges Caussade and Marguerite Long. She established a career in teaching and at French Radio, where she worked as a producer and assistant head of sound effects.

Much of Arrieu's output consists of dramatic works ranging from opera and incidental music to her farce for children *La tête du dragon* (1946). At least 30 film scores and 40 radio scores are also to her credit. Among her instrumental works, such finely wrought duos as the *Impromptu II* for oboe and piano and the *Sonatine* for flute and piano, composed in the spirit of *Gebrauchsmusik*, are characterized by the style of Les Six, but take a strongly individual direction in their harmonic and metrical shifts. Her music's wit, charm and harmonically adventurous qualities places her in a line of musical descent from Chabrier. She took a direct interest in electro-acoustics, and was one of the first to work with Pierre Schaeffer. Even so, excepting the *Fantaisie lyrique* for ondes martenot and piano, her concert works do not make use of electronic instruments or resources.

FRANÇOISE ANDRIEUX/JAMES R. BRISCOE

Arrigo [Henricus] (*fl* 2nd half of the 14th century). Italian composer. He is known only from a two-voice ballata, *Il capo biondo* (ed. in PMFC, x, 1977, p.71), which is transmitted *F-Pn 568* (ff.96*v*–97; added to fill unused space in the manuscript) under the name Arrigo, and in

F-Pn 6771 (f.25*v*), ascribed to 'Henricus'. The piece combines elements of style both conservative and new for Italian music in the second half of the 14th century. Since, from the musical style, the composer was evidently Italian, he may not be identified with other known composers named Henricus.

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Arrigo, Girolamo (*b* Palermo, 2 April 1930). Italian composer. He studied at the Palermo Conservatory, receiving diplomas in horn playing and (under the tutelage of Turi Belfiore) composition; in 1952 he went to Paris to study with Deutsch. He later spent time in New York (1964–5) and Berlin (1967) on grants from the Ford Foundation and the Deutscher Akademischer Austausch-dienst. He won second prize in the third ISCM composition competition (1963), and first prize in the Pour que l'Esprit Vive Award (1957) and at the 1965 Paris Biennale.

Among Arrigo's first significant compositions, *Due melodie* for soprano and orchestra and *Due epigrammi* for five voices, both from 1956, betray the influence of the linear writing of the Schoenberg school and, in the choral work, elements of the Italian madrigal tradition. Neo-madrigalian writing, along with hints of late-Romantic orchestral writing, is also evident in *Epitaffi* (1963), one of a number of his works to set the poetry of Michelangelo. While the impact of both the Parisian avant garde and the 'informal' tendencies of the early 1960s is clear in such works as *Shadows* (1964) and *Infrarosso* (1967), such influences have contributed relatively little to Arrigo's personal stylistic synthesis.

Arrigo's activity in the theatre began in 1969 with *Orden*, a dramatic oratorio in which, against the background of the Parisian cultural upheavals of 1968, the composer voiced his political and social commitment in a denunciation of the atrocities commited by Franco in the Spanish Civil War. His 'musical epic' *Addio Garibaldi* (1972) signalled a return to more traditional dramaturgy, a move confirmed in his opera *Il ritorno di Casanova* of 1984, which can be viewed as a synthesis of his compositional concerns up to that point.

WORKS

(*selective list*)

Stage: Orden (oratorio drammatico, 3 pts, P. Bourgeade, after R. Alberti and others), Avignon, 2 Aug 1969; Addio Garibaldi (epopea musicale, 2, Arrigo, after U. Foscolo and G. Garibaldi), Paris, OC, 18 Oct 1972; Rorogigasos (ballet, A. Poliziano), S, orch, 1973; Palermo, 26 Feb 1977; Lo schiavo morente (ballet, Michelangelo), T, hn, 1973, Venice, 1975; Il ritorno di Casanova (op, 2, G. di Leva, after A. Schnitzler), Geneva, Grand, 18 April 1985

Vocal: 2 melodie, S, orch, 1956; 2 epigrammi (G. and C. Strozzi, Michelangelo), 5vv, 1956; 3 occasioni (E. RAFFAELE POZZI

Arrigo d'Ugo. *See* ISAAC, HENRICUS.

Arrigoni, Carlo (*b* Florence, 5 Dec 1697; *d* Florence, 18 Aug 1744). Italian lutenist, theorbo player and composer. Although he may have directed music for the Prince of Carignan in his early years, his name is principally associated with Florence. By at least 1718 he was a member of the musicians' company there. He is listed as a theorbo player at an oratorio performance on 31 March 1720 and as a violinist at a private concert on 30 July 1724, both in Florence. In 1721 he was elected a member of the Accademia Filarmonica of Bologna. His presence in London between 1731 and 1736 coincided with the lifespan of the Opera of the Nobility, rival to Handel's company, which presented four performances of his *Fernando* beginning on 5 February 1734. In the 1732–3 season he directed concerts at Hickford's Rooms, together with Giuseppe Sammartini, according to a newspaper announcement quoted by Burney. Other announcements mention his participation in London concerts on 20 April and 7 May 1733, 27 March and 11 April 1735, and 21 January, 5 March and 8 March 1736, either at Hickford's Rooms or Lincoln's Inn Fields. Arrigoni also sang and played his own music in Dublin on 20 October 1733. He sang the tenor part in Handel's cantata *Cecilia, volgi un sguardo* and played the lute in Handel's concerto op.4, no.6, both at original performances of Handel's *Alexander's Feast* at Covent Garden in February and March 1736 (see Dean). Later in 1736 he was made *aiutante di camera* by Grand Duke Giovanni Gastone of Tuscany, and in 1737 the new Grand Duke, Franz II, named him chamber composer. Performances of Arrigoni's music in Vienna in 1737 and 1738 reflect the fact that the new Tuscan grand duke was the husband of Maria Theresia, and do not necessarily place the composer in that city. After 1740 Arrigoni played his theorbo several times in Lucca at the festivals of the Holy Cross (13–14 September). In a letter of 12 August 1742, Horace Mann mentioned him as an arranger of private concerts in Florence. A fellow lutenist at the court, Nicolò Susier, reported that he was survived by a wife and four sons, one of whom may be the 'signor Arrigoni' mentioned in connection with performances in England, Scotland and Ireland, 1756–63.

In his surviving music Arrigoni is revealed as a composer of modest ability. His instrumental music is saturated with conventional figuration and organized into short-winded periods of sequences, voice-exchanges, frequent cadences and literal repetitions of small units. His arias often seem to be constructed of brief, unrelated phrases, which awkwardly return to a few pitches and thus lack directional flow. Perhaps his relative success as a composer was due to his mastery of fashionable stylistic conventions rather than to the real worth of his music.

JOHN WALTER HILL

Arrigoni [Arigoni], **Giovanni Giacomo** (*b* S Vito al Tagliamento, 10 March 1597; *d* S Vito al Tagliamento, 8 June 1675). Italian composer and organist. There is no evidence that he was related to Carlo Arrigoni. From 1632 to 1638 he is recorded as an organist in the Hofkapelle, Vienna. After 1638 he does not seem to have been active in Vienna, although his link with the Viennese imperial court continued: Leopold I was the dedicatee of his three-act *festa teatrale, Gli amori di Alessandro Magno e di Rosane*. From 1638 he was in his home town of S Vito al Tagliamento and in Venice, and from 1652 to 1655 he directed an opera company in Udine. According to Gerber he was a member of the Accademia Fileleutera in Venice, with the academic name of 'L'Affettuoso', although that need not signify that he lived there. He may also have had connections with the court of Duke Carlo II of Mantua, since he dedicated his volume of 1663 to him. Arrigoni's three surviving collections show that he favoured the concertato style. Their contents include independent instrumental parts, and the 1635 book contains four sonatas, two in six parts and two in eight. The vocal works in this book embrace a wide variety of forms – chamber duet, madrigal, dialogue and chaconne among them – and show that Arrigoni was a fluent, competent composer. His *festa teatrale* is also very varied in its forms and textures and includes comic scenes.

JOSEF-HORST LEDERER

Arrigo Tedesco. *See* ISAAC, HENRICUS.

Arro, Elmar (*b* Riga, 2 July 1899; *d* Vienna, 14 Dec 1985). Estonian musicologist. He studied musicology in Vienna, where he took the doctorate in 1928 with a dissertation on music in Estonia in the 19th century. In 1933 he was appointed to a chair of musicology and also taught Slavonic studies at the German Luther Academy in Tartu, Estonia. He moved to Germany in 1939; in 1955 he was teaching at Heidelberg and after 1968 in Kiel. From 1959 he was involved in establishing the Ost-Europa Institut, first at Freiburg and later in Kiel, where it was renamed J.G. Herder Forschungsstelle für Musikgeschichte. Subsequently he moved to Vienna where he founded the periodical *Musica slavica*, of which only one volume appeared in 1977. Arro was one of the finest and most erudite scholars of Russian music history and musical life. Before he moved to Germany he published a number of studies on the history of music in the Baltic countries; while in Kiel, he established a superb collection of publications dealing with the history of music in eastern Europe, particularly the history of Russian chant. He was the founder and editor of the first four volumes of *Musik des Ostens* (until 1967).

MILOŠ VELIMIROVIĆ

Arroio [Arroyo], **João Marcelino** (*b* Oporto, 4 Oct 1861; *d* Colares, 18 May 1930). Portuguese composer of Spanish descent. A politician and member of the Coimbra University law faculty, he practised music as an amateur. His most significant work, the *drama lírico* in three acts *Amore e Perdizione*, is based on Camilo Castelo Branco's Portuguese novel *Amor de Perdição*. First performed at the S Carlos, Lisbon, in 1907, it was later translated into German as *Liebe und Verderben* for a Hamburg performance of 1910. The second act of Arroio's second *drama lírico*, the four-act *Leonora Telles* to his own libretto, was performed posthumously in 1941 and four years later the entire opera was staged, in a Portuguese version. Dramatically, Arroio's operas are similar to the nationalist operas of his compatriots Keil and Ferreira Veiga. At a stylistic level, however, they attempt to escape from the Italian style prevalent in Portugal through an intensive use of chromaticism (particularly in *Leonora Telles*) more akin to that of Wagner. Arroio's non-stage works include short piano pieces, some of which were published in Leipzig (1908–9), and a symphonic poem *Amor*, first performed in 1913 in Lisbon.

WORKS
(*selective list*)

Stage: Amore e Perdizione (drama lírico, 3, F. Braga, after C. Castelo Branco), *c*1907 (Mainz, 1909); Leonora Telles (drama lírico, 4, Arroio), *c*1910, vs (Leipzig, 1910)

Other: Amor, sym. poem, orch, perf. 1913; Inez de Castro (cant.); pf pieces, some pubd (Leipzig, 1908, 1909); songs

LUISA CYMBRON

Arrow Music Press. American music publishing firm which from 1938 leased the catalogue of the COS COB PRESS.

Arroyo, João Marcelino. *See* ARROIO, JOÃO MARCELINO.

Arroyo, Martina (*b* New York, 2 Feb 1937). American soprano. She studied at Hunter College, New York, and (with Grace Bumbry) won the 1958 Metropolitan Opera Auditions. That year she sang in the American première of Pizzetti's *L'assassinio nella cattedrale* at Carnegie Hall. After taking minor roles at the Metropolitan, she went to Europe, for major roles at Vienna, Düsseldorf, Berlin, Frankfurt and Zürich (where she was under contract from 1963 to 1968). In 1965 she was a substitute Aida for Birgit Nilsson at the Metropolitan; she played there all the major Verdi parts that formed the basis of her repertory, as well as Donna Anna, Cio-Cio-San, Liù, Santuzza, Gioconda and Elsa. She made her London début as Valentine at a concert performance of *Les Huguenots* in 1968 – the year of her first Covent Garden appearance, as Aida. Her rich, powerfully projected voice, heard to greatest advantage in the Verdi *spinto* roles, was flexible enough for Mozart (she recorded Donna Elvira with Böhm and Donna Anna with Colin Davis). In the USA she has often sung in oratorio and recital – she was the first performer of Barber's concert scena, *Andromache's Farewell* (April 1963). Arroyo's most admired recordings include Hélène (*Les vêpres siciliennes*), Amelia (*Un ballo in maschera*), Leonora (*La forza del destino*) and Aida.

ALAN BLYTH

Ars Antiqua [Ars Veterum, Ars Vetus] (Lat.: 'old art'). A term used by a group of writers, mostly active in Paris in the early 14th century, to distinguish the polyphony and notation of the immediate past from the new practice of their own time, the Ars Nova (Ars Modernorum), especially that associated with Philippe de Vitry, Johannes de Muris and their circle in the 1310s and 20s. (The word 'ars', as understood in the Middle Ages, translates the Greek word *technē*, a 'technique' or 'craft', and has no aesthetic connotations.)

Among music theorists, the champion of the Ars Antiqua was Jacobus of Liège, who in his encyclopedic *Speculum musice* (1320s) upheld the authority of Franco of Cologne, Magister Lambertus (whom he called 'Aristotle') and Petrus de Cruce, and while criticizing the moderns defined the main virtues of the old practice: (1) modern composers wrote only motets and chansons, neglecting other genres such as organum, conductus and hocket (CSM, iii/7, p.89); (2) modern composers used a multiplicity of imperfect mensurations alongside perfect ones in their work, whereas the old practice, following Franco and Lambertus, adhered exclusively to perfection (CSM, iii/7, pp.86–8); (3) the moderns divided semibreves into smaller values, perfect and imperfect groups of minims and semiminims, whereas the followers of the Ars Antiqua divided breves only into semibreves in perfect mensuration, holding that the semibreve was indivisible (CSM, iii/7, pp.35–6, 51–3); (4) as a consequence, paradoxically, the rhythmic language used by the moderns was much more limited and inflexible than that of the adherents to the old practice (CSM, iii/7, pp.38–9); (5) the moderns engaged in a great deal of experimentation with notation, resulting in an inconsistent practice, whereas the followers of Franco had a clear and established tradition for notating their music (CSM, iii/7, pp.51–3); (6) the moderns indulged too much in quirky and capricious rhythmic movement, *musica lasciva*, while the followers of the old practice kept within the confines of a more restrained *musica modesta* (CSM, iii/1, p.60). From this it is evident that the Ars Antiqua is the musical practice of the latter half of the 13th century, preserved most comprehensively in manuscripts such as *F-MOf* H196, *D-BAs* Lit.115, and *I-Tr* Vari 42, and described by the theorists mentioned above, the many commentaries, *abbreviationes*, and *compendia* based on Franco's *Ars cantus mensurabilis*, and the *De musica* of Johannes de Grocheio. Such manuscripts as *B-Br* 19606 and *F-Pn* fr.146 (the *Roman de Fauvel*), both from the second

decade of the 14th century, are transitional in a sense, containing works in both Ars Antiqua and Ars Nova.

The definition of the term 'Ars Antiqua' is often extended now to include the music of the Notre Dame period and its main composers, Leoninus and Perotinus. The genres that Jacobus praised and the rhythmic idiom he discussed developed from this earlier tradition; and indeed, the repertories of organum and conductus belong properly to that tradition rather than to the period with which he was concerned. In this more comprehensive definition, then, the Ars Antiqua includes two large historical periods, the Notre Dame school, dating from about 1160 to about 1250 and preserved in manuscripts such as *I-Fl* Plut.29.1, *D-W* 628, *D-W* 1099, and *E-Mn* 20486, and the period from about 1250 to about 1320, specifically referred to by Jacobus. The former is characterized by liturgical polyphony with Latin texts and by modal rhythm and an emerging mensural notation; the latter is dominated by controlled mensural rhythm and a developed notation, and by the genre of the motet, above all the French motet, but it also saw the beginning of a written tradition of instrumental music and secular polyphonic song. The earlier genres of conductus and organum were extensively reworked in the light of the changed aesthetic that came with mensural rhythm; it is undoubtedly through such modernized versions that Jacobus knew the earlier repertory. Whatever merits the expanded definition of the Ars Antiqua may have, a distinctly new period, an Ars Nova, did emerge in the 1310s and 20s. While many of the innovations of the Ars Nova were indeed radical, many others represent extensions of the earlier practice; thus Philippe de Vitry expressly based his rhythmic system on the Ars Vetus of Franco. Sensitivity to these changes and expansions of Ars Antiqua practices on the part of modern and more conservative musicians alike doubtless moulded the rather polemical distinction Jacobus drew between the two *artes*.

ARSC. *See* ASSOCIATION FOR RECORDED SOUND COLLECTIONS.

Arsenal, Chansonnier de l' (*F-Pa* 5198). *See* SOURCES, MS, §III, 4.

Arsis, thesis (Gk.: 'raising', 'lowering'). In measured music, the terms used respectively for unstressed and stressed beats or other equidistant subdivisions of the bar. Originally they referred to raising and lowering the foot in ancient Greek dance. Later they were applied to the unaccented and accented parts of a poetic foot, and hence acquired their association with weak and strong beats. For music since the 17th century they mean much the same as, respectively, UPBEAT (or OFF-BEAT) and DOWNBEAT; the directions 'up' and 'down' remain associated with them by their respective functions in conducting.

In 1558 Zarlino coined the expression *fuga per arsin et thesin* to refer to imitative counterpoint in which the answering voice inverted the theme stated by the leading voice. Although this is in reality a misapplication of the original Greek terms, most musicians of the late Renaissance and Baroque who were familiar with Zarlino's work, including Morley and J.G. Walther, accepted the association with imitation by inversion. Marpurg (*Abhandlung von der Fuge*, 1753–4) reconciled the two conflicting traditions by redefining 'per arsin et thesin' to refer to the entrance of a theme (usually a fugue subject) with displaced accents, former strong beats becoming weak and vice versa. Entries in stretto (*see* STRETTO (i)) may well be 'per arsin et thesin' but are not usually referred to as such because the 'strong' and 'weak' beats of the subject are superimposed. Displacement of the subject by half a bar in 4/4 time, common in Baroque fugue, does not constitute an example of the device.

PAUL WALKER

Ars Nova (Lat.: 'new art'). In the most general terms Ars Nova is used as a synonym for '14th-century polyphony' just as Ars Antiqua stands for '13th-century polyphony'. The concept of Ars Nova is based on the enormous new range of musical expression made possible by the notational techniques explained in Philippe de Vitry's treatise *Ars nova* (*c*1322). The term was first used as a historical slogan by Johannes Wolf in his *Geschichte der Mensural-Notation* (1904) in which the treatise was seen as one of the major turning-points in the history of notation; and it was perhaps the chapter titles rather than the specific content of Wolf's work that brought about the use of 'Ars Nova' to include all 14th-century French music in the work of subsequent scholars.

Several early 14th-century theorists referred to the idea of an ARS ANTIQUA, represented primarily by Franco, and an Ars Nova instituted by Philippe de Vitry (see, for instance, *CoussemakerS*, iii, 371, 408); but in historical terms the usefulness of the idea is supported more by the treatise *Ars novae musicae* (*c*1320) of Johannes de Muris, the 1324–5 bull of Pope John XXII decrying the musicians who were 'novellae scholae discipuli' and the reference in Jacobus of Liège's *Speculum musice* to 'moderni cantores' and to 'aliqui nunc novi'. That there was some awareness of a change in musical techniques and outlook in the years around 1320 is suggested also by the earliest music to exemplify the notation described in Philippe de Vitry's treatise, the motets for the ROMAN DE FAUVEL copied into manuscript *F-Pn* fr.146 in 1316, some of them extensive works several times longer than the motets of the previous generation and displaying a range of notational values far greater than it was possible to notate with the previous Franconian and post-Franconian techniques.

Relatively few French musical sources survive from the years immediately following the *Roman de Fauvel* manuscript, and those few are fragments whose dating and

provenance are subject to substantial disagreement, so there remain very few sources in the purest Ars Nova notation as described by PHILIPPE DE VITRY. The term was therefore almost inevitably applied (by Wolf and many later scholars) to the work of Machaut and, since several Machaut manuscripts are from the early 15th century, to all French 14th-century music in spite of Schrade's insistence that after 1330 the style was no longer new. Indeed, so convenient was the label that it came to stand for all music between the *Roman de Fauvel* and the Renaissance: thus volume iii of the New Oxford History of Music is entitled *Ars Nova and the Renaissance, 1300–1540* (London, 1960) and the major historical surveys in *MGG* follow the sequence 'Ars Antiqua', 'Ars Nova', 'Renaissance'. In such surveys Ars Nova can include music from all parts of Europe and stretch to about 1420 (*see* MEDIEVAL).

Italian music of the 14th century is now more often separated off with the name 'trecento'; but there is a reasonable (and strong) school of opinion that since the surviving repertory stretches from about 1325 to 1425 it is historically misleading to call it by a name that implies a division at the year 1400, and geographically separatist to use such an exclusively Italian name. Major considerations in support of excluding Italy from the idea of Ars Nova are: that Italian music until about 1370 was stylistically and notationally entirely different from French music; and that Italian notation evolved more gradually and a precise demarcation point between an Ars Antiqua and an Ars Nova in Italy cannot be established in any historically useful sense (see Clercx).

On the other hand it is hard to resist the claims of Nino Pirrotta (1966) that the fundamental change in both France and Italy in the years around 1320 was the same: that for the first time 'it required that the length of every sound be precisely determined so that the different voices could proceed on schedule and fall precisely into the combinations of sound and rhythm determined by the composer'. While that was just the culmination of processes that had been in hand for the preceding half-century, it remains one of the most startling and important moments in the history of music. No historian has ever denied that French and Italian music in the first half of the 14th century are, in general, stylistically quite different; but it is too easy to overlook the range of styles within each tradition, to impose facile boundaries. Moreover, Pirrotta's analysis allows room for seeing the undeniable links between musical evolution in all parts of Europe, including England and the eastern parts of the empire.

A further narrowing down of the terminology has been effected by Günther who formulated the term ARS SUBTILIOR to designate music of the post-Machaut generation of composers, those musicians of an International Gothic who fused the styles of France and Italy, paving the way for the simpler styles of the 15th century. In a sense this terminology is again an attempt to transfer a description of a notational style (called by Apel 'manneristic notation') to denote a musical style. The difficulty in this analysis is that many simpler styles in French music co-existed with the intricate music of the Ars Subtilior; that is, the Ars Subtilior did not replace existing styles, and its techniques were not fundamentally different from what had existed before, merely more elaborate. But since this distinction has been generally accepted and has led to the French Ars Nova being considered to end about 1370, at a time when French and Italian styles were still clearly separated, there has been subsequently less force of opinion to support any references to an Italian Ars Nova.

It is therefore customary to use 'Ars Nova' to refer to French music from the *Roman de Fauvel* to the death of Machaut, for though this is not historically the most precise way of using the term, it is historiographically the most useful. At the same time it is worth observing that 'Ars Nova', like 'Renaissance', is a term found at many times in the course of history (see Schrade). Perhaps the most famous use outside the 14th century is that of Tinctoris (*CoussemakerS*, iv, 154), who described Dunstaple (*d* 1453) as 'ut ita dicam, novae artis fons et origo'.

DAVID FALLOWS

Ars Subtilior (Lat.: 'more subtle art'). The highly refined musical style of the late 14th century, centred primarily on the secular courts of southern France, Aragon and Cyprus. The term was introduced to musicological vocabulary by Ursula Günther and derives from references in (?)Philippus de Caserta's *Tractatus de diversis figuris* to composers moving away from the style of the ARS NOVA motets 'post modum subtiliorem comparantes' and developing an 'artem magis subtiliter' as exemplified in the motet *Apta caro* (*CoussemakerS*, iii, 118); similarly Egidius de Murino referred to composition 'per viam subtilitatis' in his *Tractatus cantus mensurabilis* (*CoussemakerS*, iii, 127). The development of the idiom (chiefly encountered in *grandes ballades*) may be traced in successive, roughly chronological stages. Of these, the post-Machaut generation – De Landes, Franciscus, Grimace, Pierre de Molins, Solage, Susay (*A l'arbre sec*) and Vaillant – was largely engaged in developing the classical ballade style of Machaut.

There is a more florid extension in the works of Matheus de Sancto Johanne, Goscalch, Hasprois and Olivier. Aside from the growing contrapuntal independence of the contratenor, their works are notable for an admirable tonal and motivic cohesion. That Hasprois' *Ma doulce amour* is found in *GB-Ob* Can.misc.213 (after 1428) illustrates the underlying link between the early Ars Subtilior and the subsequent 15th-century chanson. The final disruption of the traditional Machaut style occurs in the compositions of Cuvelier, Egidius, Johannes de Alte Curie, Philippus de Caserta and Trebor. Their music is permeated with lavish minim displacements and italianate sequential patterns. Yet more advanced was a final group of composers (Rodericus, Zacharia and

Jaquemin de Senleches), who used elaborate rhythmic subdivisions, displacements (using split colorations), proportional, motet-like devices and multiple tonal layers. On occasion, even the less radical composers (such as Solage and Galiot in *S'aincy estoit* and *Le sault perilleux*) adopted this style, which ultimately spread to the French cultural outpost of Cyprus (anonymous ballade *Sur toute fleur*, *c*1410).

Ars Viva. German firm of music publishers. It was founded in Zürich in 1950 by Hermann Scherchen (1891–1966) to publish music by postwar avant-garde composers. The future of the Ars Viva catalogue was assured when in 1953 it was incorporated into the catalogue of B. Schott's Söhne, Mainz (*see* SCHOTT). Since then the Ars Viva list has gradually increased, its scores being mostly by such contemporary German and Swiss composers as Holliger, Klaus Huber, Klebe, Rolf Liebermann and Aribert Reimann, as well as including important compositions by Dallapiccola and Castiglioni and most of the early works of Nono. In addition, the firm has published a few relatively unknown works by earlier composers, including Beethoven, Cavalieri and Pergolesi, some in editions by Scherchen himself. (A. Melichar: *Musik in der Zwangsjacke: die deutsche Musik zwischen Orff und Schönberg*, Vienna and Stuttgart, 2/1959)

ALAN POPE

Artaria. Austrian firm of music publishers. It was founded in Mainz in 1765 and by 1768 was operating in Vienna, where it became the first important music publishing firm in the city.

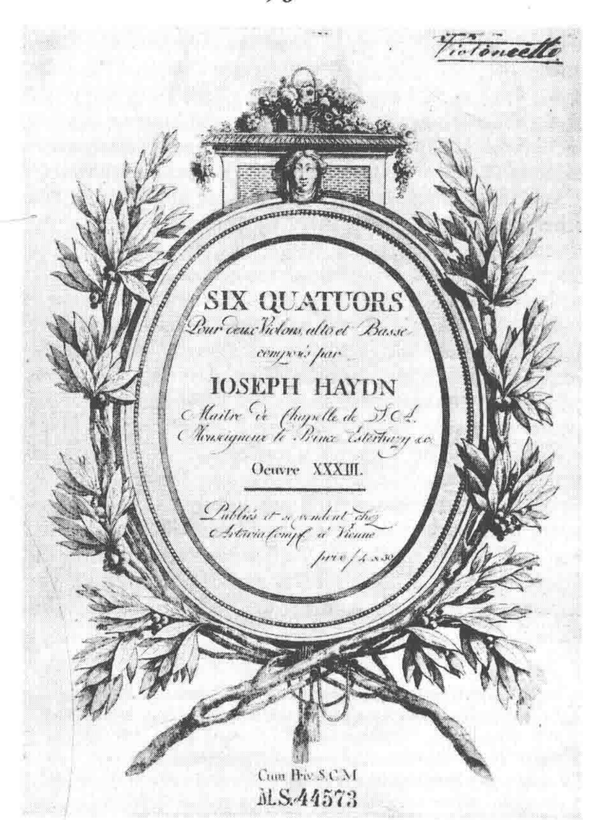
1. History. 2. Publications.

1. HISTORY. The Artaria family originated in Blevio on Lake Como, Italy. On 15 January 1759 the brothers Cesare Timoteo (1706–85), Domenico (i) (1715–84) and Giovanni Casimiro Artaria (1725–97) obtained passes to visit the fairs in Frankfurt, Leipzig and Würzburg; Carlo (1747–1808), son of Cesare, and Francesco (1744–1808), son of Domenico (i), accompanied them as *giovini* (commercial assistants). Cesare and Domenico (i) returned to their own country; Carlo and Francesco founded with their uncle Giovanni Casimiro the firm Giovanni Artaria & Co. in Mainz in 1765. By 1768, however, the cousins had moved to Vienna, where they at first carried on business without their own premises. According to the *Wienerisches Diarium* of 25 July 1770, Carlo owned a shop in the Kleine Dorotheergasse until that date, but there is no further evidence to support this. On 31 October 1770 the shop later known as 'Zum König von Dänemark' was opened in a house owned by Josef Christoph von Zorn, a civil servant. The firm was called Cugini Artaria, becoming Artaria & Comp. in 1771; the licence granted to Carlo Artaria dated 23 February 1770 covered only dealings in copper engravings. In 1774 connections with the firm in Mainz were re-established. The businesses developed so favourably that on 28 January 1775 the Vienna firm was able to open a shop near the Kohlmarkt, which also bore the name 'Zum König von Dänemark'.

Giovanni Casimiro's son Pasquale (1755–8) entered the business as his father's successor and from 19 October 1776 (*Wienerisches Diarium*, no.84) trade in printed music began with the import of works from London, Amsterdam and particularly Paris (no first stock catalogue is extant). With the new dealing in printed music, plans for a music publishing business were also developed; the rise of the Viennese Classical period provided an encouraging context. The Paris music publisher Anton Huberty offered a stimulus to the business side of the undertaking. He had been selling his publications on the Viennese market since 1770 through various booksellers; at the beginning of 1777 he moved to Vienna with his family and established himself very successfully with a music engraving shop, but, owing to his failure to obtain a licence for exclusive protection, his undertaking was short-lived (he subsequently worked as an engraver for Artaria). The Artarias took the opportunity to issue their first publication, six trios by Paolo Bonaga, on 12 August 1778 (the plate numbers 1 and 2 of these minor works were later reassigned to Pleyel's quartets op.1); the firm's first extant music catalogue was published in 1779.

In 1780 Ignazio Artaria (1757–1820), brother of Francesco, was appointed a partner in the business. Artaria was granted a ten-year printing privilege on 28 January 1782 by the *Reichshofsrat* of Emperor Joseph II: published pieces from this time bear the mark C.P.S.C.M. ('cum privilegio Suae Caesareae Majestatis'). After the death of Pasquale Artaria in 1786, Ignazio's brother Domenico (ii) (1765–1823) became a partner in the business, and in the same year the firm set up its own music engraving workshop, using pewter plates. The firm expanded dramatically during the late 1780s with the acquisition of new printing presses. Another publisher, Christoph Torricella, a competitor in the Viennese market since 31 January 1781, and now in his 70s, was soon outstripped: on 12 August 1786 Artaria bought 980 of his engraving plates at a public auction, together with all his publishing rights.

In 1789 the flourishing business was transferred to the house 'Zum englischen Gruss', in the Kohlmarkt. In the early 1790s the firm began experimenting with new printing techniques, notably the fashionable *à la poupée* method of printing in colour from a single multi-coloured plate. A new cylinder press, designed in London, was acquired to increase productivity. Domenico (ii), who with his brother Giovanni Maria (1771–1835) had carried on the Mainz branch of the firm, becoming a partner in 1787, resigned in 1793, bringing about the final division of the firm, until then known as 'Artaria & Comp., Wien und Mainz'. The Mainz branch moved to Mannheim and combined with the firm of Fontaine to form an art bookshop and publishing business which existed until 1867.



Giovanni CAPPI (1765–1815, whose sister, Maria, Carlo Artaria subsequently married) became an apprentice in the firm in 1773, then an employee, and finally a partner in 1793. Another employee, TRANQUILLO MOLLO (1767–1837), from Bellinzona, also became a partner, in 1793. Finally Pietro Cappi (*fl* *c*1790–1830), a nephew of

Giovanni, was employed in the firm. During these years an increasing number of music publications were transferred from the publisher FRANZ ANTON HOFFMEISTER to Artaria. Between 1793 and 1798 the Artaria firm had five partners: Carlo, Francesco and Ignazio Artaria, as well as Cappi and Mollo. The war years and disagreements within the firm brought about a crisis which lasted until 1804 and had an extremely detrimental effect on the business. Ignazio and Mollo left the firm in 1798; the former returned to Italy while Mollo established his own shop in partnership with Domenico (iii) (1775–1842), son of Francesco. Although Francesco and Carlo signed a new three-year contract on 9 March 1801, a further division was agreed two months later when Francesco's capital was transferred to Domenico (iii). Carlo, who had continued as sole owner of the Artaria & Co. shop on the Kohlmarkt, sold the remaining stock to Mollo on 27 August 1802. Domenico (iii) then moved to the Kohlmarkt and for a time the two shops were run in association, although each mantained separate accounts. A final split occurred in 1805, when Pietro Cappi, a nephew of Giovanni, became Domenico's junior partner. Pietro remained in the firm until 1816; from 1807 until 1824 Carlo Boldroni was a third partner. In about 1830 the firm opened an auction room. After the death of Domenico (iii) on 5 June 1842, his son August (1807–93), who had entered the firm in 1833, became sole owner. The music publications of the house became fewer; new publishers were appearing and capturing the market, in particular Haslinger, Diabelli and Mechetti. In February 1858 the *Wiener Zeitung* carried the last announcement of an Artaria music publication (although the *Denkmäler der Tonkunst in Österreich* bears the Artaria imprint between 1894 and 1918). August's sons Karl August (1855–1919) and Dominik (1858–1936) entered the firm in 1881 and 1890 respectively, and after their father's death in 1893 became sole owners.

Mathias Artaria (1793–1835), son of Domenico (ii), was involved in music publishing independently of the family firm. He took over Daniel Sprenger's arts shop in 1818; his firm (which issued some Schubert first editions) was continued after his death (in 1835) by his widow (*see* MAISCH, LUDWIG).

2. PUBLICATIONS. The Artaria firm's activities began in the art trade and expanded into geography and iconography. In these areas it achieved world-wide importance, and the art and map publishing business was carried on as an integral branch of the firm into the 20th century. The arts shop offered paintings, foreign art journals, engravings, lithographs, contemporary portraits of famous men (from its own press) and numerous pictorial views; the house of Artaria gained international recognition and established itself as a cultural focus of the Viennese nobility and upper middle classes.

It was in music publishing however that the firm revealed a particularly felicitous touch (although its first owners apparently had no musical education). As early as 1779 they established contact with Joseph Haydn and on 12 April 1780 they published a set of his piano sonatas (HXVI:20, 35–9) with plate no.7; this inaugurated a series of over 300 editions of Haydn's compositions (see illustration). Composer and publisher enjoyed a warm relationship, reflected in their lively correspondence. The firm's first Mozart editon, consisting of the six sonatas for piano and violin K296 and K376–380, appeared on 8

Title-page of the first edition of Haydn's Six Quartets op.33 (Vienna: Artaria, 1782)

December 1781. Artaria subsequently became Mozart's chief publisher and issued 83 first editions and 36 early editions of his music before 1800, in addition to publications taken over from Hoffmeister. The young Beethoven, on arriving in Vienna, was also quickly drawn to Artaria; his first published work, a set of piano variations, appeared on 31 July 1793, followed by first editions of his works up to op.8. Despite subsequent disagreements, the firm continued to receive new works from Beethoven, and by 1858 editions of his works – including arrangements and reprints – numbered over 100. The numerous surviving catalogues from this early period reveal many other well-known names, including Boccherini, Clementi, Gluck, Leopold Kozeluch, Pleyel, Salieri and Vanhal.

A unique business relationship developed between Artaria and the composer and music publisher F.A. Hoffmeister, who until the turn of the century several times simply surrendered portions of his publishing business to Artaria. In 1802 production had reached publication no.906, almost entirely works of fine quality. Then came the interregnum of co-production with T. Mollo & Co., which embraces publication nos.907–1000 as well as 1501–1692 and which ended by 25 August 1804. Nos.1001–1500 are found in the firm's main ledger reserved for a series with the title *Raccolta d'arie*, but in fact were used for the publication of piano reductions from current operas and of individual arias (the pieces appeared between 1787 and 1804 with the special 'Raccolta' number, as distinguished from the plate number, on the bottom left margin). While at first using

several independent music engravers, Artaria later employed its own engravers and also established its own press. Ferdinand Kauer is known to have been employed as a publisher's reader, and according to his own records carried out his duties for 17 years. Beyond its encouragement of Classical composers, the firm was committed to a demanding publishing programme; an impressive list of other composers, represented by numerous works, included Cramer, Hummel, Moscheles, Rossini, Sarti and Sterkel (Schubert, however, published only three works with Artaria).

Towards the middle of the 19th century publishing activities waned and works of poor quality began to be accepted; in 1858, under August Artaria, the music publishing house closed down. In 1894 the remaining assets were sold to the Viennese music publisher Josef Weinberger. The important collection of autographs which the family had accumulated over the years, partly through publishing activities and partly through subsequent independent purchases by Domenico Artaria (iii), was later transferred to the Preussische Staatsbibliothek. A large portion of the firm's administrative archive was acquired by the Stadt- und Landesbibliothek, Vienna, in 1936.

ALEXANDER WEINMANN/RUPERT RIDGEWELL

Arteaga, Esteban de [Arteaga, Stefano] (*b* Moraleja de Coca, nr Segovia, 26 Dec 1747; *d* Paris, 30 Oct 1799). Spanish aesthetician and opera historian. After entering the Society of Jesus (1763) he studied in Madrid, Corsica and Italy, after which he abandoned the Society (1769) and attended Bologna University (1773–8). There at Padre Martini's behest he wrote the first critical history of opera, *Le rivoluzioni del teatro musicale italiano dalla sua origine fino al presente* (Bologna, 1783–8/*R*, 2/1785), which met with immediate success and was translated into German (1789) and French (1802). He moved to Venice and to Rome, where he prepared works on ideal beauty (1789) and ancient and modern rhythm. His last years were spent in travel.

The original edition of *Le rivoluzioni* began with chapters on opera aesthetics and on the suitability of Italian as a language for music. His somewhat muddled history did not get beyond the advent of Metastasio: he viewed the early 18th century as the Golden Age of Music, singling out the composers Vinci and Jommelli as exemplary and crediting Metastasio with having raised opera to the greatest perfection possible. The second, 'enlarged, varied and corrected' edition of 1785 acquired a detailed critique of the decadence into which opera had fallen since that time. Much of his criticism centres on the failure of composers to set the words in a natural way that conveyed the meaning and moved the listener. He deplored accompaniments that obscured the words, distorted the meaning, and were too noisy and heavily orchestrated, especially with winds. On the other hand, he praised Gluck for his sensitive text settings and the unity he achieved by means of continuous string accompaniments for recitative, credited Piccinni with having substituted the rondò for the distortions of da capo form, and cited other composers (Traetta, Paisiello, Sacchini and Sarti) and performers (Ferrari, Jarnovich, Lolli, Somis and Chiabrano, among others) whose work he believed had merit. Calzabigi countered with a sarcastic *Risposta* (Venice, 1790).

MARITA P. McCLYMONDS

Arteaga, Manuel González Gaytán y. *See* GONZÁLEZ GAYTÁN Y ARTEAGA, MANUEL.

Artem'yev, Eduard Nikolayevich (*b* Novosibirsk, 30 November 1937). Russian composer. He attended the Moscow Conservatory (1955–60) where he studied composition under Shaporin and Sidel'nikov, polyphony under S.S. Bogatïryov and orchestration under Rakov. Later (1960–62), he studied general and musical acoustics and the theory and practice of electronic music under the guidance of Ye.A. Murzin (the engineer and mathematician who produced the first Soviet electronic ANS synthesiser). He worked as an engineer at the Institute for Electronic Research (1960–64), and then taught at the Institute of Culture (1964–86). In 1989 he became president of the Russian Association for electro-acoustic music, and in 1993 a member of the executive committee of ICEM (International Confederation for Electro-Acoustic Music). He is a laureate of the State Prize of the Russian Federation (1988, 1993, 1996), and a laureate of the 'Nika' Prize awarded by the Russian Academy for the art of cinematography.

Artem'yev is a unique figure among Russian composers. Having gained a formal conservatory education, he turned to electronic music, which at that time hardly existed at all in the USSR; in time he became a major Russian composer in this field. The study of the nature of sound and its capabilities in terms of timbre and dynamics was the basis of the works of the 1960s, especially the *Dvenadtsat' vzglyadov na mir zvuka: variatsii na odin tembr* ('Twelve Views on the World of Sound: Variations on a Single Timbre'), where his starting point was the sound of the Yakut instrument, the temir-komuz, which is very rich in harmonics. The scores for Andrey Tarkovsky's films are also basically avant-garde; as a composer of film music Artem'yev has gained international recognition and has worked in Russia, the USA and in France.

In the mid-1970s the style of Artem'yev's music changed: the avant-garde use of sonoristic techniques was enriched by traditional elements (melody, tonality, fixed metre), initially via rock music. The combination of tradition, the avant garde and rock culture represents for Artem'yev a broader process of assimilation of styles and genres of earlier and contemporary music which itself is combined with a command of all existing acoustic space as a musical phenomenon. The grandest expression of this idea is to be found in the cantata *Ritual* ('Ritual'), written for the Olympic Games in Moscow (1980). The cantata is based on a symbiosis of styles and genres on the broadest possible scale to which electronic music lends a general coherence. The principle of symbiosis is equally important for Aterm'yev's later compositions.

WORKS

Stage: Za myortvïmi dushami [In Search of Dead Souls] (ballet-pantomime, after N. Gogol), S, orch, 1966; Raskol'nikov (op, A. Konchalovsky, M. Rozovsky, Yu. Ryashentsev, after F. Dostoyevsky: *Prestupleniye i nakazaniye* [Crime and Punishment], 1987, rev. 1996; Teplo zemli [The Heat of the Earth] (op, Ye. Kompanyets), 1988

Choral orch: Ya ubit podo Rzhevom [I was Killed near Rzhevo] (orat, A. Tvardovsky), Bar, chorus, orch, 1960; Lubki [Woodcuts], suite, chorus, orch, 1962; Vol'nïye pesni [Free Songs] (cant., trad.), chorus, orch, 1968; Ritual (cant., P. de Coubertain), T, choruses, rock group, orch, elecs, 1980, rev. as Oda dobromu vestniku [Ode to a Good Messenger], 1987; Tam i zdes' [There and Here] (Ryashentsev), S, T, rock singer, orch 1996

Orch: Poėma, va, orch, 1958; Khorovodï [Round Dances], suite, orch, 1959; Okean [The Ocean], sym. poem, 1972; Pf Conc., 1994

Vocal: Romansï, 1v, pf, 1955–60; Teplo zemli [The Heat of the Earth] (song cycle, Yu. Rïtkheu), Mez, rock group, electronics, 1981; 4 poėmï (P. Celan, V. Dagurov, S. Geda), S, insts, electronics, 1982; Leto [Summer] (Geda), S, vn, synths, 1989; Fantom iz Mongolii [A Phantom from Mongolia], female v, synths, 1991

Pf: preludes, pf, 1956–9; Sonatina, pf, 1957

Numerous elec compositions, over 30 incid scores for the theatre, over 50 film scores, incl. Solaris (A. Tarkovsky), 1972

SVETLANA SAVENKO

Art Ensemble of Chicago [AEC]. Free-jazz quintet. Its members were Roscoe Mitchell and Joseph Jarman (reed instruments, vibraphone, marimba and unusual winds such as whistles and conch shells), Lester Bowie (brass instruments, harmonica, celeste, kelp horn, etc.), Malachi Favors (double bass, zither, melodica, banjo) and Don Moye ('sun percussion'). All vocalized and all played percussion instruments, including drums from several continents (especially Africa), cymbals, gongs, bells, woodblocks, sirens, bicycle horns, etc. The ensemble evolved from Chicago's Association for the Advancement of Creative Musicians. It was formed in Paris in 1969 as a 'drummerless' (but not percussionless) quartet consisting of Mitchell, Jarman, Bowie and Favors; Moye joined in 1970. While based in France the ensemble performed on television and radio, recorded extensively (including *A Jackson in your House*, 1969, BYG) and presented concerts throughout Western Europe. On returning to the USA in 1971 the members restricted their performances to profitable events such as large concerts, jazz festivals and university workshops. Their popularity grew in the late 1970s and early 1980s with the release of four albums, beginning with *Nice Guys* (1978, ECM). In the 1980s they performed on occasion in France, and in 1980 and 1984 made extensive tours of the USA. The group toured until Bowie's death in November, 1999 and, after the Modern Jazz Quartet, was the longest-lived small group in jazz.

The Art Ensemble of Chicago developed within the free-jazz tradition, the principal instruments being trumpet, alto saxophone, double bass and drums. Its members were virtuoso, experimental improvisers in this tradition who liberally used dissonance, non-tempered intonation, noise, fast flurries of saxophone melody, dense textures and irregular rhythms. However, their motto, 'Great Black Music – Ancient to Modern' more accurately described the breadth of their music than the term 'free jazz'. Their performances combined theatricality – costumes, make-up, dance, pantomime, comedy, parody, absurd dialogue, playlets – with musics from Africa (drum choirs), black America (blues, gospel, pop, jazz) and Europe (waltzes, marches). This diversity was further magnified by an economical, sensitive use of the tone colours of several hundred standard, exotic and invented instruments, and by an ever-changing melange of original compositions, individual features and collective improvisation.

BARRY KERNFELD

Arthopius [Artocopus, Artopaeus], **Balthasar** (*b* end of the 15th century; *d* Speyer, late July 1534). German organist and composer. There is no evidence to support Jauernig's assumption that he was the Balthasar Pistorius from Besike who matriculated at Heidelberg University on 12 April 1498. Arthopius was organist in Weissenburg (now Wissembourg), Alsace, around 1527. In 1527 he applied for the post of organist at Speyer Cathedral, but was not appointed because the cathedral chapter at Speyer wanted to fill the vacant organist's post with a cleric. At the end of July 1530 he again offered his services to the chapter, and after some negotiation he was installed as cathedral organist on 17 August 1530 for a period of four years. The humanist Theodor Reyssmann visited Speyer in 1531 and praised Arthopius's organ playing, comparing it with the ability of his predecessor, Conrad Bruman, a pupil of Hofhaimer's. The chapter archives report that Arthopius composed some pieces for Christmas 1533 and that for them he received a gift of 4 guilders. After Arthopius's death, the Heidelberg professor and humanist Jacob Micyllus dedicated an epitaph to him, which was set to music by Johannes Heugel (*D-Kl* Mus 4°118).

Arthopius used the elements of the later Netherlandish style in his sacred compositions; his technical skill, however, lacks the perfection of a master. For him the tenor settings of Netherlandish choral polyphony were compulsory, but he treated the cantus firmus in a fairly original manner. Imitation and the use of motifs are found throughout the pieces, and their rhythmic and harmonic flexibility is characteristic. Arthopius's German secular songs show clearly the tendency towards simplification and conciseness. He made frequent use of imitation but subordinated it to harmonic considerations. As a rule the melody is in the tenor part, from which the other parts usually derive their melodic substance. The canonic setting of the melody in the tenor and alto of *Es fiel ein Baur* is unusual. The texts of the songs are often satirical and blunt.

MANFRED SCHULER

Artia. The name of the imprint under which SUPRAPHON exports.

Articulation and phrasing. The separation of successive notes from one another, singly or in groups, by a performer, and the manner in which this is done. The term 'phrasing' implies a linguistic or syntactic analogy, and since the 18th century this analogy has constantly been invoked in discussing the grouping of successive notes, especially in melodies; the term 'articulation' refers primarily to the degree to which a performer detaches individual notes from one another in practice (e.g. in staccato and legato). This distinction between the two terms was recommended by Keller (1955); but articulation in a broader sense is sometimes taken to mean the ways in which sections of a work – of whatever dimensions – are divided from (or, from another point of view, joined to) one another.

1. General. 2. History.

1. GENERAL. Articulation and phrasing represent some of the chief ways in which performers, and consequently listeners, may make 'sense' of a flux of otherwise undifferentiated sound, and convert clock time into musical time. In tonal music in the narrower sense, they are (with tonality and thematic organization) two of the chief elements contributing to diversity within organic unity; and they are the elements for which the performer bears the most direct responsibility. Clearly, they are important to the analysis of music. Yet phrasing theory is a relative newcomer to music theory, and still occupies a somewhat peripheral and problematic position within it. This may be because the intricacies of articulation are difficult to notate and are generally transmitted orally rather than in comprehensive notated form; they ought, perhaps, to be as amenable to ethnomusicological analysis as to the document-based methods usually employed. Moreover, there is scarcely any consideration of small-scale articulation in traditional theory, except insofar as this contributes to phrasing; only recently have analysts and those in the field of performance studies begun a belated exploration of its role in musical expression. Consequently phrasing theory has been formulated largely in terms of the linguistic analogy implicit in its terminology

(phrase, sentence, period), rather than in terms of the vocal and instrumental techniques, such as bowing and tonguing, that shape small-scale articulation.

The means of articulation, and hence of phrasing too, vary widely. Single notes may be articulated and phrases begun by the 'placing' of notes (their being played or sung a fraction late, separated from the preceding note by a brief silence or other agogic device), by an accent (or conversely by an unexpected unaccented note in a loud passage) or other dynamic device, or by nuances of timbre or intonation.

Resources of articulation also differ with the performing medium and acoustic surroundings. To achieve clarity in a hall with abundant reverberation generally requires energetic articulation, as well as a relatively slow tempo. The articulative characteristics of instruments are an important element in their musical capacities. Apart from vibrato the main differences in timbre of the violin, trumpet and oboe, for instance, lie in their different means of articulation: their sound becomes virtually identical if the initial and terminal articulation of each note is excised from a recording. A distinct feature of bagpipe music is the use of grace notes, mordents and other embellishments to compensate for the unavailability of silence as an articulative resource. Ornaments are also a characteristic means of articulating notes on the organ or harpsichord when they might otherwise be submerged in the texture. Techniques of articulation in most wind instruments include various patterns of TONGUING: equivalent aspects of technique of instruments of the violin family involve the handling of the BOW (and the occasional use of pizzicato). In vocal music the resources of articulation, apart from grace notes and the like, portamentos, and such slivers of silence between notes as are available to most performers, are the consonants and the glottal or smooth beginnings and endings of vowel sounds. Most keyboard instruments can achieve an almost perfect melodic legato, even in a small room, when the terminal articulation of one note is produced after the initial articulation of the succeeding one.

The attack (initial articulation) of a note will most often occupy between 0·01 and 0·1 seconds. Bass notes are relatively slow in articulation, however, partly because more time is required to perceive waveforms of slower frequency and partly because more time is required to put into regular motion the larger masses of air, string and so forth that are likely to be involved in producing bass notes. Hence the trombone, bassoon and double bass are generally less incisive than the trumpet, oboe and violin.

Incisive articulation (as well as bright tone) assists the ear in sensing the location of an instrument. In this regard a Romantic inclination to diffuseness might be seen in music from the late 18th century onwards, for example in the vogue for the glass harmonica, where crisp articulation is virtually impossible, and later in the increased orchestral prominence of horns and trombones, the use of ever more heavily padded hammers on the piano, the elimination of 'chiff' in the pipe organ and the popularity of the reed organ. Yet the resources of phrasing and articulation came under special scrutiny in the 19th century, and they are no less essential to Romantic music than to Renaissance or Baroque music.

Technological developments since World War II have permitted the detailed study of the transient acoustical phenomena of articulation. In electronic music since the mid-1960s, moreover, commercially available synthesizers have been capable of governing not only the duration of the attack or decay of a note, but also certain aspects of its internal shape. But the variety of transient waveforms in 'natural' articulation as wielded intuitively by singers and instrumentalists has remained greater than that of most synthetic music.

Although Western notators (especially before the 18th century) have generally relied on the stylistic intuition of performers to achieve correct articulation, an exceptionally elaborate method of specifying qualities of articulation can be found in the *jianzi* notation of the Chinese zither (Chou, 1969), in which:

> a combination symbol for both hands would usually specify how a certain right-hand finger is to pluck the string, inward or outward, with the flesh or the nail, or how two or more right-hand fingers are to be used simultaneously or in succession, how a left-hand finger stops the string, or how a left-hand finger is to tap the string or to pluck it, upward or sideways, how the pitch is altered or inflected by means of glissando or portamento after the excitation of the string, and how the timbre is varied by the addition of a certain type of vibrato or by changing from one type of vibrato to another during the decay.

Phrasing, just as much as articulation, is an aspect of Western music essential to its stylish performance. Riemann (1884), like others before him, compared it to punctuation in prose or verse: an inappropriate punctuation (i.e. articulation) of the sentence 'Er verlor sein Leben, nicht nur sein Vermögen' as 'Er verlor sein Leben nicht, nur sein Vermögen' almost reverses its meaning, rather as in the sentence 'King Charles walked and talked; half an hour after, his head was cut off' with or without its punctuation. But, as writers had long before recognized, musical phrasing requires more subtlety and ambiguity than is implied by this simple analogy. The articulation implicit at a phrase-end, through tonality, cadence and so on, may for example be deliberately suppressed in order to maintain or increase momentum (see ex.1, in which

Ex.1 Square brackets show conventional phrasing; the slurs are in the original manuscript (Mozart: Rondo in A minor K511)

square brackets show a conventional phrase structure, but the slurs and other articulation signs are Mozart's own). Riemann was one of the first to attempt to catalogue these subtleties; of more modern writers, Cooper and Meyer (1960) and (from a different point of view) Keller (1955) may be found useful in this regard.

2. HISTORY. In the earliest notation of Gregorian chant, there are numerous subtle indications of agogics, lost in succeeding centuries; but in medieval and Renaissance music one does not expect to find any evidence of articulation, let alone phrasing, other than in the use of rests and fermatas (e.g. in the setting of some proper names in late medieval motets) and in the evidence of the joining together of successive notes provided by liquescent neumes, ligatures and plicas. Rests and fermatas have continued to be used as a means of notating articulation. Other early evidence of articulation is found mostly in writings about instrumental techniques, but specific

evidence of phrases in the usual sense (groups of notes to be performed in a single breath) may plausibly be sought in the special signs used by Cavalieri in his *Rappresentatione di Anima, et di Corpo* (1600: *see* NOTATION, fig.86). At the same period, the special signs for staccatos (dots and strokes) were introduced into string music, as was the bowing slur, the latter soon imitated in keyboard music such as Scheidt's *Tabulatura nova* (1624). Earlier string music was bowed with a single note to each bow, though separate bowing does not always necessarily imply strong articulation.

Phrasing theory developed out of 17th-century rhythmic theory which was conceived in terms of poetic metrical theory. The 18th century, however, introduced into it the rhetorical analogy of punctuation: Couperin drew on this notion in the foreword to his *Pièces de clavecin*, iii (1722), to justify his use of a comma in the notation of his pieces; and in Mattheson (1737) the idea of phrasing explicitly appeared. These and later writers show the modern reader that various different degrees of articulation were required (even at this date) to make phrases, sentences and so on perceptible: least for the 'comma', more for the 'colon' and still more for the 'period'. And they show that articulation was now linked to new expressive ideals. Later composers, notably Mozart, continued to show interest in the precise notation of articulation (see Badura-Skoda, 1957; Albrecht, 1957; Keller, 1955) and attempts were made to refine this notation (*see* NOTATION, fig.83); but well into the 19th century, performers were expected to have direct access to teachers able to instruct them in good taste, and hence both theory and notational practice remained far from rigorous, with no precise distinctions being made, for example, between wedges or strokes and dots to notate various degrees of articulation and of accentuation.

In the second half of the 19th century Lussy attempted to tackle the issue of 'expression' in a new way: to commit to writing the aspects of good taste in performance, especially in matters of accentuation and phrasing, which had hitherto been left mainly to oral tradition. As Riemann (1903) pointed out, Lussy's theory is far from rigorous, representing a reworking of various rules of thumb derived from early 19th-century sources. But, like Riemann's own theory, it grew from the conviction that 18th- and early 19th-century notation, by the second half of the 19th century, no longer provided an adequate representation of the expressive requirements of the classical repertory; and indeed (for performers used to the careful notation of composers like Wagner and Liszt and their contemporaries) this must have been true. Riemann believed also that phrase structure is generated ultimately by processes of linear growth rather than by abstract patterns of stressed and unstressed units; he developed a precise notation for phrasing (*see* NOTATION, fig.84) in which the course of a piece of music is related to a theoretical eight-bar structure (the numbers below the music indicate the 'punctuation' appropriate to the bars 2, 4, 6 and 8 in this structure), but with a fairly sophisticated apparatus to show the modifications to this sytem in practice.

Though Riemann's influence was strong, his views were not unchallenged. In Britain, an influential critic was Macpherson (1911), whose own theory is far less radical than Riemann's. The Urtext movement, however, may have represented the most thorough-going alternative to Riemann; an articulate statement of the virtues of an Urtext against 'phrasing editions' was produced by Schenker (1925). It is clear from this essay that Schenker saw no difference in principle between legato (articulation) slurs in conventional notation, properly employed, and the slurs he used in his own mature analytical graphs, which were conceived in terms of performance of the works, and which repay study by performers; and it is true, as Schenker and several other writers of the late 19th and early 20th century point out, that the phrasing editions sometimes falsify and trivialize perfectly unambiguous indications of articulation in the music of composers like Mozart. Nevertheless, in the 20th century the pendulum swung so far in favour of Urtext editions that one is in some danger of neglecting the evidence of earlier practice which is undeniably offered by some phrasing editions.

Despite Schenker's clear interest in performance and, in particular, in articulation and phrasing, the subject remains undeveloped in his theory, and has not even yet been fully integrated into theory.

GEOFFREY CHEW

Articulation marks. Symbols appended to musical notation which indicate to the performer the manner in which particular notes and phrases should be played.

1. Introduction. 2. The slur. 3. Treatment of unmarked notes. 4. The staccato mark. 5. Other markings. 6. Increasing systemization.

1. INTRODUCTION. Until the late 18th century the only signs commonly used to indicate distinctions of articulation were the slur and the staccato mark (a dot, a vertical stroke, or a wedge) placed above or below the note head. In the 19th century composers became concerned to specify their requirements with ever greater precision, and other forms of articulation mark were introduced, though only a few of these were widely adopted. The principal meaning of the slur has remained relatively constant, though the manner of its employment has varied greatly over the centuries. Except where slurs are written over a succession of notes on the same pitch to indicate portato, they specify that notes of different pitches should be performed without separation, that is, legato. There is, strictly speaking, no greater or lesser degree of connectedness; terms such as *molto legato* in slurred passages cannot affect the degree of connection between notes within a slur, they can only mean that there should be the minimum possible separation between slurred groups. Staccato marks, on the other hand, either alone or in combination with a slur, have been employed to indicate every type and degree of separation, from the barely articulated to the very sharply detached, and have sometimes had implications of accent as well as of separation. The interpretation of these marks in specific instances will be dependent on such factors as period, nationality, musical context, and the known or inferred practices of individual composers. Other forms of articulation and accent marks (the two functions are seldom entirely discrete) have also varied considerably in their meaning between different composers and traditions.

2. THE SLUR. From the 16th century slurs were used with growing frequency to specify legato, especially in the context of notes sung to a single syllable; slurs in instrumental music were slower to appear, and in 17th- and 18th-century music many passages of unslurred notes were undoubtedly intended to be performed with slurred bowstrokes or in single unarticulated breaths. The inclusion of slurs became more common during the 18th century, and some composers, notably J.S. Bach, used them extensively to indicate subtle and varied patterns of legato groups. But many composers seem not to have been particularly conscientious about marking slurs consistently; in most cases it was the responsibility of the performer, if the composer was not available to determine the matter in person, to decide firstly whether unslurred notes should, in fact, be played legato, and, if not, what degree and style of articulation to apply. The most careful composers of the later 18th century became increasingly punctilious in marking slurs. Until the early 19th century, however, it was rare for slurs to encompass more notes than could be performed in a single bowstroke or breath, and composers seem to have felt some degree of inhibition about extending them over bar lines; this was the case even in keyboard music where longer passages of continuous legato would have been practicable.

The question of whether slurs, in addition to specifying legato, required that the group of notes over which they stood should be performed in a particular manner has been a subject of much discussion. Slurred groups such as those in much of J.S. Bach's music, where there is a clear intention to elicit particular patterns of phrasing, were evidently intended to be made audible to the listener, and there are many references in theoretical writing to a manner of performance in which the first note under the slur would receive an accent (sometimes agogic) and the final note would be shortened. This mode of execution seems more likely to have been regarded as normal in the 18th century than in the 19th century; but even at the earlier period not all slurs may have been intended to be performed in this manner, as Türk pointed out. A number of 19th-century writers, including Czerny, limited this type of performance to groups of two or three notes, and it is clear that many slurs, particularly successions of longer slurs beginning on metrically strong beats, were intended merely to indicate a general legato. But other information (for instance Mendelssohn's reference to the distinct phrasing of slurred pairs as a practice of Handel's period that was not now widely understood) suggests that many 19th-century composers did not expect even short slurs to receive a particularly distinctive style of performance. Nevertheless, Brahms's correspondence with Joachim makes clear that, in keyboard playing at any rate, Brahms regarded a shortening of the second note in slurred pairs as obligatory, and a similar treatment of longer groups as 'a freedom and refinement in performance, which, to be sure, is generally appropriate'.

3. TREATMENT OF UNMARKED NOTES. The style of performance envisaged for notes that have neither slurs nor any other kind of articulation mark has also been variable. In the 18th century many composers intended, and musicians inferred, a clearly detached execution of such notes. Some theorists suggested that unmarked notes were to be less detached (or accented) than those with staccato marks. This may have been common practice in the earlier part of the century, when staccato marks were

used chiefly in special cases, but even at that time some composers seem to have used staccato marks without implying a more detached or accented execution than normal unslurred notes, simply to ensure that the previous pattern of slurring would be discontinued or that slurs would not be added where they were not wanted; several of these uses of staccato marks appear to be represented in Bach's autographs. The use of the staccato mark to ensure that notes are not slurred (but not apparently to indicate a degree of separation greater than normal unslurred notes) may account for a considerable proportion of the staccato marks encountered in late 18th-century scores. Despite the frequently quoted instruction of some influential theorists that unslurred notes (with or without staccato marks) should, in general, be well separated, it would be rash to apply this rule universally even in moderate or fast music. There were certainly some schools in which a less detached style was cultivated. This may have been especially the case in Italian performance, while the French represented the opposite pole: hence Quantz's comment on the short bowstroke of the French and the 'long dragging stroke' of the Italians. The so-called *détaché*, or *grand détaché* bowstroke of the late-18th- and early-19th-century school of French string players (the Viotti school), which is actually as connected a stroke as can be obtained with separate bows, undoubtedly had its roots in the schools of Tartini and Pugnani, and such tendencies seem also to have been reflected in Leopold Mozart's treatise and in the Mannheim style. There is some evidence that a similar approach to unslurred notes was adopted in some schools of 18th-century keyboard playing, especially the Italian, and that Clementi's often cited instruction, to give preference to the legato over the staccato where nothing was indicated, was by no means an innovation. By the 1830s, conceivably, many passages of notes with staccato marks were intended to be played without either physical separation or particular accent, as indicated by the instruction in Spohr's *Violinschule* to play a succession of notes marked with staccato strokes 'in such a manner that in changing from the down- to the up-bow or the reverse no break or chasm may be observed'.

4. THE STACCATO MARK. By the late Baroque period the dot, stroke and wedge (the latter largely confined to printed music) were widely used to indicate the physical separation of one note from the next by means of the replacement of part of its written value with a rest, or sometimes (though the implication of shortening the marked note seems seldom to have been entirely absent) to indicate accents. A few composers, for instance Veracini in his *Sonate accademiche*, devised and employed their own vocabulary of signs, but for the most part there is little evidence to suggest that composers utilized distinct signs for distinct purposes systematically, if at all. In the generation of Bach and Handel staccato marks were very rarely used, and the appropriate articulation for unslurred notes would generally have been determined by the performer on the basis of musical context, taking into account such factors as the type of piece and any terms of tempo or expression supplied by the composer. From the mid-18th century however, authors of tutors and theory books began increasingly to discuss and describe a variety of staccato marks. Writers were divided between those who employed a single staccato mark and those who advocated a distinction between the dot and the stroke. C.P.E. Bach considered only one mark for unslurred staccato necessary; however, in his *Versuch*, stressing that one mark did not mean one kind of execution, he observed that the performer must execute the staccato in different ways according to the length of note, the tempo, and the dynamic. Bach's preference for a single staccato mark for unslurred notes was echoed by, among others, Leopold Mozart (1756), Reichardt (1776), Türk (1789), J.A. Hiller (1792), A.E. Müller (1804) and Spohr (1832). Others, including Quantz (1752), Riepel (1757), Löhlein (1774), G.J. Vogler (1778), H.C. Koch (1802), J.H. Knecht (1803) and J.L. Adam (1804) utilized two signs with different meanings in their instruction books. Importantly, such distinctions seem essentially to have been intended as a means of instruction within the context of a theoretical study; this was explicitly recognized by Joseph Riepel in his *Gründliche Erklärung der Tonordnung* (1757) where, after describing a sophisticated range of articulation marks that signified various kinds of bowstroke, he remarked: 'I have included the strokes and dots again only for the sake of explanation; for one does not see them in pieces of music except perhaps sometimes when it is necessary on account of clarity'.

Despite the extensive literature on Mozart's articulation marks, much of which concerns itself with a supposed distinction between dots and strokes, there is no compelling evidence that classical composers were conscientiously employing two forms of staccato mark with differentiated meaning on unslurred notes; no such distinctions are apparent, even in the music of composers who advocated two forms in their theoretical writing. Nevertheless, composers of Mozart's generation employed staccato marks much more extensively than their predecessors. In manuscript sources of the late 18th and early 19th century these appear as dots or strokes of various sizes over detached notes, and in combination with slurs primarily as dots, though strokes under slurs are occasionally encountered. All these have their counterparts in printed editions, yet consistent relationships between composers' autographs and printed editions are rare; sometimes in sets of orchestral parts, as in a number of Beethoven first editions, dots are used in one part throughout and strokes in another, apparently depending on the engraver's preferred or available punch for making staccato marks.

A special use of the staccato mark, mentioned in C.P.E. Bach's *Versuch*, can be found in the second movement of Beethoven's Violin Sonata op.30 no.3 in G. In the autograph score, throughout this movement Beethoven consistently placed a staccato stroke not over the first or second note on each appearance of a dotted figure first heard in the opening bars, but over the dot of prolongation; the placement is so careful and consistent in each case that it would seem to be deliberate, for such a consistent positioning of the staccato mark after the note head is not typical of Beethoven. The meaning is almost certainly that shown in ex.1, and Beethoven may possibly

Ex.1

have derived this notation directly from the passage in C.P.E. Bach's *Versuch*, where Bach suggests precisely this relationship of staccato mark and dot of prolongation to signify a rest in such figures.

5. Other markings. Another sign, quite commonly encountered in music of this period, is the wavy line, occasionally under a slur, but normally on its own. Like all these signs it could have a number of meanings. Employed over a succession of notes at the same pitch it seems to have been synonymous with the portato notation of dots under a slur or a slur alone, and this is its probable meaning in the majority of cases during the 18th century. Over single notes, when it was not simply an instruction to divide the note into repeated portato notes, it usually implied some other form of trembling motion, either a vibrato or a tremolo with separately articulated repeated notes; it is frequently found with the latter meaning in string parts in Rossini's scores. In some piano reductions of orchestral parts of that period the wavy line seems to have been used as the equivalent of the modern abbreviation with white notes joined by multiple beams.

6. Increasing systemization. From the late 18th century an increasing number of authorities advocated or acknowledged two signs, the dot and the stroke, for staccato on unslurred notes. But there was still no general agreement about precisely what these should signify. The majority of late 18th- and early 19th-century German authors who described both signs favoured the stroke as the sharper ('schärfer') of the two: in about 1810 F.J. Fröhlich referred, in the *Violinschule* of his *Vollständige ... Musikschule*, to the stroke as the more powerful staccato ('der kräftigere Stoss') and the dot as the gentler one ('der gelindere'). Yet some authors, for instance G.J. Vogler and his admirer J.H. Knecht seem to have wanted the stroke sharper and longer than the dot: in his *Allgemeiner musikalischer Katechismus* Knecht described the stroke as indicating that one should give the notes a 'somewhat sharp and long staccato' while the dot indicated a short and dainty execution. Schubert, among early 19th-century composers, may have intended a difference. In some of his autographs the distinctions between staccato dots (which match his dots of prolongation) and long narrow staccato strokes is pronounced. As late as the 1830s however the article 'Abstossen' in Gustav Schilling's *Encyclopädie der gesammten musikalischen Wissenschaften* still expressed uncertainty about the significance of the two types of staccato mark. By the second half of the 19th century the recognition of two signs with different implications was more or less universal and many major composers undoubtedly employed them in practice. The principal disagreements at this stage were between string players and keyboard players, and between composers in the German and French traditions. In string playing different forms of staccato mark became increasingly linked to specific types of bowing (*martelé*, *spiccato* etc.) and, partly because of the varying practices of French and German violinists, these signs acquired conflicting meanings in the two traditions. For Baillot strokes were associated with *martelé* and dots with *sautillé* or *spiccato*, while for Ferdinand David the reverse was the case. Thus German musicians continued to associate the stroke with accented staccato and the dot with lighter staccato, while the French appear, on the whole, to have associated the stroke with a shorter and usually lighter staccato and the dot with a less short and weightier staccato. Although the definition of the shortening effect of staccato marks propounded in J.L. Adam's *Méthode du piano du Conservatoire* of 1804, whereby a stroke shortened the note by three quarters, a dot by half and a dot under a slur by one quarter, was repeated in German, English, Italian and other theory books during the 19th century, it cannot be regarded as a reliable guide to the practices of many composers of the period. In any case, as many theorists continued to point out, the degree and type of articulation applied in particular cases was conditioned by many external factors, such as the size of the ensemble, the qualities of the instrument, or the space in which the performance took place.

The ambiguity in the meaning of staccato marks, particularly the question of whether they carried any implications of accent, induced some late 18th- and early 19th-century theorists, for instance Türk and Corri, to propose other symbols to indicate articulation, but these signs remained confined largely to the realm of theory. Interestingly, the uncertainty over the meaning of staccato dots and strokes was still sufficiently strong in the early 20th century for Schoenberg to consider it necessary to explain in the preface to his Serenade op.24 that wedges indicated 'hard, heavy, staccatoed' notes and dots 'light, elastic, thrown (spiccato) ones'.

The inclusion of other articulation marks in manuscript and printed music was relatively uncommon before the 19th century, but by the middle of that century additional signs had been proposed by theorists, and several were beginning to be adopted by composers. This process was encouraged by the growing concern of composers with details of articulation as an essential element in their music and by their determination to exercise greater control over the performer's interpretation. One consequence was a gradual, but by no means consistent, refinement and narrowing of the meaning of staccato marks, as other signs began to assume some of the functions previously subsumed in those signs. The horizontal line came gradually to be seen as a replacement for the old portato marking, though some conservative musicians, including Brahms, resisted using it in this sense. But initially the line seems to have been regarded rather as an accent marking, indicating a moderately weighty but not sharp execution, and it continued to be used by some composers with this meaning. Sometimes composers seem simply to have regarded it as a method of showing that a note should be held for its full value; however, that meaning may not be as common as is generally believed. By mid-century a number of composers, including Schumann, in line with the suggestions of contemporary theorists, began to use signs that explicitly indicated both accent and articulation (ex.2). Many later

Ex.2

19th-century composers, including Wagner, Verdi, Bruckner and Dvořák, availed themselves of these and other signs to prescribe their articulation and accentuation with ever greater precision. A sophisticated system of articulation marks was proposed by Hugo Riemann and employed in his editions of Classical piano music, specifying articulation and phrasing to a remarkable degree of nicety. Like those of earlier theorists, however, his markings were not generally adopted by composers, though Mahler among others did occasionally utilize the comma (which had periodically been proposed as a music symbol) in Riemann's sense, to indicate a short articulation. Some 20th-century composers, for example Bartók, used a very wide range of articulation and accent markings, while

others, such as Shostakovich, contented themselves with a much more limited vocabulary of basic signs.

Artis Quartet. Austrian string quartet. It was founded in 1980 by Peter Schuhmayer and Manfred Honeck, violins, Herbert Kefer, viola, and Othmar Müller, cello, all of whom studied at the Vienna Musikhochschule with Hatto Beyerle and Alfred Staar. Johannes Meissl replaced Honeck in 1982. In 1984–5 the group studied with the La Salle Quartet in Cincinnati, after which they quickly established an international reputation with débuts in Paris (1985), Berlin (1987), Tokyo (1987), London (Wigmore Hall, 1988), New York (1988) and Amsterdam (1989). The Artis has also appeared at major international festivals, and since 1988 has given an annual concert series in the Vienna Musikverein.

The quartet has given the premières of several works, including Eder's Quartet no.4 (1991) and von Einem's Quartet no.5 (1992), and is the dedicatee of Richard Dünser's Quartet no.2 and Thomas Pernes's Quartet no.4. The intensity and imagination of the Artis's playing, founded on a warm, characteristically Viennese sonority, can be heard on numerous recordings, ranging from Mozart, Schubert and a complete Mendelssohn cycle to the quartets of Magnard and Zemlinsky. Schuhmayer plays a Domenico Montagnana violin dated 1727, Meissl an Andrea Guarneri instrument of about 1690 and Kefer a J.B. Guadagnini viola of 1784. All four players are also active as teachers, Schuhmayer and Meissl at the Vienna Musikhochschule, and Kefer and Müller at the Graz Musikhochschule.

Artocopus, Balthasar. *See* ARTHOPIUS, BALTHASAR.

Artomius [Artomiusz, Krzesichleb, Artomius Grodicensis], **Piotr** (*b* Grodzisk, nr Poznań, 26 July 1552; *d* Toruń, 2 Aug 1609). Polish clergyman and hymnbook compiler. He first studied at Grodzisk, was then, from 1573, a private tutor at Ostroróg and in 1577–8 attended the University of Wittenberg. An outstanding Protestant divine, he spent his whole career as a preacher – in Warsaw from 1578, at Węgrów from 1581, at Kryłów (in the Małopolska district) from 1584 and at Toruń from 1586 until his death. He was the editor of the most popular Polish Protestant hymnbook, *Cantional, albo pieśni duchowne* ('Cantionale, or Spiritual songs'; Toruń, 1587 or ?1578). It was enlarged and reprinted many times as *Cantional, to iest pieśni krześcijańskie* ('Cantionale, or Christian songs') at Toruń in 1596, 1601, 1620, 1638, 1648, 1672 and 1697, at Gdańsk in 1640 and 1646 and at Leipzig as late as 1728. The biggest edition, that of 1601, contains 333 songs, 106 of which were set by Adam Freytag for three to five voices (the number of these settings was reduced in later editions). The melodies were taken from traditional Catholic sources and Czech and German hymnals, and some were native Polish tunes; some of the texts were adapted, presumably by Artomius himself, to fit the traditional melodies.

ZYGMUNT M. SZWEYKOWSKI

Artopaeus, Balthasar. *See* ARTHOPIUS, BALTHASAR.

Artôt, Alexandre [Montagney, Joseph] (*b* Brussels, 25 Jan 1815; *d* Ville d'Avray, nr Paris, 20 July 1845). Belgian violinist. He was the son of Maurice Artôt (1772–1829), first horn player at the Théâtre de la Monnaie, and Theresa Eva Ries, cousin of Ferdinand Ries. Maurice Artôt's real name was Montagney. At the age of five Alexandre began studying the violin with his father and within 18 months played a Viotti concerto at the theatre. He received further instruction from Snel, principal first violin at the theatre, who advised him to study in Paris. There he was admitted as a page at the Chapelle Royale and continued his studies at the Conservatoire first with Rodolphe and later with Auguste Kreutzer, gaining the second and first prizes in 1827 and 1828. According to Fétis, Artôt then performed successfully in Brussels and London and toured Belgium, Holland, Italy, Germany and other European countries. At the Philharmonic on 3 June 1839 Artôt played a fantasy of his own for violin and orchestra; this was well received because of the delicacy of his playing and his remarkable execution rather than his tone, which, according to the *Athenaeum* (8 June 1839), was small. Berlioz's *Rêverie et caprice* (op.8) was written for Artôt.

In 1843 Artôt went on a concert tour of America and Cuba with the soprano Cinti-Damoreau. He was one of the first violin virtuosos to visit America, the others being Vieuxtemps and Ole Bull; they vied with each other for the admiration of the American public, the French elements preferring Artôt's Parisian elegance to the awkward but modest stage presence of Ole Bull. While in

America Artôt showed the first symptoms of the lung disease from which he died. His compositions include a Concerto in A minor (1845), fantasies and airs with variations and, in manuscript, string quartets and a Quintet for strings and piano.

ALEXIS CHITTY/MANOUG PARIKIAN

Artôt, (Marguerite-Joséphine) Désirée (Montagney) (*b* Paris, 21 July 1835; *d* Berlin, 3 April 1907). Belgian mezzo-soprano, later soprano. She was the daughter of Jean Désiré Montagney Artôt, horn player and professor at the Brussels Conservatory. She studied with Pauline Viardot in London and Paris, making her first concert appearances in Brussels and London in 1857. On Meyerbeer's recommendation she was engaged for the Paris Opéra in 1858, making her début as Fidès in *Le prophète*. In spite of the praise lavished on her by many critics, she asked to be released from her contract following some intrigues and, deciding to concentrate on the Italian repertory, she toured the south of France and Belgium. Her vocal range had extended itself in both directions, allowing her to add soprano roles to her repertory. In 1859 she sang in Italy, and at the end of the year in Berlin, with Lorini's Italian company at the opening of the Victoria-Theater, where she won great acclaim as Rosina, Angelina (*La Cenerentola*), Leonora (*Il trovatore*) and even as Maddalena (*Rigoletto*). Thereafter the greater part of her career was spent in Germany, both in Italian and German opera.

During the 1859–60 season she appeared with great success in concerts in London, and in 1863 she sang with the Royal Italian Opera as Maria in *La figlia del reggimento*. In the same year she sang Adalgisa to the Norma of Tietjens and Violetta. In spite of the great impression she invariably made in London, her appearances at Covent Garden in 1864 and 1866 were her last in England. In 1868 she went to Russia where, after a brief friendship, Tchaikovsky proposed marriage to her. Without a word of explanation, however, she married the Spanish baritone Mariano Padilla y Ramos at Sèvres in September 1869; she sang with him in Italian opera in Germany, Austria and Russia until her retirement. On 22 March 1887 they appeared together in a scene from *Don Giovanni*, performed for the kaiser's birthday at the Imperial Palace in Berlin. She taught singing in that city until 1889, when she and her husband went to live in Paris.

Their daughter, Lola Artôt de Padilla (*b* Sèvres, 5 Oct 1876; *d* Berlin, 12 April 1933), made her début in Paris in 1904 and subsequently sang in Berlin at the Komische Oper (1905–8) and at the Hofoper (1909–27), where in 1911 she was the first Octavian heard in Berlin. Her other successful roles included Zerlina, Countess Almaviva and Oscar and Micaëla.

HAROLD ROSENTHAL

Art Rock. A style of rock that overtly displays musical influences from Western classical styles or otherwise seeks to expand rock's stylistic and conceptual boundaries through exceptional technical prowess or fusion with prestigious or exotic styles. The Beatles' *Sgt Pepper's Lonely Hearts Club Band* (1967) was its founding document, both in its incorporation of classical referents such as orchestral instruments and in the implicit claims it made for the seriousness and complexity of popular music. The Moody Blues established a model for 'symphonic rock' when they collaborated with the London Festival Orchestra to produce *Days of Future Past* (1967). A group of mostly British bands continued to develop PROGRESSIVE ROCK through the late 1960s and 70s, including the Nice, Emerson, Lake and Palmer, Deep Purple, Yes, Procol Harum and Pink Floyd. Further experimentation and eclectic fusions arose through the work of Genesis, King Crimson, Jethro Tull and, in the United States, Styx, Kansas and Boston.

In a broader sense, the term is often used to describe musicians such as Roxy Music, Brian Eno, Frank Zappa, David Bowie, the Velvet Underground, Steely Dan, Rush and Laurie Anderson, who in various ways absorbed influences from classical music, although an ironic stance differentiated most of them from the progressive rockers. Art rock might properly include the classically influenced HEAVY METAL of the 1980s, yet the very fact of its popular success seems to have disqualified heavy metal as art, so demonstrating the ideological implications of such cultural categories. Apart from heavy metal, the audience for art rock has been comparatively small since the genre's heyday in the 1970s.

ROBERT WALSER

Arts Council of Great Britain. British organization, incorporated by royal charter in 1948 to take the place of the wartime Council for the Encouragement of Music and the Arts and to administer the subsidies granted by the state to artistic enterprises.

The Arts Council worked through panels, musical, literary, dramatic etc., independently of the government, though the government supplied its funds. It was not intended to represent an 'establishment' view of the arts and their place in society, and aimed for 'patronage without control'. Regional arts associations working under its aegis and partly supported by the council, were free to form their own policies. The council's care for music extended beyond professional orchestras and opera companies to amateur groups. London organizations (especially the Royal Opera House) took the greatest share of subsidies, but the policy from the 1960s and 1970s was to foster the arts in the regions by its support of small touring companies.

In 1994 the Arts Council's responsibilities and functions were transferred to three new bodies: the Arts Council of England, the Scottish Arts Council and the Arts Council of Wales. The Arts Council of Northern Ireland was already established as a separate body. Each of these organizations supports, in addition to orchestras and opera companies, a range of ensembles in the fields of jazz, music theatre, improvised music, early music and Asian, African, Caribbean and other non-European music.

They also actively encourage the works of living composers and have commissioned many new works.

HENRY RAYNOR/R

Arts Council of Ireland. Organization founded in 1951 in Dublin. *See* DUBLIN, §11.

Arts Florissants, Les. French Baroque vocal and instrumental ensemble. It was founded in Paris in 1979 by WILLIAM CHRISTIE.

Art song. A song intended for the concert repertory, as opposed to a traditional or popular song. The term is more often applied to solo than to polyphonic songs. *See* SONG.

Artufel, Dámaso (*b* southern France; *fl* 1609–14). Spanish liturgist of French birth. A Dominican friar, educated at the monastery at Saint-Maximin-la-Sainte-Baume, Provence, he served as *cantor* in a number of houses of his order in France, Aragon and Castile, including S Pablo at Valladolid and finally S María de Atocha in Madrid. He was commissioned to prepare a new simplified processional for the Spanish Dominicans, *Processionarium secundum morem almi ordinis Praedicatorum S.P.N. Dominici* (Madrid, 1609), which contains information on past chant manuals of the order, and the rubrics and music for the special services involving processions. Its music was badly garbled by the printer. Artufel's second work, *Modo de rezar las horas canónicas conforme al rezo de los Frayles Predicadores ... con un Arte de canto llano y con la entonación de los hymnos y sus rúbricas* (Valladolid, 1614), is in three parts with separate paginations. The first, a ceremonial for the Office, is chiefly an extract in translation from the Dominican Ordinary but with some interesting added material on the use of the organ; the second part contains the hymn intonations; the third is a manual on chant consisting of 23 chapters on the rudiments of music (notation, solmization, intervals, modes) and a collection of examples. The bulk of the technical material is taken verbatim from the *Arte de tañer fantasía* (Valladolid, 1565) of Artufel's great predecessor at S Pablo, Tomás de Santa María.

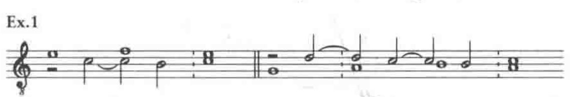
ALMONTE HOWELL

Artusi, Giovanni Maria (*b* c1540; *d* Bologna, 18 Aug 1613). Italian theorist, polemicist and composer. He was one of the leading Italian theorists in the years around 1600, specially notable for his criticisms from a traditional viewpoint of certain modern tendencies in the music of his day.

1. Life and polemics. 2. Principal theoretical works.

1. LIFE AND POLEMICS. Except for becoming embroiled in several musical polemics, Artusi led a quiet, studious life as a canon regular in the Congregation of S Salvatore at Bologna, where there was an important and sumptuous library of Greek and Latin manuscripts and books. He entered the order on 14 February 1562 and professed on 21 February 1563. He studied for a time in Venice with Zarlino, to whom he always remained devoted, honouring him during his lifetime with a compendium of *Le istitutioni harmoniche* and after his death with a learned eulogy by way of an explication of his teacher's emblem or device, *Impresa del molto rev. Gioseffo Zarlino* (1604). It was as a defender of Zarlino's theories that he entered two famous controversies.

Some years after Vincenzo Galilei had published *Dialogo della musica antica et della moderna* (1581), much of which is directed against the teachings of Zarlino, Artusi rose to the latter's defence in several pamphlets known only through quotations in Ercole Bottrigari's *Aletelogia di Leonardo Gallucio*. In *Lettera apologetica* (1588) he urged composers to imitate the works of Willaert, Rore, Merulo and Costanzo Porta rather than the 'bagatelles of certain modern composers'. After Zarlino's *Sopplimenti* (1588) and Galilei's *Discorso* (1589) in reply to it, Artusi issued a *Trattato apologetico* (1590). Galilei's final reply to Artusi and Zarlino remains in manuscript (*I-Fn* Gal.5).



The controversy that developed between Artusi and Bottrigari is not unrelated to that between Zarlino and Galilei. In *Il Desiderio* (1594) Bottrigari drew attention to some of the imperfections that arose in performance when instruments tuned to different standards were mixed in ensembles (*concerti*). The dialogue appeared under the name of one of the interlocutors, Alemanno Benelli; this is an anagram of Annibale Melone, a prominent Bolognese musician and teacher whom Bottrigari chose to honour. Melone greatly admired Bottrigari and used to spend hours each day studying theory with him and copying his works. When Melone died in April 1598, his widow Luccia handed over to Artusi at his request all of Melone's manuscripts, or so states an affidavit signed by her two years later when Bottrigari thought he recognized in Artusi's book, *L'Artusi*, published in December 1600, material from his own unfinished dialogue *Il Trimerone*. Artusi allowed his quarters to be searched, but nothing was found; then Bottrigari collected witnesses for the authorship of his own unpublished works (10 December 1600 to 15 July 1601, in *I-Bc* B.44 and B.46). Actually, although Artusi covered some of the same ground as Bottrigari and was probably stimulated by *Il Trimerone*, there is no evidence of plagiarism. Rather, Bottrigari's jealousy may have been aroused by Artusi's superior scholarship and theoretical acumen and by the understanding and detachment with which he dealt with the history of Greek theory on the basis of careful reading of Aristoxenus, Ptolemy and other ancient writers.

Meanwhile in 1599 Bottrigari had issued a new edition of *Il Desiderio* under his own name. This prompted Artusi to have it reprinted in Milan in 1601 under Melone's name, with a dedication to the senate of Bologna and a letter to the reader in which Artusi claimed that Bottrigari had stolen Melone's work. Bottrigari reacted with understandable indignation in *Lettera di Federico Verdicelli* (1602). Annoyed also by the fact that Artusi criticized his *Desiderio* without naming the author, Bottrigari answered in a dialogue, *Ant-Artusi*, which has not survived. To this Artusi replied in *Considerationi musicali*, printed in *Seconda parte dell'Artusi* (1603), mockingly dedicated to Bottrigari. It is devoted in large part to a refutation of *Il Patricio* (1593), in which Bottrigari had taken friendly issue with his old mentor, the philosopher Francesco Patrizi, on some points regarding the ancient Greek tuning systems. Bottrigari replied with *Aletelogia di Leonardo Gallucio* (1604), which apparently terminated the exchange.

2. PRINCIPAL THEORETICAL WORKS. Artusi's first book, *L'arte del contraponto ridotta in tavole* (1586), mainly

outlines in tabular form Zarlino's *Le istitutioni harmoniche* (1558), including some of books 1, 2 and 4, but the core of it is a simplification of book 3, on counterpoint. Although these tables show remarkable synthetic powers and an occasional flash of original thought, it is only with the *Seconda parte dell'arte del contraponto* (1589) that Artusi emerged as an independent theorist of the first rank. It is the first published book devoted entirely to the use of dissonances. (Galilei completed in 1588 a draft of a book on dissonances, which was never published; Artusi knew of it but did not see it.) He noted that there are more dissonances in counterpoint than consonances and that they are particularly useful for setting words expressing sorrow, tears and pain. Artusi made a primary contribution to the understanding of the suspension when he distinguished the note that moves to cause the dissonance as the *agente* and the note that is held over from the previous beat as the *patiente*. He stated the rule that the *patiente* must descend a step to a perfect or imperfect consonance or occasionally to a dissonance. The *agente*, on the other hand, is free to move anywhere (Zarlino obliged it to remain still by requiring the dissonant interval to be followed by the consonance closest to it). Artusi permitted the 4th to be resolved by a diminished 5th and the 2nd by a unison (p.29): see ex.1.

Ex.1

He also recognized that certain dissonances arise from diminution, as in the occurrence in ex.2 of parallel 2nds, which otherwise would not be permissible.

Ex.2

L'arte del contraponto (1598) united the two previous books while replacing much of the material deriving from Zarlino with a broader-based theory to bring it into line with contemporary composition. He urged composers not to imitate those who obstinately remained within the strictures of the rules and forced fugues and clever subtleties into their counterpoint, missing opportunities for more pleasing passages. Rather he would have them imitate works by Andrea Gabrieli, Palestrina and Clemens non Papa, 'who, having avoided obstinacy, have given so much pleasure to all' (p.38).

Artusi is rightly famous, though unjustly maligned, for criticizing in his books of 1600 and 1603 certain contrapuntal licences taken by an unnamed composer (later identified as Monteverdi) in four madrigals not published until 1603 and 1605. This stimulated Monteverdi's famous reply in *Il quinto libro de' madrigali* (1605) and a gloss on this letter by his brother Giulio Cesare in *Scherzi musicali* (1607). The debate is important because it brought into focus the ideals of the new style, the *seconda pratica*, as Monteverdi called it. Through the interlocutor Vario in the 1600 dialogue Artusi accused the composer of improprieties in the use of dissonances and accidentals, in the coordination of parts and in mixing modes. Meanwhile through the interlocutor Luca, who defended Monteverdi, we learn that some of the free dissonances could be justified as arising from *accenti* (ornamental figures) and diminutions, others as written examples of improvised counterpoint and still others as modelled on the freer part movement used in instrumental performance. Through the defence of Monteverdi by an unidentified composer who wrote under the academic name of L'Ottuso quoted in Artusi's 1603 book, we learn of some of the precedents and pretexts for the expressive use of harmonic and melodic dissonances that were recognized in the works of Rore, Wert and Marenzio, and also about the metaphoric use of dissonances as 'suppositions' or 'substitutions' for consonances. Artusi replied to Monteverdi's letter under the pseudonym 'Antonio Braccino da Todi' in a discourse of 1605 which is not extant, and to Giulio Cesare's *Dichiaratione* through a second discourse under that name in 1608. In the latter he answered point for point the letters of the Monteverdi brothers and added to his other criticisms the allegation that Monteverdi did not use time signatures correctly. His most interesting retort is that it is not the text that should be mistress of the harmony and rhythm, as Monteverdi, following Plato, believed, but that rhythm ought to be the master of the other two.

Although the quarrel with Monteverdi has attracted the most attention, in both *L'Artusi* volumes it is almost a side issue. Central to the first is the subject of the imperfection of modern *concerti*, which he had first broached in chapter 16 of the counterpoint treatise of 1589 and which received a long commentary by Bottrigari in *Il Desiderio*. Now he showed that the criteria for a good ensemble are more complex than the question of tuning raised by Bottrigari. He also rejected Bottrigari's classification of instruments as 'altogether stable' in tuning, 'altogether alterable' and 'stable-alterable' and proposed instead the following three categories: with equal tones and unequal semitones; completely flexible; with both equal tones and equal semitones. The main conclusion of Artusi's dialogue was that a major imperfection of modern music stemmed from the fact that musicians had not yet calculated a way to tune instruments so that they could all play together and that any melody could be transposed to any key. Denouncing the syntonic diatonic of Ptolemy supported by Zarlino and Bottrigari as opening the way to a flood of difficulties, the interlocutors agreed that only the equal tones and equal semitones of Aristoxenus could satisfy the needs of modern music (f.34*r*).

WORKS

Canzonette, 4vv, libro I (Venice, 1598)
Cantate Domino, 8vv, in 1599[2]

WRITINGS

L'arte del contraponto ridotta in tavole (Venice, 1586)
Lettera apologetica del Burla academico Burlesco al R.D. Vincentio Spada da Faenza, 14 Jan 1588; lost, except for excerpts in Bottrigari
Seconda parte dell'arte del contraponto, nella quale si tratta dell'utile et uso delle dissonanze (Venice, 1589)

CLAUDE V. PALISCA

Artusini, Antonio (*b* Ravenna, bap. 2 Oct 1554; *d* Ravenna, before 6 May 1604). Italian composer, lawyer, poet and orator. According to Mazzuchelli, he was born in Forlì. His only known musical work is *Il primo libro de madrigali a cinque voci* (Venice, 1598), dedicated to Paolo Savelli, which contains 23 madrigals, including a setting of Guarini's popular *Ah dolente partita* and another, based on the scale ut, re, mi, fa, sol, la. His poetic writings include a canzonetta on the death of Cristina Racchi Lunardi.

PIER PAOLO SCATTOLIN

Artyomov, Vyacheslav Petrovich (*b* Moscow, 29 June 1940). Russian composer. He attended the Moscow Conservatory where he studied composition with Sidel'nikov and the piano with Logovinsky (1962–8) although since 1957 he had already been engaged in various professional musical activities (teaching, working as a pianist at the Moscow Choreography, as a musical director with the Moscow theatres of drama, and as an editor for Muzïka publishers). Since 1977 Artyomov has concentrated wholly on creative work. In 1975, along with Gubaidulina and Suslin, Artyomov organised the group Astrea, which performed improvisations on unusual and exotic instruments. In 1990 Artyomov was composer-in-residence at the University of Nevada and in 1992 he organized the *Fund dukhovnogo tvorchestva* (The fund for spiritual art) in Russia.

Artyomov's early works were written in a neo-folkloric style, a trend that was popular in Russian music during the 1960s. By the mid 1970s he had become more independent and his music became shaped by two spheres of interest that were important too in his later works. The first of these is associated with a striving for a characteristic sound, above all in the brass and percussion. In percussion writing Artyomov emphasizes ritualistic while his brass writing is characterized by a concerto style with freely composed solo parts. The other aspect of Artyomov's art veers towards neo-Romanticism, a trend which by the mid 1970s had acquired great importance in Russia. Tonal structures and melodic lines began to appear in Artyomov's music – not in pure form, but employing the more complex timbres and polyphonic textures that are generally typical of his style. By the end of the 1970s the mastery of his orchestration had become one of the strongest aspects of his style, even though sound colour in itself was not of primary importance to Artyomov; he strives to subordinate his art to higher spiritual goals that in time become more and more grandiose. This aspect of his work and the titles of two major instrumental works of the 1970s – *Girlyanda rechitatsiy* ('A Garland of Recitations') and *Simfoniya ėlegiy* ('A Symphony of Elegies') – link his work to the Symbolism of the Russian Silver Age and more specifically to Skryabin, to whose style direct references are made. The title of a work becomes a distinctive, programmatic commentary, in most cases filled out by Artyomov himself or by his wife, the poet Valeriya Lyubetskaya; these commentaries accompany the performance in the form of printed texts.

In the 1980s Artyomov wrote chiefly instrumental music for non-standard forces but also applied himself to the writing of symphonic works in the spirit of late romanticism. These works, grandiose in their concept and in the scale of their realization, again demonstrate a direct link with the traditions of Skryabin. The first composition of this type to appear was the symphony *Put' k Olimpu* ('The Pathway to Olympus'), the first in the tetralogy *Simfoniya puti* ('The Symphony of a Pathway'), which was continued and completed in the 1990s. Conceptually, *Put' k Olimpu* follows in the footsteps of Skryabin's *Poėma ėkstaza* ('The Poem of Ecstasy') and *Prometey*: central to the work is the idea of ascending from a primary static state towards the final moment of lucidity embodied in a 'chord of unity'. This prophetic grandiosity is characteristic of the remaining parts of the tetralogy: the symphonies *Na poroge svetlogo mira* ('On the Threshold of a Radiant World'), *Tikhoye veyaniye* ('Gentle Emanation') and *Dennitsa vossiyayet* ('The Morning Star Shines Forth').

Artyomov's musical language of the 1990s is synthetic, combining elements of a traditional melodic and harmonic style with sonoristic effects and a dramatic plan based on timbre and texture. In its most transparent form this synthetic quality manifests itself in the Requiem dedicated *Muchenikam mnogostradal'noy Rossii* ('To the Martyrs of Long-Suffering Russia'), the performance of which generated great public interest. Although the Requiem is written to canonical Latin texts, his interpretation follows

not the liturgical but the concert hall tradition. His Requiem is an ecumenical mass, grandiose in terms of the forces required to play it and in its scale.

SVETLANA SAVENKO

Arundell [Arundel], **Dennis (Drew)** (*b* Finchley, London, 22 July 1898; *d* London, 10 Dec 1988). English opera producer, writer and composer. He studied the piano under his mother (both his parents were musicians) from the age of six, and was educated at Tonbridge School (1912–17) and St John's College, Cambridge (1919–29), where he read classics and music and became a Fellow. His musical studies were under C.B. Rootham, Henry Moule and Stanford and he was also influenced by E.J. Dent and Maynard Keynes. He made appearances as an actor and singer, from 1926, and from 1929 was a professional actor and producer. An influential figure in English musical-theatrical life for many years, his opera and masque productions cover a remarkably wide historical range: from Locke, Purcell and Handel (*Semele*, stage première, Cambridge, 1925) to Delius, Janáček (*Kaťá Kabanová*, British première, London, 1950), Britten, Honegger and Stravinsky (*Soldier's Tale*, British première, Cambridge, 1928); he also produced many works in the standard repertory, including several Mozart operas, as well as Balfe's *Bohemian Girl* at Covent Garden under Sir Thomas Beecham. His productions were noted for their sense of style, their dramatic vigour and their stage mastery. He believed in total fidelity to the score and stage directions, supported by a scholarly understanding of the social and historical background, and was intolerant of more freely interpreted productions.

Arundell wrote many articles, in *Opera* and elsewhere, mostly on matters concerning musical drama, as well as several books. He was a prolific composer of theatre music, including operas (*Ghost of Abel* and *A Midsummer Night's Dream*) and incidental music for plays, films, radio and television, mostly unpublished. He co-edited Purcell's *Miscellaneous Odes and Cantatas* for the Purcell Society (1957). He was appointed to the staff of the Royal College of Music Opera School in 1956, and was Crees lecturer at the college in 1971; he was made FRCM in that year. From 1974 for a brief period he was appointed opera producer and coach at the Royal Northern College of Music, Manchester, and in 1975–6 he produced *Hänsel und Gretel* and *Don Pasquale* in Melbourne. He was awarded the OBE in 1978.

Introduction to *Le nozze di Figaro and Così fan tutte* (London, 1971)

ERIC BLOM/ROSEMARY WILLIAMSON

Arutiunian, Alexander Grigoriyevich (*b* Yerevan, 23 Sept 1920). Armenian composer and pianist. At the Komitas Conservatory in Yerevan he studied composition (with Barkhudarian and Tal'ian) and the piano (with O. Babasian), graduating in 1941. He continued his studies at the Moscow Conservatory with Litinsky, Peyko and Zuckermann (1946–8). He was artistic director of the Armenian Philharmonic Society between 1954 and 1990. He began to teach composition at the Yerevan Conservatory in 1965, and was appointed to a professorship in 1977. He joined the Union of Composers in 1939 and the Union of Cinematographers of Armenia in 1975. He was awarded the State Prize of the USSR in 1949 for his graduation work *Kantat hayreinki masin* ('Cantata on the Homeland'), and was made a People's Artist of Armenia in 1960. Since then he has received numerous awards in Armenia, the USA and elsewhere.

The development in the late 1940s of Arutiunian's artistic perception, with its dualism between Classical and Romantic elements, coincided with the development of vitalist trends in Soviet art of the postwar period. Arutiunian's individual response to vitalism involved a spontaneous and improvisatory approach which drew on Armenia's cultural heritage, revealing the immanent potential of the national melodic style and the energy of its rhythms. Elements of vitalism also conditioned other

aspects of Arutiunian's music: his preservation of Classical sequences of contrasting movements and his use of Baroque forms and genres, especially suites and concertos. The concertante principle influences not only his concertos and other orchestral and chamber works, but also the opera *Sayat-Nova* (1967), in which the *ashug*, an 18th-century Armenian minstrel comparable to the Western Meistersinger, is made to symbolize the originality of the national poet-musician. The *ashug* tradition, based on freely varied development, has been important to Arutiunian's work in general. His lyrical idiom is rooted in a specific national melodic character, while the Romantic side of his sensibility finds expression in an emotional radicalism and a predominantly lyrical impulse, producing music that is at once expressive, sentimental, nostalgic and ironic.

Although Arutiunian's style has evolved smoothly and continuously, distinct periods are discernible in his music. The works of the 1940s and 50s are characterized by thematic development and the sequential combination of large structures which creates a high degree of emotional intensity. These works, including the Festive Overture, the Symphony and the Piano Concertino, continue the tradition of Khachaturian in their combination of a highly colourful, decorative style with a tragic sense of pathos. The 1960s and 70s saw an abandonment of dramatic elements in favour of diatonic clarity and an orientation towards Classical forms. Alongside *Sayat-Nova*, his major achievement of this period, are a number of works written in the neo-classical style, such as the sinfoniettas, the Horn Concerto and the Variations for trumpet and orchestra. Stylistic synthesis characterizes his works of the 1980s and 90s, such as the concertos for trombone and tuba (like the earlier Horn Concerto the first Armenian concertos for their respective instruments), and the Violin Concerto 'Armenia – 88', considered by many his masterpiece, in which a rhetorical Baroque style, Classical form and a Romantic harmonic palette are employed in balanced combination. A number of Arutiunian's works for wind, notably the concertos for trumpet (1950) and tuba and the brass quintet *Armenian Scenes* (1984), have entered the international repertory.

WORKS
(*selective list*)

Stage: Sayat-Nova (op, 3, A. Khanjan), 1967, Yerevan, A. Spendiarian Theatre, 1969; Medsapativ muratskanner [Honourable Beggars] (musical comedy), 1972, unfinished

SVETLANA SARKISIAN

Arzumanov, Valery Grantovich (*b* nr Vorkuta, Russia, 3 Aug 1944). Russian composer. He trained in Leningrad as a violinist and composer at the Special Music School attached to the Conservatory (1958–63) and then at the Conservatory itself (1963–8; postgraduate studies 1968–71) in the composition class of V. Salmanov. He has taught in both establishments. In 1974 he moved to France where he studied composition with Messiaen at the Paris Conservatoire (1974–8), and at the musicology faculty of the Sorbonne (1984–5). Since 1991 he has been *Professeur-animateur* of the national music school at Notre Dame de Gravenchon and since 1994 he has also taught analysis at the Rouen Conservatoire.

A prolific composer, Arzumanov's moral and religious quests are reflected in his continuous search for new styles and genres. He has studied the music of Mahler, Shostakovich and the Second Viennese School, the music of ancient civilizations, pop music, and the church canticles of the Orthodox tradition, and willingly uses their forms and devices in his works in his efforts to find a spiritual kinship with distant epochs and peoples. The piano cycle *Fortepiannïy mir* 'Piano World' which he wrote at the end of the 1980s includes more than 400 pieces and is a unique and resonant diary of the composer's life; in it he captured the vicissitudes of life through the most varied musical impressions retained by his memory. Themes of childhood are frequently encountered in Arzumanov's work; they are sometimes associated with recollections of his own dramatic childhood spent in the far north of Russia in the Stalinist Gulag where his parents met. They had been exiled there in 1936 as 'enemies of

the people'; in works such as *Pamyati V.T. Shalamov* 'In memory of Varlam Tikhonovich Shalamov' and *Babushka Khava* 'Grandmother Khava' the composer expresses a thought which is dear to him – that of suffering as a means to penitence and purification. Another large cycle, having an autobiographical and deeply lyrical character, are the songs which Arzumanov set to his own words and which he himself performed with a guitar accompaniment. Many of his earliest works are orchestral, but he has since written works for soloists, ensemble (often of an unusual make-up) and choir. He has published six volumes of poetry (in Russian) and has written articles on many of his contemporaries including Butsko, Karamanov and Golovin.

WORKS

STAGE

Dvoye [The Two] (chbr op, S. Volkov), 1966; Babushka Khava [Grandmother Khava] (op-monologue, Arzumanov), 1952–90; Pamyati V.T. Shalamova [In Memory of Varlam Tikhanovich Shalamov] (mini-op, Arzumanov), 1956–88; Ikar [Icarus] (ballet, B. Eyfman, collab. A. Chernov), 1970; Pis'mo [The Letter] (op-monologue, I. Okunev), 1991

VOCAL

MIKHAIL GRIGOR'YEVICH BYALIK

As (Ger.). A♭. *See* PITCH NOMENCLATURE.

Aṣ, Jamīl al- (*b* 17 Jan 1929). Jordanian traditional composer, singer and *buzuq* player of Palestinian Gypsy origin. At an early age he joined a group of Gypsy musicians as a singer and player of the *'ūd* (short-necked lute) and the *buzuq* (long-necked lute), and performed at weddings and other celebrations in Jerusalem and the neighbouring villages. He began to learn religious chants and Qur'anic recitation at the age of nine. In 1949 he joined the choir of the broadcasting service in Ramallah, and in 1959 he joined the music section of the newly established radio station in Amman. In 1963 he was appointed leader of the radio station's music ensemble; he held this position for several years, during which he performed many of his songs and also had the opportunity to join a group of researchers making a field survey of folk heritage including Jordanian folk singing and music in an area covering both banks of the river Jordan. As a *buzuq* player he participated in several national and international festivals and competitions, winning first prize in a competition in Tunisia in 1974. In 1976 he was appointed consultant for the radio and television stations in Amman and still held this position in 1999.

His vocal style reflects elements of east Jordanian and Palestinian heritage as well as influences from Iraq and Syria. Many of his songs have been performed by his second wife, the Palestinian singer Salwā, and by several Jordanian and Arab singers including Ismā'īl Khaḍr, Shukrī 'Ayyād, Sihām al-Ṣafadī, and Sāmī al-Shāyib; the songs of al-Aṣ have become widely known in Jordan and the Arab world through the performances of the Lebanese singer Samīra Tawfīq. Jamīl al-Aṣ received the Badge of Independence for his contribution to the development of Jordanian song.

ABDEL-HAMID HAMAM

Asaf'yev, Boris Vladimirovich [Glebov, Igor'] (*b* St Petersburg, 17/29 July 1884; *d* Moscow, 27 Jan 1949). Russian musicologist, composer and critic. He studied at the St Petersburg Conservatory from 1904 to 1910 with Rimsky-Korsakov and Lyadov, and graduated in 1908 from the faculty of history and philology of the University of St Petersburg. From 1910 he worked as a repetiteur; from 1916 edited and composed ballet music and from 1919 was a member of the board of directors and repertory consultant at the Mariinsky and Mikhaylovsky Theatres. In 1919 he became head of the Central Library for State Musical Theatres. In the same year, in association with Lyapunov and Bulich, he organized the music department at the Petrograd Institute for the History of the Arts (now the Zubov Institute for the History of the Arts); he was its director from 1921. Between 1922 and 1925 he was responsible for the organization there of concerts of contemporary music. He was made a professor at the Leningrad Conservatory in 1925, and established its music department as well as devising a programme of studies that aimed to unite a university education with a fundamental preparation in the techniques of musicianship. He also taught and administered at the Leningrad Music Technical School.

In 1926 Asaf'yev was one of the founders of the Leningrad branch of the Association for Contemporary

Music. He simultaneously set up and led the New Music Society; the two groups amalgamated a year later. Concerts were given of music by Les Six and other Western composers, as well as contemporary Leningrad composers; unfamiliar works by Prokofiev and Stravinsky were also heard. As a result of this he produced the first Russian book on Stravinsky, *Kniga o Stravinskom* (1929). He also had an active influence on the renewal of the repertory of the Leningrad opera houses. Between 1924 and 1928 more than ten new foreign operas were staged, including *Salome*, *Wozzeck*, Schreker's *Der ferne Klang* and Krenek's *Der Sprung über den Schatten* and *Jonny spielt auf*.

From 1914 Asaf'yev wrote regularly under the pseudonym Igor' Glebov in the journals *Muzïka*, *Muzïkal'nïy sovremennik*, *Zhizn' iskusstva* and *Krasnaya gazeta*. During his most prolific period as a writer (1919–28), he formulated his interests in the study of the classical legacy of Russian music and in contemporary music, consolidated through contact with Berg, Hindemith, Schoenberg, Milhaud, Honegger and Bartók. During the 1930s his academic work was pushed into the background by composition. He wrote an outstanding trio of ballets – *Plamya Parizha* ('The Fire of Paris', 1932), *Bakhchisarayskiy fontan* ('The Fountain of Bakhchisaray', 1933) and *Utrachenniye illyuzii* ('Lost Illusions', 1934) – as well as five symphonies and numerous other works. He returned to rigorous academic work at the start of the 1940s, even continuing to write prolifically during the Siege of Leningrad, and devised a cycle of research and writings called *Mïsli i duma* [Thoughts and reflections]. A significant aim was realized in 1947 with the publication of *Intonatsiya*, the second volume of his book *Muzïkal'naya forma kak protsess*. In this, he expounded his influential theories of music 'intonation', a term which, in Russian, has broader implications than in English, embracing the diverse expressive aspects of musical form. In addition to further writings on Russian subjects, he completed his fundamental monograph on Glinka (1947) and wrote a major article on the revival of Czech music in the decades preceding World War II (intended for the *Mïsli i duma* cycle, a fragment of the essay was published in *Izbrannïye trudï* (1952–7) iv, pp.357–68.

In 1943 he moved to Moscow, where he headed the research office at the Conservatory and the music department of the Institute of Art History of the USSR Academy of Sciences. He was also a consultant to the Bol'shoy Theatre. He was made a National Artist of the USSR in 1946, and was president of the Union of Composers from 1948 to 1949. His book on Russian paintings, *Russkaya zhivopis'*, was published posthumously in 1966.

LARISA GEORGIEVNA DAN'KO

Asante [Ashanti] **music.** The music of one of the dominant and culturally important ethnic groups in GHANA. The Asante number about 1,500,000 and are grouped politically into large territorial units, each of which is headed by a paramount chief under whom there are district chiefs of different ranks. The constitutional head of the Asante is the Asantehene, to whom all paramount chiefs owe allegiance. In the pre-colonial period, the Asante sphere of influence spread over many parts of Ghana and extended westwards to the borders of Côte d'Ivoire and eastwards across the Volta.

1. Musical organization. 2. Musical instruments. 3. Vocal music.

1. MUSICAL ORGANIZATION. The traditional political structure of the Asante is reflected in the organization of their music. Firstly, the music of the court is separated from that of the community, while the hierarchical ordering of chiefs under the Asantehene is reflected in the number and types of instruments and ensembles that each royal court can have. Secondly, court music is performed on state occasions and festivals, whereas community music is performed on all other social occasions. Thirdly,

as the practice of music in community life is organized on the basis of the social groups within it, the inventory of musical types and songs of the community is much larger than that of the court. Fourthly, although there is no idiomatic differentiation between court music and the music of the community, the music of the court tends to be more sophisticated or elaborate in organization, or more complex in structure. Accordingly, the training and recruitment of court musicians is institutionalized.

2. MUSICAL INSTRUMENTS. Asante music lays more emphasis on the use of idiophones and membranophones than on other instrumental types. Idiophones include *dawuro* and *nnawuta* (single and double clapperless bells); *firikyiwa* (castanets made of iron); *torowa* (vessel rattles); *astratoa* (concussion rattles); *mmaa* (stick clappers); *sraka* (scraped idiophones); and *prempensua* (large *sausa*s). The flat board *sausa* with five wooden lamellae is no longer widely used.

Membranophones are generally open and single-headed. They fall into three groups: *twenesin* (signal drums), *akukuadwo* and *atumpan*, which are the principal talking drums of the court, and those drums played in ensembles as basic supporting drums or those played as master drums. A few closed or double-headed membranophones, such as the *donno* (hourglass drum; *see* DRUM, fig.1*f*) and *gyamadudu* (large cylindrical drum), as well as some frame drums, are also used.

Aerophones include two varieties of flute: the *aten teben* (bamboo flute) and the *odurugya* (cane flute) played at the court of the Asantehene. Court trumpets are made from animal horns or elephant tusks and are played in hocket fashion in ensembles of five or seven instruments. Chordophones are rare, and only the *benta* (mouth bow) and the *seperewa* (bridge-harp) are found.

3. VOCAL MUSIC. With the exception of the *kwadwom* historical chant and the song preludes of *kete* drum music and dance, the music of the court is almost entirely instrumental, while that of the community lays stress on vocal music. Asante songs are based on a seven-tone scale. They have a general descending trend. Melodic movement within the phrase is limited to 2nds, 3rds and 4ths and may be stepwise, interlocking or pendular. The singing of simultaneous melodies in parallel 3rds and the use of leader-chorus forms in alternating or overlapping sections are dominant characteristics of Asante vocal style.

As Asante is a tonal language, the melodic contour follows the intonation contour of speech. The rhythm of songs similarly follows speech rhythm closely. Hence spoken verse, declamations and other styles which treat song as a form of speech utterance are exploited.

Asch, Moe [Moses] (*b* Warsaw, 1905; *d* New York, 19 Oct 1986). American record producer and co-founder of Folkways Records. The son of the Yiddish writer Sholem Asch, he was an electronics technician and an enthusiast for American folk music when he began to produce recordings in 1939. He released albums compiled from 78 r.p.m. discs on the Disc and Asch labels before founding Folkways in 1947 with Marian Distler. Over the next 40 years, Asch issued what he called a 'public archive of world sounds', including animal noises and steam engines as well as traditional music and song from the USA and many other countries. The largest part of the Folkways catalogue of 2200 albums consists of recordings of the major figures in American traditional music in the 1940s and 50s. Asch recorded over 900 songs from Leadbelly and more than 200 from Woody Guthrie, and he issued over 60 albums by Pete Seeger. He also issued albums by Doc Watson and Blind Willie Johnson and recordings of children's music by Ella Jenkins. After his death, Folkways was sold to the Smithsonian Institute, Washington, DC, which guaranteed to keep all the recordings in print. Smithsonian Folkways has reissued much of the catalogue on CD.

For more information see P.D. Goldsmith: *Making People's Music: Moe Asch and Folkways Records* (Washington DC, 1998).

DAVE LAING

Aschenbrenner, Christian Heinrich (*b* Stettin [now Szczecin], 29 Dec 1654; *d* Jena, 13 Dec 1732). German composer and violinist. He was taught the violin by his father, a Stettin town musician, and in 1668 he received composition lessons from Johann Theile. He studied with J.H. Schmelzer in Vienna in 1676 and 1677 and in the latter year became a violinist in the Hofkapelle at Zeitz, where he remained until the Kapelle was disbanded in 1682. In the following year he became Konzertmeister in the Hofkapelle at Merseburg. There he enjoyed friendly relations with the Hofkapellmeister, David Pohle, whom he had known when he held a similar position at Zeitz from 1680 to 1682. In 1695 Aschenbrenner returned to Zeitz, where he was director of music until, in 1713, he went back to Merseburg as Hofkapellmeister. He still, however, retained an honorary title from Zeitz as 'Kapellmeister von Haus aus', though this cannot have continued beyond 1718, when the death of the reigning duke at Zeitz put an end to musical life at the court there. He retired from Merseburg in 1719 and from then until his death lived at Jena on a small pension provided by Duke Moritz Wilhelm of Merseburg. He twice went to Vienna as a performer – in 1692, when he dedicated six violin sonatas to the Emperor Leopold I, and in 1703. His compositions, of which only three pieces survive, were known throughout Saxony and Thuringia, as is evident from their inclusion in inventories and catalogues of the time, such as the dictionaries of Walther and Gerber.

WORKS

Gast- und Hochzeit-Freude, bestehend in Sonaten, Präludien, Allemanden, Curanten, Balletten, Arien, Sarabanten, 3–6vv, bc (Leipzig, 1673), lost
Sonaten, Praeludien ... etc., 3–6vv, bc (Leipzig, 1675), lost

KARL-ERNST BERGUNDER

Ascher, Leo (*b* Vienna, 17 Aug 1880; *d* New York, 25 Feb 1942). Austrian composer. He studied law and music at Vienna University, the piano with Hugo Reinhold and L. Thern (1898–1904) and composition with Robert Fuchs and Franz Schmidt. By 1905 he had decided to devote his time to composition, and by 1932 had composed 32 operettas. His first, *Vergeltsgott* (1905), was produced at the Theater an der Wien and had 69 performances, while one of his greatest successes was *Hoheit tanzt Walzer* (1912), first produced at the Raimundtheater and performed more than 2500 times over the next ten years. Characteristically Ascher's music was in a strong local Viennese idiom, and he created a perfect example of the so-called Wienerlied with *S'Lercherl von Hernals* (1911). He also wrote lieder and film music. Ascher was arrested during the Reichskristallnacht, and upon his release emigrated to the USA (1939), where he worked as a lawyer, specializing successfully in law suits regarding plagiarism and royalties. The Leo Ascher Centre of Operetta Music at Millersville University, Pennsylvania contains hundreds of scores, sheet music and ephemera; upon the death of Ascher's daughter Franzi Ascher-Nash, her papers were also added to the library. (*GänzlEMT*, incl. complete list of stage works)

WORKS
(*selective list*)

Operettas: Die arme Lori, 1909; Die keusche Susanne, 1910; Eine fidele Nacht, 1911; Hoheit tanzt Walzer, 1912, rev. as Hochzeitswalzer, 1937; Die goldene Hanna, 1913; Der Soldat der Marie, 1917; Ein Jahr ohne Liebe, 1923; La Barberina, 1928; Sonja, 1925; Frühling im Wienerwald, 1930; Bravo Peggy, 1932; Um ein bisschen Liebe, 1937

Film scores: Ihre Durchlaucht, die Wäscherin, 1931; Mein Leopold, 1931; Purpur und waschblau 1931 (incl. Irgendeinmal kommt irgendwer von irgendwo her [Somewhere about someone is out looking for you])

Lieder: S'Lercherl von Hernals (1911); Hinaus (P. Cornelius); Es war ein braunes Maidelein (O.J. Bierbaum); Vom Scheiden (E. zu Schoenaich-Carolat); Diebstahl (R. Reinick); In Heiligenstadt steht ein Bankerl am Bach

Principal publisher: Doblinger

THOMAS L. GAYDA

Ascherberg, Hopwood & Crew. English music publishers. Eugene Ascherberg (*b* Dresden, 1843; *d* London, 28 May 1908) arrived in England after a period in Australia, and set up in London as E. Ascherberg & Co. by 1879, initially as a piano importer. The firm gradually moved over to music publishing and took over Duncan Davison & Co. in 1886. The firm of Hopwood & Crew (founded in 1860) published popular dance music by Charles d'Albert, Charles Coote (father and son), Waldteufel and others, as well as countless music-hall songs, and it absorbed the firms of Howard & Co. (1899) and Orsborn & Co. (1901) who had similar catalogues. An amalgamation in 1906 led to the formation of Ascherberg, Hopwood & Crew, and in the same year the firm of John Blockley was also acquired. Ascherberg, Hopwood & Crew's substantial catalogue covered music of every description, but was based mainly on light music. Among its successful stage works were the operettas *The Geisha* and *The Belle of New York*, and later musical comedies such as *The Maid of the Mountains* and Straus's *The Last Waltz*. The firm also held the British copyrights for Mascagni's *Cavalleria rusticana* and Leoncavallo's *Pagliacci*. Its many instrumental and choral series included works by Elgar, Reger and Coleridge-Taylor. In 1969 the firm was taken over by CHAPPELL.

Aschpellmayr, Franz. *See* ASPLMAYR, FRANZ.

Asciolla, Dino [Edoardo] (*b* Rome, 9 June 1920; *d* Siena, 9 Sept 1994). Italian viola player and violinist. He studied the violin and viola at the Rome Conservatory and later attended masterclasses at the Accademia di S Cecilia, Rome, and at the Accademia Musicale Chigiana, Siena. He began his career as a violinist and won the 1950 Vivaldi Competition at Venice. For a time he was leader of the Alessandro Scarlatti Orchestra and the Salzburg Mozarteum Orchestra, but he later concentrated on the viola and became one of its best-known exponents. Firmino Sifonia, Ennio Morricone, Domenico Guaccero and Manuel De Sica are among the composers who wrote works for him. He had an international reputation as a soloist and chamber player, having toured widely with various ensembles such as the Virtuosi di Roma, I Musici, the Boccherini Quintet, Chigi Quintet, Rome Quartet and Quartetto Italiano. He played a Maggini viola, a rare instrument from the 17th-century Brescia school. His recordings included Paganini's Sonata for viola and orchestra, in which his performance is distinguished by richness of tone and flexibility of technique. He taught at the conservatory in L'Aquila.

PIERO RATTALINO/R

Ascone, Vicente (*b* Siderno, Calabria, 16 Aug 1897; *d* Montevideo, 5 March 1979). Uruguayan composer of Italian birth. Early in life he moved with his family to Montevideo, where he studied harmony and composition with Luis Sambucetti, and the trumpet with Aquiles Gubitosi. He was for several years first trumpet and soloist with the Montevideo Radio SO, which he conducted occasionally, and from 1940 to 1954 he directed the municipal band of Montevideo. He has also taught harmony at the Montevideo Instituto Verdi, and wind

and percussion instruments at the Municipal School of Music, where he was later appointed director and professor of harmony. In 1938 the Venezuelan government asked him to establish a course for teaching choral music at the experimental music schools in Caracas; during his stay he composed *Venezuela*, a book of school songs. A prolific composer whose music has a nationalist character, he has received various national awards and his works have been favourably received outside Uruguay. Among his later compositions, the Trumpet Concerto (1969) places strongly rhythmic outer movements, in unstable harmonies and with reminiscences of military music, against a tonal, lyrical second movement consisting primarily of an extended melody by the trumpet soloist.

WORKS

Ásgeirsson, Jón (*b* Ísafjörður, 11 Oct 1928). Icelandic composer, teacher and critic. He graduated in 1955 from the Reykjavík College of Music, where he studied the piano with Árni Kristjánsson and theory with Victor Urbancic. Further composition studies were undertaken at the RSAMD in Glasgow (1955–6) and at the Guildhall School of Music in London (1965). In 1961 he received a teacher's diploma from the Reykjavík College of Music. Ásgeirsson has conducted various choirs, and became the principal music critic of *Morgunblaðið* in 1970. Formerly president of the Icelandic Composers' Society, he has taught at various institutions and is currently professor at the Icelandic Teachers' College.

His works are mainly traditional in style though he has written a few serial compositions. He is particularly interested in reviving Icelandic folksongs and dances and has set related folk poetry found without music; he has also served as music director for productions of the ancient dances by the National Dance Company. In 1974 his opera *Thrymskviða* ('The Lay of Thrym') was the first full-scale Icelandic opera to be staged in Iceland.

WORKS
(selective list)

Stage: Thrymskviða [The Lay of Thrym] (op, 5, after Elder Edda), Reykjavík, National, 1974; Blindisleikur [Blindman's Buff], ballet, perf. 1981; Galdra Loftur [Loftur the Magician] (op, 3), 1995, perf. 1996

AMANDA M. BURT/THORKELL SIGURBJÖRNSSON

Ashbourne(-Firman), Peter (Thomas) (*b* 14 July 1950). Jamaican composer, violinist and keyboard player. He came from a musical family, and his talent for the piano and the violin revealed itself early on, with improvisation skills developing soon afterwards. His first musical lessons were given by his aunt, after which he was taught by other Jamaican teachers. He studied at the Berklee College of Music, Boston gaining the BM in 1976. His studies focussed mainly on composition and improvisation in modern, black American (including Jamaican) popular styles. He taught in the African-American department of the Jamaica School of Music (1976–9), then, as a freelancer, conducted workshops (including one at the Musikhochschule, Graz), judged festivals and directed theatre productions in the Caribbean.

Ashbourne is a leading violinist and keyboard performer in the Caribbean region, with styles ranging from religious to theatrical, classical, folk and popular. His compositions are equally wide-ranging: he has written and arranged music for theatrical productions, dance, recordings, commercials and documentaries. He has raised the technical and artistic standards of the composition and performance of commercial and popular music through his numerous works for soloists and for chamber, orchestral and vocal ensembles. He has successfully fulfilled commissions from the American Wind SO, the Graz Musikhochschule, the Jamaican-Canadian Chamber Music Festival and the National Dance Theatre Company of Jamaica.

WORKS
(selective list)

Choral: Alleluia, 2 choirs, drums, after 1994, unperf.
Dance theatre: Two Drums for Babylon, drums, pf, synth, perf. 1980
Sym. wind ens: Jamaican Suite (Fantasy on Jamaican Folk Tunes), perf. 1981; Avia (Fantasy), perf. 1986
Str qt: Jamaica Folk (Medley of Jamaican Folk Tunes), perf. 1985; Folk Suite (Fantasy on Jamaican Folk Tunes), perf. 1996
Other chbr; music for commercials, documentaries and TV; jazz compositions for special occasions

OLIVE LEWIN

Ashbrook, William (Sinclair) (*b* Philadelphia, 28 Jan 1922). American scholar and musicologist. He received the BA from the University of Pennsylvania in 1946 and the MA from Harvard University in 1947. He taught humanities at Stephens College (1949–55) and was a member of the English department at Indiana State University (1955–74). From 1974 to 1984 he was professor of opera at the Philadelphia College of the Performing Arts. Although trained as a teacher of English literature, Ashbrook also has a lively interest in Italian opera and has contributed numerous articles on the subject to numerous periodicals. He was editor of the *Opera Quarterly* from 1992. His books on Donizetti (1965, 1982) and Puccini (1968, 1991) are particularly valuable for the careful presentation of biographical material, the discussion of the literary and dramatic aspects of the operas and the description of the various revisions.

PAULA MORGAN

Ashdown, Edwin (*b* 1826; *d* 26 Nov 1912). English music publisher. He and Henry John Parry were employed by Wessel & Co. and took over the business on the retirement of CHRISTIAN RUDOLPH WESSEL in 1860; the firm then became known as Ashdown & Parry. Parry retired in 1882 and the firm's name changed to Edwin Ashdown, becoming a limited company in 1891. The firm's publications included much new English music and the short-lived periodical *Hanover Square* (1867–9), edited by the pianist Lindsay Sloper, which consisted largely of new music. Composers in the catalogue included G.A. Macfarren, Sullivan, Elgar and Vaughan Williams, and for many years the firm was also the English agent for BOTE & BOCK of Berlin. Piano and choral music and solo songs came to form the core of its publishing activities. Ashdown also took over the music publishing firms of Hatzfeld & Co. (1903), Enoch & Co. (1927) and J.H. Larway (1929). In its turn it was absorbed by Music Sales in 1982.

PETER WARD JONES

Ashe, Andrew (*b* Lisburn, Co. Antrim, *c*1759; *d* Dublin, 1838). Irish flautist and composer. When 12 he was adopted by Count Bentinck, a British naval captain, and travelled widely with him in Europe. He quickly learnt the flute but abandoned it because of his dissatisfaction with the contemporary one-keyed instrument. He returned to the flute in 1774 at The Hague, after hearing the flautist Vanhamme (or Vanham) play a six-keyed instrument by Richard Potter and purchasing it from him. Around 1778 Ashe was appointed first flute at the Brussels Opera, having beaten Vanhamme, the incumbent, in a public audition. After settling in Dublin in 1782, he was engaged by Saloman in 1791 for the Haydn concerts in London, where he made his solo début the following year. He succeeded Monzani at the King's Theatre in 1805, and in 1810 also became director of the Bath concerts on the death of Rauzzini, whose pupil, Miss Comer, he had married in 1799. In 1813 he was the founding first flute of the Philharmonic Society, serving until replaced by Charles Nicholson in 1816. Four years of losses led him to resign his position in Bath in the winter of 1821–2. After years of private teaching, he was appointed professor (with Nicholson) when the RAM opened in 1823, but the initial lack of flute students may have been a factor in his return to Dublin the same year. Ashe's tone, intonation and expressive playing made him an influential advocate of the flute with 'the extra keys' when it was still opposed by older players. His flute concertos, the novelty of which excited admiration, were never published and are now lost.

PHILIP BATE, DAVID LASOCKI

Asheim, Nils Henrik (*b* Oslo, 20 Jan 1960). Norwegian organist and composer. He graduated as an organist in 1981 and after studying with Olav Anton Thommesen at the Norwegian Academy of Music he gained a graduate degree in composition (1987). He also spent a year with Ton de Leeuw at the Sweelinck Conservatory in Amsterdam. Asheim teaches at the Rogaland Conservatory in Stavanger. Between 1988 and 1991 he was chairman of the Norwegian Society of Composers.

An important part of his output is connected with his work as an organist and church musician. His largest work in this genre is the dramatic oratorio *The Ascension of Martin Luther King* (1990). He has also won acclaim for his chamber music and orchestral works, and has twice been awarded the Work of the Year prize in Norway, and as early as 1978 he received the UNESCO/EBU Rostrum prize for *Ensemble Music for Five*. Several of his compositions incorporate electro-acoustic elements. The installation *Axis* was realized through real time output from a computer.

ARVID O. VOLLSNES

Ashewell, Thomas. *See* ASHWELL, THOMAS.

Ashforth, Alden (Banning) (*b* New York, 13 May 1933). American composer, jazz researcher and teacher. He studied composition with E.B. Hill and Richard Hoffmann at Oberlin College (BA 1958, BM 1958) and with Sessions, Earl Kim and Babbitt at Princeton University (MFA 1960, PhD 1971). He began his teaching career at Princeton (1961) and held positions at Oberlin (1961–5) and several other schools before joining the faculty of UCLA in 1967. In 1969 he became coordinator of the UCLA electronic music studio and in 1980 he was made a full professor. Since 1952 he has been active as a producer of New Orleans jazz recordings. His writings include contributions to *Perspectives of New Music* (on Schoenberg), *The Music Review* (on Beethoven) and *The New Grove Dictionary of Jazz*. Ashforth has received

particular notice for his electronic works. *Byzantia: Two Journeys after Yeats* (1971–3) is panoramic in dramatic effect, with mosaic-like juxtapositions of electronic, acoustic (voice, traditional instruments) and natural (flowing water, bird calls) sounds.

Ashkenazi music. *See* JEWISH MUSIC, §III, 3.

Vladimir Ashkenazy, 1986

Ashkenazy, Vladimir (Davidovich) (*b* Gor'kiy [now Nizhniy Novgorod], 6 July 1937). Russian pianist and conductor, naturalized Icelandic. He was born into a musical Jewish family and entered the Moscow Central School of Music in 1945; his teacher there for the next ten years was Anaida Sumbatyan. His first major recital, devoted entirely to Chopin, was in the Great Hall of the Moscow Conservatory in April 1955, and later that year he gained second prize at the fifth Warsaw International Chopin Competition. In 1956, now a pupil of Lev Oborin at the Moscow Conservatory, he was awarded first prize at the Queen Elisabeth Competition in Brussels. While still a student he made his first tour outside the USSR the following year, to East and West Germany. After graduating, it was inescapable that he should be groomed for the second International Tchaikovsky Competition in Moscow in 1962 (the American Van Cliburn having won the first), and he duly restored national honour by carrying off a shared first prize (with John Ogdon). His London début followed in 1963, and in that year he defected and settled in London with his Icelandic wife and son. In 1969 the family moved to Iceland, where he started to conduct, away from the glare of publicity and the pressures of international concert life. He has subsequently made his home in Switzerland.

For many years Ashkenazy was considered the finest of the young Russian players: for the 1960s, a once-in-a-generation virtuoso, such as Kissin was in the 1990s. Establishing his career with Chopin, he was recognized early on as having all the virtues of a great performer: musicianship, intellectual perception, technical perfection and musical instincts that never failed to make his fingers say something. In his first recording of Chopin's Etudes, completed in 1960 (Melodiya), he matched to perfection Chopin's inspiration, which took off from an exploration of the resources of the piano and the potentialities of timbre to be exploited by a new keyboard technique. Although Ashkenazy went on to record the complete piano works of Chopin, he never surpassed these early Etudes. After settling in the West he began an association with Decca, for which he has recorded virtually all the major works of the piano repertory. The achievement, inevitably, has been variable; it includes a complete set of the Mozart concertos, in which he directed the Philharmonia from the keyboard, two widely admired sets of the four Rachmaninoff concertos and the Paganini Variations (first with the LSO and Previn, then with the Royal Concertgebouw and Haitink), all the Prokofiev concertos and much of Prokofiev's solo music, and sets of distinction of the ten Skryabin sonatas and Shostakovich's 24 Preludes and Fugues op.87.

As his conducting activities grew, so Ashkenazy's solo career was reduced in proportion. He has an individual but expressive conducting technique, forged in the 1970s during his early years in Iceland; but he made the transition to the podium with complete success and his orchestral recordings are now as numerous as his others and the best of them as masterly. His orchestral début on disc was in Prokofiev's Classical Symphony in 1974; he went on to record all the Prokofiev symphonies, all the Sibelius (he is a dedicated Sibelian), and the three Rachmaninoff symphonies, in addition to other large-scale works of Rachmaninoff. Having made a triumphant return to his homeland in 1989, after an absence of 26 years, now as pianist and conductor, he has been free to work there again and has recorded most of the Shostakovich symphonies with the St Petersburg PO. He was music director of the RPO in London from 1987 to 1994, and since 1988 has held the same post with the Deutsches Sinfonie-Orchester, Berlin (the former Berlin RSO), with which he has recorded a fine Skryabin series. In 1998 he was appointed music director of the Czech PO. He describes his favoured repertory as Beethoven, Sibelius and Rachmaninoff. As a chamber music player and partner to singers, his recordings include sets of the Rachmaninoff songs with Elisabeth Söderström, lieder with Matthias Goerne and the Beethoven violin sonatas with Itzhak Perlman. His autobiography, *Beyond Frontiers*, co-written with Jasper Parrott, was published in London in 1984.

STEPHEN PLAISTOW

Ashley. English family of musicians. They were active in London and the provinces *c*1780–1830.

(1) **John Ashley** (*b* ?London, ?1734; *d* London, 14 March 1805). Bassoonist and conductor. He was first bassoon at Covent Garden Theatre, and became more widely known after his success as assistant conductor to Joah Bates at the 1784 Commemoration of Handel in Westminster Abbey. Charles Burney (*An Account of the Musical Performances … in Commemoration of Handel*; London, 1785) records that the 'unwearied zeal and diligence' of 'Mr John Ashly of the Guards … were constantly employed with such intelligence and success, as greatly facilitated the advancement of the plan'. According to Burney he was also the 'Mr Ashley' who played the then novel double bassoon at these celebrations. Ashley's four sons (see below) also took part in the commemoration and later in 1784 the whole family first appeared in the provinces at the Hereford meeting of the Three Choirs; they took part in subsequent Handel commemorations and from 1789 were regularly billed at Ranelagh Gardens.

With this experience, and sometimes working in conjunction with a local musician, Ashley promoted some 13 two-, three- and four-day 'Grand Musical Festivals' in provincial towns from Portsmouth to Newcastle upon Tyne in the summers between 1788 and 1793. His sons led various sections of the orchestra and he engaged professional singers from the London theatres together with leading chorus singers from the Ancient Concerts and, occasionally, boys from the Chapel Royal. Local rank-and-file singers and instrumentalists augmented the touring troupe. His interest in such ventures waned when he became director of the Lenten Oratorios at Covent Garden in 1793, a position he held until his death, although in 1801 he arranged an impressive five-town festival tour through East Anglia.

Ashley's enterprises have been doubly criticized. Edward F. Rimbault's suggestion (*Grove1*) that unscrupulous profiteering lay behind the festival schemes cannot be substantiated. Ashley, and later his sons, consistently featured eminent performers of the day at places otherwise bereft of metropolitan talent and the programmes always provided substantial, and at times novel, musical fare, such as performances of *The Creation* at Hull in 1801, Norwich in 1802 and Stamford in 1803. Ashley has also been condemned for changing the character of the Lenten Oratorios by replacing performances of complete works with miscellaneous selections of sacred and secular music. In fact complete performances did not entirely disappear. In a typical season of 11 concerts any three of *Messiah*, *Judas Maccabaeus*, *Acis and Galatea*, *L'Allegro* and *Alexander's Feast* received at least one airing. The miscellaneous selections, already introduced into the Oratorios before Ashley's directorship, reflect a public taste nurtured on the Commemoration programmes and their imitations at all important musical festivals. No doubt Ashley exploited this fashion. His programmes, an adroit mix of conservatism, patriotism and novelty, well suited the temper of the times. His particular achievements at the Oratorios are too frequently overlooked: the first performances in England of *The Creation* (28 March 1800, a month before Salomon) and Mozart's *Requiem* (27 February 1801), for which Ashley prepared a special biographical note.

Ashley was also briefly a publisher, bringing out a second edition of Boyce's *Cathedral Music* in 1788 and Boyce's anthem *Lord, thou hast been our refuge* (1755) in 1802. From 1765 he was a member of the Royal Society of Musicians and was Master of the Worshipful Company of Musicians, 1803–4.

The Jane Ashley (1740–1809) whom W. Barclay Squire (*DNB*) and *Grove2* and *3* describe as a brother of John Ashley, and the double bassoonist at the 1784 Commemoration, is a confusion of two surnames arising from a misinterpretation of the notice of death (9 April 1809) of Ashley's brother-in-law Richard Jane ('… aged 69, Mr Jane, uncle of the Messrs Ashley'; *Gentleman's Magazine*, lxxix (1809), 478).

(2) General **Christopher Ashley** (*b* London, 6 Nov 1769; *d* London, 21 Aug 1818). Violinist, son of (1) John Ashley. He studied the violin with Felice Giardini and F.-H. Barthélemon and was apprentice to his father from 1784 to 1791. A second violin player at the 1784 Handel Commemoration, he led the orchestra at his father's musical festivals, first appearing in that role at Derby in 1790. His 25-year tenure as leader at the Covent Garden Oratorios began that same year. After his father's death he jointly managed that enterprise with (3) John James Ashley. These two brothers were also the mainstays of the festivals the family continued to promote in the provinces between 1806 and 1815.

Ashley was elected to the Royal Society of Musicians in 1791 and was engaged at Ranelagh and the Concerts of Ancient Music. He gained a considerable reputation in the performance of 'ancient and sacred music'. His concerto repertory, regularly aired at the Oratorios, was conservative. It included works by Geminiani, Giardini, Avison and Giornovichi and, occasionally, works of his own composition.

(3) **John James Ashley** (*b* London, 6 March 1771; *d* London, 5 Jan 1815). Organist, pianist and singing master, son of (1) John Ashley. He and his two younger brothers were trebles in the chorus at the 1784 Handel Commemoration. Although noted as both organist (at Tavistock Chapel and subsequently at Covent Garden Theatre) and pianist, being a pupil of the celebrated J.S. Schroeter, he was even more famed as a singing teacher. His pupils included Eliza Salmon (née Munday), Mrs Vaughan (Miss Tennant), Master (James) Elliot and Charles Smith, all of whom performed in the Covent Garden Oratorios and further afield in the family's festivals. After his father's death, Ashley continued to preside at the organ for the Oratorios until 1813 and assisted his brother (2) General Christopher Ashley in their management.

Ashley was also a composer; his published works include three sonatas for piano and violin op.1 (London, *c*1790), a sonata for piano op.2 (London, *c*1790), and three vocal canzonets for one and two voices op.5 (London, *c*1795). The sonatas are substantial two-movement affairs with florid piano parts. The more attractive songs (again with bravura accompaniments) may have been written for his pupils. Curiously, two piano compositions *Arabella: Introduction with Theme and Variations* and *La fete heureuse* appeared in 1824. Both were disparaged by *The Harmonicon* but it recalled Ashley as 'a good conductor and an able organist'.

(4) Charles Jane Ashley (*b* London, 30 Dec 1772; *d* Margate, 28 Aug 1843). Cellist, son of (1) John Ashley. He appeared as soloist at Ranelagh, in his father's and brother's festivals and at major music meetings throughout the country. He was one of the founders of the Glee Club (1793), a member of the Royal Society of Musicians from 1794 and its secretary during the period 1811–19, and an original member of the Philharmonic Society (1813). He performed at the Concerts of Ancient Music and belonged to the orchestra at the King's Theatre. He was sole manager of the Covent Garden Oratorios from 1816 to 1819 when the family's long connection ended, and continued promoting festivals in the provinces after the deaths of his elder brothers, running a particularly extensive series late in 1818. As a cellist he was often considered second only to Robert Lindley and was renowned for his playing of obbligatos in arias such as 'O liberty' (*Judas Maccabaeus*) and 'Gentle airs' (*Athalia*). Unfortunately Ashley's concerto repertory, a feature of the Oratorios, is unspecified. Apparently his own compositions loomed large and he was noted for including popular airs in the final movements.

Court proceedings in 1820 and 1822 saw Ashley confined in the King's Bench prison for debts of over £300. Discharged in August 1834, his health and career ruined, he moved to Margate where he was variously named as manager and proprietor of the Tivoli Gardens until his death.

(5) Richard Godfrey Ashley (*b* London, 8 Sept 1774; *d* London, 11 Oct 1836). Violinist, viola player and timpanist, son of (1) John Ashley. He appeared in his father's undertakings and his brothers' provincial ventures, including the swansong 1818 festival series. However, from about 1805 his regular connection with the Covent Garden Oratorios is less certain. He was usually listed as performing on the 'Double Drums' but also led the second violins and violas on occasion. He performed at Ranelagh from an early age and was in demand at major festivals, being principal viola at the Three Choirs Festival of 1811 and leader of the section at festivals at York (1823), Chester (1829) and Ware (1829). He was also principal viola in the orchestra at the King's Theatre, London. Samuel Wesley thought him 'a most capital performer ... laudable for his rigid observance of Time; moreover his Tone was universally steady, full and rich' (*GB-Lbl* Add.27593, 105f). Ashley was made a member of the Royal Society of Musicians in 1796 and the Worshipful Company of Musicians in 1800.

BRIAN W. PRITCHARD

Ashley [of Bath], **John** (*b* Bath; *d* Bath, after 1834). English singer, composer and bassoonist. He was called John Ashley of Bath to distinguish him from his London namesake. He received his musical training from his elder brother Josiah, who was a well-known flautist and oboist. From about 1780 to 1830 he was active in Bath both as a bassoonist and singer. He wrote words and music to a number of songs and ballads, many of which acquired considerable popularity. He also published two pamphlets on *God save the King*, in which he refuted the since disproved theories of Richard Clark.

WRITINGS

Reminiscences and Observations respecting the Origin of God Save the King (Bath, 1827)
A Letter to the Rev. W.L. Bowles, supplementary to the 'Observations' (Bath, 1828)

WILLIAM WATERHOUSE

Ashley, Robert (Reynolds) (*b* Ann Arbor, 28 March 1930). American composer and performer. He studied music theory at the University of Michigan (1948–52) and piano and composition at the Manhattan School of Music (MS 1953); he then returned to Ann Arbor to study acoustics and composition (1957–60). His teachers in composition included Riegger, Finney, Bassett and Gerhard. As a composer and performer Ashley was active in Milton Cohen's Space Theater (1957–64), the ONCE Festivals and ONCE Group (*c*1958–69), and the Sonic Arts Union (1966–76); with each of these groups he toured the Americas and Europe. From 1969 to 1981 he directed the Center for Contemporary Music at Mills College, Oakland, California, where he organized an important public-access music and media facility. Subsequently he moved to New York, where he has become best known for a complex, interlocking series of highly unconventional operas for television, including *Perfect Lives*, *Atalanta* and the tetralogy *Now Eleanor's Idea*.

Ashley realized his early electro-acoustic pieces while working with Cohen, a painter and sculptor. Like the other Sonic Arts Union composers, Mumma, Lucier and Behrman, he invented electronic devices for the live generation, manipulation and deployment of sounds. The group was less interested in polished electronic compositions, however, than in conceptual processes whose details were often left to chance. Unlike the others, Ashley was inexorably drawn towards the theatre, and his works rarely had as much to do with sounds as with theatrical situations. In this he was also influenced by filmmaker George Manupelli, the artist Mary Ashley (Ashley's wife), and the pianist 'Blue' Gene Tyranny, who has had a major presence in Ashley's works.

From 1959 to 1963 Ashley wrote instrumental works, such as *Fives* (1962), which explore a jazz-like, improvisatory freedom. A 1963 quartet of *In memoriam* pieces – *In memoriam ... Crazy Horse (Symphony)*, *In memoriam ... Esteban Gomez (Quartet)*, *In memoriam ... John Smith (Concerto)*, and *In memoriam ... Kit Carson (Opera)* – apply the widest possible latitude to the genres parenthesized in their titles and provide the performers with graphics that allow for a variety of potential definitions. In *Kit Carson*, for example, the performers use geometric symbols to chart the nature of and relations between groups, events and time.

Soon, however, working with Manupelli on multiple-projection films, Ashley moved in the direction of mixed-media performance art. In 1964 he took a provocative move into his own personal theatre with *The Wolfman*. In this seminal work of the 1960s, Ashley played as background a tape collage of sounds recorded in a restaurant. He then walked onto the stage and began to project long vocal sounds, each duration consisting of one full breath. As one review (*Source*, no.3) described it:

> Gradually the relatively articulate collage is transformed into an inchoate mass of electronic sound, the voice overcoming the holocaust of feedback in the circuit and becoming more and more

indistinguishable from the tape. The volume level is extremely high; the audience is literally surrounded by a wall of sound that is comparable to and even surpassing that of today's rock music.

In another, equally provocative nightclub-ambience piece, *Purposeful Lady Slow Afternoon* (1968), a woman hesitantly describes a sexual act over an accompaniment of bells.

About 1978 Ashley came to much wider public attention with his opera *Perfect Lives* (originally entitled *Private Parts*) (1977–83). Convinced that he suffered a mild form of Tourette's syndrome, which can compel automatic speech, he began to record his spells of compulsive speaking, and to use the results in electronic collage works such as *Automatic Writing* (1979). Employing similar methods, he also generated texts that have eventually grown into a series of operatic works, in which one opera derives from the plot and characters of another. The first, *Perfect Lives*, was developed in stages, the composer originally performing it as a solo text with piano and tape, and later with other singers and video. In this, as in subsequent operas, the work is created by slowly piling layer upon layer of text and music, sometimes achieving indecipherability and information overload.

In addition to internal interrelation, the operas draw on a wide range of literary sources: *Perfect Lives* is structured after the *Tibetan Book of the Dead*; *Improvement* is based on Frances Yates's books on Neoplatonism; *Now Eleanor's Idea* draws letters from *Low Rider* magazine (about customized cars); *The Immortality Songs* (a series derived from *Now Eleanor's Idea*) uses material from *Forbes* magazine and the business section of the *New York Times*.

All Ashley's operas are collaborative, the composer's contribution consisting largely of the text and the rhythmic structure. Others who have provided elements of the music and video images include the singers Thomas Buckner, Jacqueline Humbert, Sam Ashley (the composer's son) and Joan La Barbara, the video producer John Sanborn, the rock musicians Peter Gordon and Jill Kroesen, the percussionist and performance artist David Van Tiegham and the sound designer Tom Hamilton.

Despite this multiple input and an overriding sense of freedom the operas remain highly structured. *Improvement*, for example, for its 88-minute length, is a passacaglia based on a 24-note row over two chords, ♭ minor resolving to F minor; the length to which each central pitch is sustained varies with the intensity of the main character's situation at the moment in question. Likewise, *eL/Aficionado* is structured over a 16-note ostinato, and each scene is defined by a modal structure within which the soloist improvises on the text. Though intended for television, the daring and unconventional nature of Ashley's operas has meant that, with the exception of *Perfect Lives*, none has yet been broadcast.

WORKS

OPERAS

all composed for television and unless otherwise stated with librettos by Ashley

That Morning Thing (stage op), 1967, Ann Arbor, 8 Feb 1968
Music with Roots in the Aether, 1976, Paris, 1976
Perfect Lives (Private Parts), 1977–83, Channel 4 TV, 1984
The Lessons, 1981, New York, 1981 [may be perf. as part of Perfect Lives (Private Parts)]
Music Word Fire and I would Do it Again Coo Coo, 1981
Atalanta (Acts of God), 1982, Paris, 1982
Atalanta Strategy, 1984
Improvement (Don Leaves Linda), 1984–5
eL/Aficionado, 1987
Yellow Man with Heart with Wings, 1990
Now Eleanor's Idea, 1993
Foreign Experiences, 1994
The Immortality Songs, 1994–8
Balseros (M. Fornes), 1997
Many other works derived from the operas

ELECTRONIC MUSIC THEATRE

#+ Heat, pfmr, tape, 1961, Ann Arbor, Dec 1962
Public Opinion Descends upon the Demonstrators (Ashley), 1961, Ann Arbor, 18 Feb 1962
Boxing, sound-producing dance, 1963, Detroit, 9 April 1964
Combination Wedding and Funeral (Ashley), 1964, New York, 9 May 1965

RICHARD S. JAMES/KYLE GANN

Ashrafi, Muhtar (*b* Bukhara, 29 May/11 June 1912; *d* Tashkent, 10 Dec 1975). Uzbek composer. He studied at the Samarkand Institute of Music, Theatre and Choreography (1929–31), then at the Moscow Conservatory with B. Shekhter and S. Vasilenko (1934–7) and the Leningrad Conservatory with M. Steinberg (1941–3). He joined the staff of the Tashkent Conservatory in 1944 and was later its director (1947–62) and rector (1971–5). He is regarded as one of the founders of new Uzbek music and was a leading public figure in the country: he was the director of the Navoi Theatre of Opera and Ballet (1943–7) and both founder and director of the Samarkand Theatre of Opera and Ballet (1964–6). He received a large number of honours and prizes in his lifetime, including the title of People's Artist of the USSR (1951). The renaming of the Tashkent Conservatory after him in 1976 bears wirness to his status both within and outside Uzbekistan.

WORKS
(*selective list*)

Buran (op, 5, K. Yashen), 1939, collab. S. Vasilenko, Tashkent, 12 June 1939; Velikiy kanal [The Great Canal] (op, 5, M. Rakhmanov and K. Yashen), 1941, collab. Vasilenko, Tashkent, 19 Jan 1941; Sym. no.1 (Geroicheskaya) [Heroic], 1942; Sym. no.2 (Slava pobeditelyam) [Glory to the Winners], 1944; Dilorom (op, 4, K. Yashen and M. Mukhamedov, after A. RAZIA SULTANOVA

Ashton, Algernon (Bennet Langton) (*b* Durham, 9 Dec 1859; *d* London, 10 April 1937). English composer and teacher. He spent his childhood in Leipzig. Ashton studied music under Franz Heinig and Iwan Knorr, and subsequently at the Leipzig Conservatory, with Jadassohn, Richter and Reinecke (theory and composition) and with Papperitz and Coccius (piano). In 1879, having won the Helbig composition prize, he briefly returned to England. He became a pupil of Raff. In 1885 he was appointed to teach the piano at the RCM, where he remained for 25 years.

Ashton's compositions cover most conventional forms except for opera, but he was best known for his piano and chamber works; they include a series of 24 string quartets (now lost) in all the major and minor keys. His published music exceeds 160 works. In 1898 Hofbauer issued a catalogue of the first 100 opus numbers (published by a variety of German and British publishers); they include works for solo piano, piano trio, piano quartet and quintet, short choral works and songs. Ashton's orchestral music, which includes five symphonies, overtures, an orchestral suite, a Turkish March, and violin and piano concertos, made no impression. They are believed to have been lost in World War II.

Truscott claimed Ashton's style was English, but the surviving piano works show a minor 19th-century composer influenced by Raff, Brahms and Schumann. The sonatas show considerable personality and are well worth investigation, the early ones in particular being memorable in invention and vigorous in execution.

Late in his life Ashton became something of a musical reactionary, underlining a natural pomposity evinced particularly in the hobby that obscured his merits as a teacher and composer: his passion for writing letters to the newspapers. His hobby-horses included the neglect of the graves of famous men, although his subjects were often musical, and the letters include much useful information. He published them in two collections: *Truth, Wit and Wisdom* (London, 1905) and *More Truth, Wit and Wisdom* (London, 1908).

Ashton, Sir **Frederick (William Malandaine)** (*b* Guayaquil, Ecuador, 17 Sept 1904; *d* Eye, Suffolk, 19 Aug 1988). English dancer and choreographer. *See* BALLET, §3(ii).

Ashton, Hugh. *See* ASTON, HUGH.

Ashwell [Ashewell, Asshwell, Aswell, Hashewell], **Thomas** (*b* *c*1478; *d* after 1513). English composer. He was admitted as a chorister to St George's Chapel, Windsor, on 29 October 1491 and remained there until 14 January 1493. The roll of accounts of the stewards of Tattershall College, Lincolnshire, for Michaelmas 1502 to Michaelmas 1503 lists him as one of the singing clerks (*clerici conducticii*). An entry dated 29 January 1508 in the chapter acts of Lincoln Cathedral shows that at that time he was *informator choristarum* there but the date of his appointment is unknown. In 1513 he was cantor at Durham Cathedral. The inclusion of his song *She may be callyd a sovrant lady* in a collection printed in 1530 cannot be taken as evidence that he was still alive then, for Fayrfax (*d* 1521) and Cornysh (*d* 1523) are also represented. Ashwell is one of the English authorities listed by Morley at the end of his *Plaine and Easie Introduction to Practicall Musicke* (1597).

Ashwell's admission as a chorister at St George's Chapel in 1491 (see Bergsagel, 1976) suggests he was born about 1478, which would dispose of the unsubstantiated claim by Flood that Ashwell had composed an anthem *God Save King Harry* for the wedding of King Henry VII and Elizabeth of York on 17 January 1487. This assertion was apparently based on a curious statement by Strickland (*Lives of the Queens of England*, London, 1840–48) referring to the chance discovery of the piece in an old church chest and its recognition as a precursor of the British national anthem. There may have been some confusion with the Mass '*God Save King Harry*' by Ashwell, two vocal parts of which have survived in Cambridge libraries.

Ashwell's presence at Tattershall College is particularly interesting for its support of a suspected teacher–pupil relationship between him and Taverner, who is supposed to have been a chorister at Tattershall at about this time. The only two works by Ashwell surviving complete are the six-voice *Missa 'Ave Maria'* and *Missa 'Jesu Christe'* in the Forrest-Heyther Partbooks copied by or for Taverner when he assumed his duties as choirmaster at the new Cardinal College, Oxford, in 1526. According to the indenture of Ashwell's appointment at Durham Cathedral (printed in Harrison, 1958) he was expected to teach 'planesong, priknott, faburden, dischant, swarenote et countre', to play the organ, to sing and to compose each year a four- or five-voice mass or equivalent work to the glory of God, the Blessed Virgin Mary, or St Cuthbert. A mass by Ashwell to each of these dedications has survived, but though it is reasonable to suppose that his mass to St Cuthbert was composed for Durham it cannot be automatically assumed that the other two were also written after his appointment there in 1513.

JOHN BERGSAGEL

Asia, Daniel (Issac) (*b* Seattle, 27 June 1953). American composer and conductor. He studied composition with Stephen Albert, Ronald Perera and Randall McClellan at Hampshire College (BA 1975). His teachers at Yale University (MM 1977) included Druckman and MacCombie (composition), and Arthur Weisberg (conducting). He also studied composition with Schuller at the Berkshire Music Center (1979) and with Yun at the Berlin Hochschule für Musik (1980). He served on the faculty of the Oberlin Conservatory from 1980 to 1986. A UK Fulbright Arts Fellowship and a Guggenheim Fellowship (1987–8) enabled him to work in London from 1986 to 1988, where he was a visiting lecturer at City University. He joined the faculty of the University of Arizona in 1988. He has conducted the university-based Arizona Contemporary Ensemble, founded and co-directed the New York contemporary music ensemble Musical Elements (1977–) and served as composer-in-residence for the Phoenix SO (1991–4). His awards include grants from the NEA (1978, 1985, 1993), the Fromm Foundation (1986), the Koussevitsky Foundation (1989), Meet the Composer (1994) and the Aaron Copland Fund (1994). His works have been commissioned by the Seattle SO (Symphony no.1, 1987), the American Composers Orchestra (*Black Light*, 1990) and the Cincinnati SO (*Gateways*, 1993) among others.

Asia's music of the 1970s, particularly *Miles Mix* (1976) and *Sand II* (1978), experiments with vernacular influences. Later works, especially the symphonies and the Piano Concerto, are more indebted to the music of Barber, Bernstein and Copland.

JAMES CHUTE

Asian Music Forum. Congress instituted in 1969 by the INTERNATIONAL MUSIC COUNCIL.

Asioli, Bonifazio (*b* Correggio, nr Reggio nell'Emilia, 30 Aug 1769; *d* Correggio, 18 May 1832). Italian composer and theorist. Born into a family of musicians, he was essentially self-taught although he studied briefly with Giovanni Battista Lanfranchi, the assistant *maestro di cappella* in the basilica. At the age of eight he had already written complex sacred pieces and chamber music. He studied in Parma with Angelo Morigi (called 'Il Merighi') during 1780–81 and in 1782 stayed for a time in Bologna (where he visited Paudre Martini) and Venice, where he had great success as a harpsichordist and improviser. Having returned to Correggio, at the age of 14 he taught the harpsichord, flute and cello at the Collegio Civico and in 1786 was appointed *maestro di cappella*. *La volubile*, performed in Correggio in 1785 with the intermezzo *Il ratto di Proserpina*, marked the beginning of his career as an opera composer. In the retinue of the Marchese Gherardini, he moved to Turin (1787), then to Venice (1796–9) and finally to Milan, where his opera *Cinna* had already been staged at La Scala (1792). In 1805 he was appointed *maestro di camera* and music director at the royal chapel of the viceroy Eugène Beauharnais; the appointment involved the composition of both sacred and secular music for the *accademie* held at the royal palace. In 1808, at the suggestion of Mayr, who had refused the post, he became the first director of the newly founded Milan Conservatory, and held the chair of composition. The second part of his life was devoted to teaching by the production of a series of theoretical works. He was responsible for the first performance in Italy of Haydn's *Creation* and *Seasons*. During his Milanese period he was in touch with Weigl, Clementi and Haydn, who, in a letter in 1806, recommended Karl Mozart to him as a pupil. Apart from a journey to Paris in Beauharnais' retinue in 1810, he remained in Milan until 1814, when he was compelled to leave the conservatory as a 'foreigner' after the fall of the Kingdom of Italy. Because of his exceptional merits he was allowed to retain his post at court but in October he was again in Correggio, where he remained until his death.

In Correggio in 1815 he established a music school, in which he was joined by his brother Giovanni Asioli (1767–1831), who, during a life spent entirely in Correggio, was municipal *maestro di cappella* (from 1755), organist at the basilica, a pianist and composer. In this final period of his life, Bonifazio composed mostly sacred music and continued his theoretical writings. In 1826 he supplied the statutes for the Reggio music school of which, having refused the directorship, he was made honorary president.

Asioli's music is now forgotten, although the brilliance of his talent was widely acknowledged by his contemporaries. His idiom, pleasant and at times sentimental, is at its best in his vocal chamber music, which in style recalls Haydn and Mozart, without showing many traces of the stylistic crisis undergone by music at the beginning of the 19th century. His *sinfonie* have been compared to those by the young Beethoven, and his theatrical music was written in the style of Paisiello and Cimarosa. His didactic work survived longer, and it is to him that the Milan Conservatory owes the foundation of its library.

His brother Luigi Asioli (1778–1815) was a tenor, pianist and composer. A pupil of his brother Giovanni Asioli, he worked first in Naples and Palermo, and from 1804 in London, where he became a fashionable singing teacher. He composed a large amount of music in all forms, much of which, particularly vocal and instrumental chamber pieces, was published in London.

SERGIO LATTES/ROBERTA MONTEMORRA MARVIN

Asioli, Francesco (*b* probably in Reggio nell'Emilia, *fl* 1674–6). Italian composer and guitarist, ancestor of Bonifazio Asioli. He is known by two collections of guitar music, both printed by Giacomo Monti: *Primi scherzi di chitarra* (Bologna, 1674/*R*) and *Concerti armonici per la chitarra spagnuola* op.3 (Bologna, 1676; 3 ed. in Chilesotti, 1886; 1 also ed. in Chilesotti, 1921). The second book is more varied in content than the first, containing, besides the typical dances, two arias, two capriccios, a prelude and a sonata with fugue. Each piece is dedicated to a member of the Parma Collegio dei Nobili, where Asioli apparently served as guitar instructor. There are four pieces that spell out the dedicatees' names in *alfabeto* chords (where letters of the alphabet designate fingering positions), a device first used by Corbetta. Asioli's music combines strummed chords and pizzicato notes in a competent, if rather conservative style, with little use of *campanelas* (the playing of as many open strings as possible in the notes of scale passages so that the notes ring on) or the complex rhythms and textures of the contemporary works of, for example, Granata.

GARY R. BOYE

Askenase, Stefan (*b* Lemberg, 10 July 1896; *d* Cologne, 18 Oct 1985). Belgian pianist and teacher of Polish birth. His first lessons were with his mother, who had studied with Chopin's pupil, Mikuli, after which his teacher was Mme Zacharjasiewicz, a former pupil of Mozart's son, Franz Xaver. Another teacher was Teodor Pollak. In 1914–15 he was a pupil of Sauer at the Vienna Music Academy, and he resumed studies with him in 1919 after serving in the Austrian army. Askenase made his début in Vienna in 1919. He moved to Cairo in 1922 to take up a post at the conservatory, but three years later returned to Europe, settling in Brussels and later becoming a Belgian citizen. Askenase toured widely during a career that spanned six decades. Although chiefly remembered for his elegant and poetic interpretations of Chopin, many of which were recorded, the priorities of clarity and simplicity in his approach were equally well suited to the sonatas of Mozart and Haydn.

JAMES METHUEN-CAMPBELL

Askew [Ascue, Askue], **R.** (*fl c*1595). Nothing is known of his identity. His extant compositions for lute are mostly in the University Library of Cambridge: they comprise a Jigg (Dd.2.11, f.100 and Dd.5.78, f.32*v*); Askewes Galliarde (Dd.2.11, f.80); R. Askue (one part of a duet; Dd.9.33, f.88*v*); and (in *GB-Ge*) Robin hoode (Euing 25, OLim R.d.43, f.46*v*). One piece for cittern – a Conceipte – is in *Cu* Dd.4.23, f.6*v*.

DIANA POULTON

Aslanishvili, Shalva (*b* Artanuji, nr Artvini, 10/23 March 1896; *d* Tbilisi, 13 Dec 1981). Georgian musicologist. After graduating from the Tbilisi State Conservatory (1927), he studied at the Leningrad Conservatory with Yury Tyulin and Khristofor Kushnaryov (1927–30). He taught music theory at the Tbilisi College of Music (1924–7) and at the Conservatory (from 1930). He established and headed the department of music theory at the Conservatory (1937–73), and was head of the ethnomusicology section of the Institute of History, Archaeology and Ethnography in Tbilisi (1946–50). He conducted fieldwork expeditions throughout Georgia (1927–50), on the basis of which he introduced a course in Georgian harmony at the Conservatory. His work formed the basis for further theoretical studies in Georgian musicology, both concerning folk music and Western music. He was awarded the doctorate (1964) for his book on Georgian folksong, and was the recipient of the Z. Paliashvili award (1972).

JOSEPH JORDANIA

Asmahān (*b* during a voyage from Turkey to Syria, 1917; *d* Egypt, 14 July 1944). Syrian singer. Born to a well-known Syrian family, she moved to Cairo with her family in 1924 and made some commercial recordings while still a teenager. In 1932 she married her cousin Prince Ḥasan al-Aṭrash and returned to Syria. After giving birth to a daughter she was pronounced unable to produce any more children (and therefore not a son and heir). She left her husband to give him the chance of having an heir, and thereafter deep sadness marked her life and the romantic meanings in her songs.

Staying in Cairo with her mother, she made singing her profession. She sang compositions by her brother, AṬRASH, FARĪD AL-, and later co-starred in his film *Intiṣār al-shabāb* ('Triumph of youth'). The greatest composers wrote for her: Midhat Assem, Zakariyyā Aḥmad, Muḥammad al-Qasabjī and Riyāḍ al-Sunbaṭī. She sang in Muḥammed 'Abdal-Wahhāb's film *Yom sa'eid* ('A happy day') (1939), and co-starred in his operetta *Qais and Laila*. Her rendition of Muḥammad al-Qasabjī's monologue *Yā ṭuyūr* ('O birds') put her at the peak of modernization in Arabic singing, acclaimed for the rare qualities of her voice and unique performance style.

Her repeated successes, carefree lifestyle and relationships with top Egyptian politicians made her many enemies. In 1941 she returned to her husband in Syria, but was caught up in political trickery and accused of treason. Subsequently she undertook a new film, *Gharām wa intiqām* ('Love and revenge'), in Cairo, receiving the highest payment yet known in Egyptian cinema. While filming she died in a mysterious car accident which may have been staged to kill her.

SAADALLA AGHA AL-KALAA

Asmatikē akolouthia (Gk.: 'chanted service'). The urban or 'cathedral' Office of the Byzantine rite, performed at the Great Church of Hagia Sophia in Constantinople. In its complete form it is preserved in liturgical manuscripts copied between the 8th and the 12th centuries. *The asmatikē akolouthia* originally differed from the monastic Office celebrated in Palestine: the cathedral rite used music in the performance of its fixed psalms (psalms appropriate to the hour of the day) as well as responsorial chants and sung refrains; in monasteries, however, there was little or no singing, merely the verse by verse recitation of the complete Psalter throughout each week. (*See* PSALM, §III, 1.)

By the 11th century, the two traditions had gradually merged into a new, hybrid rite, although a strong element of the monastic *ordo* of Constantinople remained. Monasteries absorbed the fixed psalmody, ceremonial and the melodious chanting of the urban Office, while the presence of urban monks affected the shape of the cathedral rite. By 1200 the *asmatikē akolouthia* had been displaced by the new rite in almost all the main Byzantine cities. However, it remained in occasional use at the cathedral of Thessaloniki, under the conservative Archbishop Symeon (1416–29).

The best musical sources for the *asmatikē akolouthia* are *GR-An* 2062 (late 14th century) and 2061 (early 15th century), which, despite their late date, preserve the service unadulterated by monastic elements.

DIMITRI CONOMOS

ASOL. *See* AMERICAN SYMPHONY ORCHESTRA LEAGUE.

Asola [Asula, Asulae], **Giammateo** [Giovanni Matteo] (*b* Verona, ?1532 or earlier; *d* Venice, 1 Oct 1609). Italian composer. On 7 May 1546 he entered the congregation of secular canons of S Giorgio in Alga. After this he probably studied with Vincenzo Ruffo in Verona. From 1566 until his death he held benefices at S Stefano, Verona. After 1569, not wishing to take monastic vows, he left the congregation, became a secular priest and on 1 June 1571 went to work in the parish of S Maria in Organo, Verona. In 1577 he was appointed *maestro di cappella* at Treviso Cathedral but after a year accepted a better position at Vicenza Cathedral. In 1582 he probably went to Venice and in 1588 was appointed one of four chaplains at S Severo, a church under the jurisdiction of the monks of S Lorenzo. In 1590–91 he was again in Verona but otherwise probably remained at S Severo until his death. His most notable pupils were Leone Leoni and Amadio Freddi.

Asola's large body of sacred music is close in style to that exemplified by the late works of Palestrina, whom, in a dedication, he called the greatest musician of the period. Like Palestrina's his music is based essentially on the polyphonic combination of flowing, balanced melodic lines. There are no chromaticisms, disjunct dissonant intervals or extreme contrasts. Homophonic and canonic passages appear, but most of his music is in a freely imitative contrapuntal style balanced occasionally by brief sections of non-imitative texture. Some of the less spectacular innovations of the Venetian school, particularly in the treatment of *cori spezzati*, can be found in the eight-part works and to a lesser extent in those for six voices. Too much has been made of the dubious assertion that Asola was one of the first composers to write an independent continuo part.

DONALD FOUSE

Aspen Music Festival and School. An annual programme held in Aspen, Colorado, a major skiing resort during the winter. The summer festival, which developed from the 1949 Goethe Bicentennial Convocation and Music Festival, has since 1950 included lectures, discussions and concerts of vocal, chamber and orchestral music and jazz performed by faculty, guest artists and students. The Conference on Contemporary Music was founded by Milhaud in 1951. The music school comprises the Aspen Opera Theater Center, the Edgar Stanton Audio Recording Institute and the Center for Advanced Quartet Studies.

RITA H. MEAD/R

Asperen, Bob (Jan Gerard) van (*b* Amsterdam, 8 Oct 1947). Dutch harpsichordist, clavichordist, organist and conductor. After a classical education, he studied the harpsichord with Gustav Leonhardt and the organ with Albert de Klerk at the Amsterdam Conservatory, graduating in 1971. Since his début in Haarlem in 1968, van Asperen has performed as recitalist and occasionally as conductor in Europe, the USA and Australia. His repertory ranges from the keyboard music of the late 16th century to that of the late 18th, with emphasis on the works of the English virginalists, Frescobaldi, the French *clavecinistes*, Soler, and J.S. and C.P.E. Bach. From 1968 to 1984 he performed with the ensemble Quadro Hotteterre, with

whom he made several recordings. In addition to the principal harpsichord works of J.S. Bach and the organ concertos of Handel, van Asperen has also recorded the complete printed keyboard works of C.P.E. Bach and the complete sonatas of Soler.

After serving as harpsichord professor at the Royal Conservatory in The Hague (1973–88), he succeeded Gustav Leonhardt as professor of harpsichord at the Sweelinck Conservatory in Amsterdam. He has also given masterclasses and has been a visiting professor at leading institutions in Europe, Canada and Australia. Van Asperen has researched extensively into the life and works of the 17th-century Dutch composer Cornelis Thymanszoon Padbrué, and into aspects of 18th-century performance practice.

HOWARD SCHOTT

Aspiration (Fr.). *See* ORNAMENTS, §7.

Asplmayr [Aspelmayr, Aspelmeier, Aschpellmayr, Appelmeyer etc.], **Franz** (*b* Linz, bap. 2 April 1728; *d* Vienna, 29 July 1786). Austrian composer and violinist. He probably received his first musical instruction from his father, a dancing-master. After his father's death he found employment by 1759 as *secretarius* and violinist to Count Morzin during Haydn's tenure as music director. He was by then an established composer, with works published in Paris perhaps as early as 1757. He married in 1760, and after the disbanding of Morzin's musical establishment in 1761 he worked as ballet composer for the Kärntnertortheater in Vienna, succeeding Gluck. There is no primary evidence that he was an imperial court composer and member of the Hofkapelle, as often reported. When Gassmann replaced him as ballet composer Asplmayr continued as a professional violinist, meanwhile composing substantial quantities of instrumental music. His activities as a composer of dance music led to a collaboration with the choreographer J.-G. Noverre (from 1768) and Noverre's successor Gaspero Angiolini, resulting in his writing music during the 1770s for at least ten major dramatic ballets, nine of which survive; also extant are scenebooks of *Iphigénie en Tauride* and *Alexandre et Campaspe de Larisse* (*A-Ws*) and a scene synopsis of *Acis et Galathée* (*Wn*). The most famous of these ballets, *Agamemnon vengé*, achieved international acclaim. Asplmayr also composed the music for the first German-language melodrama in 1772 (on a translation of Rousseau's *Pygmalion*) and a Singspiel, *Die Kinder der Natur*, for the first season of the German Nationaltheater at the Burgtheater. He was a founding member of the Tonkünstler-Societät, serving as an elected officer, and was a member of the quartet, also including Alois Luigi Tomasini, Pancrazio Huber and Joseph Weigl, that first performed Haydn's op.33 in 1781. His career then began to decline, and after an illness he died in poverty.

Asplmayr was an innovative composer, even an experimental one. His principal fame came as the result of his collaboration with Noverre. *Agamemnon vengé*, based on characters from Greek antiquity, contains 39 numbers as well as symphonies before each act. In addition to the usual set pieces there are passages of highly programmatic music to accompany mimed episodes. Asplmayr's *Die Kinder der Natur* was the most substantial of the earliest Viennese Singspiele. Although the music is excellent, the work suffered from an exceptionally bad libretto and disappeared from the repertory. Asplmayr's instrumental music is equally interesting. He composed more than 40 string quartets and over 40 symphonies. Several of the string quartets look forward to the style of Haydn's op.9. The symphonies, two of which appeared under Haydn's name, represent the Viennese mainstream styles of the 1760s and 70s. They are particularly advanced with respect to harmony and developmental techniques. Asplmayr also composed string trios, of which two were attributed by Hoboken to Haydn, as well as a great many divertimentos for strings, wind partitas, sonatas, concertinos and pieces of dance music. He has yet to find his place in the history of the Viennese Classical period.

WORKS

BALLETS

Les faucheurs (C. Bernardi), Vienna, 9 May 1761, *CZ-K*; Les noces japonoises (Ballo japonese) (Bernardi), Vienna, 16 June 1761; Ballo Stattgutti (La promenade du Stadtgut; ?Le divertissement dans le Stadt-Gutt) (Bernardi), Vienna, 16 June 1761, *K*; L'Egyptienne rusée (Les voleurs, ou La Bohemienne adroite; I Ladri) (Bernardi), Vienna, 9 Sept 1761, *K*; Les paisans, les païsannes, et les mineurs (De mineurs et paisans; Les mineurs) (Bernardi), Vienna, 1 Dec 1761, *K*; Le pére de famille, ou La feinte malade (La finta ammalata) (Bernardi), Vienna, 26 Dec 1761, *K*; Le prince jardiner (Il principe persiano) (Bernardi), Vienna, 4 Feb 1762, *K*; La mascarade (Une masquerade) (Bernardi), Vienna, 13 Feb 1762, *K*; Les montagnards (I montanari) (G. Salamone), Vienna, 2 July 1762, *K*; L'heureuse bergere, ou L'amant magicien (Les bergers) (Salamone), Vienna, 21 Nov 1762, *K*; La fête moresque (Ballo moresco) (Salamone), Vienna, 21 Nov 1762, *K*; La lotterie (F. Calzavara), Vienna, 15 Jan 1763, *K*; L'arrivé des charettiers dans un paisage de la Styrie, ou La noble pelerine (La pellegrine noble) (Salamone), Vienna, 23 Jan 1763, *K*; Flora (J.-G. Noverre), Vienna, 1766, *K*; Die Wäscherinnen von Cythere (La Lavandare di citere; Les blanchisseuses de Cythère; Le lavandage di Cittera) (Noverre), Vienna, 1770, *Pnm*; Agamemnon vengé (Der gerächte Agamemnon; La mort d'Agamemnon) (Noverre), Vienna, 1771, *A-Wgm*, *Wn*; *CZ-K*, *Pnm*; *D-Bs*, *Rtt*; Iphigénie en Tauride (Iphigenie in Tauris) (Noverre), Vienna, 1772, *CZ-K*, *D-Bs*, *I-MOe*; Acis et Galathée (Noverre), Vienna, 1773, *CZ-K*, *I-MOe*; Alexandre et Campaspe de Larisse, ou Le triomphe d'Alexandre sur soi-même (Alexander und Kampaspe, oder Der Sieg Alexanders über sich selbst) (Noverre), Vienna, 1773, *A-Wn*, *CZ-K*, *Pnm*; L'espiègle du village (Der Dorfeulenspiegel) (G. Angiolini), Vienna, 1774, *K*; Sidney e Silly (Angiolini), Vienna, 1774, *K*; Il sacrafizio al dio Pan (Le sacrifice de dieu Pan; ?Des Opfer des Gottes Pan), 1775, *K*; La nova sposa Persiana (La nouvelle épouse persanne; Die persische Braut) (Noverre), Vienna, 1776, *K*

Undated: L'aventure alla campagne (Angiolini), Vienna, *CZ-K*; Ballo del Sign., *K*; Il contratempo, ossia Il ritorno opportuno (Die Wiederkehr zur rechten Zeit), *K*; La fête Cloris, *A-Wn*; Paride ed Elena, *CZ-Pnm*; A quelque chose malheur est bon (Noverre), Vienna, *K*; Die Wein Loese, *K*; Ballo, *K*

Doubtful: ?Il mori, espagnuoli, 1770s; Montgolfier, oder Der Luftkugel, ?1780s

Lost: La caravanne turque (Bernardi), Vienna, 23 March 1761; Une suite de plusieurs incidents qui arrivent parmi les païsans (Bernardi), Vienna, 23 March 1761; La foire (Bernardi), Vienna, 2 May 1761; La promenade des Quackers ou Le focsal à London (L'inglese; Englese; Theatre allemande) (Bernardi), Vienna, 1 Aug 1761; Les tailleurs (Bernardi), Vienna, 9 Aug 1761; La querelle au cabaret, ou La jalouse apaisée (Bernardi), Vienna, 2 Dec 1761; Le sabbat des sorciers, et sorcieres (Bernardi), Vienna, 2 Dec 1761; Le repos des païsans (Bernardi), Vienna, 24 Jan 1762; La querelle appaisée (Salamone), Vienna, 19 April 1762; La retour de la chasse (Salamone), Vienna, 1 May 1762; L'algerien, ou Le capitain genereux (L'algerine captive et deliverée, ou Le capitain genereux) (Salamone), Vienna, 11 July 1762; Le suisse affamé (Salamone), Vienna, 7 Aug 1762; Les jardiniers (Salamone), Vienna, 21 Aug 1762; Les vendanges (Salamone), Vienna, 4 Oct 1762; L'avare trompé par les fourberies de sa fulle pour avoir la consentiment dans son mariage (L'avare corrigé) (Calzavara), Vienna, 6 Dec 1762; Les petit riens (Les Baget) (Noverre), Vienna, 1767; Die ländlichen Unterhaltungen (Angiolini), Vienna, 1775; Die unnütze Vorsicht, ? 1775

OTHER DRAMATIC

Makbeth der Hexenkönig (Leben und Tod des Königs Makbeth) (pantomime, H. Moll, after W. Shakespeare), Vienna, ?1771, lost; Pygmalion (melodrama/scene lyrique, J.J. Rousseau, trans. J.G. von Laudes), Vienna, 1772, pubd, *A-Wn*, music lost; Die Kinder der Natur (Spl, 2, J.F. von Kurz, after J.F. Hoffmann: *Wer is in der Liebe unbeständig*, after P.C. Chamberlain de Marivaux: *La dispute*), Vienna, 1778, *Wn*; Frühling und Liebe (Spl), Vienna, 1778, lost; ?La ressource comique (oc, 1), pubd lib, *Ws*, music lost; Der Sturm (incid music, J.J. Schink, after Shakespeare), Vienna, 1779, music lost; Orpheus und Euridice (melodrama, L. Bursay, trans. von Laudes), Vienna, 1779, pubd lib, *Ws*

DENNIS C. MONK

Aspull, George (*b* bap. Bolton, 4 Sept 1814; *d* Leamington, 19 Aug 1832). English pianist and composer. He was the ninth of ten sons of Thomas and Martha Aspull, another of whom, William (1798–1875), was organist of St Mary's Church, Nottingham, in 1830–35. He first appeared as a pianist in 1823. Being very short, he stood at the piano, and his hand could barely stretch an octave; yet this did not prevent him from 'conquering the most complex and rapid passages that have ever appeared', including difficult works by Czerny, Moscheles and Kalkbrenner. He received unbounded admiration from leading musicians, and on 20 February 1824 played to George IV. After performing in Paris in April 1825, where he was praised by Rossini, George undertook a number of concert tours with his brothers William and Joseph (*b* 1812) throughout Great Britain and Ireland. By the time of his death (from tuberculosis) at the age of 19, he was extraordinarily famous. He is credited with having given the first performance in England of Weber's *Konzertstück*, in 1824. His compositions for the piano were edited by his father and published under the title *George Aspull's Posthumous Works for the Pianoforte* (London, 1837), with a portrait and a prefatory memoir. They are showy but musically undistinguished.

NICHOLAS TEMPERLEY

Asriel, Andre (*b* Vienna, 22 Feb 1922). German composer of Austrian birth. He studied the piano at the Vienna Music Academy from the age of 13. After the annexation of Austria by the Third Reich in 1938, he emigrated to London, where he studied as a licentiate at the RAM (1939–40). While in England he became interested in art of the political left, particularly Soviet music, songs of the Spanish Civil War and the compositions of Hanns Eisler. He forged personal contacts with communist artists such as the Cuban poet Kurt Barthel and Ernst Hermann Meyer, with whom he had occasional composition lessons. He continued his piano study with Franz Osborn (1944–5). In 1946 he moved to East Germany, where he studied at the Berlin-Charlottenburg Musikhochschule (1947–9) with Reinhard Schwarz-Schilling, Hermann Wunsch and others, and in Eisler's masterclass at the Akademie der Künste (1950–51). During this period he worked on a project entitled 'Unser Lied – unser Leben' for East German radio. In 1951 he was appointed to a lectureship at the newly founded Hanns Eisler Musikhochschule, where he served as a professor of composition from 1967 to 1981. His honours include the National Prize of the DDR (1951).

Much of Asriel's compositional output consists of documentary and feature film scores, incidental music for stage and radio plays, and choral songs intended for mass performance. He is the author of *Jazz: Analysen und Aspekte* (Berlin, 1966, enlarged 4/1985).

WORKS

(*selective list*)

Film scores: Auf der Sonnenseite, 1961; Der Schwur des Sergeanten Pooley, 1961; Der Dieb von San Marengo, 1963; Mir nach, Canaillen!, 1964; Der verlorene Engel, 1966; Der Lotterieschwede; Elixiere des Teufels; music for short films and TV

Incid music: Der Frieden (P. Hacks, after Aristophanes), 1962; Polly (Hacks, after J. Gay), 1965; Faust I, 1968

Vocal: Mahle, Mühle, mahle (W. Dehmel), mixed chorus, 1951; 6 Lieder (B. Brecht), 1v, pf, 1954; 8 Liebeslieder (J. Gerlach), 1v, pf, 1955; Suite in Scat, mixed chorus, rhythm ens, 1965; 6 Fabeln nach Äsop, mixed chorus, 1967; Baumlige Lieder (H. Stöhr), 1v, pf, 1971; Drei Kommentare zu Moro lasso, chbr chorus, 6 insts, 1971 [after C. Gesualdo]; 3 ernste Gesänge (Brecht), men's vv, 1977; 3 Chöre (Latin texts), mixed chorus, 1983; many other choral works, incl. canons, folksong arrangements and political songs; other songs, 1v, pf

Inst: Rondo, orch, 1952; 4 Inventionen, tpt, trbn, orch, 1963; Shakespeare-Suite, 2 tpt, 2 trbn, 1963; 20 Variationen, fl, gui, 1964; Volksliedersuite, orch, 1964; Metamorphosen, orch, 1968; Serenade, 9 insts, 1969; Toccata und Fuge, org, 1973

Principal publishers: Verlag Neue Musik, Litolff, Lied der Zeit

BEATE SCHRÖDER-NAUENBURG

Assai (It.: 'very'). A word often used in tempo designations (like the approximately equivalent adjective *molto*) to indicate the superlative. *Allegro assai* ('very fast') is its commonest use, and is found particularly in 19th-century scores. *Allegro assai moderato*, 'a very moderate *allegro*', appears characteristically at the opening of Act 2 of Verdi's *Otello*. The Marcia funebre of Beethoven's Third Symphony is marked *adagio assai*.

But the meaning of the word for Beethoven may not have been consistent. Brossard in his *Dictionaire* (1703) gave the usual meaning and added that *assai* could also mean 'rather' or 'moderately'; and although Rousseau roundly chastised him for his ignorant interpretation of the word in terms of the cognate (*assez*) in his mother tongue, there is considerable evidence that most early uses of the word should be taken in that sense. The anonymous *A Short Explication* (London, 1724) gives only the meaning 'moderately'; J.G. Walther (1732) translated *allegro assai* as *ziemlich geschwind* ('fairly fast'); and late in the 19th century Stainer and Barrett's *Dictionary* translated *allegro assai* as '(lit.) Fast enough. A quicker motion than simple *allegro*'. Herrmann-Bengen (*Tempobezeichnungen*, 1959) drew attention to works by R.I. Mayr (1677) and Gottlieb Muffat (1735–9) which may well use *assai* in this more moderate sense; and Brossard himself is witness that he used it thus in his own first book of motets (1695). Stewart Deas ('Beethoven's "Allegro assai"', *ML*, xxxi, 1950, pp.333–6) argued plausibly that Beethoven also sometimes understood *assai* to mean 'moderately': of his copious evidence perhaps the most striking concerns the main theme's first entry in the finale of the Ninth Symphony, marked *moderato* in a late sketch but *allegro assai* in the finished product.

For bibliography see TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Assandra, Caterina [Agata] (*b* ?Pavia, *c*1590; *d* Lomello, after 1618). Italian composer and nun. Assandra alluded to Pavia as her birthplace in the dedication of her surviving motet book, *Motetti à due, & tre voci*, op.2 (Milan, 1609[3], 1 ed. in Bowers, 1996), which is dedicated to G.B. Biglia, the Bishop of Pavia. Her musical talents were noted early by the publisher Lomazzo in the dedication to G.P. Cima's *Partito de ricercari, e canzoni alla francese* (RISM 1606[15]). She received instruction from the German Catholic exile Benedetto Re (or Reggio), *maestro* at Pavia Cathedral, who dedicated a piece to her in 1607. Her op.1 (probably before 1608) is lost, but two motets, *Ave verum corpus* and *Ego flos campi*, which survive untexted in a German organ tablature, are probably from that volume (*D-Rtt*; ed. C. Johnson: *Organ music by Women Composers before 1800*, Pullman, WA, 1993). According to her 1609 dedication to Biglia, she took vows, in an ancient but isolated rural Benedictine monastery, shortly after the volume's publication (taking 'Agata' as her religious name). She seems to have continued to compose after her profession: an imitative eight-voice *Salve regina* appeared in Re's Vespers collection of 1611, and a motet, *Audite verbum Dominum*, for four voices was included in his motet book of 1618.

Borsieri characterized Assandra's motets as among the first in the Roman style to be published in Milan; he must have heard in her music the influence of Agazzari, whose small-scale works had recently been published in the city. The 18 small-scale motets (plus two works by Re) include both highly traditional pieces (e.g. *O salutaris hostia*, a reduction for two voices and two instruments of a simple double-choir motet) and more innovatory works. Among the latter is *Duo seraphim* (ed. B.G. Jackson, Fayetteville, AK, 1990), in which a change in modus reflects the Apocalyptic text; some of the features of this piece anticipate Monteverdi's setting of the same text in 1610.

ROBERT L. KENDRICK

Assez (Fr.). *See* ASSAI.

Assisi. City in Italy, situated in the Umbria region. The earliest evidence of a flourishing musical activity in Assisi is given by a Franciscan breviary and two fragments with neumatic notation from the 13th century (*I-Ac* 683, 694 and 696). Another source from the same century (*Ac* 695), including nine compositions in early polyphonic style and probably originating at Reims, provides a link between Assisi's musical life and the prevailing polyphonic practice of the time. Giuliano da Spira (*d c*1250) was at Assisi (1227–30) after having served at the court of Louis VIII in Paris; he was delegated to compose the first rhythmical Office of the Franciscan Order. Troubadour songs were cultivated by several secular societies (the most famous being the Del Monte) and were heard on 1 May each year when the town's districts competed in a musical contest called the Calendimaggio.

The community of the Friars Minor, founded by St Francis (*c*1181–1226) at Assisi, promoted the singing of *laude* during sermons and religious services. In the 13th and 14th centuries the singing of *laude* was also practised in Assisi by 12 religious confraternities. The statutes of the Confraternita di S Stefano, compiled in 1327, report that meetings were held at least twice weekly, when *laude* were sung to stir the hearts of the brothers to lamentation and tears.

From its construction in the last quarter of the 13th century the Basilica di S Francesco was the centre of the city's musical activities. In 1363 a new organ was installed by Francesco di Santa Colomba of Rimini. The most noted *maestro di cappella* in the 15th century was Lorenzo Panconi of Arezzo (1489–94). Venanzio da Alessandria filled the post in 1503, probably preceded by Ruffino Bartolucci, who subsequently returned there (1534–9) and who organized the installation of a new organ in the lower church in 1537. Among the composers who held posts at the basilica in the 16th century were Ludovico Balbi (a pupil of Costanzo Porta), Lorenzo da Porciano (1563), Nicolò d'Assisi (1587) and Silvestro d'Assisi (*c*1599).

In the cathedral of S Rufino a *cappella musicale* was officially instituted in 1525 and organized on the model of the Roman papal chapel, after a new organ had been constructed in 1516 by Maestro Andrea da Firenze. The cathedral's *Atti capitolari* cite the appointments as organists and *maestri di cappella* of Ambrogino da Spello (1551), Matteo Rocchichiola (1561), Camillo da Frascati (1562), Gaetano Gabrat (1570), Francescantonio Contolini (1571), Camillo Lameto (1573), Giuseppe da Gubbio (1577), the Flemish Giovanni Tollio (1584) and Camillo Mattlem (1592).

In the 17th century *maestri di cappella* at S Francesco were Bartolomeo Agricola (*c*1622), Francesco Targhetti da Brescia (intermittently from 1614 to 1641), Claudio Cocchi (1632), Giovanni Battistini (1642), Antonio Cossando (1639–53) and Felice Arconati. From 1649 at least 40 singers were employed, and the *cappella* reached its greatest splendour under the direction of Francesco Maria Angeli in the second half of the century.

The theorist and singer Giovanni Battista Bovicelli (*d c*1627) was active in Assisi from 1592 to 1627, singing at S Rufino from 1622 to 1627. Giacomo Carissimi also served the cathedral from 1628 to 1630, and G.O. Pitoni from 1674 to 1676. Outside the churches, music was promoted by the Accademia dei Disiosi (founded 1554) which later (1656) changed its name to Accademia degli Eccitati. In 1657 the academy presented a *dramma per musica*, *Dafne*, with players and singers from the basilica. The printer Giacomo Salvi published Antonio Cifra's *Psalmi sacrique concentus* (1620) and *Psalmorum sacorumque concentuum liber secundus* (1621), motets by A. Perconti and E. Jarram and madrigals by G. Bovicelli.

Maestri di cappella at S Rufino included Democrito Vicomanni (1602), Vincenzo Pace (1620) and Timotello Timotelli (1643). At S Francesco were F.M. Benedetti (1711–15, 1716–46), Francesco Zuccari (1725–6, 1750–88), Clemente Mattei (1781–3) and Luigi Vantaggi (1798–1800), while the cathedral was served by Pietro Sabbatini (intermittently, 1705–43). Pietro Serafini (1745–55) and Giovanni Ricci (after 1750) were *maestri* at both S Rufino and S Francesco.

During the 18th century a music school was run by the Sacro Convento. Notably among its pupils, who were mostly castratos, were the sopranos Felice Fabiani, who later sang in Rome and Loreto, and G.B. Velluti. In 1750 the Accademia degli Eccitati was renamed Accademia dei Rinati; in 1754, Colonia Arcadica Properziana; and in 1810, Accademia Properziana del Subasio. Under its sponsorship, the architect Lorenzo Carpinelli began in 1836 the construction of the Teatro Metastasio, which was inaugurated in autumn 1840 with Mercadante's *Emma d'Antiochia*. Verdi was a member of the academy from 1874.

From 1858 to his death in 1896 Alessandro Borroni, a pupil of Rossini, directed the *cappella* at S Francesco. During this period, the cathedral frequently drew on the basilica for its singers and directors. During the first half of the 20th century Domenico Stella reorganized and catalogued the musical archives at the basilica, partly stored at the Biblioteca Comunale di Assisi, and directed its *cappella* (1919–56). The première of Licinio Recife's *Trittico Francescano* (1926) took place there; Lorenzo Perosi directed the première of his *Transitus animae Sancti Patris Nostri Francisci* there on 4 October 1937.

In 1927 the Accademia Properziana began to revive the tradition of the Calendimaggio, and each September since 1946 some of the musical productions of the Sagra Musicale Umbra have also taken place at Assisi. The Cantori di Assisi, directed by Evangelista Nicolini, was founded in 1960 and performs early music and traditional music.

Associated Board of the Royal Schools of Music. British institution which conducts examinations in practical and theoretical musical subjects; it is also a significant publisher of music and related pedagogical materials. The Associated Board is a London-based charitable company, established in 1889 by the Royal Academy of Music and the Royal College of Music, later joined by the other two 'royal' conservatories, the Royal Northern College of Music (Manchester) and the Royal Scottish Academy of Music and Drama (Glasgow). A.C. Mackenzie, the then Principal of the Royal Academy, provided a colourful account of the circumstances surrounding the foundation of the Associated Board in *A Musician's Narrative* (London, 1927). Its central activity is the provision of a scheme of graded practical examinations for instrumentalists and singers: candidates at each of the eight ascending levels of difficulty must perform set pieces, play scales and arpeggios and pass sight-reading and aural tests. The examinations are held at local centres in Britain and in about 85 other countries, with a high proportion of overseas candidates living in the countries of the Commonwealth, especially New Zealand, South Africa, Hong Kong, Malaysia and Singapore. During the late 1990s about 570,000 candidates were examined annually, 350,000 of these in Britain. The assessments are administered by a pool of about 530 touring examiners, almost all of whom are based in Britain. They are subject to regular compulsory training and elaborate moderation procedures.

The board's publishing activities are undertaken by a non-charitable limited company. This firm exists principally to supply teachers and pupils with the materials required for the board's examinations; consequently a high proportion of its output consists of specimen examination papers, books of exercises and albums of graded instrumental pieces. However, the Associated Board has for many years also produced authoritative editions of classical works, with a particular strength in the piano repertories of the 18th and 19th centuries (for

example, the Beethoven Sonatas edited by Donald Tovey and Harold Craxton). Its editions tend to be didactic, offering worked-out fingerings and phrasings along with editorial suggestions for performance ranging from the choice of tempo to the realization of ornaments. Towards the end of the 1990s the firm's output diversified somewhat, notably with the publication of two volumes called *Spectrum*, containing newly commissioned piano pieces and an edition of a recently discovered manuscript of keyboard works by Purcell.

In recent years the Associated Board has sought to consolidate its position as the world's largest music examining body by reforming and extending its traditional activities. Thus the syllabus for graded examinations now includes jazz piano, jazz ensembles and choral singing; ungraded tests are offered for young children just beginning to learn an instrument and for adults. At post-Grade 8 level, a new syllabus and three levels of diploma were introduced in 2000. The Associated Board has also established a Professional Development department, which has operated courses for instrumental and singing teachers at regional centres in Britain since 1995; centres offering the same course have since opened in Singapore and Hong Kong.

DAVID ALLINSON

Associated Music Publishers [AMP]. American firm of music publishers, active in New York. It was founded in 1927 by Paul Heinicke, originally as the sole American agency for leading European music publishing houses, including Bote & Bock, Breitkopf & Härtel, Doblinger, Eschig, Schott, Simrock, Union Musical Español and Universal Edition. The firm began publishing in its own right and has built up an important catalogue of American composers, including John Adams, Elliott Carter, Cowell, Dello Joio, John Harbison, Harris, Husa, Ives, Kirchner, Peter Lieberson, Piston, Riegger, Schuller, Surinach, Tower and Wilder. In 1964 it was acquired by G. Schirmer, which in turn was acquired by Music Sales in 1986; as a BMI affiliate it has retained an interdependent publishing programme complementing Schirmer's affiliation with ASCAP.

ALAN PAGE

Association for Recorded Sound Collections [ARSC]. American organization, founded in 1966 to promote the preservation and study of historic recordings in all areas of music and the spoken word. Its membership, drawn from 23 countries, numbers over 1000 and includes private collectors as well as sound archivists, librarians, media producers, record dealers, discographers, recording engineers, musicians and record reviewers. The ARSC holds an annual conference each year to disseminate discographic information and to provide a forum for presentations and panel discussions in all aspects of recorded sound research. The ARSC also publishes a biannual journal which includes major research articles, technical developments, discographies, record and book reviews and bibliographies; a quarterly newsletter which contains information about member activities, meetings and events, and a membership directory, updated every two years, which lists all ARSC members, their collecting interests and research projects. Other special publications include major archival projects undertaken by an ARSC committee, the Associated Audio Archives, including *Rules for Archival Cataloging of Sound Recordings* (Albuquerque, 1980, 2/1995), *Audio Preservation: a Planning Study* (Silver Spring, MD, 1988), and the *Rigler and Deutsch Record Index* (Syracuse, NY and Rochester, NY, 1983–6) which inventories all the 78 r.p.m. holdings of five major sound archives at the following institutions: Library of Congress, New York Public Library, Syracuse University, Yale University and Stanford University. The ARSC annually awards grants for researchers in the field of recorded sound as well as awards for excellence in historical sound research.

Astaire, Fred [Austerlitz, Frederick] (*b* Omaha, NE, 10 May 1899; *d* Los Angeles, 22 June 1987). American dancer and singer. His early career was in partnership with his sister Adele (*b* Omaha, 10 Sept 1898; *d* Phoenix, AZ, 25 Jan 1981). They danced on the vaudeville circuit from 1905 until 1917, performing comedy and ballroom dances. Their Broadway début in Sigmund Romberg's revue *Over the Top* (1917) led to appearances of increasing length and variety, as their roles began to include singing and comedic acting. In the *Passing Show of 1918*, *Apple Blossoms* (1919) and *The Love Letter* (1921), they won praise for their loose-limbed, nonchalant agility, and in the last of these they introduced their trademark 'runaround' dance.

Their first starring roles were in Jerome Kern's *The Bunch and Judy* (1922), but it was their performances in *For Goodness Sake* (1923, with three songs by George and Ira Gershwin), and its West End version, *Stop Flirting* (1923), that made them transatlantic celebrities. Thus the Gershwins agreed to write their next two shows, *Lady, Be Good* (New York, 1924; London, 1926) and *Funny Face* (New York, 1927; London, 1928). After *Smiles* (1930), their unsuccessful collaboration with Marilyn Miller, and the hit revue *The Band Wagon* (1931), Adele retired to become the wife of Lord Charles Cavendish. Astaire's last stage musical was Cole Porter's *The Gay Divorcee* (New York, 1932; London, 1933), in which he was partnered by Claire Luce.

Astaire's Hollywood career began in 1933 with *Dancing Lady* and *Flying Down to Rio*, the first of ten collaborations with Ginger Rogers that reorientated cinematic dance away from the chorus lines of Busby

Berkeley towards romantic solos and duets. In films such as *The Gay Divorcee* (1934), *Top Hat* (1935), *Swing Time* (1936) and *Shall We Dance* (1937), he introduced many classic songs by Porter, Berlin, Kern and Gershwin. The dazzling choreography and debonair settings of these tended, however, to distract audiences and critics from his very real vocal talents. These talents were underplayed in his subsequent films, which used him primarily as a dancer; exceptions were *Easter Parade* (1948), *Funny Face* (1957) and *Silk Stockings* (1957). Astaire was given a special Academy Award in 1949. Although his last screen musical was *Finian's Rainbow* (1968), he had already begun a career as a dramatic actor (*On the Beach*, 1958) which continued until *Ghost Story* in 1981.

Astaire's light baritone was controlled by a highly refined stylistic sensibility; he was, after all, an accomplished pianist and songwriter ('I'm Building Up to an Awful Letdown', 1936). On his 1924 recording of 'Fascinatin' Rhythm', partnered by Adele Astaire and accompanied by Gershwin, one hears Astaire's nascent jazz rubato colliding with his sister's literalist approach to the printed rhythms. As might be expected from a dancer, his ability to relate rhythmic freedom to an unerring sense of pulse was paramount; his crisp yet relaxed enunciation, slightly nasal pronunciation, almost vibrato-less tone, and judicious use of portamento and ornaments created a conversational style as affably personable as it was immediately recognizable.

HOWARD GOLDSTEIN

Astarita [Astaritta], **Gennaro** (*b* ?Naples, *c*1745–9; *d* Rovereto, 18 Dec 1805). Italian composer. He has been called a Neapolitan, but his surname is very common on the Sorrento peninsula. He is first heard of in summer 1765, when he contributed some music to Piccinni's comic opera *L'orfana insidiata* at the Teatro dei Fiorentini, Naples, suggesting that he may have been Piccinni's pupil. He left Naples after producing two operas at the Fiorentini (1765–6); in 1768 an *azione drammatica* by him was performed in Palermo, and in 1770–71 he had at least two comic operas performed in Turin. From Carnival 1772 to autumn 1779 he produced a series of operas in Venice and other northern and central Italian cities, including Florence (1773) and Bologna (1778). In 1779 he completed his friend Traetta's last opera and in 1780 was at Pressburg (now Bratislava) where he produced three operas. After a long gap in his output he went to Moscow as music director of the Petrovsky Theatre (1784), producing a ballet there in January 1785; he then moved to St Petersburg (1786), where he may have had an opera performed in 1787 (according to a score with that date in St Petersburg). He evidently spent the rest of his life working in Italy and Russia: several new operas were performed in Venice and Florence between 1789 and 1793, and in 1794 he was sent by the director of the imperial theatres to engage an Italian opera company. He returned to St Petersburg in 1795 as its *maestro compositore*, and in 1796 he composed for it a comic opera, *Rinaldo d'Asti*; in 1799 the company was taken into the imperial service. In July 1803 he announced his departure from Russia and returned to Italy, stopping in Rovereto where he died on 18 December 1805.

Astarita wrote close to 40 operas, almost all of which are comic. La Borde called him a 'very pleasant modern composer' who appealed more to the general public than to connoisseurs; he singled out the rondò 'Come lasciar poss'io l'anima mia che adoro' as one of the best known.

WORKS

OPERAS

Il corsaro algerino (ob, G. Palomba), Naples, Fiorentini, aut. 1765
L'astuta cameriera (dg), Turin, Carignano, aut. 1770
Gli amanti perseguitati (semi-seria, P. Donzel), Turin, 1770

DENNIS LIBBY (text), MARITA P. McCLYMONDS (work-list)

Aston [Asseton, Assheton, Ashton, Haston], **Hugh** [Hugo] (*b c*1485; bur. Leicester, 17 Nov 1558). English composer. On 20 November 1510 he supplicated at Oxford University for the degree of BMus, stating that he had spent eight years in the study of music and submitting a mass and an antiphon as his exercise. He apparently lived in Coventry in about 1520 when the dean and chapter of the collegiate church of St Mary at Warwick paid his expenses to come from there to advise them on the purchase of a new organ (see Bowers). In 1525 he was *magister choristarum* and keeper of the organs at St Mary Newarke Hospital and College in Leicester where he apparently remained until its dissolution in 1548. He was thus presumably the master of the choristers whom Bishop Langland proposed to send from Newarke College to Wolsey's new Cardinal College, Oxford, in 1526, a position ultimately filled by Taverner. In 1548 Aston was awarded an annual pension of £12, paid up to 17 November 1558, on which date he was buried in St Margaret's parish, Leicester.

The beginnings of the Gloria, Credo and Agnus Dei of the *Missa 'Te Deum'* refer to the opening duet of the antiphon *Te Deum laudamus*; this relationship suggests that these works may have been those Aston submitted for his degree in 1510. In the earlier sources (*GB-Cjc* 234, *Cu* Dd.13.27 and *Lbl* Harl.1709) the antiphon appears with the text *Te matrem Dei laudamus*, a Marian imitation of *Te Deum laudamus* and probably Aston's original text. The latter text is not the same as the hymn but an adaptation, making it an antiphon of the Trinity (the texts are given in TCM, x). The relationship is not so close that the mass can be said to be derived from the antiphon, however, and it also uses phrases of the plainsong *Te Deum* for its cantus firmus.

The virtues of Aston's vocal music have been overshadowed by the remarkable quality of his one surviving composition for the virginal. His 'Hornepype' shows an early grasp of idiomatic keyboard writing which is in advance of continental practice of the time. On stylistic grounds *My Lady Careys Dompe* and *The Short Mesure off my Lady Wynkfelds Rownde* have been attributed to Aston but there is no manuscript evidence for this. The references to Carew and Wyngfeld indicate that this music was associated with the court of Henry VIII and possibly that Aston was in London during the period 1510–20.

Hugh Ashton's Maske is a four-part untexted piece of which three parts survive in the late Elizabethan Christ Church partbooks (*GB-Och*), two ascribed to 'Mr. Hugh Ashton' and the third (possibly added later) to 'Mr. Whytbroke'. Like the keyboard pieces, it is built on an ostinato pattern; the ground, presumably in the missing bass book, is known from Byrd's *Hugh Aston's Ground*. The existence of a bass part of an anonymous mass constructed on this ground (*GB-Lbl* Add.34191) suggests that the mass may be by Aston (see Sandon, 1981) and that the piece in the Christ Church partbooks could be an extract from it (and 'Maske' a corruption of 'Mass').

JOHN BERGSAGEL

Aston, Peter (George) (*b* Birmingham, 5 Oct 1938). English composer and teacher. He studied at the Birmingham School of Music, at the University of York as a postgraduate, and privately with Mellers for composition. He was appointed lecturer in music at York in 1964 and became professor of music at the University of East Anglia in 1974. While pursuing his academic career he has directed the Tudor Consort (which he founded), the English Baroque Ensemble, the York University Choir and Chamber Choir, and the Aldeburgh Festival Singers (1975–88). He has appeared as a guest conductor at several choral festivals in the USA and Italy.

Aston's compositional output is dominated by his church music. However, it was with *Five Songs of Crazy Jane* (1960) that he first attracted attention. During the

following decade he set secular texts for chorus and composed a children's opera, *Sacrapant the Sorcerer* (1967). In his church music, his preoccupations with music of the Baroque era (he has edited the works of George Jeffreys) and with 20th-century British music, in particular Britten, fuse naturally with his well-shaped vocal lines supported by transparent textures. The chromaticism of *God be merciful unto us* (1967) arises from close-weaved contrapuntal lines and extensive use of false relations. Aston retains a distinctive modern style in his writing for choirs of modest ability, for instance in *For I went with the multitude* (1970) and *The True Glory* (1976). A richer harmonic style is evident in some of his works of the 1980s, though a more contemplative note can be heard in the sustained harmonies and arabesques of *How lovely is your dwelling-place* (1996). Both in his distinctive voice and in the quantity of his works, Aston has made one of the most remarkable contributions to English church music of the late 20th century.

WORKS

Sacred: 3 Hymns to the Virgin, SATB, 1962; There is no Rose, S, SATB, org, 1965; Balulalow (J., J. and R. Wedderburn), SATB, org, 1966; God be merciful unto us, SSATB, org, 1967; Alleluya psallat I, 6 solo vv, 1967; And I saw a new heaven, S, SATB, org, 1969; For I went with the multitude, SATB, org, 1970; Divine Image (W. Blake), SATB, 1970; Praise ye the Lord, SSAATTBB, brass, 1970; Alleluya psallat II, SATB, 1971; Mag and Nunc, F, SSAATTBB, org, 1972; Communion Service, F, SATB, org, 1973; Make we Joye, 4 carols, SATB, 1973; Hosanna to the Son of David, SATB, org, 1974; Hodie Christus natus est, SATB, org, 1974; 14 Short Introits, SATB, org, 1974; So they gave their bodies (A. Zimmern), SATB, org, 1976; O sing unto the Lord a new song, SATB, org, 1976; Lift up your heads, O ye gates, SATB, org, 1979; God be in my head, SATB, 1979; Yuletide Carol, Tr, pf/org, 1979; Beloved, let us love (H. Bonar), SATB, 1979; Author of life divine (C. Wesley), SATB, org, 1981; Come, my Way, my Truth, my Life (G. Herbert), SATB, 1982; Welcome Yule!, SATB, org, 1984; Great is the Lord, SATB, org, 1986; Lord, make me an instrument of your peace, SATB, org, 1987; A Mass for All Saints, SSAATTBB, org, 1987; Where shall wisdom be found?, SATB, 1989; The King of Love (H.W. Baker), S, SATB, org, 1991; Ps cl, SATB, org, 1993; Eternal Grace (H. Bonar), SATB, org, 1993; I give you a new commandment, SA, org, 1995; You are Peter, SA, org, 1996; How lovely is your dwelling-place, 2 choirs (SS, SATB), 1996; Holy Spirit, truth divine (S. Longfellow), SATB, 1997; O be joyful in the Lord, SATB, org, 1999; I am the true vine, SATB, org, 1999

MICHAEL NICHOLAS

Aston, A. William. Pseudonym of KETÈLBEY, ALBERT W.

Aston Magna Foundation for Music and the Humanities. American musical organization founded in 1972 by the harpsichordist Albert Fuller and Lee Elman. In September of that year the foundation initiated the Aston Magna Festival, the first professional summer festival of music on period instruments in the United States. The foundation's early educational activities took place on Elman's estate 'Aston Magna' in Great Barrington, Massachusetts. In 1973 the summer festival under artistic director Albert Fuller found a permanent home at St James's Church in Great Barrington, after initial misgivings by the local townspeople. Additional summer concerts are held annually at Bard College in Annandale-on-Hudson, New York.

Aston Magna quickly became a leading force of the early music movement in the USA, presenting concerts on instruments played with techniques known to the composers and offering educational programmes on music and its relation to the other arts and society. In 1977 Aston Magna gave the first US public performances in modern times of the complete Bach Brandenburg Concertos on period instruments, and in 1978 presented the first American performances of Mozart symphonies on original instruments. The same year, with funding from the NEH, Aston Magna launched its cross-disciplinary academy programme under the direction of harpsichordist and musicologist Raymond Erickson. The three-week academy was originally held at Simon's Rock of Bard College in Great Barrington. Subsequent academies have been held at Rutgers University in New Brunswick, New Jersey and at Yale University. The academy brings together scholars in the humanities and musicians to explore particular moments in Western culture, from the end of the Renaissance to the early Romantic period. In 1997 the academy initiated a publication series beginning with *Schubert's Vienna* (New Haven, CT, 1997), a volume of essays by the academy's faculty edited by Raymond Erickson and published by Yale University Press.

A dispute with the foundation board led to Fuller's resignation as artistic director in 1983. He was succeeded by the viola da gamba player John Hsu, who served as artistic director from 1984 to 1990. The violinist Daniel Stepner was appointed artistic director in 1990. The executive offices of the foundation are located in Danbury, Connecticut.

SALLY SANFORD

Astor. English and American firm of instrument makers, publishers and dealers. The two founders were the sons of Jacob Astor, a merchant of Mannheim. George [Georg] (Peter) Astor (*b* Waldorf [now Walldorf], nr Heidelberg, 28 April 1752; *d* London, Dec 1813), after an initial visit to London, decided to establish a business there with his brother John [Johann] Jacob Astor (*b* Waldorf, 17 July 1763; *d* New York, 29/30 March 1848). This operated as George & John Astor at 26 Wych Street *c*1778–83. In 1783 John left for the USA to sell flutes. He rapidly also became involved in the fur trade and built up a highly

profitable business exporting furs to England and importing musical instruments for sale in the USA. In 1809 he established a fur trading company; this and the purchase of land in the Bowery laid the foundations of the Astor wealth.

George took sole charge of the London business at the Wych Street premises. He may have worked with George Miller (*fl* c1765–90), who made the earliest surviving English clarinets (one is dated 1770); a clarinet by Miller bears the address 26 Wych Street and he marked his instruments with a unicorn's head, as did Astor and his successors. In 1797 or 1798 the business moved to 79 Cornhill, where Astor made numerous woodwind instruments and pianos. During the period 1784–1826 the firm was known as either George Astor or Astor & Co.; it also operated at 27 Tottenham Street. By 1800 the firm's activities had extended to publishing, including sheet music and instruction manuals for the flute. In 1801 the firm styled itself 'organ builders'. On his death in 1813 George Astor was succeeded by his widow. From 1815 to 1819 the business at 79 Cornhill was known as Astor & Horwood, from 1824 to 1831 as Gerock, Astor & Co., and from 1831 to 1836 as Gerock & Wolf.

Surviving Astor instruments include numerous flutes, oboes, clarinets, bassoons and pianos (see *ClinkscaleMP*), mostly from the early 19th century. A one-key flute (Horniman Museum, London) marked 'Jacob, London' may have been made by the younger Astor. An interesting early clarinet by George Astor (pre-1796) in boxwood and ivory (Bate Collection, Oxford) is an extendable instrument playable in C, B♭ and probably A (one section is missing). George was the maker in 1800 of the bass-horn originally designed by Frichot of Paris. The firm published an annual collection of country dances (from 1815 under the Astor & Horwood imprint); two collections of 24 for violin survive from 1803 and 1818.

NIALL O'LOUGHLIN

Astorga, Baron **Emanuele (Gioacchino Cesare Rincón) d'** (*b* Augusta, Sicily, 20 March 1680; *d* ?Madrid, ?1757). Italian composer. Before Volkmann's research his biography (as given by Fétis, for example) was largely a tissue of colourful legend. Over the last 50 years, sparked by Volkmann's work, other important contributions have been made by Frank Walker, Ottavio Tiby and Roberto Pagano which have brought some clarity to many events in Astorga's life, including some completely unknown to Volkmann. It still remains the case, however, that little or nothing is known of the final part of his life.

Astorga came from a family of Spanish origin, and he himself recognized this when he indicated his homeland as 'non sol l'Italia' but 'anco la Spagna'. The family became rich after purchasing in 1624 the appointment of *Regio Secreto* in the city of Augusta, and then joined the aristocracy after acquiring land linked to a baronial title: Ogliastro and Millaina in 1633, Mortiletto five years later. 'Don Emmanuello' gave himself these titles in the frontispiece of his *Cantadas* (1726). After the earthquake which destroyed half the cities of Sicily in January 1693, the family left Augusta for Palermo. Before they had time to join the capital's high society they found themselves at the centre of a scandal involving the composer's father Francesco, who, in autumn 1693 tried to kill his wife Giovanna Bongiovanni and daughter Tommasa 'cum ictu carrabinae' (with a rifle shot). For this he was banished from Palermo, losing his civil and political rights, and on 21 June 1694 his title and lands passed to his son Francesco, Emanuele's elder brother. It was not until January 1709 that the violent father regained his title and land, and resumed his place at the head of the family. For this reason, Roberto Pagano has suggested, while Francesco senior is likely to have been the 'barone d'Astorga' who was 'capo di squadra' of the company of nobles which manned the watch-tower during the people's uprising in 1708, it was undoubtedly Francesco junior who was a member of the Palermo senate between 1705 and 1706, since, before regaining his title, the father 'would not have been able to boast the title of baron, which however appears in all the Senate's official documents'. When he was still young, and for reasons that are still not completely clear, Emanuele left Palermo to travel across half of Europe, leading a fairly nomadic and adventurous life until the middle of 1714. His father's difficult and violent character was no doubt a factor in this, but there were perhaps other reasons, not least the fact that a man of his social standing was prevented from practising freely as a professional musician, although this was how he was to earn his living for a large part of his life.

Astorga's musical education probably began when he was a small child, and his studies continued in Palermo, a city which at the time was home to Francesco Scarlatti (according to Molitor, the young baron's personal tutor) and host to Francesco Gasparini. In 1698 he was ready to display his musical gifts, with a performance in the domestic theatre of Antonio Lucchese, the future Duke of Grazia, of his opera *La moglie nemica*, to a libretto by Francesco Silvani; he and his brother Francisco took the two principal female roles. Obviously this was a highly refined theatrical display, the reflection and product of an equally refined and exclusive society, and the composer felt it appropriate to stress his personal involvement, as was later the case in 1702 when 'D. Eman[uele] Rincon de Astorga, barone dell'Agliastro' composed the music for a *dialogo* by Francesco Maria Landolina, performed when Vincenzo Paternò Asmundo was enrolled in the prestigious military order of the Apostolo S Giacomo. In later years he gave salon performances of his own cantatas, which make up the bulk of his compositions and are mostly for solo voice and continuo.

It is not known exactly when Astorga left Sicily for Rome; it was certainly after 1702 but (as suggested by Pagano) some years before 1708, the date proposal by Tiby and Walker on the basis of Volkmann's supposition that two cantatas with orchestral accompaniment–really two lengthy monologues in the form of a short *opera seria* with an opening sinfonia–dated January 1708 were composed for Cardinal Ottoboni, with whom Astorga seems to have been in contact. Once in Rome, Astorga

became part of the circle of the Duke of Uzeda, Spain's papal ambassador; there he made friends with the Neapolitan poet Sebastiano Biancardi, who provided the texts for some of his cantatas. The 1732 Venice edition of Biancardi's poems is prefaced by an account which is an important (if not always reliable) source of information about Astorga at this period. The two friends went to Genoa, where they were robbed by their servant, and to raise money Astorga wrote an opera, *Dafni*, performed there on 21 April 1709. Under the assumed names Giuseppe del Chiaro and Domenico Lalli, they then visited Tortona, Mantua and Venice, where, in autumn 1710, their second operatic collaboration, *L'amor tirannico*, was performed at the Teatro S Cassiano.

The precise date of Astorga's arrival in Barcelona, where he was summoned by the Habsburg claimont Charles III, is not known; probably, as Tiby indicated, it was before *L'amor tirannico* was performed in Venice. It is known, however, that in June 1709 *Dafni* was performed there 'before their Catholic majesties'. The opera was so well received that it was given several performances that summer at the express command of Charles III, who, wishing to retain the services of such a capable musician, assigned him a generous salary while also exempting him from various duties normally required of the other, non-aristocratic *maestros de capilla* in his service. As Pagano rightly observes, it was actually Emperor Joseph II who granted the salary (2000 florins per annum), but Astorga only began to receive it in 1712 when his protector Charles, who in 1711 had become emperor as Karl VI, confirmed it. By 9 May 1712 Astorga was in Vienna, where on that date he stood godfather to a daughter of Antonio Caldara, in place of his friend the Dutch ambassador Hamel von Bruynings, and he may have composed the anonymous one-act *Zenobia*, produced in Vienna a few weeks later. He left Vienna (and a number of debts) in spring 1714, and by September he was in Palermo, occupied with inheriting the family title and estates after the deaths of both his elder brother and his elderly father in 1712. This was possibly after prompt and decisive intervention by his mother and sister Tommasa, who, with a series of astute legal actions, prevented the exchequer from taking possession of the barony on the grounds that the succession had to be claimed within six months of the holder's death. In October 1717 Astorga married the 15-year-old Emanuela Guzzardi e Nicolaci, daughter of the Baron of S Giorgio, who bore him three daughters. From May 1717 to June 1718 he was a senator of Palermo and from 1718 to 1720 a governor of the hospital for incurables there. He was also, on 18 August 1718, one of the founders of the Accademia del Buon Gusto, an offshoot of the Arcadian Academy, and he may have played a part in developing music education at the old Casa degli Spersi, renamed the Conservatorio del Buon Pastore, helping to turn it into a genuine musical institution. In 1721, however, he restored his wife's dowry and made over to her the income from his estates in return for an annuity; he then left Sicily for Lisbon, and never returned home.

Manuscript cantatas (in *GB-Lcm*) are dated Lisbon 1721 and 1722; other works from the same years are the serenata *Aci e Galatea*, performed in Barcelona on 27 December 1721 and *Il Sacrifizio di Diana*, a *componimento musicale* (26 July 1722). The latter was performed in Lisbon, as noticed in the *Gazeta de Lisboa*, where the composer is indicated unambiguously as the 'Barone d'Astorga ao presente nesta Corte' (see M.C. de Brito: *Opera in Portugal in the Eighteenth Century* (Cambridge, 1989), 125). Two villancicos by him in honour of St Vincent were sung at the cathedral there on 21 June 1723, and in 1726 he published there a volume of 12 *Cantadas humanas a solo* with Spanish and Italian words, his only works to be printed in his lifetime.

Hawkins relates that Astorga 'was at Lisbon some time, and after that at Leghorn, where being exceedingly caressed by the English merchants there he was induced to visit England, and passed a winter or two in London, from where he went to Bohemia'. The London visit is not supported by documentary evidence, but Hawkin's details (for example that Astorga was very shortsighted) suggest that his information came from someone who had known the composer. Nothing certain is known about the final years of his life. The latest manuscript date is 1731, and in October 1739 a serenata by him was performed at the Buen Retiro palace in Madrid to celebrate the wedding of the infante Don Filippo (later Duke of Parma) to Louise Elisabeth, eldest daughter of Louis XV. Astorgas Sicilian estates were sold in 1744 by his deserted wife and sister, who were heavily in debt. The date and place given for his death are highly doubtful, being known only from a notation on a manuscript in the Santini collection (*D-MUs*).

The opera *Dafni* was revived at Parma in 1715 and Breslau in 1726. Only the first act is extant (in *A-Wn* and *D-DI*); the overture and some arias were published by Carreras y Bulbena in 1902. In his own day Astorga was best known for his chamber cantatas, which exist in numerous manuscripts. These fluently written and agreeable works move within the same general formal and stylistic bounds as Scarlatti's cantatas without attaining the degree of musical invention or sensitivity towards the joining of words and music displayed by Scarlatti at his best. One of Astorga's best-known compositions is the *Stabat mater* in C minor for solo voices, mixed chorus, strings and continuo, thought until recently to be his only extant sacred work. Beside it must now be placed another sacred work, the hymn *Ave maris stella* in G for soprano, alto, two violins and continuo (the same forces as Alessandro Scarlatti used in his *Stabat mater*), which is in the archive of the Chiesa Madre (now the cathedral) in Piazza Armerina, Sicily. This is probably a youthful work, as is suggested by the inscription 'del Sig. Astorga' on the title-page. Unlike the *Stabat mater*, which concentrates more on choral writing (only two of its nine movements are solo arias), the *Ave maris stella* is modelled on the style of a chamber cantata. Also unlike the *Stabat mater*, which is permeated by complex contrapuntal procedures, it is in a simple, fluent musical style, close to the 'modern' style which was forming in Naples after the first decade of the 18th century in the work of such composers as Domenico Sarro, Nicola Porpora and Leonardo Leo. The *Stabat mater* was dated about 1707–8 by Volkmann on purely stylistic grounds; no performances are known before the middle of the century. Its first known performance outside the liturgy took place in Oxford where, according to William Hayes, 'in 1753 it featured in the musical entertainments which the Academy of Ancient Music gave on Thursday evenings'. From that time until 1840 it enjoyed great popularity. It is thus quite revealing to record what Franz Grillparzer noted in his diary on the

occasion of a private performance of the *Stabat mater* organized by the Viennese musicologist Kiesewetter: 'I had not been so profoundly moved for a considerable time; what type of men have come into the world, if not even the name is known today of such an example of the human race!' The *Stabat mater* appeared in print several times during the 19th century and took a permanent place in the European repertory from the beginning of the 20th.

WORKS

† – *doubtful*

OPERAS

music lost unless otherwise stated

La moglie nemica (melodrama, F. Silvani), Palermo, Casa Lucchese, 1698

Dafni (dramma pastorale, D. Lalli), Genoa, S. Agostino, 21 April 1709, *A-Wn* (Act 1 only), *D-Dl* (Act 1 only); ov. and some arias ed. in Carreras y Bulbena

L'amor tirannico (drama per musica, Lalli), Venice, S Cassiano, 1710

†Zenobia, Vienna, 1712

Astrakhan. Town in Russia. Located near the mouth of the Volga, it became famous at the end of the 19th century as a centre of music in the south of Russia. Opera troupes and soloists came on tour, especially after the opening of the Winter Theatre (with seating for 700) in 1884 and the Summer Theatre (with seating for 1200) in 1892.

The Society for Music and Drama, which had been founded in 1885, began music classes in 1889 and taught singing and instruction on a number of instruments. In 1891 the society was reorganized into the Astrakhan division of the Imperial Russian Music Society; it remained active until 1920. The classes had been headed in 1897–9 by Fyodor Keneman, who introduced permanent symphony concerts. Four programmes per season were given and, with the participation of teachers, students and military musicians, the symphonies of Haydn and Beethoven, and later of Mozart and Tchaikovsky, were performed.

In September 1900 the classes were turned into a music school with a seven-year course of training. The first director was Aleksandr Gorelov (1900–03), who continued the concerts and also staged operas each year (*Rigoletto*, *La traviata*, Rubinstein's *Demon*, *Yevgeny Onegin*) with local amateur performers. He was succeeded by Artur Kapp (1903–20), who introduced performances of organ music and oratorios in the Lutheran church. The music society and Kapp personally assisted Chaliapin, Landowska, Artur Rubinstein and others to arrange their concert tours.

The social upheavals of 1917 and the ensuing Civil War combined at first to bring about an advance. For about five years an opera troupe in Astrakhan (directed by M. Maksakov 1920–23) managed to put on 20 productions or so. Alongside the first music school another three opened, but after a few years they closed due to financial collapse. Musical life remained stagnant for many years. A public Philharmonia was briefly active (1926–7), organizing tours. Amateur ensembles appeared in a number of clubs, including the Tatar Music and Drama Group. In the mid-1930s a symphony orchestra made up of teachers and students of the fishing industry institute played for several years. But the most significant feature of these times was the staging of opera by professionals and amateurs grouped around the music school. During World War II 12 productions were put on, organized by the Bol'shoy singer M. Maksakova. Immediately after the war a fishermen's song and dance ensemble called 'Moryana' was set up, as well as a theatre of musical comedy, which was active until 1948.

A notable revival of musical life began in the mid-1960s. In 1965 a concert hall for the Philharmonia was constructed with a seating capacity of 700, and this allowed musicians such as Richter, Rostropovich and Vishnevskaya to be invited to play. The music school moved into a renovated building, and in all the regions of the town children's music schools were founded. In 1969 the Astrakhan State Conservatory opened; six years later it gained a concert hall with an organ and a seating capacity of 400. Opera was given again under the auspices of the House of Culture attached to the fish-canning and refrigeration group (1958–69) and of the fishing industry institute. In May 1996 the Astrakhan State Music Theatre opened to present opera, ballet and operetta.

MARK ARONOVICH ETINGER

Åstrand, (Karl) Hans (Vilhelm) (*b* Bredaryd, 5 Feb 1925). Swedish music administrator, writer and lexicographer. He studied the double bass, cello, organ and music theory privately and romance languages at Lund University (graduated 1958). He taught French and Spanish at the Malmö Gymnasium (1959–74), and has pursued various musical activities, including posts as music critic of the Malmö newspaper *Kvällsposten* (1950–80), founder and leader of Chamber Choir '53 (1953–62), founder (1960) and director (1965–71) of the Ars Nova society for new music and programme director of Sal. Smith Chamber Music Society (1966–73). He has also taught music history at the Malmö National School of Drama (1963–71), and served as a board member of the Malmö Musikhögskola (from 1964) and the Swedish Royal Academy of Music (1966–73; general secretary from 1973–90), and as vice-chairman of the board of the

Stockholm Elektronmusikstudion (1974–89), the Opera High School in Stockholm (1982–8) and the international J.M. Kraus-Gesellschaft (from 1982). In 1972 he was appointed editor-in-chief of the second edition of *Sohlmans musiklexikon* (Stockholm, 1975–9). Apart from his work for this, Åstrand has written much about the musical life of Skåne, the south-western province of Sweden, in which he himself has played a particularly active role; he has contributed several chapters to *Musik i Skåne* (Malmö, 1971) and to *Svenska musikperspektiv* (Stockholm, 1971). He was awarded the title of professor by the government in 1983, and the honorary doctorate from Lund University in 1985. He was appointed vice-chairman of the IMC project, *The Universe of Music: a History* in 1996.

JOHN BERGSAGEL/HENRIK KARLSSON

Astvatsatrian, Levon Arami (*b* Constantinople, 3 Jan 1922). Armenian composer. During his early life in France (1923–47) he attended the Collège Parc Impérial in Nice and studied composition with Eleuthier Lovreglio at the conservatoire there (1940–45). He moved to Yerevan in 1947 and worked as a music editor for the publishers *Sovetakan grokh* (1950–91) and joined the Armenian Composers' Union in 1949. His First Symphony (1970) was commissioned by the Armenian Ministry of Culture and the *Chorale and Queen of Kilikia* was written to mark the inauguration of an international symposium on the ancient Armenian kingdom of Kilikia, held in New York in 1993. His works have been heard at festivals in Vilnius (1972), Los Angeles (1980), Buenos Aires (1986) and Lille (1995). As a composer, Astvatsatrian is primarily concerned with rationalization of the creative process. Even the neo-classical works of the late 1950s and early 60s, such as the *Sonata-Breve* and *Havik*, are notable for their architectural proportions; in the later serial works, structural systematization is sometimes achieved by means of computer analysis (as in the first and second symphonies). These works are frequently conceived in terms of what the composer has called 'melogenesis', in which the character of the source material – which includes medieval Armenian songs and Gregorian chant – directly informs the type of internal transformation applied to it. His own historical and conceptual views on not only the genesis of sound but also the unity of physical, acoustical and mathematical laws shape the spatial aspects of his music, which are an important feature of *Intégrales* and *Spatial Structures*.

SVETLANA SARKYSIAN

Asuar, José Vicente (*b* Santiago, 20 July 1933). Chilean composer and electro-acoustic engineer. He studied at the National Conservatory in Santiago with Urrutia-Blondel (1947–56), at the Berlin Hochschule für Musik with Blacher (1959–60) and at the Badische Hochschule für Musik with Wildberger. Simultaneously he studied engineering at the Catholic University in Santiago (1953–9). As part of his dissertation, in 1959 he assembled the first electro-acoustic music laboratory in Latin America, and composed the region's first electronic composition, *Variaciones espectrales*.

Asuar was the Chilean delegate to the 1960 ISCM Festival in Cologne. In 1962 he directed a seminar of electro-acoustic music in Salvador, Brazil. He was Professor of Acoustics and Contemporary Music at the National Conservatory in Santiago (1963–5). In 1964 he taught a seminar in electronic music at the di Tella Institute in Buenos Aires. From 1965 to 1968, at the invitation of the Instituto Nacional de Cultura y Bellas Artes of Venezuela, he established and directed the Instituto de Fonología, the country's first electro-acoustic music centre.

On his return to Chile he conceived and directed a course in sound technology at the University of Chile (1968–72). He became interested in the potential of computer music, and in 1970 he travelled to the USA with a Fulbright Grant to develop new techniques in that field with Lejaren Hiller at SUNY in Buffalo. He later worked at the Institut International de Musique Electroacoustique of Bourges, where he composed *Affaire des oiseaux*

(1976). He later returned as a special guest and participant at this institute's symposium 'Inventions et creation musicales: refus de l'Utopie', bringing together the world's pioneering figures of electro-acoustic and computer music (1989, 1990, 1991).

In 1978 Asuar developed a musical instrument based on the Intel 8080 microprocessor, called COMDASUAR (Computador Musical Digital Analogico Asuar). This was the first music computer of its type in the world, and the first overall in Latin America, bringing computer applications and music together. Since the mid-1990s Asuar has led a reclusive life, reportedly travelling extensively and occasionally making Málaga in Spain his base of operations.

Asuar has published several articles and a book, and has been the recipient of several awards for his work, from the University of Chile (1959, 1969), the Interamerican Festival Jury in Caracas (1966), the Dartmouth Arts Council (for his *Divertimento*, 1970) and the Bourges International Competition of Electro-Acoustic Music (for *Guararía repano*, 1975).

His pioneering career and ideas have been extremely influential in the development of Latin American electro-acoustic and computer music. He often uses traditional and popular melodies from Chile and Venezuela as source material. Works like *Guararía repano* and *Divertimento* have been praised for their technical achievement, evocative lyricism, colourful imagination and witty elegance, often inspired by natural and even cosmological imagery.

Asula [Asulae], **Giammateo.** *See* ASOLA, GIAMMATEO.

Atabekian, Angela (*b* 11 April 1938). Armenian *k'anon* player. She graduated from the Melikian Music College, Yerevan, in 1955. In the same year she joined the Ensemble of Folk Instruments of Armenian Radio and Television, performing as a soloist and as a member of the ensemble; many of the group's performances were recorded by the Melodiya company. In 1957 she received four gold medals and a finalist's diploma in performers' competitions held at the 6th World Festival of Youth and Students in Moscow. She began to teach at the Melikian Music College in 1959. In 1972 she created an ensemble of *k'anon* players with her sisters Apolina, Eghisabet, Anahit and Dsovinar; they performed in Armenia, Russia, Belarus, Ukraine, Moldavia, Germany and Hungary, and the group subsequently developed into a larger vocal and instrumental ensemble in which the children and grandchildren of the Atabekian sisters participated. In 1983 Angela Atabekian joined the staff of the Komitas State Conservatory, Yerevan where she graduated in 1985; she was named People's Artist of Armenia in 1986, and in 1994 she was appointed professor of *k'anon* at the Conservatory.

Her repertory has included Armenian traditional melodies, original works by Armenian composers, and extracts of western European music in idiomatic arrangements for the *k'anon*; she has been noted for her virtuoso technique. She has toured Europe, the Middle East, South Asia, Australia and the Americas, and was awarded a gold medal by the Hungarian government for her participation in concerts held during a festival of Armenian art and literature in Hungary.

ALINA PAHLEVANIAN

Atanacković, Slobodan (*b* Idvor, 23 Sept 1937). Serbian composer. He graduated from the composition classes of Živković and Josif at the Belgrade Academy of Music (1956) before becoming editor-in-chief of the music programme at Radio Belgrade; later, he became the programme's adviser. While his early works betray the influence of Bartók, the soundscapes of Atanackovi's later works resemble music of the postwar Polish school; the polyrhythms, heterophony and dense canonic writing – interspersed with folk elements – create clusters across instrumental groupings. Particularly well known among his works are *Akathist*, an oratorio inspired by the heroism and tragedy of war, and the *Sinfonia eterofonica*, which was placed among the top ten compositions at the 1987 UNESCO International Rostrum in Paris. The

former work features antiphonal writing, rhythmic choral declamation and aleatory structures, while the *Sinfonia*, in an attempt to unify past, present and future, begins in the style of archaic folk music yet ends with electronic sounds. The orchestral diptych *Ad vivum* (1975) was inspired by unmeasured and non-tempered folk melodies. He has received more than 20 awards from competitions organized by the Association of Serbian Composers, and in 1981 he was presented with the October Prize of the City of Belgrade.

ROKSANDA PEJOVIĆ

Atanasov, [Athanassov] **Georgi** (*b* Plovdiv, 6/18 May 1882; *d* Fasana, Lake Garda, 17 Nov 1931). Bulgarian composer and conductor. At the age of 14 he began formal music studies in Bucharest. He studied composition with Mascagni at the Pesaro Conservatory (1901–3), then returned to Bulgaria, where he became well known as a military bandmaster. In 1922–3 he conducted the Sofia National Opera, and over a period of many years directed more than 90 orchestral concerts in the capital; these were the first regular symphony concerts in Bulgaria since the liberation of 1878.

Atanasov was the first Bulgarian professional opera composer. His lyrical, Romantic style shows the influence of late 19th-century Italian opera, but is primarily melodic and also bears traces of folk idioms. He achieved dramatic effects by the alternation of contrasting numbers. His most frequently performed opera is *Gergana*, the first Bulgarian opera to make an individual character the centre of the plot. The opera *Tsveta* is similar in its clearly expressed dramatic conflict. In *Kosara* (1924) Atanasov used a mystical-romantic style and a leitmotif technique, while *Altzec* developed features using ancient Slav motifs.

WORKS

Stage: (all first perf. in Sofia): Borislav (op, N. Popov, after I. Vasov), Bulg. Opera Society, 4 March 1911; Gergana (op, P. Bobevski, after P.R. Slaveykov: *Izvorat na Belonogata*), Bulg. MAGDALENA MANOLOVA

Atanasov, Nikola (*b* Kyustendil, 13/25 Oct 1886; *d* 30 Sept 1969). Bulgarian composer. From 1906 he studied in Zagreb with F. Dugan, V. Hummel, K. Junek and V. Ruzic, gaining his diploma in 1912 for the first three movements of his First Symphony (the fourth movement, a rondo, was completed on his return to Bulgaria). He then taught at grammar schools in Stara Zagora, Pleven and Sofia before joining the newly established Music Academy as a teacher of theory, later serving as professor (1929–58). During the early stages of Bulgarian concert music when most composers contented themselves with smaller genres, Atanasov stood alone in tackling large forms – he wrote the first Bulgarian symphony and piano sonato. With his first essays in the genre he took the first steps in Bulgarian symphonism. His thinking proceeded from purely instrumental lines, and he endeavoured to combine an accessible language with a national character with dynamic Classical form. The influences of Classical and Romantic music intertwine with Bulgarian folk sources.

ANDA PALIYEVA

Atayan, Robert Arshaki (*b* Tehran, 7 Nov 1915; *d* Los Angeles, 5 March 1994). Armenian musicologist, folklorist and composer. After moving to Yerevan in 1923 he studied composition at the Yerevan Conservatory. From 1944 he taught harmony at the conservatory and completed a second degree at the Institute of Art of the Armenian Academy of Sciences with Kushnaryov, 1945–8. In 1951 he began taking part in folklore expeditions around Armenia and in 1955 he completed his dissertation at the conservatory on Armenian neumatic (*khazer*) notation. He joined the staff of the Institute of Arts in 1956 and was appointed professor in 1962 at the conservatory, where he also served intermittently as head of the music theory department until 1991. He was made an Honoured Representative of the Arts of Armenia in 1961. He participated in many congresses both within and outside the former Soviet Union, and was highly regarded as a teacher.

As a leading Armenian musicologist, Atayan had broad interests which included Armenian peasant and urban folklore, medieval monody and the music of Komitas, for which he compiled and edited the complete works in eight volumes (Yerevan, 1960–98). In the course of his work, Atayan systematized folklore elements (such as typology, genre, mode and dialect); he also examined the stylistic

evolution, the structure and the issue of 'authenticity' of Komitas's compositions. Atayan's belief in the unity of the theory, history and ethnology of Armenian culture has informed his research into the legacy of Ekmalian and Tigranyan, whose works were published under Atayan's guidance. As a composer, Atayan showed a preference for vocal genres, including solo and choral songs, based on national themes and rhythms and arrangements of medieval monody.

SVETLANA SARKISYAN

Atehortúa (Amaya), Blas Emilio (*b* Santa Helena, Antioquia, 22 Oct 1933). Colombian composer. In 1956 he entered the Escuela de Bellas Artes in Medellín and joined the Medellín SO as a violinist. In 1959 he moved to Bogotá to study at the Conservatory of the National University with Olav Roots (conducting), Fabio González Zuleta (composition) and José Rozo Contreras (orchestration). He studied composition at the di Tella Institute, Buenos Aires (1966–8), where he was influenced by Ginastera, Xenaxis, Nono and others. On returning to Colombia (1969) he taught in Tunja, Popayán, Medellín and Ibagué and directed the Conservatory in Bogotá (1973–8). In 1992 he went to teach at Duchesne University, returning to Bogotá in 1994. In 1995 he settled in Bucaramanga. He teaches at the Universidad Industrial de Santander.

Atehortúa's compositions, some of which were commissioned or have won national and international prizes, amount to over 190 opus numbers. From his time at the di Tella Institute he experimented with serialism and electronic music while conserving neo-Classical tendencies. At the same time his music acquired a strong regional feeling, helping to create a Colombian musical identity. Although his traditional counterpoint can resemble Vivaldi, Mozart or Haydn, he comments on rather than imitates European culture. His intensely lyrical chromaticism and rhythmic complexity reveal that the main influence in his music, besides Ginastera, is Bartók.

WORKS
(*selective list*)

VOCAL

Choral: Cantico delle creature (St Francis), op.29, Bar, double chorus, wind, perc, 1965; Apu Inka Atawalpaman (Elegía americana), op.50, S, T, B, chorus, orch, 1971; Elegía para un adios en enero (R. Groot), op.73 no.1, SATB, 1978; Tiempo-Americandina (cant., A. Bello, M.A. Asturias, R. Gallegos and others), op.69, S, nar, chorus, orch, 1978; Simón Bolívar (P. Neruda, J. Martí, S. Bolívar and others), op.95, T, actors, children's vv, SATB, orch, 1980; Kadish, op.107, male chorus, winds, timp, str, 1981; Elegía de septiembre (P. Barba Jacob, M. Meijía Vallejo), op.121, nar, SATB, orch, 1983; Requiem del silencio (G. Cano, R. Lara Bonilla), op.143, SATB, orch, 1987; Cristoforo Colombo, T, boys' chorus, SATB, orch, 1991

Songs (1v, pf): 2 canciones (Barba Jacob), op.11, 1961; Canción del viento (L. de Greiff), op.148 no.1, 1988; Canción de Sergio Stepansky (de Greiff), op.18 no.2, 1988

INSTRUMENTAL

Orch: Tríptico, op.6, 1960; Conc., op.12, timp, orch, 1963; Obertura simétrica, op.17, 1962; Estudio sinfónico, op.36, 1968; Cántico y cántico funebre, op.48, 1971; Soggetto da Vivaldi, op.71, 1977; Brachot, op.109, 1982; Elegía sinfónica para Ginastera, op.125, 1983; Musica d'orchestra para Béla Bartók, op.135, 1985; Concertante antifonal, op.182, 1996

Chbr: Wind Qnt no.1, op.2, 1959; Str Qt no.2, op.9, 1961; Camara musica, vn, hn, vc, perc, pf, 1964; 3 preludios, op.44 no.1, gui, 1970; Str Qt no.4, op.87, 1979; Septimino, fl, ob, cl, vn, vc, pf, perc, op.93, 1980

Pf: Suite no.2, op.19, 1963; Fantasía y toccata op.41 no.1, 1970; 4 piezas líricas, op.148 no.3, 1988

El-ac: Sonocromías op.31, 1966; Syrigma 1, op.30, 1966; 4 danzas para una leyenda quajira, op.45, 1970

ELLIE ANNE DUQUE

Atempause (Ger.: 'breath-break'). Usually a breathing-pause indicated by a superscript comma. *See* LUFTPAUSE.

A tempo (It.: 'in time'). An instruction to return to the previous tempo after a deliberate deviation.

Ath, Andreas d' (*fl* 1622–30). Flemish composer and organist. The title-page of his first publication shows that in 1622 he was chaplain and organist of the collegiate church of St Paul, Liège. From 17 October 1623 he held a benefice at Liège Cathedral. On the title-page of his volume of 1626 he is described as chaplain of the cathedral, and he is mentioned in documents in the cathedral archives dated 4 August 1628 and 20 April 1630. He was replaced as beneficiary before 1639. As a composer he is known by two books of motets, *Prolusiones musicae*, for two to five voices and continuo (Douai, 1622, incomplete), and *Tomus secundus Prolusionum musicarum*, for three to six voices and continuo (Douai, 1626). They are similar on all counts. Ath was brought up in the polyphonic tradition, but he included continuo parts and made each voice equally important. The motets begin with strict imitation and continue with freer imitative textures. The motifs are generally short,

and there are some roulades, often in dotted rhythm. As a disciple of the Jesuits he took special care over the correct accentuation of the words. His works most probably influenced those of Hodemont and the young Du Mont.

JOSÉ QUITIN

Athanasian Creed. *See* CREDO.

Athanasiu-Gardeev, Esmeralda (*b* Galaţi, 1834; *d* Bucharest, 1917). Romanian composer and pianist. She studied in Bucharest, then in Paris with Julius Schulhoff (piano and composition) and in St Petersburg with Anton Rubinstein (composition). She was married briefly to Vasile Hermeziu, then to the Russian General Gardeev, who introduced her to European aristocratic circles (many of her works are dedicated to King Charles I of Romania and members of the aristocracy) and, in particular, to the salons of George Sand, Nicolò Rubini, Sophie Menter, Camillo Sivori, Vasile Alecsandri, Grigore Ventura, Dumitru Kiriac-Georgescu, Anton Rubinstein and others. At the end of the Romanian War of Independence (1877–8), she settled in Bucharest, teaching the piano, singing and the guitar. Her music was inspired by Romanian folklore, which in turn influenced Rubinstein (*The Demon* and *Sulamith*); her *Rumänisches Charakterstück* op.44 is dedicated to him.

WORKS
(*selective list*)

Choral: Imn [Hymn], mixed chorus

Songs: 3 Lieder, op.33 (J. von Eichendorff, O. Roquette, A. Wernherr); Collection de chansons, 7 bks, opp.35–41: op.35 (F. von Schiller, H. Heine), op.36 (Heine), op.37 (J.W. von Goethe), op.38 (Heine, Goethe, N. Lenau), op.39 (V. Alecsandri, D. Bolintineanu), op.40 (J.-J. Rousseau, Athanasiu-Gardeev, V. Alecsandri), op.41 (V. Alecsandri); Si tu m'aimais, op.46 (Athanasiu-Gardeev)

VIOREL COSMA

Athenaeus (*b* Naucratis, Egypt; *fl c*200 CE). Greek grammarian and encyclopedist. He settled in Rome at the beginning of the 3rd century CE. None of his works has survived except the *Deipnosophistai*, a vast compendium in 15 extant books, probably written after 192 CE. Its generic form is that of the literary symposium; as a species, it deals with antiquarian lore rather than such 'higher themes' as philosophy. Its main topic is food; the mock-academic title, often translated as 'The Sophists at Dinner', properly describes specialists whose learning centres tirelessly upon the joys of the kitchen. The work is not, however, a cookery book.

Many characters engage in this marathon after-dinner conversation; they include representatives of every profession thought to be consequential, among them musicians, both professional and amateur. It has been rightly noted that the diverse themes are related to the banquet itself with but indifferent success. The unified structure of Plato's *Symposium*, like its wit, has no parallel in the miscellaneous learning of Athenaeus. When his speakers turn their attention to music, what they say has frequent, and sometimes unique, value for the historian of ancient music (especially in books i, iv, xiv and xv).

Almost at the outset (14b–d), Athenaeus interprets the function of bards in Homer as didactic: for him they are sober teachers of morality, not entertainers. A long section on instruments (174a–185a) contains valuable information: after a description of the hydraulis or water-organ (174a–e), the author considers the varieties of aulos and its popularity among the Greeks 'of the olden time' (176f–182e, 184d–f). The aulos is discussed further in a much later passage (616e–618c) containing especially valuable literary quotations. There follows an extensive and highly important section on the ethical and educational aspects of music (623f–638e). It embodies long passages (624c–625e) taken from the writings of an anonymous Academic theoretician from Heraclea in Pontus, a figure of the 4th century BCE usually given the name 'Heraclides Ponticus'. Most notably, he maintains that there were only three modes, corresponding to the broad national characteristics of the Dorians, Aeolians and Ionians. The claim at the end of this section that 'a mode must have a specific character (*ēthos*) or feeling (*pathos*)' sounds like a distorted version of Aristotle's comment in the opening passages of the *Poetics* (1447a28), perhaps including also the favourite *ethos–pathos* distinction made by later rhetoricians. A notable reference follows (628c) to the Damonian theory of singing and dancing as consequences of the soul's motion. He also mentions Pythagoras's belief in music as the binding principle of the cosmos (632b–c).

Athenaeus's claim to literary eminence is that of a compiler. He salvaged from oblivion more than 10,000 lines of Greek verse, including some of the finest surviving fragments of the lyrics of Sappho and Alcaeus. The great number of citations and comments concerning Hellenic and Hellenistic music has secured for him an unquestioned place among the valued later sources.

WARREN ANDERSON/THOMAS J. MATHIESEN

Athens (Gk. Athínai). Capital of Greece. It is the country's main musical centre. Its role in the overall development of Greek music is discussed in GREECE, §III.

1. Musical education. 2. Concert halls. 3. Orchestras, choirs and chamber music. 4. Opera.

1. MUSICAL EDUCATION. The 1994 *Panellinios odhigos odheion* lists 156 private conservatories, conservatory branches and music schools in Athens and its suburbs. The most important ones, in chronological order, are: the Odheion Athinon (Athens Conservatory), established in 1871 and the oldest institution of its kind in mainland Greece. Since 1979 it has been partly funded by the government. It contains a small concert hall; the Odheion Peiraïkou Syndesmou (Piraeus League Conservatory),

founded in 1904; the Ellinikon Odheion (Hellenic Conservatory), founded in 1919 by Kalomiris, which has 16 branches in Athens; the Ethnikon Odheion (National Conservatory), founded in 1926, also by Kalomiris, with 34 branches in Attica; the Athens Orpheion, founded in 1962 as a music school and a conservatory since 1967; the Attikon Odheion (Attica Conservatory), founded in 1967 as the Athens Music School and a conservatory since 1976; the Apolloneion Odheion (Apollonian Conservatory), founded in 1972; the Athenaeum Conservatory, founded in 1974. Since 1975 it has organized the annual the Maria Callas International Competition. It contains a small concert hall; the Nikos Skalkottas Conservatory, founded in 1981; the Philippos Nakas Conservatory, founded in 1981, and containing a small concert hall and a recording studio; and the Moussiki Etaeria Athinon (Athens Musical Society), founded in 1993 under the composer Yannis Ioannidis. The music department of Athens University, founded in 1991, is rather orientated towards Orthodox church music and ethnomusicology.

2. Concert halls. The largest auditoriums in Athens are the ancient Odheion Herodou tou Attikou (Theatre of Herodes Atticus), constructed in AD 160–70 with a capacity of 5000 and since 1955 associated with the Athens Festival; and the modern amphitheatre on Lycabettus Hill, constructed in 1965 (cap. 4000) and in recent years used mainly for pop concerts. A third open-air theatre in Piraeus, Veakeion (cap. 1986), inaugurated in 1969, is used for opera, theatre, ballet, concerts and folk ensembles. Since 1991 the Megaro Moussikis Athinon (Athens Concert Hall) has either promoted or housed most of the city's winter concert activity. The other Athenian concert halls are, in order of capacity: the Pallas auditorium, (cap. 1750), which houses some of the concerts of the Athens State Orchestra; the Olympia Theatre, formerly an open-air theatre, which houses the Ethniki Lyriki Skini (National State Opera), with a seating capacity of 952; the Athens College auditorium in Psychiko (cap. 830), inaugurated in 1982; the Piraeus Dhimotikon Theatron (city Theatre) (cap. 700), inaugurated in 1895 for concerts, theatre and occasional opera performances; the Parnassus Hall (cap. 600), founded in 1865 and used for recitals and chamber concerts; the hall of the Ethniki Pinakothiki (National Gallery), completed in 1976 and, until the construction of the Athens Concert Hall, used for radio concerts and other events. It is still occasionally used as a concert venue; the new Athinaïko Dhimotiko Theatro (Athens City Theatre), near Nea Smyrni, inaugurated in 1989 with a capacity of 470; the auditorium of the Athens French Institute (cap. 437), opened in 1976; the auditorium of the Athens Goethe Institut (cap. 350); the auditorium of the Hellenic-American Union (cap. 200); and the auditorium of the Istituto Italiano di Cultura (cap. *c*150).

3. Orchestras, choirs and chamber music. The city's oldest established orchestras are the Athens State Orchestra (1942), which grew out of the Athens Conservatory RSO (1894), and the Athens SO (1938). More recent orchestras include the Orchistra ton Chromaton ('Orchestra of Colours'), founded in 1989 by Manos Hadjidakis; the Camerata of the 'Friends of Music' Society, founded in 1991 by the conductor Alexandros Myrat and based in the Athens Concert Hall; and the Athens City SO, founded in 1996 under the conductor Eleftherios Kalkanis and based at the new Athens City Theatre.

The three principal choirs in Athens are the chorus of the National Opera, the Radio Chorus and Fons Musicalis, founded in 1989, which performs mainly at the Athens Concert Hall. Chamber music has always been a marginal feature of Athens musical life. Ensembles based in the city have included the Athens Trio (1933–55), the Hellenic String Quartet, later named the Georgios Lycoudis Quartet (founded 1952), the Athens String Octet (1961–9), the Hellenic Woodwind Quintet (1963–80), the Nikolaos Mantzaros Wind Ensemble (founded 1978), the sextet Symmolpa (1985–8) and the Skalkottas String Quartet (founded 1989), later the New Hellenic Quartet. The last three groups have been especially active in the promotion of contemporary Greek music.

4. Opera. It is difficult not to consider the foundation of the Ethniki Lyriki Skini (National Opera) as a branch of the National Theatre during Metaxas's dictatorship (1936–41) as one aspect of an attempt to control the artistic and mass media. It was inaugurated in 1940 at the Olympia Theatre with *Die Fledermaus*; four years later it became independent, under Kalomiris's directorship. It now has a virtual monopoly of opera production in Greece and operates as part of the ministry of culture. Promising young singers have often preferred to make their careers abroad, mainly in Germany; many return as guests. The Olympia Theatre, rebuilt several times, has traditionally been the company's home; its main season runs from November to May. The repertory is restricted by the dimensions of the building, with its narrow stage and small pit; there are 433 stalls seats, with a further 519 in two tiers of boxes and galleries. By the late 1990s the company had staged over 170 works. The average season consists of six operas and two operettas (usually including a popular Greek one). The repertory is conservative, with the emphasis on Verdi and Puccini, although contemporary Greek works have been increasingly performed since the early 1990s.

For bibliography *see* Greece, §III.

George Leotsakos

Atherton, David (*b* Blackpool, 3 Jan 1944). English conductor. After studying at Cambridge (1962–6), the RAM and the GSMD, he was appointed by Solti to the staff of Covent Garden in 1967. A year later he made his début there in *Il trovatore*, and served as resident conductor until 1980. He made his début at La Scala in 1976 and at the San Francisco Opera in 1978. From 1968 to 1973 and from 1989 to 1991 he was music director of the London Sinfonietta. Atherton was music director of the Royal Liverpool PO from 1980 to 1983 and from 1983 to 1986 its principal guest conductor. From 1980 to 1987 he was music director of the San Diego SO, a tenure marred by controversy. He became principal guest conductor of the BBC National Orchestra of Wales in 1984, and was principal guest conductor of the BBC SO from 1985 to 1989, when he was appointed music director of the Hong Kong PO and also founded the Mainly Mozart Festival in San Diego. In 1991 he conducted at Covent Garden the first London staged performance since World War II of Meyerbeer's *Les Huguenots*.

Atherton's early career, in particular, was marked by an enthusiastic commitment to new music. Notable first

performances include Tavener's *The Whale* (1968), Birtwistle's *Punch and Judy* (1968), Crosse's *Grace of Todd* (1969), Iain Hamilton's *Voyage* (1971) and Henze's *We Come to the River* (1976). He has edited and recorded Schoenberg's complete works for chamber ensemble, and has recorded works by Janáček, Mozart, Schubert, Stravinsky, Weill and others with the Hong Kong PO, Berlin RSO and major British orchestras. Among Atherton's finest achievements on disc are his powerful, cogent readings of *Punch and Judy* and Tippett's *The Ice Break* and *King Priam*, the latter drawing particular praise from the composer.

CHARLES BARBER, JOSÉ BOWEN

Atherton, Michael (Jeffrey) (*b* Liverpool, 17 Feb 1950). Australian performer and composer, of English birth. After studying English at the University of New South Wales (1969–77) he worked as a solo and ensemble player on a wide range of medieval, Renaissance and Baroque string, wind and percussion instruments; he also specialized in folk instruments from a variety of countries. This instrumental ability led him to work with cross-cultural groups such as Sirocco, Southern Crossings (a world music quartet founded by Atherton in 1986), and Ariel (a quartet founded in 1995 to explore new music for shakuhachi, didjeridu, percussion and electronics); he has toured and lectured widely with these groups in Australia and abroad. He has also worked as a music therapist, and was curator of instruments at the Australian Museum in Sydney (1993 and 1998). In 1993 he was appointed foundation professor of music at the University of Western Sydney, Nepean. His interests include urban ethnomusicology, organology and Korean music. His work as a composer, arranger and improviser includes film scores, and choral and chamber works.

PATRICIA BROWN

Athesinus, Leonardus. *See* LECHNER, LEONHARD.

Athos, Mount. Semi-autonomous monastic 'republic' comprising numerous Greek and other Christian monastic communities. It is located on a peninsula of the same name, east of Thessaloniki in northern Greece; the peninsula is also known as the 'Holy Mountain' (*Hagion oros*) or the 'Garden of the All-Holy Virgin'. Since the Middle Ages, and especially since the fall of Constantinople in 1453, Athos has been an important centre for Byzantine chant. A number of notable musicians and composers worked there, including Joannes Koukouzeles, who lived near Lavra in the 14th century, and many important manuscripts were produced in its monasteries. The Athonite monastic communities are now unusual in their adherence to the regular recitation of the Byzantine Offices.

1. History. 2. Organization. 3. Manuscripts.

1. HISTORY. Because of its isolation and semi-desert nature, Athos is an ideal monastic site. Monasteries were first established there in the 9th century (references to earlier foundations are unsubstantiated). Great Lavra, the oldest continuously inhabited monastery, was founded in 963 by St Athanasius of Athos with the support of the Byzantine Emperor Nicephorus Phocas. The number of subsequent foundations grew rapidly; there are references (perhaps exaggerated) to some 180 monastic settlements in the 11th century and close to 300 by the early 13th century. Later, however, the number of monasteries diminished. In the early 13th century crusaders conquered Constantinople and many monasteries lost their property and suffered economic decline. In the early 14th century Athos was ravaged by Catalan soldiers, and for over 20 years in the middle of the century it was a part of the Serbian Empire. During this century, too, the monks were sharply divided by the theological controversy over the views of Gregory Palamas.

From about 1430 Athos submitted to the Turks, who granted the area internal autonomy but taxed it heavily. By the end of the 16th century the number of 'ruling' monasteries had been established at 20 (see §2 below). In 1783 Athos obtained its sixth constitution which, with some minor modifications, is still in effect. With the disintegration of the Ottoman Empire in the Balkan War of 1912, Greece assumed the responsibility for maintaining the traditions of Mount Athos.

A Greek Academy (school for monks) was established under the Turks in about 1749 but abolished after barely ten years; it reopened only in 1953 (an earlier attempt in 1930 failed), and besides the monks, orphans are educated there, in the hope that some may later become monks themselves. The Athos monks have never been exclusively Greek: at one time there was a Latin monastery of Amalfitans; the monastery of Iviron was founded by Georgians from the Caucasus; and there are Russian, Bulgarian, Serbian and Romanian monks. Since the mid-17th century the monastic population of Mount Athos, which once probably exceeded 12,000, has diminished considerably: in 1905 there were about 7500 monks (Russians constituting almost half, with slightly fewer Greeks, and the rest made up of other nationalities), but fewer than 1300 in 1968, of an average age between 55 and 60.

2. ORGANIZATION. Athos resembles a confederation: each monastery sends a delegate to the 'Holy Community' (*hiera koinotēs*), the highest ruling body, which acts like a parliament. Daily affairs are administered by an executive 'Holy Epistasia' (*hiera epistasia*) of four members; each monastery is represented in the Epistasia one year in five, and the *prōtepistatēs* or head of the Epistasia must come from one of the five 'great' monasteries, Lavra, Vatopedi (Batopediou), Iviron (Ibērōn), Chilandari(ou) and Dionysiou.

Besides these five monasteries, the 'ruling' monasteries are, in order of rank rather than age, Koutloumousi(ou), Pantocrator (Pantokratōr or Pantokratōros), Xiropotamou (Xēropotamou), Zografou (Zōgraphou), Dochiariou (Docheiariou), Karakalou, Philotheou, Simonopetras, Agiou Pavlou (Hagiou Paulou, St Paul), Stavronikita (Stauronikēta), Xenofontou (Xenophōntos), Grigoriou (Grēgoriou), Esfigmenou (Esphigmenou), Agiou Panteleimonos (Hagiou Panteleēmonos, Panteleimonos, Rossikon) and Ko(n)stamonitou. These monasteries comprise at least a *katholikon* (main church), additional chapels and quarters for monks and servants. Besides the ruling monasteries there are communities termed *skētes* and *kellia*, and solitary hermitages. A *skētē*, juridically a dependency of a monastery, lacks the rank of the latter but is for practical purposes identical to it; it may, indeed, be more populated than the monastery to which it

'belongs'. A *kellia* (cell) is a small settlement with a chapel or chapels. Some monasteries have a cenobitic organization, where no monk has personal property and meals are taken communally; others are idiorhythmic (a system introduced in the 14th century), where monks may even receive salaries and eat mostly in their own quarters.

The Offices are recited in full: an Athonite monk spends eight hours daily in their recitation, eight hours at work and eight hours at rest. In this and other ways Mount Athos is a relic of the Middle Ages. Time is reckoned in the ancient way: the day begins at sunset, with midnight regarded as the sixth hour of the day; all the monasteries except Vatopedi adhere to the Julian ('old style') calendar, rejecting the Gregorian calendar as an innovation of Rome. The custom, attested since the 10th century, of refusing any female (even female animals) access to Athos is still maintained.

3. Manuscripts. Approximately 12,000 manuscripts survive in the Athonite monasteries. Catalogues (see Stathēs) and recent research suggest that approximately 2000 are music manuscripts, most of which date from the 16th century and later, but about 200 are from the period between the 10th century and the 15th and constitute an important source of evidence for the evolution of Byzantine musical style and notation as well as that of the liturgy (see Stathēs). The present manuscript holdings do not represent the entire corpus of those written at Mount Athos, however. There have been losses: the library of Simonopetras was completely destroyed by fire in 1891, and that of the *skētē* of St Andrew in 1958 (the fire of 1966 at Vatopedi spared the library). 50 manuscripts originally from Lavra are now in the Biblioteca Laurenziana, Florence, and 70 others in the *fonds Coislin* of the Bibliothèque nationale, Paris. Maxim the Greek took many Athonite manuscripts to Russia; in 1654 A. Sukhanov, a Russian merchant, bought 504 manuscripts from Athos, and of these some 400 came into the possession of the Synodal Library in Moscow (148 of them from Iviron). Further Athonite manuscripts are now in the British Library, London, and among the manuscripts of the Bibliothèque nationale, Paris (suppl.gr.). The Russian archimandrite Porphyry Uspensky (later Metropolitan of Kiev) not only stole complete manuscripts but also cut initials and miniatures from others.

The largest library is that of Lavra, with approximately 2000 manuscripts, of which about 600 were written before 1500. They include some of the earliest Byzantine music manuscripts, the well-known heirmologion B32, and two triōdia, Γ12 and Γ67, all of which date from the 10th century. 11th-century manuscripts include Γ72 and Γ74, and a partly notated fragment from the euchologion, Δ11. There is a late 13th-century heirmologion, Δ35, and a large group of akolouthiai anthologies of the 14th and 15th centuries, of which the most complete and sumptuous is E173, written in the 1430s by Raidestinos. Most of these manuscripts appear to have been written on Athos. A few leaves from Γ67, one bearing a 10th-century list of neumes, were torn off and taken to Chartres in 1840 (see Strunk, 1955). Two folios from the heirmologion B32 are in St Petersburg (Thibaut, no.371).

The triōdion 1488 of Vatopedi is published in facsimile in the series Monumenta musicae byzantinae (*Principale*, ix, 1975). Vatopedi has several beautiful and well-notated 13th-century stichēraria and at least three interesting heirmologia (1531, 1532 and 1529), as well as an unknown number of akolouthiai. A late 12th-century heirmologion from Iviron (470), was the first of its type to be published in facsimile in Monumenta musicae byzantinae (*Principale*, ii, 1938). Other heirmologia from Iviron include 1101 and 1259; there are numerous stichēraria and akolouthiai (as in nearly every other library) awaiting investigation. Of the akolouthiai at Iviron, the most interesting is perhaps the voluminous autograph of Manuel Chrysaphes (1120) dating from 1458. Esfigmenou has an 11th-century heirmologion (54) and an 11th-century triōdion (53). Pantocrator has several manuscripts deserving study (208, 214 etc.). Dionysiou has at least one curious heirmologion (95); the Serbian monastery of Chilandari has two early Slavic manuscripts (307 and 308; facs. in MMB, *Principale*, v, 1957). The collections in Philotheou, Karakalou and Koutloumousi are known only in part.

Manuscripts outside Athos of Athonite origin include the collection of Uspensky, described by Thibaut, and the *fonds Coislin*, briefly described by Gastoué. The latter includes the well-known 12th-century heirmologion Coislin 220.

MILOŠ VELIMIROVIĆ

Atienza y Pineda, Francisco de (*b* ?*c*1657; *d* Puebla, Mexico, March 1726). Mexican composer, probably of Spanish birth. He became a priest, and by 1695 ranked among the leading musicians at Mexico City Cathedral. In 1710 he officially protested against the selection of Zumaya as substitute for the ailing choirmaster Salazar, noting that he himself was considerably older than Zumaya, and indeed had substituted for Salazar in 1703. He departed soon after for Puebla, where he won the post

of *maestro de capilla* on 15 January 1712, serving until his death. The Biblioteca Palafoxiana there contains texts of 12 sets of villancicos printed between 1715 and 1722 (and an undated one) and sung at Puebla Cathedral with music composed by Atienza. His surviving liturgical compositions reveal a skilled composer with a fluent command of polyphonic techniques. He adhered to the Spanish tradition in generally employing the *prima pratica*.

ALICE RAY CATALYNE

Atis. *See* ATYS.

Atkins, Sir **Ivor (Algernon)** (*b* Llandaff, 29 Nov 1869; *d* Worcester, 26 Nov 1953). English organist, composer and editor. After instruction from his father and C. Lee Williams, Atkins became a pupil and assistant of G.R. Sinclair at Truro and Hereford, and was appointed organist of Ludlow parish church in 1893. In 1897 he became organist of Worcester Cathedral, retiring in 1950, having directed the Worcester Three Choirs Festivals from 1898 to 1948. He revived the festivals after World War I and was knighted in 1921. Though he was not a gifted conductor, the programmes of the Worcester Festivals under him showed considerable breadth of taste, and it was at his insistence that Elgar's *The Dream of Gerontius* was performed in 1902. His own *Hymn of Faith* was given in 1905 and revived in 1993.

Atkins produced (with Elgar) an English-language edition of Bach's *St Matthew Passion*, and (alone) of Bach's *St John Passion*, Brahms's *German Requiem* and Debussy's *La demoiselle élue*. Though no longer acceptable, the treatment of Bach's recitative in relation to the English Bible marked an important stage in the appreciation of Bach's Passion settings in England. Atkins also edited Bach's *Orgelbüchlein* and Mendelssohn's organ sonatas. He took the Oxford DMus in 1920, was elected a Fellow of the Society of Antiquaries in 1921 and was Worcester Cathedral librarian from 1933 to 1953.

WATKINS SHAW

Atkins [Atkinson], **John** (*d* London, bur. 12 Feb 1671). English violinist and composer. He became one of the king's band of violins in 1660 and served until his death early in 1671. His widow Sarah (whom he had married in 1639) was in receipt of his back pay for several years thereafter. Although John Playford did not publish any of his songs, several, mostly drinking-songs, survive (in *GB-Lbl* Add.29396, *F-Pn* Rés.2489, *US-NYp* Drexel 4275 and particularly Drexel 4041). One source, Drexel 4041, may have originated close to the composer as one of a circle of musicians having connections with the City of London. The fact that it is an important source of pre-Commonwealth playsongs could indicate that the composer was a theatre musician; his settings of Davenant's *This lady ripe and fair and fresh* may have been made for the original production of *The Just Italian* (1629; one of four songs by Atkins in *English Songs, 1625–1660*, MB, xxxiii, 1971). Possibly he was the principal copyist of two collections of consort music: the manuscripts *F-Pn* Rés.F.770 and *US-R* ML96.L814f which is signed 'J.A. 1661 Octo: ye 11th'. Some instrumental pieces attributed to him also survive (*Ob* Mus.Sch.D.220, 1654).

IAN SPINK

Atlanta. American city, capital of Georgia. Concert life in Atlanta probably began in February 1858 when Sigismond Thalberg, assisted by Henry Vieuxtemps, brought his Grand Concert to the recently completed Athaeneum Theater. Opera appeared for the first time in October 1866 when Max Strakosch and the Ghioni and Sussini Grand Italian Opera company opened the Bell-Johnson Hall (cap. 600) with *Il trovatore*, *Norma*, and *Il barbiere di Siviglia*. The next month the Grover Opera Troupe staged an operatic concert, and in 1868 Grau's German Opera Company presented excerpts from various operas, followed by the McCulloch Opera Troupe with performances of *Il barbiere di Siviglia* and *Don Pasquale*. Demand for a better theatre prompted the Belgian Consul Laurent DeGive to build DeGive's Opera House (cap. 1200); in 1873 he increased the seating to 2000. During the 1870s Italian opera performances dwindled, supplanted by a succession of British opera companies, who presented a few of the stock Italian favourites in English. English operetta appeared in 1879 with *HMS Pinafore*. Several concert organizations were founded during this period, most importantly the Mozart Club (1867), the Beethoven Society (1872) and the Rossini Club (1876). The city gained its first professional musician when Alfredo Barili moved there in 1880. Barili organized Atlanta's first music festival in the autumn of 1883, when he oversaw the première of five major symphonic works in the city during the three-day festival. The first week of February 1889 saw Atlanta's first week-long operatic festival when the Emma Abbott Company staged eight operas, including *Faust*, *Norma*, *Il trovatore* and *Martha*. Increasingly

frequent visits by major companies and concert artists continued throughout the final years of the century.

The year 1901 brought the first visit by singers from the Metropolitan Opera House under Maurice Grau, which included conductor Walter Damrosch, soprano Emma Eames and contralto Ernestine Schumann-Heink. The Atlanta Music Festival Association was established in 1905. It organized music festivals in 1907 and 1909, and supported the construction of a city auditorium and the installation of a 77-stop Austin organ, which was inaugurated under Percy Starnes for an audience of 7000. Enthusiasm for the highly successful music festivals finally resulted in annual tours by the Metropolitan Opera, beginning in 1910 and featuring such stars as Caruso, Geraldine Farrar and Louise Homer. From 1911 to 1923 Atlanta was the only city outside the North-east to which the Metropolitan toured. The annual visits continued, with a few interruptions, until the company ceased national tours after the 1986 season.

The Atlanta Music Club was formed in 1915 to enrich the city's musical life by sponsoring noted artists in recitals. Primarily a women's organization, the club continues its vital role of supporting the community's artistic life. It was instrumental in the establishment of the Atlanta SO, the Choral Guild of Atlanta (1940) and other groups, as well as providing music scholarships for talented young people.

Early attempts to establish a symphony orchestra proved frustrating. In 1923 the first organization to bear the title the Atlanta SO was formed, with 60 players drawn from the Howard and Metropolitan theatre orchestras under the direction of Enrico Leide. In 1944 the Atlanta Music Club founded the Atlanta Youth SO by the merging of two school orchestras, under the Chicago conductor Henry Sopkin. Two years later the group began adding professional players and changed its name to the Atlanta SO. Sopkin gradually built the group into a competent semi-professional ensemble until his retirement in 1966.

An air crash in Paris on 3 June 1962 took the lives of more than 100 leading Atlanta art patrons, who were commemorated with the construction of the Memorial Arts Center (later renamed the Robert W. Woodruff Memorial Arts Center). The largest of its four performance halls is Symphony Hall (cap. 1762), the first permanent home of the Atlanta SO; the complex also houses an art school and the professional Alliance Theater. A decision was made to upgrade the orchestra to full professional status and Robert Shaw was engaged as music director. For his first season in 1967 the orchestra numbered 87 musicians. Shaw founded the Atlanta SO Chorus and under his direction the orchestra and chorus grew into one of the nation's finest. When Shaw retired in 1988 he was succeeded by Yoel Levi.

Atlanta continues its thriving choral and organ tradition, mainly in its many churches, which contain some notable organs, especially the magnificent Flentrop organ at St Ann's Episcopal and the large Aeolian-Skinner at St Philip's Cathedral. Virtually all of the universities, colleges and junior colleges provide some musical instruction. The most important is Georgia State University (24,000 students), where the School of Music has 450 music majors taught by a staff of nearly 70 faculty members. Its new Rialto Theater (cap. 1200) has become the finest medium-sized concert hall in the area. Emory University also contributes to Atlanta's concert life with its Flora Glenn Candler concert series. Two predominantly black colleges, Spelman and Morehouse, also provide advanced music training programmes. The Georgia Academy of Music, a private institution, has enjoyed noteworthy success in teaching music to children. Other prominent musical groups include the Atlanta Boy Choir, the Pro-Mozart Society and the Atlanta Festival Singers, the finest small ensemble in the region. Several chamber groups enjoy widespread recognition, notably the Atlanta Chamber Players and Thamryis, which specializes in contemporary music.

Opera in Atlanta experienced the same difficulty as the Atlanta SO in establishing itself. Productions in the Memorial Arts Center began in 1968 with the American première of Purcell's *King Arthur*. Two ambitious professional companies emerged in the mid-1970s: the Atlanta Lyric Opera (1976) and the Music Theater Guild of Atlanta (1974), which became Georgia Opera in 1977, when it moved to the Woodruff Arts Center and added an orchestra. In 1979 the two companies merged to form the Atlanta Civic Opera. Financial problems plagued the company and both directors left by 1984. The following year the company was reorganized with William Fred Scott as conductor and artistic director, under whom Atlanta Opera has become the largest operatic organization in the South-east.

N. LEE ORR

Atlantic. American record company. It was founded in New York by Herb Abramson and Ahmet Ertegun (*b* 1923), both jazz and blues enthusiasts, in 1947, primarily to issue African American music; it achieved considerable commercial success with recordings of musicians whose work encompassed jazz, blues, and rhythm-and-blues. Ertegun's brother Nesuhi (1917–89) joined the organization in 1955, and supervised artists and repertory for the LP catalogue; around the same time the company established a new label, Atco, which was chiefly devoted to popular music. During the late 1950s and early 1960s the company made significant recordings marking the emergence of the free jazz style, but by the middle of the decade it was primarily known for soul music; in 1966, at the height of the company's success in this field, it founded the Vortex label for the release of jazz records. During this period Atlantic and its subsidiaries recorded many significant artists: the singers Lavern Baker, Ray Charles, Ben E. King, Esther Phillips, Wilson Pickett and Otis Redding; the vocal groups the Coasters, and the Drifters; and the jazz musicians Lennie Tristano, Lee Konitz, Charles Mingus, the Modern Jazz Quartet, John Coltrane, Ornette Coleman, Keith Jarrett and Chick Corea. It also presented gospel groups and important white popular musicians, including Bobby Darin and Sonny and Cher.

In 1967 the company was bought by Warner Bros., which in turn was purchased two years later by the Kinney Corp.; Ahmet and Nesuhi Ertegun, however, continued to direct Atlantic. With the emergence of Aretha Franklin, further recordings by Redding and Pickett and such new artists as King Curtis, Roberta Flack and the Temptations, Atlantic became one of the most significant labels in soul music. It also gained a huge presence in rock with

recordings by international groups including the Bee Gees, Buffalo Springfield, Cream, Crosby, Stills and Nash (and Young), Led Zeppelin, the Rolling Stones, Yes, Genesis and AC/DC. Its prominent jazz artists included Keith Jarrett, the Modern Jazz Quartet and Manhattan Transfer. While Ahmet Ertegun remained directly in charge of Atlantic, Nesuhi moved in 1971 into the position of president and chief executive officer of the conglomerate WEA (Warner Brothers-Elektra-Atlantic); in 1985 he became its chairman and co-chief executive.

Atlantic remained a leading popular music label in the 1990s through such singer-songwriters as Tori Amos and Jewel and rock groups including Stone Temple Pilots and Hootie & the Blowfish. Corporate reorganization also gave Atlantic a presence in classical music when it took over US distribution of the European labels Teldec, Erato and Finlandia with recordings by Nikolaus Harnoncourt, Daniel Barenboim and others. In country music, an Atlantic Nashville division was set up in 1991 with a roster including Rickie Skaggs and John Michael Montgomery. The label was now less prominent in black music, although it issued recordings by Anita Baker and the gospel star Bebe Winans.

BARRY KERNFELD, HOWARD RYE, DAVE LAING

Atlantic Symphony Orchestra. Orchestra based in HALIFAX (ii), formed in 1968 as a merger between the Halifax SO and the New Brunswick SO.

Atlantov, Vladimir (Andreyevich) (*b* Leningrad [now St Petersburg], 19 Feb 1939). Russian tenor. The son of an opera singer, he graduated from Bolotina's class at the Leningrad Conservatory in 1963, and had further training as a student-artist (1963–5) at La Scala opera school. He won the 1966 Tchaikovsky and the 1967 Sofia international competitions. In 1963 he made his début at the Kirov Theatre, and in 1967 he joined the Bol'shoy. His voice is full and ample, but capable of great beauty and delicacy; he has a strong temperament and a gift for character portrayal. His roles include Hermann, Vladimir (*Prince Igor*), Alfredo and Don José. He has toured in Europe, Canada and Japan, and was made People's Artist of the RSFSR in 1972. He made his Covent Garden début in *Otello*, one of his most famous roles, in 1987, and sang Canio there in 1989. Atlantov made his US début, as Canio, at San Francisco in 1990. He has also toured extensively as a concert singer. His recordings include Hermann, Lensky, Andrey Khovansky (*Khovanshchina*) and Canio.

I.M. YAMPOL'SKY/R

Atlas, Dalia (*b* Haifa, 17 Nov 1933). Israeli conductor. She studied the piano at the Rubin Academy of Music in Jerusalem, and subsequently studied conducting in Europe and the USA with Franco Ferrara, Celibidache, Hans Swarowsky and Boulez. From 1954 to 1960 she taught piano at the Rubin Academy of Music. Atlas won several international conducting awards, including the Dimitri Mitropoulos Competition (1964), the Leopold Stokowski Prize (1978) and the Eugene Ormandy Award (1980). In 1981 she was appointed associate professor and director of musical studies at the Technion in Haifa. She is the founder and principal conductor of the symphony orchestra and choir of Technion, the Israel Pro Musica Orchestra and the Atlas Camerata. She has also appeared as a guest conductor with the RPO in London, the Royal Liverpool PO and the Stockholm PO, among others. Atlas has given the first performances of works by the Israeli composers Amy Maayany and Zvi Avni, and has recorded Stravinsky's *The Firebird* and Symphony in E♭, works by Vaughan Williams, Bloch and Josef Suk, as well as her own orchestral arrangements of Schubert's String Quintet and Mendelssohn's Octet.

MICHAL BEN-ZUR

Atnaḥ. Cantillation sign marking the end of a half-verse in Hebrew EKPHONETIC NOTATION. *See also* JEWISH MUSIC, §III, 2(ii).

Ato [Hatto] **episcopus Trecensis** (*fl* 1123–45). Ecclesiastic and composer. He was Bishop of Troyes from 1123 to 1145. He is credited with the composition of six polyphonic pieces for two voices in the Codex Calixtinus (*E-SC*; *see* SOURCES, MS, §IV). They are a versus, *Nostra phalanx plaudat leta*, the soloists' portion of four responsories from the Matins and 2nd Vespers of St James's Day and Translation (with a *prosa* for the *neuma* or melisma of the last one), and the soloists' portions of the gradual from Mass on that day.

DAVID HILEY

Atonality. A term that may be used in three senses: first, to describe all music which is not tonal; second, to describe all music which is neither tonal nor serial; and third, to describe specifically the post-tonal and pre-12-note music of Berg, Webern and Schoenberg. (While serial music is, by the first definition, atonal, it differs in essential respects from other atonal music and is discussed in the articles SERIALISM and TWELVE-NOTE COMPOSITION; it is, therefore, not considered here.)

1. RELATIONS BETWEEN TONALITY AND ATONALITY. An important aspect of tonality is the way in which pitches are contextually defined so that each particular definition of a given pitch yields a different tonal function. A G which is the root of a G major triad, for example, has a different function or meaning from that of a G which is the 3rd of an E♭ major triad. Such a definition is, in turn, further refined by larger musical contexts, and the roles of rhythm, register, dynamics and timbre in tonal music are closely related to, and interactive with, the definition of tonal functions.

Atonality may be seen roughly to delimit two kinds of music: (1) That in which there is no such contextual definition with reference to triads, diatonic scales or keys, but in which there are, nonetheless, hierarchical distinctions among pitches. This category would include some of the works of Schoenberg, Stravinsky and Hindemith. The inadequacy of theories of tonality in dealing with this music lends support to such a classification. (2) That in which such hierarchical distinctions are not so explicit,

though sometimes present. This includes some of the pre-serial music of Webern, Schoenberg and, to a lesser extent, Berg.

The usual attitudes concerning atonality and its development are vague and misleading. It is often said that tonality developed to a point of complexity where it was no longer possible to determine contextual definition as described, and tonal functions were therefore abandoned. This attitude has a basis in reality but is a simplification which obscures essential issues. Two compositions near either side of the imagined border between tonality and atonality, Liszt's *Sonetto del Petrarca no.104* from the second book of *Années de pèlerinage*, and Skryabin's Prelude op.74 no.3, shed light on this question.

It is not difficult to determine tonal contextual definition in the opening measures of the *Sonetto* (ex.1). The F♯ dominant 7th chord at the downbeats of bars 1, 4 and 5 serves as a dominant to the B dominant 7th in bar 5, which is in turn the dominant of E in bar 7. In the opening bars of this composition, however, the diminished 7th chord plays a fundamental role as a referential collection through the use of different interpretations of that chord. The chords at the upbeats to bars 1, 2, 3, 4 and 5, and at the fourth quaver beats of bars 3 and 4, are all enharmonically equivalent forms of the initial diminished 7th collection B♯, D♯, F♯, A, which is transformed into the dominant 7th chord C♯, E, F♯, A♯ on the downbeat of bar 1. In that bar the F♯ octave moves to G as an upper neighbour, at which point another diminished collection is implied: C♯, E, G, (B♭). The sequence is repeated at successive minor 3rd transpositions until in bar 4 an octave transposition of the F♯ dominant 7th chord of bar 1 is reached. All pitches in bars 1–4 are thus enharmonically equivalent members of one of two diminished 7th collections. While it is useful to observe that these measures prolong the dominant of the dominant of E major, the actual method of prolongation is most easily understood in relation to the enharmonically undefined diminished 7th collections 0, 3, 6, 9 and 1, 4, 7, 10 (with 0 denoting C or B♯, 1 denoting C♯ or D♭, etc.). The absence of a key signature further emphasizes the non-diatonic nature of the passage.

The opening of Skryabin's Prelude op.74 no.3 provides an interesting counter-example (ex.2). The music is not tonal in the senses described above or in the sense of the Liszt composition. It is not clear that any note is defined as a member of a major or minor triad, or that the passage is using notes of some major or minor scale. There is a 'dominant 7th chord' embedded in bar 2, but this does not seem to function as a dominant of D major or minor. On the other hand a special aspect of this passage is that all notes except G♯ in bar 1 and D in bar 3 belong to one of the diminished 7th collections A♯, C♯, E, G and B♯, D♯, F♯, A; and Skryabin's spelling is consistent with this view. The 'dominant 7th chord' in bar 2 is thus understood as a conjunction of members of these two collections. In bar 3 the tritone transposition of the right hand of bar 1, against the untransposed bass, results in the appearance of the same collection as in bar 1 since the diminished 7th collection is invariant under transposition by a tritone, The G–A♯ succession in the middle register in bars 2–3 also emphasizes the unfolding of a diminished 7th collection.

In response to the above attitude concerning the development of atonality, it would seem safe to say, rather,

Ex.1

that tonality developed new ideas, which then lost some of their association with older concepts, and in doing so gained more independent status as compositional determinants. The diminished 7th chord in the music of Mozart, for example, most often acts as a tonicizing agent, with the two tritones resolving in contrary motion to a major or minor triad, but in the Liszt piece this is not

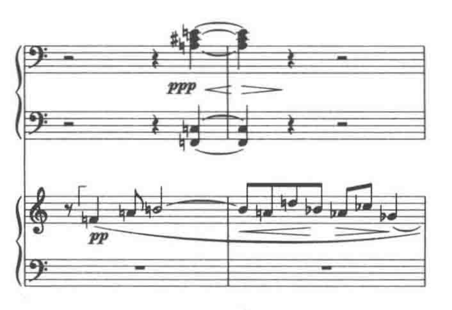
Ex.2

so clearly the case, in that the chord seems to have some significance as a referential collection, and in the Skryabin it certainly functions in a completely different way.

In as much as notation reflects compositional thinking, it is interesting to observe the expanded denoting of key signatures in the late 19th and early 20th centuries as a kind of musical barometer. The point of a key signature in the music of Debussy, for example, is often only to delimit a pitch-class collection – usually the whole or part of a diatonic scale – rather than to prescribe a diatonic scale with the implied functional associations of tonic and dominant triads, consonance and dissonance, and so on, as in the notation and music of Liszt. On the other hand, the key signature of four sharps in Schoenberg's Chamber Symphony op.9 serves more to indicate that an E major triad will function in some hierarchically significant way than to delimit a scale. The first pages of the composition are, in fact, so full of symmetrical collections, such as the whole-tone scale and the augmented triad, that the key signature serves virtually no practical purpose. In the fourth movement of Schoenberg's Second Quartet op.10 the convention of a key signature is abandoned. Schoenberg commented upon this work as follows (as quoted by W. Reich in *Schoenberg*, London, 1971, p.31):

> there are many sections in which the individual parts proceed regardless of whether or not their meeting results in codified harmonies .... The key is presented distinctly at all the main dividing points of the formal organization. Yet the overwhelming multitude of dissonances cannot be balanced any longer by occasional returns to such triads as represent a key.

The concept of atonality thus evolved as various components of tonality lost the high degree of interdependence they had formerly possessed.



An important aspect of late 19th-century music lies in a set of relatively abstract ideas about what music is and can be: a referential sonority (the triad) as the basis of a musical language; a motif as a compositional tool; the progress and unfolding of a musical composition as something defined by the transformation and development of motivic, contrapuntal and harmonic ideas; the concept of closure; significant relations between discrete parts of a musical composition; and the hierarchic superiority of certain specific pitches or configurations of pitches in a given composition.

The first composers whose music might be defined as atonal were trained in the traditions of 19th-century tonality, and their music reveals, in one way or another, the profound influence of these concepts, as may be exemplified by the opening of the second of Schoenberg's Five Orchestral Pieces op.16 (ex.3 is taken from Webern's two-piano reduction).

A succession of simultaneities between the two right hands unfolds transpositions and inversions (of interval content) of the same referential sonority: in bar 1, (A, D, G♯), (F, C, G♭); in bar 2, (A♭, D♭, G), (G, C, G♭), (E, B, F). The significance of the D–A dyad is emphasized by its role in the first movement, where the trichord D, A, C♯ is sustained as a pedal for most of the movement, and by the octave doubling in bar 1 of ex.3 and the retention of the D–A dyad for the first three bars. An important motivic idea here is a three-note melodic cell consisting of some kind of 2nd and some kind of 3rd. (In the opening of the first movement the cellos play the line (E, F, A, G♯, A, C♯) which consists of several interlocking versions of this cell.) The first three bars form a phrase unit defined by the new rhythmic and registral placement of the

Ex.3

descending minor 3rd (G♯–F in bar 1; A♭–F in bar 3), and the rest on the first beat of bar 4. The concept of a musical language as inferred from tonality thus extends deeply into atonality and forms a significant basis for the development of new ideas.

2. Differences between tonality and atonality. Although an attempt has been made to indicate the ways in which tonality developed into atonality and the similarities between the two, there are also significant differences. As has been noted, one of the remarkable aspects of tonality is the high degree of interdependence between the various dimensions of a composition, such as pitch, rhythm, dynamics, timbre and form. In atonality the functional relations between these dimensions are not clearly defined. The concept of a suspension in tonality, for example, embodies a conjunction of rhythmic and harmonic ideas, but the body of atonal works offers no similar operation as a general procedure. Comparisons of this sort have given rise to a second prevalent attitude concerning atonality: that its processes do not extend beyond the boundaries of a given composition. Again, this attitude is not entirely without basis but is highly oversimplified. As understanding of tonality is aided by the existence of a relatively highly developed theory, while no such assistance exists for atonality, the former is perceived as a more highly unified musical language than the latter. Atonal works do, however, have properties in common, but the manifestations of these properties are very different. Examples may be taken from two compositions in which, as in exx.1 and 2, the diminished 7th collection has some structural significance: the first movement of Bartók's Music for Strings, Percussion and Celesta, and the opening of Varèse's *Density 21·5* for solo flute.

Ex.4 is the theme of the 'fugue' that opens the Bartók work. The voices of the fugue make their entries at

successive perfect 5ths alternately above and below the original entry until, in bars 26 and 27, F♯ and C are

Ex.4

reached, a major 13th above and below the original entry. The F♯ and C are members of the same diminished 7th collection as the initial A. They are doubled at the octave to emphasize their structural significance, and they initiate a more complex process of development which culminates in bar 56 where an E♭ (the pitch class at which the two diverging cycles of 5ths meet, and the remaining member of the diminished 7th collection A, C, E♭, F♯) is reached. The linear structure of the theme is relevant to the large-scale structure of the movement. The first two phrases span A–E♭, an interval of the diminished 7th collection; the third and fourth phrases span B–E and B♭–E♭, respectively. Thus a tritone, an interval which figures in the large-scale structure, is outlined by the first and second phrases, and also by the third and fourth phrases together. The span of the entire theme is a perfect 5th, anticipating the second statement on E. At bar 65, after E♭ is stated in several octaves, the literal inversion of the theme is introduced, and at the end of the movement (ex.5) a

Ex.5

simultaneous statement of the second phrase of the theme and of its inversion, both beginning on A, telescopes structural aspects of the movement in the unison A and octave E♭, and in the statement of all 12 pitch classes, a totality implied by the succession of fugal transpositional levels, and created by any two adjacent fugal entries.

Ex.6 contains the first large phrase of Varèse's *Density 21·5*. The number 0, 1, or 2, inserted below each note, shows the diminished 7th collection to which that note belongs: 0 denotes the collection on C, 1 that on C♯ and 2 that on D. Except for the Fs in bars 1 and 3, all notes in bars 1–10 belong to the 0 and 1 collections. These bars seem, in addition, to prolong the 1 collection since the 0 collection appears less frequently and with less rhythmic emphasis. The opening F–E–F♯ motif is special in that it contains one member of each collection. Bar 9 represents an important structural point: it is the loudest moment in the piece so far; the initial rhythmic figure returns, but with new and more emphatic articulation; an octave has been spanned from the lowest note so far and, since the 1 collection is now represented on the first semiquaver of this figure, a kind of 'modulation' occurs. The repetition of D♭–C in bars 9 and 10 delays the arrival of D (dynamically emphasized) until the downbeat of bar 11, thus prolonging a transposition of the initial motif. In bars 11–13 there are successive prolongations of the 2 and 0 collections, and a final return to the initial 1 collection. The B♭–E dyad in bars 13–14 contains the remaining members of the 1 collection as it appeared in its first salient statement in bar 2.

Ex.6

In both the Bartók and the Varèse a governing structural principle is the symmetrical partition of the octave through the diminished 7th collection. But the compositional procedures are very different and the respective results could hardly be more dissimilar.

3. The atonality of Schoenberg, Berg and Webern. Many of the atonal compositions of Berg, Webern and Schoenberg use procedures and concepts such as those discussed in relation to Schoenberg's op.16 no.2. Just as tonality yielded concepts which were reinterpreted for use in atonality, so the interactions between the various aspects of the atonality of Berg, Webern and Schoenberg yielded new concepts which eventually became relevant to serialism. A fundamental development was the elimination of hierarchical pitch-class distinctions, typified in tonality by entities such as the major scale. This led to the use of all 12 pitch classes within smaller time spans. Webern's Bagatelles for string quartet, for example, emphasize the unfolding of 12-note collections through a reduction of pitch and pitch-class repetition, and by very careful and precise attention to the articulation and orchestration of individual pitch classes (ex.7). The extreme brevity of each of the Bagatelles is a consequence of this approach.

The sense of octave relations as manifested in tonality undergoes a radical transformation in a composition such as the Bagatelles. Clearly defined octave relations would shift the focus away from an unfolding of the 12 pitch classes. This thinking strongly influenced the development

Ex.7

of the 12-note system where the collection of 12 pitch classes plays a fundamental role. (The meaning of an octave relation in this music differs profoundly from that in the Bartók and Varèse examples quoted above. In the latter compositions the octave has significance as a boundary, framing its symmetrical divisions – the whole-tone scale, the diminished 7th collection, the augmented triad, the tritone and the cycles of 5ths and semitones – and octave intervals may thus signify the culmination of a process of development or a common feature of different subdivisions.) In this sense one motivic idea of the Bagatelles is a tendency towards the unfolding of 12-note collections. In general the concept of a motif in this music merges into a much broader background encompassing the rhythmic and instrumental textures.

The atonal works of Berg, Webern and Schoenberg employ a wide variety of procedures and techniques for securing musical coherence. It is only necessary to compare Schoenberg's *Erwartung* with his Six Little Piano Pieces op.19, for example, to see, on the one hand, a large-scale unfolding of complex and varied pitch relations, and on the other, a small, detailed and precise expression of specific and simple musical ideas. The evolution to the 12-note system and serialism was guided mainly by a tendency to subdue traditional hierarchical pitch distinctions and to emphasize the use of ordered, or partially ordered, collections of pitch classes, or motifs, to generate chords and lines. Eventually the former tendency, in its encouragement of the use of 12-note collections, merged with the latter to become Schoenberg's 12-note system.

4. THEORETICAL ISSUES. In the latter half of the 20th century, three theories of organizational structures in atonal music emerged and became influential in musicians' perceptions and understanding: (1) normative structures based on symmetry, from George Perle; (2) pitch class set theory, from Allen Forte; and (3) transformational networks, from David Lewin. The last two are influenced by the premises of twelve-note theory given by Schoenberg and later expanded on by Babbitt. Each theory, while decidedly non-tonal in approach, defines relationships that have priority over others and govern successions of notes, in ways that are at least remotely analogous to the hierarchies of tonality.

These three theories share some general principles; in particular, two interpretations of melodic and harmonic events in atonal music have proven seminal. The first stems from the recognition that the referential sonorities in atonal music are not triads and that the organization is no longer based on tonal function and the hierarchical organization of key centres. Notes freed from tonal obligations have come to be regarded as enharmonically equivalent and functionally indistinguishable, and generalized into 12 pitch classes. In principle, any group of pitch classes can occur in a chord, melody or combination, and these note-groups may succeed each other without the dependent relationships of tonality. The second interpretation in atonal music is a focus on intervals rather than pitches for relating note-groups. With this change in orientation have come changes in the way intervals are described: they are no longer divided into 'consonant' and 'dissonant' categories; intervals are named by the number of semitones they contain, rather than by their tonal names; and equivalences of intervals related by octaves (defined as 12 'pitch class intervals'), and even by octave complements (those that add up to an octave, defined as six 'interval classes'), are asserted. Thus, rather than talking about pieces being in keys, writers describe pieces as having intervallic tendencies among non-triad note-groups.

Without the organizing force of a tonic key note and hierarchical grouping and voice-leading between triads, new criteria for classification and relationships among note-groups have also developed: (1) collectional or order equivalence, where a note-group is recognizable as a categorized 'collection' when presented in any order, which may include horizontal or vertical; (2) transpositional equivalence, where a note-group is not differentiated functionally from transpositions of itself; (3) inversional equivalence, where a note-group is not differentiated functionally from inversions of itself; and (4) symmetry as a structural property, with mirror symmetry, symmetrical collections (those in which inversions are equivalent to transpositions) and interval cycles acting as alternatives to the chord progressions and voice-leading of tonality. All these criteria relate to 'invariance', a central concept in which some aspect of a note-group – either pitch, pitch class, interval or interval class – is retained following some operation.

Many writers have codified the possible collections available by various intervallic successions, initially as 'scales' for compositional resources and later as lists of equivalent note-groups. The traditional equivalence operations are transposition and inversion, where, for instance, the note-groups C–E♭–G and A–C–E (transposition) and C–E♭–G and C–E–G (inversion) are considered equivalent. A later addition is equivalence under 'M' or multiplicative operations, where 'M5'- or 'M7'-related collections – for example C–C♯–D and C–F–B♭ at M5, with exchanged interval class 1 and 5 values – are considered equivalent. Such lists and criteria are often defined using numbers and mathematical relationships, with C = 0, C♯/D♭ = 1, … A♯/B♭ = 10, B = 11 (10 and 11 are also notated variously as 't', 'e'), with transposition expressed as addition and inversion as subtraction, and even with geometrical shapes and equations (see O'Connell, 1962, and Roeder, 1987). Some notational conventions are: (1) {x, y, z} ({C, E♭, G}) for unordered collections of pitches or pitch classes, that is, those in which order is not considered an identifying feature; (2) <x–y–z> (<C–E♭–G>) for ordered collections of pitches or pitch classes, that is, those in which order is an identifying feature; and (3) [xyz] ([037]) for a set class, an equivalence class of all unordered pitch class collections related by transposition or inversion to a representative note-group, here {C, E♭, G}.

(i) Symmetry. A letter from Berg to Schoenberg (27 July 1920), in which Berg outlined his interest in interval cycles and symmetry, is the strongest source evidence for symmetry being an organizing force in atonal music (as asserted by Perle). Perle has described symmetrical procedures in tonal music as 'windows of disorder' which become 'windows of order' in atonal music.

In reference to music principally by Berg and Bartók, but also by Schoenberg, Webern, Stravinsky, Skryabin and others, Perle describes 'normative' elements that underlie the surface in similar ways, stemming from the symmetry of the 12-note equal-tempered collection, which act as priority elements among other 'reflexive' or local elements in pieces. This symmetry is manifested as interval cycles (e.g. '3-cycles' of <C–E♭–F♯–A>, <C♯–E–G–B♭>

and <D–F–A♭–B>) and cyclic collections (e.g. {C, E, F♯, A♭} as a collection from the complete whole-tone collection {C, D, E, F♯, G♯, A♯}), and in inversional complementation (e.g. <*c′–e′*> as the complement or mirror pair to <*d–f♯*> around axis note *a*: <*d–f♯–*[*a*]*–c′–e′*>).

Symmetry results not only from the division of musical space into equal-division pitch space, resulting in 'mirror symmetry' and an 'axis' of symmetry, but in a more general sense from relationships among collections of pitch classes (e.g. <C–E> and <D–F♯> expressed numerically as <0–4> and <2–6>, then related by the sum of complementation 6, from 0+6 [C+F♯] and 4+2 [E+D]: Babbitt's term for this sum is 'index number'). Different symmetrical bases can combine, with pitches or pitch classes lying both inside and outside the prevailing symmetrical system(s), or acting as transitions to some new cyclic aspect of the system, allowing for a hierarchy of symmetrical and non-symmetrical notes. Where it occurs, symmetry is thus in a constant state of interruption and regeneration, tension and release, somewhat analogously to tonal stability and instability by motion away from and back to a tonic key.

The principal elements of symmetry are: (1) voice-leading and registral motion by interval cycles, where composition can be motivated to fill gaps within cycles, span cyclic intervals, transpose or invert cycles, or change to different cycles; (2) cyclic collections as a harmonic basis, either from pure cycles or cycles with added 'dissonant' notes (e.g. a whole-tone collection plus an added note C, <F–E♭–D♭–A–C–B>, from the beginning of Berg's String Quartet op.3), with procedures such as transposition to different cycle forms, changes or reinterpretation in cyclic basis (e.g. <C–C♯–D–E> as a 1-cycle <C–C♯–D> collection plus E reinterpreted as a 2-cycle <C–D–E> collection plus C♯), and opposition and reconciliation of cyclic bases; (3) embedded cyclic collections functioning within larger note-groups, which are influenced by the intervallic properties of the interval cycle; and (4) a structural role for symmetrical note-groups, with their transpositional or inversional invariances, and axes of symmetry or pitch class sums of complementation. Such sums are identified by Perle as 'keys' and used to relate different pieces, such as the sum 9 relationship pairing E/F, E♭/F♯, D/G, D♭/G♯, C/A and B/B♭ (in numbers, 4/5, 3/6, 2/7, 1/8, 0/9, 11/10 (mod 12)) between the first movements of Berg's Lyric Suite and Bartók's Fourth String Quartet.

(ii) Pitch class set theory. Pitch class set theory, as set out principally by Forte, establishes a theoretical context in which pitches are grouped into pitch class sets, which are then further categorized into set classes equivalent under transposition and inversion. Set classes are labelled by cardinality, placement within a list ordered by interval class content and prime form (e.g. set class 4–1 [0123] indicates four notes, e.g. {C, C♯, D, D♯}, with its interval class 'vector' of <321000> identifying three interval class 1s, two interval class 2s etc., placed first in the list of four-note set classes, and with a prime or most compact form [0123]). Set classes grouped or 'segmented' in analyses of pieces are related to each other in several ways: in 'literal' relationships two sets share pitch classes; in 'abstract' relationships two sets share interval classes. Two other relationships are the 'complement' of a set, which may be a literal complement consisting of the remaining pitch classes or the abstract complement consisting of the set class of the remaining pitch classes, and a 'Z-relation', in which two set classes of the same cardinality have the same interval class vector but not the same prime form (e.g. [0137] and [0146], both with vector <111111>).

The organization of atonal pieces is interpreted by a hierarchical network relating as many set classes as possible to a central 'nexus' set – a set, usually a hexachord, that shares the greatest number of interval class relationships with surrounding sets and their complement sets. Two types of network exist: (1) a 'K' network, which results when, among two set classes of different cardinalities, S and T, and their complements S′ and T′, S is a subset or superset of either T or T′; and (2) a more exclusive 'Kh' network, yielding a smaller number of related sets, which results when set class S is a subset or superset of both set classes T and T′.

Many writers have expanded on pitch class set theory to show the 'normative' elements that result from the 12-note equal-tempered system: (1) the equivalent invariance properties and intervallic structures of complementary sets, where interval class vector entries differ by the difference in cardinalities (e.g. given set class 3–1 {C, C♯, D} vector < 210000> and complement 9–1 {D♯, E, F, F♯, G, G♯, A, A♯, B} vector <876663>, 876663 – 210000 = 666663, with the interval class 6 entry halved due to its invariance); (2) the tendency of hexachords to be nexus sets; (3) the presence of Z-related pairs of sets; and (4) the similarity of relationships, sharing pitch class and interval class content, between pitch class sets, usually expressed as percentages in a scale of 0 to 1. These 'normative' structures provide a context for the 'reflexive' elements of individual pieces. *See also* SET.

(iii) Transformational networks. Lewin's focus has been on the spans between musical events rather than on the events themselves – durations rather than attacks, intervals rather than pitches. These spans, called 'intervals' in a more generalized sense, are regarded as active rather than passive, transformational rather than simply measurable or classifiable, ordered in time and space, and interpretable according to relative, rather than absolute, criteria. By combining defined musical spaces ('S', e.g. pitch), a group of mathematical operations (IVLS, e.g. the addition of semitones), and defined mappings of objects on to one another by specific *intervals* (a function 'int' mapping *s* on to *t*, e.g. transposition), Lewin's analytical apparatus, the Generalized Interval System (GIS), can encompass aspects of many existing theories of atonal and tonal music. The successive *intervals* transforming one object through a succession of other objects are displayed in transformational networks, which are internally ordered and logical, and to varying extents independent of the objects being transformed.

In practice, Lewin's analyses are governed by several premises. Like Perle, Lewin defines intervals both as differences (transpositions) and sums (inversions). Inversion is described in terms of inversional 'balance', manifested as either pitch axes or pitch class sums that group surrounding notes (e.g. the axis A/B♭ groups note pairs A/B♭, G♯/B, G/C, F♯/C♯, F/D and E/E♭. The completion of either a pitch-inversional dyad in register or of a pitch class-inversional pair is often a compositional premise. Intervals are regarded as having tendencies to propagate themselves as transpositional or inversional levels. Lewin allows for the equivalences of pitch class set theory, and combines transposition and inversion within

the same set as 'Klumpenhouwer networks' (e.g. <A–F♯–B> with interval 2 <A–B> transposed to <A♭–B♭>, and interval <A–F♯> symmetrically expanded at sum 3 to <A♭–G> to yield <A♭–G–B♭>), analogous to Perle's combinations of sum and difference relationships in the 'cyclic sets' that are the basis of his 12-note tonality. Analytically, Lewin stresses pitch relationships with registral extremes or boundary notes as significant elements.

Noteworthy in analytical commentary from Lewin's approach are the following: aggregates and aggregate completion; instances of symmetrical pitch inversion as more 'audible' realizations of pitch class inversional complementation; axis notes of inversion occurring as adjacent notes in a series; and ordered relations among symmetrically related notes. The point of the analysis is often to relate as many collections as possible by a similar set of transformations – particularly to show that different collections, whether symmetrical or asymmetrical, adjacent or divided on the surface by register, have similar transformational relationships – and in this way to demonstrate the underlying unifying principles that connect the first note to the last in a passage. A transformational scheme is valued for including virtually every note, and is validated by recurring 'motivic' pitch registral connections on the surface and in relation to other movements.

5. CONCLUSION. Atonality thus roughly delimits a wide range of compositional practices whose only features are the absence of the normative and interrelated procedures of tonality and of the basic concept of serialism. It remains to be seen to what extent atonality is a useful or relevant musical category. The tendency of historical criticism to construct systems of classification which attempt to index individual entries as neatly and unambiguously as possible has certainly been frustrated so far. The individuality of the contributions of Schoenberg, Stravinsky, Bartók, Webern, Berg and others ultimately transcends and trivializes such attempts, if it does not contradict them.

PAUL LANSKY, GEORGE PERLE (1–3, 5), DAVE HEADLAM (4, bibliography)

Aṭrash, Farīd al- (*b* al-Qrayya, Syria, 18 Oct 1915; *d* Beirut, 26 Dec 1974). Syrian singer, composer, *'ūd* player and film actor and producer. In 1924 political circumstances forced his family to move to Egypt. His mother, the noted singer 'Aliyya al-Munther, taught him singing in the Syrian style. He studied the *'ūd* (lute) at the Cairo Institute for Arab Music. His professional work began as an *'ūd* player and singer at the national radio station and in Badī 'a Maṣabnī's variety show saloon.

In 1941, through his sister ASMAHĀN, he entered the cinema industry, and for the rest of his life was involved in films as a composer, singer actor, and producer. His singing of Syrian *mawwāl* (popular songs), tangos and rumbas achieved great popularity, and his work laid the foundations for Arab variety show films, cinematic operetta, orchestral musical overtures and comic and sad songs. His 31 films are mostly autobiographical and provide valuable insight into the role of the musician in society.

His skilful solo *'ūd* playing moved listeners to ecstasy. He combined abstract conceptualism with a deep understanding of the instrument's artistic traditions, and was widely imitated. In 1962 he received a prestigious Turkish award for his playing.

He composed songs many of which were inspired by the emotional difficulties and health problems which he suffered, and instrumental pieces (some for dance performances by his lover Sāmīa Gamāl). Influences were his mother's Syrian songs, the Lebanese composer Farīd Ghuson, and the Egyptian composers Zakariyyā Aḥmad, Muḥammad al-Qaṣabjī and Muḥammad 'Abd al-Wahhāb (the latter also being a rival). He wrote for famous female singers (Asmahān and others) and some songs achieved fame in Europe. He headed the Association of Egyptian Songwriters and Composers for many years, and received numerous medals from all over the Arab world.

He promoted Arab nationalism and held Syrian, Lebanese, Egyptian and Sudanese nationalities. He suffered several strokes (the first aged 37) and eventually died from a heart attack.

SAADALLA AGHA AL-KALAA

Atrio, Hermanus de. *See* HERMANUS DE ATRIO.

Attacca (It.: 'attack', 'begin'; imperative of *attaccare*). A direction, usually found at the end of a movement, signifying that the next movement is to be joined to the preceding without a pause. The term also appears in the form *attacca subito*, 'begin immediately'. In Baroque music a movement without a normal cadence on the tonic at the end implied an *attacca*.

GEORGE GROVE/R

Attacco (It.: 'attack'). An extremely brief fugue subject. The word was apparently first so defined by G.B. Martini in volume ii of *Esemplare, ossia Saggio fondamentale pratico di contrappunto* (1775), where it is contrasted with SOGGETTO, a fugue subject of medium or average length, and ANDAMENTO, a fugue subject of extended length. For an example of *attacco*, Martini offered a theme of only three crotchets and a quaver, and he suggested that contrapuntal treatment of such a subject might be freer than that of other, longer fugue subjects. Indeed, because few fugue subjects are this brief some later writers have employed the term principally in the context of point-of-imitation technique rather than of fugue itself. Martini's three terms found only limited use

outside Italy, but they have been included in every edition of *Grove's Dictionary* beginning with the supplement to the first edition, where they were treated at length by W.S. Rockstro.

PAUL WALKER

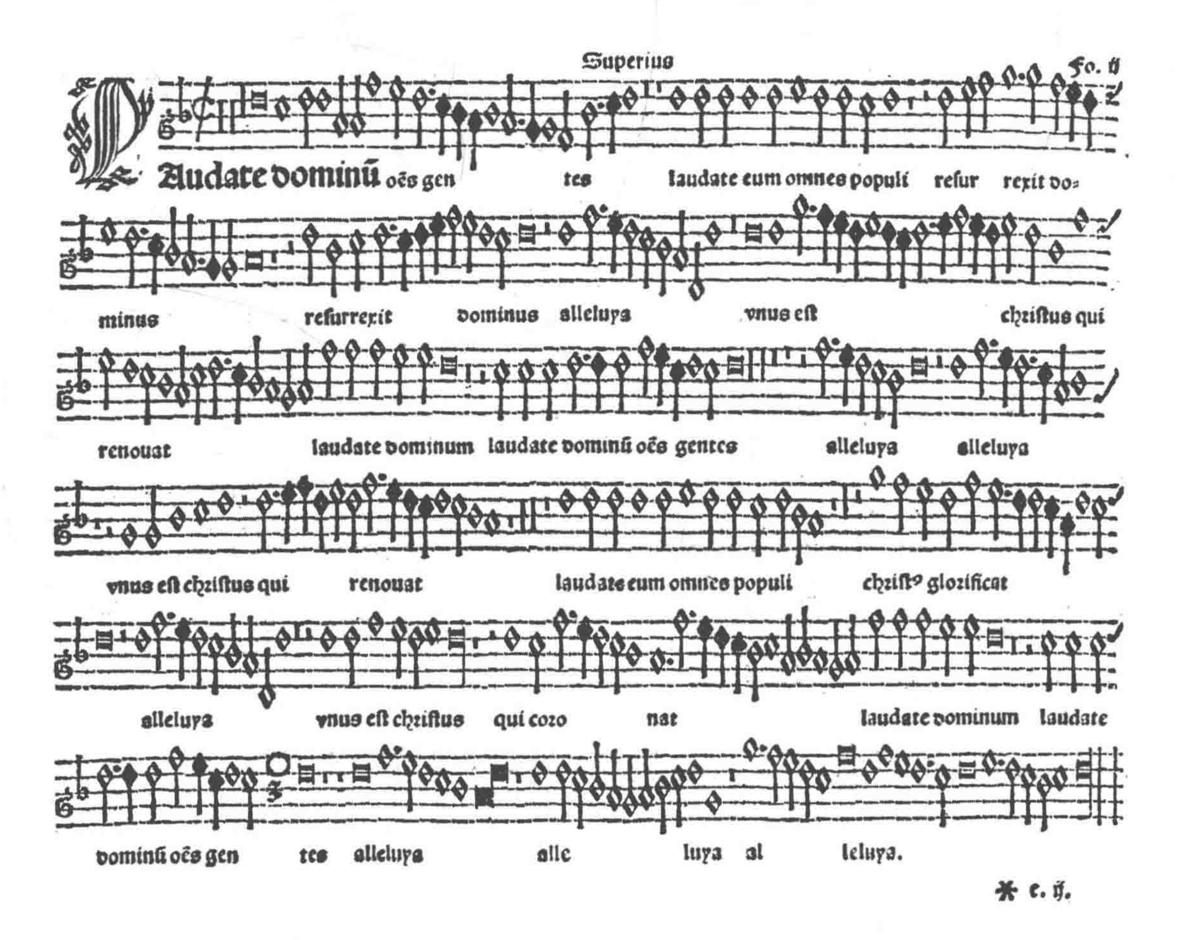
Attaingnant, Pierre (*b* probably in or nr Douai, *c*1494; *d* Paris, late 1551 or 1552). French music printer, publisher, bookseller, punchcutter and typecaster.

1. Life. 2. Publications.

1. LIFE. By a document notarized 13 January 1513/14 Attaingnant, described as a 'bookseller, living in Paris', leased a press to Jean de la Roche, reserving the right to print ecclesiastical pardons and the like, should he receive commissions. He may have gone from Douai to Paris originally with a chorister's scholarship for the Collège de Dainville, which was subject to the cathedral chapters of Arras and Noyon. This institution leased the part of its buildings on the rue de la Harpe to Philippe Pigouchet (*fl* 1490–1514), the printer-engraver famous for his Hours and the master to whom Attaingnant was probably apprenticed. Marriage to one of Pigouchet's daughters, Claude, made Attaingnant his heir. Another of Pigouchet's daughters, Germaine, was married to Poncet le Preux (1481–1559), one of the four 'grands libraires jurés' of the university, Master of the Printers' Guild and a prolific publisher of scholarly texts.

The earliest surviving book to bear Attaingnant's name is a Noyon breviary of 1525, the only book that he is known to have published in conjunction with Le Preux. Attaingnant continued to publish liturgical books for Noyon throughout his life as well as syllabuses for schoolboys. After experimenting with music types for several years he brought out the *Chansons nouvelles*, dated 4 April 1527/8. Within a year they were followed by at least seven other books in the same format. At this time he sought and obtained royal protection in the form of a privilege preventing others from copying the contents of his books for three years after printing. It specifically mentioned books 'tant en musique, jeux de Lutz, Orgues, et semblables instruments' which he had printed or at least planned. (These intentions were realized with the lute tablatures of 1529 and 1530 and the keyboard scores of 1531.)

When the protection covering his earliest music books began to run out in spring 1531, he sought a wider, six-year privilege covering 'messes, motetz, hymnes, chansons que desditz jeux de Lutz, Flustes et Orgues, en grans et petitz volumes'. The royal decree of 18 June 1531 granting this is printed in the first volume of folio masses (1532). Also in this volume is Attaingnant's dedicatory address to the Cardinal of Tournon, who was praised in a Latin poem, written by Nicolas Bourbon for the occasion. Each of the seven mass volumes was illustrated with a woodcut of the court hearing Mass by Oronce Finé, royal mathematician and cosmographer (fig.1). Further royal preferment was natural after the achievement represented by the folio masses – Tournon was a powerful statesman as well as titular head of the royal chapel. Hopes mentioned in the second privilege were also realized by



1. *French court at Mass: woodcut by Oronce Finé from 'Primus liber tres missas continens' (Paris: Attaingnant, 1532)*

the imposing 13-volume set of motets in quarto format brought out in 1534 and 1535. A 14th volume devoted to Manchicourt appeared in 1539 (fig.2).

In 1537, in addition to a renewal of his privilege, Attaingnant received the unprecedented appointment of 'imprimeur et libraire du Roy en musique'. The other royal printers were men of learning such as Robert Estienne. About the time of Attaingnant's nomination, he began to abandon the older text types for the italics and romans more in keeping with humanist tastes. In 1538 he took a partner, Hubert Jullet, husband of his daughter Germaine, with whom he jointly signed a portion of the firm's output from then until Jullet's death in 1545. After his wife's death in 1543, an inventory of the firm's extensive stock and equipment was made. Two years later Attaingnant married Marie Lescallopier. He witnessed a contract as late as 3 October 1551 but died before the end of 1552. His widow printed a few music books between 1553 and 1557, then restricted her publications almost exclusively to the scholarly commentaries of Léger du Chesne, the last of which appeared in 1567. In the general tax of 1571 she was levied 6 livres on the considerable fortune of 300,000 livres.

2. PUBLICATIONS. In Attaingnant's method of printing music the staff-segments and notes were combined, so that both could be printed in a single impression (fig.2; *see also* PRINTING AND PUBLISHING OF MUSIC, fig.8*a*). This process superseded the double- or triple-impression techniques required to produce Petrucci's expensive quartos and became the first international method of music printing. The reason was primarily economic, for it allowed the time and cost of production to be reduced by half, or more. The five music types Attaingnant used in his workshop (four for mensural notation, one for French lute tablature) seem to have been cut for his own use, since no other editions show them. A similar but more primitive method produced the music types used by John Rastell in his *Interlude*, which likely antedates the *Chansons nouvelles*. We may never know which of these two printers first thought of the new technique, but it is clear that Rastell's trials reached nothing like the scale of Attaingnant's production. An altogether different method that it gradually displaced was the printing of music from engraved woodblocks. This method, of which Andrea Antico was the foremost craftsman, had been mostly used in Italy (in Rome and Venice), but was also used in Lyons from about 1525 to 1528. Attaingnant at first followed the small oblong octavo format made popular by Antico in the 1520s, but from the mid-1530s oblong quarto became the norm for all his music publications.

The commercial success of the new method coincided with the flowering of the so-called Parisian chanson. The

2. Superius voice of Manchicourt's 'Laudate Dominum' from 'Liber decimus quartus XIX musicus cantiones' (Paris: Attaingnant, 1539), printed from type by single impression

leading chanson composers, Claudin de Sermisy, Clément Janequin and Pierre Certon, all in royal service of one kind or another, are very well represented in Attaingnant's collections, which diffused their works widely. The tastes and liberality of Francis I were decisive: his patronage effectively made Attaingnant the official printer of the king's music. With this development a major step was taken towards the highly centralized establishment that has characterized French musical life ever since. In compiling his extensive catalogue of sacred and secular publications Attaingnant opened the way, showing others not only how to print, but also what to print; for example, his 1546 publication of settings by Certon and Mornable of the psalms in Marot's translations, the first books of their kind, were harbingers of a wave of similar settings.

Attaingnant was the first music publisher to achieve a true mass production. The numbered series of chansons from his later years, for instance, ran to 36 volumes and many of these went through two or three editions. With press runs conservatively estimated at 1000 copies, the total number of chansons put on the market by Attaingnant alone reached a staggering figure. To sell in such quantity required outlets on an international level. These were facilitated through the publishing business of Le Preux, who had dealings with some of the large German syndicates and maintained depots in various centres. He is known to have held stocks of Attaingnant's music books and may have been responsible for their foreign distribution.

As far as is known, Attaingnant was not a composer; yet he must have been skilled enough to do his own editing. At least, no house editor was named until the very last years, when Claude Gervaise (*fl* 1540–60) was given credit for revising and correcting some books of ensemble dances (Gervaise continued to give editiorial assistance to Marie Lescallopier until 1558). The lutenist Pierre Blondeau may have had a hand in editing an early lute tablature (1529/30), in which some pieces bear his initials. The accuracy of editing was generally high, with the exception of the earliest works and some from 1550. Verbal corrigenda were sometimes used to point out errors, but more frequently cancel slips were pasted over the original to correct passages or even single notes. Concern for utility and practical convenience are evident in the listing of voice combinations in the index for the six- and eight-voice motets, and in the instrumentation indications for flutes or recorders or both in two chanson books of 1533.

For the most part, Attaingnant offered the public new and original works of French composers. The music of the generation before Francis I found scant place in his books; the same is true for composers outside France, with the exception of certain Franco-Flemish masters working in the Low Countries (such as Gombert, Lupi and Richafort) or in Italy (Arcadelt, Verdelot and Willaert). Although he pirated Antico's canonic duets of 1520 and borrowed occasionally from Moderne, later from Susato and even from Du Chemin, he was by contemporary standards quite scrupulous. Certainly he was more imitated by other printers than imitative of them. He was chiefly responsible for starting the vogue for printing two- and three-voice arrangements of four-voice chansons – one of the clearest examples of a vast repertory created at the behest of the publishing business.

With the accession of Henri II in 1547, Attaingnant's special position soon vanished. Several other printers also received royal privileges, a fact which may explain Attaingnant's frenetic burst of activity at the end, with its concomitant lowering of standards in printing and proofreading. After Attaingnant's death, the appointment of 'King's Music Printers' was granted to Le Roy & Ballard, who gradually re-established the near monopoly first held by Attaingnant.

DANIEL HEARTZ/LAURENT GUILLO

Attenhofer, Carl (*b* Wettingen, canton of Aargau, 5 May 1837; *d* Zürich, 22 May 1914). Swiss choral conductor and composer. He was a pupil of D. Elster and studied at the Leipzig Conservatory (1857–8) where E.F. Richter was among his teachers. After holding several minor teaching posts at Muri (1859), in 1863 he became director of music at Rapperswil, where his excellence as a choral conductor during a national singing festival in 1866 soon made his name known throughout the country. In the same year he moved to Zürich and fulfilled a number of important choral conducting engagements. In 1870 he was appointed director of music at the university, and in 1896 became second director, with Friedrich Hegar, of the conservatory. Together with the painter Arnold Böcklin and Hegar, he was given an honorary doctorate by the university in 1889. In addition to his various conducting duties he was an active composer; he wrote a great deal of church and chamber music, but excelled primarily in vocal music. His best works are, perhaps, his accompanied and *a cappella* compositions for male voices which have been printed in numerous collections and are still popular in Switzerland.

F.R. BOSONNET

Atterberg, Kurt (Magnus) (*b* Göteborg, 12 Dec 1887; *d* Stockholm,15 Feb 1974). Swedish composer, administrator, conductor and critic. He studied the cello at school in Göteborg and then entered the Stockholm College of Technology. Having passed the examination in civil engineering in 1911, he spent his working life (1912–68) in the patent office. He was largely self-taught although

he studied composition and instrumentation with Hallén at the Swedish Royal Academy of Music (1910–11), and partly used the state composer's scholarships he received between 1911 and 1915 to study in Germany (1911 and 1913). He made his début as a conductor at Göteborg in 1912, when the programme included his First Symphony; thereafter (particularly during the 1920s) he often conducted his own music and that of contemporaries, both at home and abroad (where he promoted Swedish music). From 1916 to 1922 he was *kapellmästare* at the Royal Dramatic Theatre, Stockholm; he also worked enthusiastically as co-founder and president (1924–47) of the Society of Swedish Composers, and as co-founder, president (1924–43) and vice-president (1943–62) of the Swedish Performing Rights Society (STIM). He was secretary to the Swedish Royal Academy of Music from 1940 to 1953 (he had been made a member in 1926), and was music critic of the *Stockholms-tidningen* from 1919 to 1957, gradually tending to dislike younger composers and new techniques.

Atterberg's manifold activities have diluted appreciation of his music, and in later years he met with less response than at the beginning of his career. Nevertheless, with Rangström, he was one of the leading Swedish composers in the generation after Peterson-Berger, Stenhammar and Alfvén, producing his best work in symphonies and stage music. The point of departure for his first two symphonies was German and Scandinavian Romanticism (Brahms and Alfvén), though he inclined less to detailed thematic working than to a kind of al fresco technique, with melodic lines – often cantilenas in an assimilated folk style – set off against colourful backgrounds. Having added an impressionist touch in the Third Symphony (arguably his best) and realistic effects in the symphonic poem *Älven* ('The River', 1929), he completed his repertory of symphonic procedures with polytonal elements, which he used in varying degrees up to his last symphony, the Ninth (1955–6). His Sixth Symphony won the prize awarded by the Columbia Graphophone Company for the Schubert centenary (1928). Some of his five operas and his two best ballets had many performances in Europe during the 1920s and 1930s, particularly in Germany. Best known of these was the ballet *De fåvitska jungfrurna* ('The Foolish Virgins', 1920), written for the Ballets Suédois of Paris. *Bäckahästen* ('The White Horse', 1923–4), with its naive folkloristic tone and Singspiel character, also met with success, and *Fanal* (1929–32) is an effective, ballad-style drama of freedom in 16th-century Germany. All Atterberg's stage works rely on decorative effect rather than psychological profundity. His music for Maeterlinck's *Soeur Béatrice* is typical in its lyrical-elegiac, slightly Impressionist treatment of sentiment; the suite drawn from it is one of his most frequently performed works.

WORKS
(*selective list*)

STAGE

op.	
–	Jefta (incid music, Didring), 1913; used in Suite no.1
9	Per Svinaherde (ballet), 1914–15; Stockholm, 1921
–	Mats och Petter (incid music, J. Bauer), 1915; used in Suite no.2
12	Härvard harpolekare [Härvard the Harpist] (op, K. Atterberg), 1916–18, Stockholm, 1919; rev. 1934–5; rev. 1952 as Härvards hemkomst [Härvard's Homecoming], Stockholm, 1954
–	Syster Beatrice (incid music, M. Maeterlinck), 1917; used in Suite no.3
13	Perseus och vidundret (incid music, T. Hedberg), 1918
–	Balettskizzer, 1919; Stockholm, 1920
17	De fåvitska jungfrurna [The Foolish Virgins] (ballet), 1920; Paris, 1920
–	Turandot (incid music, C. Gozzi), 1920; used in Suite no.4
18	Stormen (incid music, W. Shakespeare), 1921; orch suite
–	De tre mostrarna (incid music, G. Holmgren), 1923
–	En vintersaga (incid music, Shakespeare), 1923; used in Suite no.5
24	Bäckahästen [The White Horse] (op, A. Österling), 1923–4; Stockholm, 1925
–	Hassan (incid music, J.E. Flecker), 1925; used in Suite no.6
–	Antonius och Kleopatra (incid music, Shakespeare), 1926
35	Fanal (op), 1929–32; Stockholm, 1934
43	Aladdin (op), 1936–41; Stockholm, 1941; ov., op.44, 1941
49	Stormen (op), 1946–7; Stockholm, 1948

HANS ÅSTRAND, BO WALLNER

Atterbury, Luffmann (bap. London, 5 Jan 1740; *d* London, 11 June 1796). English glee composer. He was apparently

a builder or carpenter by trade, but later developed a second career as a composer and singer. In 1773 he was recommended by the renowned organist John Stanley to the Foundling Hospital as a singing master. Although appointed he was soon dismissed, as the General Court decided that the newly appointed organist, Thomas Grenville, needed no assistance in teaching the children. Two years later Atterbury became a musician-in-ordinary to George III. He sang in the Handel Commemoration of 1784. He composed about 50 glees and catches, the great majority for male voices. Many of them first appeared in Warren's *Collection of Catches Canons and Glees* (London, 1763–93) and in Atterbury's three collections of his own music (1777, *c*1790, *c*1797). The glee *Come let us all a-maying* and the catch *Hot cross buns* long remained popular. He also composed an oratorio *Goliath*, performed at the Haymarket Theatre on 5 May 1773, and two years later, at the church of St Lawrence at West Wycombe, Buckinghamshire, as part of the elaborate ceremonies accompanying the inurnment of the heart of the politician and satirical poet Paul Whitehead. He provided airs for a pasticcio, *Mago and Dago* (1794), and in the same year contributed 12 pieces to William Tattersall's *Improved Psalmody*. In September 1790 he married Elizabeth Ancell. Doane's *Musical Directory* of 1794 lists him as a member of the King's Band, composer and organist.

NICHOLAS TEMPERLEY, EVA ZÖLLNER

Attey, John (*fl* 1622; *d* ?Ross, Herefordshire, *c*1640). English lutenist and composer. In his book of ayres Attey described himself as 'Gentleman, and Practitioner in Musicke', while in the dedication to the Earl and Countess of Bridgwater he wrote that his songs were for 'the best part composed under your roofe while I had the happiness to attend the service of those worthy and incomparable young Ladies your daughters'. John Egerton (1579–1649), Earl of Bridgwater and his wife Frances, daughter of Ferdinando, Earl of Derby, lived at Ashridge, in the parish of Little Gaddesden, Hertfordshire. Fellowes (1921) gave Attey's death date as above but the source for his statement is not known: Ross parish registers do not survive from before 1662.

Attey's only publication, *The First Booke of Ayres* for four voices and lute (London, 1622/*R*; ed. in EL, 2nd ser., ix, 1967 and MB, liv, 1989), was the last of its kind to be printed in England. The songs appear to have been composed originally for four voices: *The Gordian knot*, for example, begins with the alto and tenor unaccompanied, implying that Attey considered the alternative lutesong arrangement for cantus, lute and bass viol his second choice of performance. The title-page suggestion that 'all the parts may be plaide together with the Lute' implies instrumental performance not suggested in any other book of ayres. The four lowest courses of Attey's ten-course lute were presumably off the finger-board: when F♯ is required (*In a grove of trees*) the tablature shows that this one note was to be played an octave higher. These musical hiccups, together with Attey's idiosyncratic use of the basses, indicate the necessity of the bass viol when singing the ayres as solo songs. Attey had a pleasant talent for melody, but his songs have, as Warlock wrote, 'no outstanding qualities save for the last song in the book, *Sweet was the song the Virgin sung*, a flawless work of serene beauty which forms a fitting conclusion to this golden period of English song'.

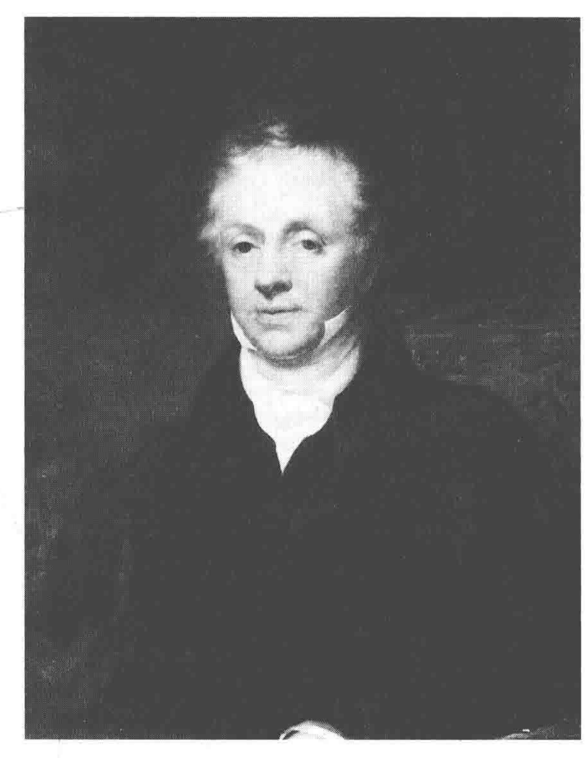
DIANA POULTON/ROBERT SPENCER

Attwood, Thomas (*b* London, bap. 23 Nov 1765; *d* London, 24 March 1838). English composer and organist. His father, also called Thomas Attwood, was an under-page to George III, and a viola player and trumpeter in the King's Band. Throughout his life Attwood benefited from royal patronage. At the age of nine he became a chorister in the Chapel Royal. When he left the choir in 1781 he became one of the Pages of the Presence to the Prince of Wales, who was so impressed by his musical ability that he sent him abroad to study. From 1783 to 1785 he lived in Naples, studying with Felipe Cinque and Gaetano Latilla. He then travelled to Vienna, where he lived from August 1785 until February 1787, still apparently supported by the Prince of Wales, and taking lessons in composition from Mozart. His exercises, with Mozart's corrections, are extant and have been printed. In Oldman's words, they 'are valuable not only for the light they throw on the prentice years of a notable English composer, but as evidence that Mozart, given an apt and congenial pupil, took his duties as a teacher with the utmost seriousness'. Mozart became much attached to Attwood: according to Kelly (who is not always reliable) Mozart said of him, 'He partakes more of my style than any scholar I ever had; and I predict, that he will prove a sound musician'. He also played a large part in introducing Mozart's music to the British public.



Attwood returned to his court position in England, and began to publish some of his instrumental compositions. In December 1791 he was appointed music teacher to the Duchess of York, and in April 1795 to the Princess of Wales. More important appointments followed in 1796, when he was made organist of St Paul's Cathedral and, later in the year, composer to the Chapel Royal. Meanwhile he had become a successful composer for the stage. Beginning with *The Prisoner* (1792), for the next ten years he provided music in whole or in part for well over 30 productions. The great majority of these were afterpieces of slight musical substance, and many were pasticcios; but in Attwood's original contributions it is easy to see the polish and grace that distinguish him from such contemporaries as Arnold and Kelly, and which evidently derive from Mozart's teaching. In many of these pieces, particularly the earlier ones, he adapted Mozart's own music to the English texts.

After 1801 there were only five more dramatic pieces, spread over the next quarter of a century, as Attwood was increasingly occupied with other kinds of music. He was one of the 30 original members of the Philharmonic

Society on its foundation in 1813 and one of its directors in 1816–20 and 1824–32, and he conducted one concert almost every year, usually including one of Mozart's symphonies. He was also concerned with several vocal societies, for which he composed a number of glees. In 1821 he composed an anthem *I was glad* for the coronation of his former patron, now George IV, and shortly afterwards was appointed organist of the king's newly built private chapel at Brighton, a sinecure position. He was one of the founding professors of the RAM in 1823. He succeeded his father as musician-in-ordinary to the king in 1825; finally, in 1836, he was appointed organist of the Chapel Royal in succession to Stafford Smith. During all this time the emphasis in his composition moved steadily in the direction of church and organ music. In 1831 he was again called upon for a coronation anthem, this time for the 65-year-old William IV (*O Lord, grant the king a long life*), and on his death he is said to have left behind a third which had been commissioned for the coronation of Victoria. He was buried beneath the organ in St Paul's Cathedral.

Attwood was a man of kind and genial disposition, and had many friends in the musical world. In his later years he had the pleasure of a close friendship with Mendelssohn, who stayed with him at his house on Beulah Hill, Norwood, on several occasions: the Fantasia op.16 no.2 was composed there in 1829. Mendelssohn dedicated to him his Three Preludes and Fugues op.37, and the autograph of a Kyrie eleison in A minor is inscribed 'For Mr. Attwood, Berlin, 24th March 1833'. Attwood was a great admirer of Mendelssohn's brilliant performances on the organ of St Paul's Cathedral, and was converted by them to a tardy recognition of the genius of Bach. He was not himself a great executant on the organ.

Attwood's compositions, whether for the stage, the church or the home, were profoundly affected by his intense experience as Mozart's pupil. But the influence did not take the form of direct imitation except in some of the earliest stage pieces; it is found rather in the feeling for melodic shape and the beautifully tasteful organization of harmony that distinguish him from his English contemporaries. His style is recognizably English, as much as it is Mozartian, and he had a particularly sensitive feeling for verbal accent: this is noticeable in the songs, including *The cold wave my love lies under*, in glees like *The Curfew*, and in the many treble solos in his longer anthems. The dramatic works are collections of songs and choruses in the manner of their time, offering little opportunity for imitation of Mozart's operatic methods. The early instrumental trios, like Mozart's but unlike most English 'accompanied sonatas' of the time, treat the string instruments on equal terms with the piano. Attwood's most ambitious music is in his great coronation anthems with orchestral accompaniment, containing elaborate counterpoint (but also unfortunately introducing patriotic airs), and in the Service in F, with its 'Gloria Patri' in strict canon. However, his slender reputation now rests not on these large-scale works, but on intimate, exquisitely polished pieces such as *Turn thy face from my sins* and the hymn *Come, Holy Ghost*. They are in direct line from the Mozart of *Ave verum corpus* and the Andante section of the Fantasia K608. To him they owe their balance and serenity, their melodic grace, and the sweetness of their full four-part harmony.

Thomas Attwood: portrait by an unknown artist (Royal College of Music, London)

In 1793 Attwood married Mary Denton, who bore him five sons and a daughter. Some of his most distinguished pupils were Thomas Attwood Walmisley (who was also his godson), John Goss, George Bridgetower and Cipriani Potter. Walmisley inherited or acquired many of his manuscript compositions; he published a selection of the church music in 1852, but many other compositions, including most of the organ music, passed from the Walmisley family to Frederick Fertel, organist of Bromley, and were dispersed after his death.

WORKS

all printed works published in London

all first performed in London; published in vocal score in same year unless otherwise stated; Mss of most librettos in US-SM, Larpent Collection

NICHOLAS TEMPERLEY

Atumpan. Goblet-shaped TALKING DRUM (membranophone) of Ghana. *See also* DRUM, §I, 2(ii)(d).

Atys [Atis; first name unknown] (*b* St Domingue [now Haiti], 18 April 1715; *d* Paris, 8 Aug 1784). French creole flautist, composer and teacher. His skill as a flute virtuoso and teacher made him renowned in Paris and Vienna, but his concert career was cut short by a chin wound received in a pistol duel. He was among the first flautists to use crescendo and diminuendo instead of simple echo contrasts. His compositions, all published in Paris, are primarily intended for amateur flautists: they include duos 'en forme de conversation' op.1 (1754), sonatas 'dans le goût italien' op.2 (1756, lost), further duos and quartets, a *Feste concertante* (1775, lost) and minuets for orchestra.

He also published two flute methods. (*Choron-FayolleD*; *FétisB*; *La BordeE*)

ROGER J.V. COTTE

Atzmon [Groszberger], **Moshe** (*b* Budapest, 30 July 1931). Israeli conductor. His family settled in British-mandated Palestine in 1944 and he followed Israeli custom in changing his original surname to the present Hebrew form. Having studied the piano and horn, he graduated from the Tel-Aviv Academy of Music in composition and conducting (1962) and was encouraged by Antal Dorati to pursue a conducting career. In London, where he studied at the GSM, he won the school's conducting prize in 1963, followed in 1964 by the first prize at the international conducting competition sponsored by the Royal Liverpool PO. In 1967 he conducted the Vienna PO at the Salzburg Festival. From 1969 to 1971 he was chief conductor of the Sydney SO, and in 1972 he became chief conductor of the NDR SO and of the Basle SO. After a spell in Tokyo as musical adviser for the Tokyo Metropolitan SO (1978–82), he served as principal conductor of the American SO (1982–4) and permanent conductor of the Nagoya PO, Japan (1986–92). His operatic début was in October 1969 with Rossini's *La Cenerentola* at the Deutsche Oper, Berlin, and he first appeared on record conducting the New Philharmonia Orchestra in 1968, having already brought a skilled baton technique and a lively personality to concerts in Britain, the USA and Israel. In 1991 he was appointed Generalmusikdirektor at Dortmund.

ARTHUR JACOBS

Aubade [aube] (Fr.: 'dawn song'). A term originally applied to music intended for performance in the morning. It has now become simply a generic title. In the 17th and 18th centuries, aubades were played at court by military bands in honour of French sovereigns, and in provincial towns to celebrate the election of municipal officials. The Provençal ALBA is a distant antecedent. In the 19th and 20th centuries the term and its Spanish equivalent, ALBORADA, came into use as the title of a characteristic piece, for example the *Aubade* for piano by Bizet and the *Aubade et allegretto* for strings and wind by Lalo (1872). Poulenc used it as the title of a more extended work, his 'choreographic concerto' for piano and 18 instruments (1929).

□

Auber, Daniel-François-Esprit (*b* Caen, 29 Jan 1782; *d* Paris, 12 May 1871). French composer. He composed mostly *opéras comiques*, and the foremost representative of this genre in 19th-century France.

1. Early life and works. 2. Collaboration with Scribe. 3. Style and influence.

1. EARLY LIFE AND WORKS. He was the son of a royal huntsman, who became a dealer in art materials after the Revolution. He showed an early talent for the piano, studying with Ignace Antoine Ladurner; he also learnt to play the violin and cello, and had a fine baritone voice. He took part in chamber music recitals and was admittted into the Société Académique des Enfants d'Apollon as a composer in 1806. Among his earliest compositions were several *romances*, at least one string quartet, a piano trio and a concerto for violin, viola, cello and piano. At first he was expected to go into his father's business, and after the Peace of Amiens in 1802 he went to London to study commerce and learn English. He seems to have had some success in London as a performer and as a composer of *romances* and quartets, and Malherbe ascribes his self-discipline and understatement to this stay (1911, p.3). The resumption of Anglo-French hostilities in 1803 was presumably the reason for his return to Paris, where he remained for the rest of his life.

On his return to the capital he composed a violin concerto and five cello concertos (at least three of which were published under the name of Lamarre). His first stage work, *Julie*, was composed in 1805 for an amateur society that met in the Salle Doyen. Here Auber met the artist Ingres (they remained friends until the latter's death in 1867). At the same time Auber began taking private lessons from Cherubini, with whom he studied composition for three years; he subsequently composed a fugue on a theme from Cherubini's *Faniska*. During this period Auber attended the salon of the Prince of Caraman (later the Prince of Chimay) in the Rue de Babylone as an *accompagnateur*, where musicians such as Rudolphe Kreutzer, Rode, Baillot and Duchambge performed alongside amateurs. He twice went to the prince's Belgian château to perform in comedies and operas in a fully equipped theatre that still survives. Auber composed a mass for three voices (1812) for the chapel of this chateau; the theme of the Prière in *La muette de Portici* is taken from its 'Dona nobis pacem'. In 1812 he wrote his second opera, *Jean de Chimay*, for the prince's theatre. In the same year, encouraged by his parents and by Cherubini, Auber decided to compose a one-act opera, *Le séjour militaire*, for the Salle Feydeau; it had a satisfactory 16 performances, and was revived in 1826 and staged in the provinces. For the next seven years, until his father's death, he led a carefree life. His decision to devote himself seriously to opera composition arose from the bankruptcy of his father, which forced Auber to provide for his family.

His next opera, *Le testament et les billets doux*, to a libretto by François-Antoine-Eugène de Planard, was staged on 18 September 1819. It was dropped from the repertory after 11 performances, but Auber achieved greater success with *La bergère châtelaine* (1820) and *Emma* (1821), both to librettos by Planard; they were also successful in their first performances in Germany.

2. COLLABORATION WITH SCRIBE. At this time he entered upon what soon became a very close collaboration with Eugène Scribe. With five *opéras comiques* and the *drame lyrique Léocadie*, Scribe and Auber became the leading exponents of *opéra comique* in France, enjoying success in the German-speaking states, Denmark and England as well – reflected in the numbers of vocal scores, piano arrangements and translations of the librettos.

Germain Delavigne had written a libretto for a three-act opera on a revolutionary subject, entitled *Masaniello, ou La muette de Portici*, in 1825. After several reworkings by Scribe it emerged as the first grand opera. The production realized a new quality of historical and geographical realism, as well as social verisimilitude in the depiction of the relationships between the characters. Solomé as director and Pierre Cicéri as designer created a sensation with their use of the very latest stage techniques. Although the chorus for the Neapolitan insurgents ('Grâce pour notre crime') at the end of the opera, inserted at the insistence of the censors, makes them descredit their own rebellion, *La muette* made its mark as an opera of revolution. Thanks to its association with the Belgian revolution of 22 August 1830 it became widely regarded

as a symbol of revolutionary sentiment, to which Auber's music made a decisive contribution. Throughout the opera reminiscences are used to create a network of musico-dramatic relationships, supported by a scheme of tonalities. The build-up of tension towards the last act-finale, where the D minor harmony suggests the second finale of *Don Giovanni*, is particularly compelling. Its most important dramaturgical innovation was the frequent alternation between crowd scenes and intimate encounters of individuals. With the five-act structure and the tragic ending its authors turned away from the traditional aesthetics of *tragédie lyrique*.

Wagner regarded it as 'something quite new' because of its 'unusual concision and drastic concentration of form'. Besides being the first grand opera, *La muette de Portici* was one of the great operatic successes of the 19th century. By 1882 it had had 505 performances in Paris, and it was performed in translated versions throughout Europe. Auber consolidated his international reputation with *La fiancée* and *Fra Diavolo*; the latter is still performed, though predominantly in Germany.

From 1830 to 1840 he wrote at least one new opera a year, mostly *opéras comiques*, but he also composed more serious works for the Paris Opéra: *Le dieu et la bayadère*, *Le philtre*, *Le serment*, *Gustave III*, *Le cheval de bronze* and *Le lac des fées*. For *Gustave II*, great attention was lavished on production, scenery and costumes, especially in the ball scene, which brought about 300 people onto the stage, more than 100 of whom took part in the sensational Galop. The turbulent circumstances of the work's genesis are also reflected in a score which is convincing in its overall conception but suffers from the very variable quality of individual numbers. The importance attached to the visual aspects of *grand opéra* is demonstrated by Louis Véron's assertion that *Gustave III* was spoilt by the false conception of costumes and scenery in the first four acts; in Véron's view, the Louis XV costumes inhibited the performers from freely expressing their passions. The opera had a long-lived success in Germany, Austria and England. The ball act, often performed on its own in Paris, had a strong influence on similar tableaux in other operas, and it served Auber himself as the model for other, mostly shorter, parlante scenes in later operas (*Le domino noir*, for example).

Daniel-François-Esprit Auber: caricature by André Gill from the cover of 'L'éclipse' (1 March 1868)

As the extant correspondence between Auber and Scribe shows, their conception of characters and musical numbers in their comic operas depended a good deal on the performers available to them, and was not determined solely by aesthetic criteria. Scribe's letter of 25 August 1843 describes the casting of *La sirène*:

> I have managed to arrange for Roger to play the lead. This will mean a good deal of work for me, but none for you, because – and this is what made the problem difficult to solve – I have not changed anything affecting the music, except in the finale of the first act which you have not written.
>
> When I wrote the part for Chollet, having no alternative, I was very uneasy about it. Though he can still be good in big parts which are not naturalistic, Chollet is terrible when verisimilitude, animation and above all interest are required. It is impossible for him to be interesting, but now, with Roger, I shall have animation, interest and comedy. Moreover, I have placed the little aria of which you gave me the rough sketch for Mlle Lavoye, and I may add a little smuggler's song for Roger, which will not detract from his second-act aria.

Scribe's reference to a rough sketch (*monstre*) denotes a procedure known to have been employed in French opera since its early days, and Scribe and Auber frequently adopted it. Auber often composed solo arias before he received Scribe's verses; next the composer gave his librettist a 'rough sketch' with the metre and sometimes certain key words, and Scribe would use this sketch to write the text to be sung. Study of Scribe's autographs has shown that when he first provided Auber with a text he used isometrical verses with regular rhyme-schemes for solo arias; however, when fitting his verses to Auber's music, they were generally heterometrical with no regular rhyme-scheme at all.

Rossini had taken the opera-going public by storm with the Paris première of *Il barbiere di Siviglia* on 26 October 1819. In his early comic operas Auber was accused of falling under Rossini's influence, not only in the coloratura passages of his arias, but also in the number of ensembles, many more than in the works of his predecessors and having considerable dramatic and musical weight. However, with *Léocadie*, set in Portugal but evincing musical coloration closer to Spain, he soon developed his own style, which was regarded throughout Europe as typically French and typically Parisian.

3. Style and influence. In Auber's *opéras comiques*, the introductions to the first acts are generally comparable in importance to the finales. As a rule, the climax is reached at the latest with the finale of the second act, in a manner similar to Verdi's. Only in *Fra Diavolo* is the climax delayed until the finale of the third act, as in Auber's grand operas. By the early 1840s the Opéra-Comique was staging works of more demanding musical aspirations, including Donizetti's *La fille du régiment* and Halévy's *Guitarréro*, which rivalled the Opéra and Théâtre-Italien. Correspondingly, in the important and more serious works of his middle creative period (*L'ambassadrice*, 1836; *Le domino noir*, 1837; *Les diamants de la couronne*, 1841; *La part du diable*, 1843; and *Haydée*, 1847) the solo arias gain in individuality,

musical expressiveness and harmonic depth, influenced by the *drame lyrique*. On the whole, however, the ensemble is also pre-eminent in these works. The first-act, or more rarely the second-act, finale is the richest in action and musical content. In these mature works and in his last creative period Auber usually opens the first act with an aria (only *Le premier jour de bonheur*, 1868, and *Rêve d'amour*, 1869, begin with introductions).

Scribe and Auber broke more new ground in their five-act biblical opera *L'enfant prodigue* (1850), which is almost without action, and contrasts markedly with the ideas of Berlioz. No other work that Auber composed for the Opéra matches it in musical depth or stylistic aspiration. The character of the patriarch Ruben, who dominates the entire work, and the magnificent final scene of forgiveness are among the opera's outstanding features. In *Manon Lescaut* (1856), the café-scene in Act 2 paints a multi-faceted picture of contemporary society in a manner close to Offenbach; the culmination of the action in a dramatic, half-hour-long death-scene is still more astonishing, anticipating, within the *opéra comique* genre, the fatal outcome of *Carmen* by 19 years. At the age of 86, only three years before his death and at a time when the repertory in Paris was dominated by Offenbach's *opéras bouffes* and the operas of Verdi, Auber had another great success in France and Germany with *Le premier jour de bonheur*. The first performance of his last *opéra comique*, *Rêve d'amour*, took place in December 1869, but the orchestral score is now lost.

Unlike many of his Romantic contemporaries, Auber did not seem to have any lofty sense of mission. He was inclined to express himself ironically. Throughout his career he introduced into his operas easily accessible melodies that lodged in the memory after a single hearing and became popular in all classes of society. In this he was following a typically French tradition, dating back to the *airs de vaudeville* Lully used in his *tragédies*. Besides the various types of aria, Auber made use of such vocal genres as the *couplet*, barcarolle, ballade, nocturne, rondeau, chanson, *valse chantée*, tyrolienne, bolero, canon and *mélodie*, both as solo numbers and within the ensembles. He was first and foremost a melodist and avoided profound emotions and all emphatic and extreme forms of expression; his (frequently criticized) rhythmic style was influenced strongly by contemporary dance. In spite of the almost invariable dominance of melody, his ensembles are often the most interesting and best-constructed pieces in his operas. His ideals were those of the French tradition in general and *opéra comique* in particular: the greatest possible simplicity, clear lines and transparent structures, lightness of spirit and coloration, elegance, esprit and moderation in expression.

Few if any remarks by Auber about composers he admired have survived, but his library gives some clues as to his preferences. The scores he owned include the operas of Gluck, Piccinni, Sacchini, Cherubini, Rossini, Grétry, Dalayrac, Monsigny and, especially, Mozart, whom Auber admired above all others.

Although Auber lived in Paris almost uninterruptedly, the popularity of his operas led to a flood of publication of his works throughout Europe and in America. Editions of the individual opera librettos and piano arrangements were printed in immense quantities, and particularly successful numbers gave rise to more than 400 transcriptions and free instrumental arrangements – sonatinas, fantasias, potpourris and *mélanges* – ranging from the piano to military bands and salon orchestras. The overtures of most of his operas were among the most popular items played at concerts, as well as in salons and private homes. Berlioz was among his sternest critics in France, while the hostile attitudes of Schumann and Mendelssohn in Germany were in marked contrast to the enthusiastic views of Wagner.

In addition to his activities as an opera composer, Auber was appointed director of the Paris Conservatoire in February 1842. His term of office was marked by special emphasis on vocal tuition, the separation of classes for male and female singers, provision of boarding accommodation for students, performances of opera in costume, and performances in the Conservatoire of music-theatre works by winners of the Prix de Rome. He was also appointed *maître de chapelle* by Napoleon III, and composed a substantial quantity of music for the royal chapel in the Louvre, the great majority of which remains unpublished. He had 40 choristers and 40 instrumentalists at his disposal, who performed under the direction of conductors from the Opéra. The most frequently performed of his sacred works was *Domine salvum fac*, first heard in Ste Marie-Madeleine in about 1849. Most of the pieces Auber wrote for the royal chapel are plain in style, homophonic and melody-led, and nearly all of them survive in two versions: one with orchestral accompaniment, and one with organ, with or without harp. The string quartets Auber composed in 1870 have long been lost; like other lost works they once belonged to Malherbe.

Auber was the recipient of numerous honours and orders, and a member of various institutions: he rose through the degrees of the Légion d'Honneur (from 1825); he was elected to the Académie des Beaux-Arts of the Institut de France in succession to Gossec (1829); he was also director of the Concerts de la Cour (1839) and a member of several European orders.

WORKS

unless otherwise stated, works were first performed in Paris and published in Paris in the year of first performance

STAGE

S	
1	Julie [L'erreur d'un moment] (comédie, 1, J.-M. Boutet de Monvel), Salle Doyen, 1805, unpubd
2	Jean de Chimay [Le château de Couvain] (oc, 3, N. Lemercier), Belgium, Château de Chimay, Sept 1812, unpubd
3	Le séjour militaire (oc, 1, J.-N. Bouilly and E. Mercier-Dupaty), OC (Feydeau), 17 Feb 1813
4	Le testament et les billets doux (comédie mêlée de chant, 1, F.-A.-E. de Planard), OC (Feydeau), 18 Sept 1819
5	La bergère châtelaine (oc, 3, Planard), OC (Feydeau), 27 Jan 1820
6	Emma, ou La promesse imprudente (oc, 3, Planard), OC (Feydeau), 7 July 1821
7	Leicester, ou Le château de Kenilworth (oc, 3, E. Scribe and Mélesville [A.-H.-J. Duveyrier], after W. Scott: *Kenilworth*), OC (Feydeau), 25 Jan 1823
8	La neige, ou Le nouvel Eginhard (oc, 4, Scribe and G. Delavigne), OC (Feydeau), 9 Oct 1823
9	Vendôme en Espagne (drame lyrique, 1, A.-J.-S. d'Empis and E. Mennechet), Opéra, 5 Dec 1823, collab. Hérold
10	Les trois genres (prologue, Scribe, Dupaty and M. Pichat), Odéon, 27 April 1824, collab. A. Boieldieu
11	Le concert à la cour, ou La débutante (oc, 1, Scribe and Mélesville), OC (Feydeau), 5 May 1824

12 Léocadie (drame lyrique, 3, Scribe and Mélesville, after M. de Cervantes: *La fuerza de la sangre*), OC (Feydeau), 4 Nov 1824
13 Le maçon (oc, 3, Scribe and Delavigne), OC (Feydeau), 3 May 1825
14 Le timide, ou Le nouveau séducteur (oc, 3, Scribe and Saintine [X. Boniface]), OC (Feydeau), 2 June 1826
15 Fiorella (oc, 3, Scribe), OC (Feydeau), 28 Nov 1826
16 La muette de Portici [Masaniello] (op, 5, Scribe and Delavigne), Opéra, 29 Feb 1828
17 La fiancée (oc, 3, Scribe, after M. Mason and R. Brucker: *Les contes de l'atelier*), OC (Feydeau), 10 Jan 1829
18 Fra Diavolo, ou L'hôtellerie de Terracine (oc, 3, Scribe), OC (Ventadour), 28 Jan 1830
19 Le dieu et la bayadère, ou La courtisane amoureuse (op, 2, Scribe), Opéra, 13 Oct 1830
20 Le philtre (op, 2, Scribe), Opéra, 15 June 1831
21 La marquise de Brinvilliers (drame lyrique, 3, Scribe and Castil-Blaze [F.-H.-J. Blaze]), OC (Ventadour), 31 Oct 1831, collab. Batton, H.-M. Berton, Blangini, A. Boieldieu, Carafa, Cherubini, Hérold and Paer
22 Le serment (ou Les faux monnoyeurs) (op, 3, Scribe and E.-J.-E. Mazères), Opéra, 1 Oct 1832
23 Gustave III, ou Le bal masqué (op historique, 5, Scribe), Opéra, 27 Feb 1833
24 Lestocq, ou L'Intrigue et l'Amour (oc, 4, Scribe), OC (Bourse), 24 May 1834
25 Le cheval de bronze (opéra-féerie, 3, Scribe), Opéra, 28 March 1835; rev. as opéra-ballet, Opéra, 21 Sept 1857
26 Actéon (oc, 1, Scribe), OC (Bourse), 23 Jan 1836
27 Les chaperons blancs (oc, 3, Scribe), OC (Bourse), 26 March 1836
28 L'ambassadrice (oc, 3, Scribe), OC (Bourse), 21 Dec 1836
29 La fête de Versailles (intermède en deux parties, Scribe), Versailles, 10 June 1837
30 Le domino noir (oc, 3, Scribe), OC (Bourse), 2 Dec 1837
31 Le bourgeois gentilhomme (comédie-ballet, Molière), 1838, Turkish scene
32 Le lac des fées (op, 5, Scribe and Mélesville), Opéra, 1 April 1839
33 Zanetta, ou Jouer avec le feu (oc, 3, Scribe and J.-H. Vernoy de Saint-Georges), OC (Favart), 18 May 1840
34 Les diamants de la couronne (oc, 3, Scribe and Saint-Georges), OC (Favart), 6 March 1841
35 Le duc d'Olonne (oc, 3, Scribe and Saintine), OC (Favart), 4 Feb 1842
36 La part du diable (oc, 3, Scribe), OC (Favart), 16 Jan 1843
37 La sirène (oc, 3, Scribe), OC (Favart), 26 March 1844
38 La barcarole, ou L'Amour et la Musique (oc, 3, Scribe), OC (Favart), 22 April 1845
39 Les premiers pas (oc, 1, A. Royer and G. Vaez), Opéra-National, 15 Nov 1847, collab. A. Adam, Carafa, Halévy
40 Haydée, ou Le secret (oc, 3, Scribe, after P. Mérimée: *Six et quatre*), OC (Favart), 28 Dec 1847
41 L'enfant prodigue (op, 5, Scribe), Opéra, 6 Dec 1850
42 Zerline, ou La corbeille d'oranges (op, 3, Scribe), Opéra, 16 May 1851
43 Marco Spada (oc, 3, Scribe and Delavigne, final scene after H. Vernet: *La confession du bandit*), OC (Favart), 21 Dec 1852; rev. as (46) Marco Spada, ou Le bandit (ballet, 3, J. Mazilier), Opéra, 1 April 1857
44 Jenny Bell (oc, 3, Scribe), OC (Favart), 2 June 1855
45 Manon Lescaut (oc, 3, Scribe, after A.-F. Prévost), OC (Favart), 23 Feb 1856
47 Le cheval de bronze (op ballet, 3, Scribe), Opéra, 21 Sept 1857
48 La circassienne (oc, 3, Scribe), OC (Favart), 2 Feb 1861
49 La fiancée du Roi de Garbe (oc, 3, Scribe and Saint-Georges), OC (Favart), 11 Jan 1864
50 Le premier jour de bonheur (oc, 3, A.-P. Dennery and E. Cormon), OC (Favart), 15 Feb 1868
51 Rêve d'amour (oc, 3, Dennery and Cormon), OC (Favart), 20 Dec 1869

?music in La gitana (ballet, 3, Taglioni), St Petersburg, Bol'shoy, 23 Nov 1838, collab. Schmidt

SACRED

52 Messe solennelle, 3vv, orch, 1812; Dona nobis later used in La muette de Portici (O dieu puissant), 1828
53 Litanie de la Sainte Vierge, 4vv, orch, *c*1815
54 Hymme à Sainte Cécile, *c*1840
55 Domine salvum fac rem publicam, 4vv, orch, *c*1849
67 O crux ave, 4vv, hp, pf, 1854
71 Parce Domine, 4vv, org, 1854
72 Sub tuum praesisium, 4vv, org, 1854
91 Ecce panis angelorum, 4vv, org, 1860
92 Pie Jesu, S, org, 1861
95 Veni creator, 4vv, org, 1864
98 Ave Maria, S, org, 1865
103 O quam tristis, 3vv, hp, hmn, org
104 Stabat mater/Virgo virginem, chorus, hmn, hp, org
107 O Dieu puisant, chorus, 2 cl, 2 bn

11 Ky, S56, 57, 58, 59, 73, 88, 90, 96, 97, 99 (1854–70); 2 Ky and Cr, S60, 61 (1854); 3 Gl S62, 75, 94 (1854–63); 7 Bs, S63, 77, 78, 79, 80, 83, 84 (1854–9); 7 Ag, S64, 65, 66, 81, 93, 101, 102 (1854–*c*1870); 12 O salutaris, S68, 69, 70, 74, 85, 86, 87, 89, 105, 106, 108 (1854–*c*1870)

SECULAR VOCAL

109 Non s'è più barbaro, T, orch, 1798
110 Ridotto a questo segno/Rendi mi figlio mio, T, orch, 1799
111 Tu t'éloignes de moi (scene from Procris), S, str orch, *c*1800
113 Quel ta page (finale of Act 3, Judith Arthur), frag.
114 Chasseur, qui parcourez la plaine, *c*1800
116 Je suis cette cousine, S, orch
117 Fêtez par vos chants, choeur chinois, *c*1834
140 Sauve, ô mon Dieu, le roi, *c*1843; later used in Jenny Bell, 1855
118–49 Romances and chansonettes, *c*1783–1869
150 Chant des polonais (cant.), 1830; also known as La varsovienne
151 Cantate por le dîner du roi, 1837
152 Cantate pour l'inauguration du statue de Henri IV, 1843
153 Cantate pour le mariage de Napoléon III, 1853
155 Cantate pour la prise de Sébastopol, 1855
154 Cantate pour le baptême du Prince Impérial, 1856
156 Cantate pour la distribution des prix de la Société des Gens de Lettres, 1856
157 Magenta (cant.), 1859

INSTRUMENTAL

158 Sonata, C, pf, 1794/5
159 String Quartet, C, 1799
160 String Quartet, 1800, lost
162 Trio, D, pf, vn, vc, op.1 (Paris, *c*1806)
163 Piano Quartet, e, *c*1808
164 Fugue on a theme from Cherubini's Faniska, *c*1808
165 Violin Concerto, D, 1808, ed. S. Beck (New York, 1938)
166 Cello Concerto, no.1, a, *c*1809
167 Cello Concerto, no.2, D, solo part only, *c*1809
168 Cello Concerto, no.3, B♭, *c*1809
169 Cello Concerto, no.4, lost, mentioned by Fétis
170 Cello Concerto, no.5, D, *c*1809 [two mvts only]
171 Air varié, vc, orch/pf, *c*1807, lost, mentioned by Fétis
172 8 pieces, 2 vc, 1808
173 Air de danse, for Gluck's Iphigénie, 1811, lost
174 Overture
175 Overture
176 Variations on a theme by Handel, 1817: 1 Variations, 2 Variations, 3 Dans le style de Handel, 4 Allegro maestoso, 5 Andante con moto
177–200 Pieces for orch/pf, *c*1834–62

THEORETICAL WORKS

HERBERT SCHNEIDER

Aubert. French family of violinists and composers. They were active in Paris during the 18th century.

(1) Jacques Aubert [*le vieux*, *le père*] (*b* Paris, 30 Sept 1689; *d* Belleville, nr Paris, 17/18 May 1753). He was probably a son of Jean Aubert, a member of the 24 Violons du Roi until his death in 1710. By 1717 Jacques Aubert was known as a dancing-master, violinist and composer, working at the Théâtres de la Foire, and had written the music for at least five ballets and comedies. In 1719, the year in which he married Marie Louise Lecat and published his first book of violin sonatas, Aubert was appointed to the service of Louis-Henri, Duke of Bourbon and Prince of Condé. In this capacity he composed a *Fête royale* and a *Ballet des XXIV heures* for the duke's entertainment when the young Louis XV passed through Chantilly to Reims in 1722; Aubert played the violin in the role of Orpheus in the latter work.

In 1727 Aubert succeeded Noël Converset in the 24 Violons du Roi, remaining a member until 1746, and in the next year he accepted a position with the Académie Royale de Musique and was named first violinist of the Opéra orchestra, with which he performed for the next 24 years. He made his début at the Concert Spirituel in 1729, and often played there until 1740.

Like many of his contemporaries, Aubert was greatly influenced by the Italian style. At the Concert Spirituel he must have heard and possibly played concertos and sonatas by Vivaldi and Corelli. Jean Baptiste Senaillé, Aubert's teacher (with whom he played a sonata for two violins at the Concert Spirituel in 1730), may have stimulated his growing interest in Italian music, and he was encouraged too by Madame de Prie, a friend of Aubert's patron, the Duke of Bourbon, and an adherent of the Italian style.

Aubert's large output as a composer includes ballet and dance music, *opéras comiques*, concertos, sonatas for violin and continuo and what he called 'concerts de simphonie' (pieces in suite form for trio, to which different sonorities could be added). He wrote the first violin concertos to be printed in France; whether they are the first concertos by a Frenchman is questionable (see Paillard and Brofsky). Of the stage works, *La reine des Péris* is perhaps the most interesting. In keeping with its more serious tone it was staged at the Opéra. Called a *comédie persane*, the work has a continuous plot and is fully sung. It is thus one of the earliest examples of French comic opera with sung dialogue.

Aubert was more than a composer of salon music or an imitator of the Italian style. While he accepted the basic concerto and sonata form from the Italian school, and their belief that the violin should be more than an instrument *pour faire danser*, he retained many French elements in his music, the most characteristic being the use of the gavotte, menuet, or other dance form as the

slow middle movement and the fully written-out melodic embellishment of the solo pieces.

WORKS

(printed works published in Paris; op. nos. from Nouvelle edition, op.1 (1794))

STAGE

(opéras comiques unless otherwise stated)

La paix triomphante (ballet), 1713, lost
Arlequin gentilhomme malgré lui, ou L'amant supposé (3, A.-R. Lesage and d'Orneval), Paris, Foire St Germain, 3 Feb/27 March 1716; Act 3 perf. as Les arrêts de l'amour (1), Paris, Foire St Germain, 17 July 1716, music in Le Théâtre de la Foire, ii (1721)
Arlequin Hulla, ou La femme répudiée (1, Lesage and d'Orneval), Paris, Foire St Laurent, 24 July 1716, music in Le Théâtre de la Foire, ii (1721)
La fête champêtre et guérrière (ballet), 1716; as op.30 (*c*1746)
Les animaux raisonnables (1, L. Fuzelier and M.-A. Legrand), Paris, Foire St Germain, 25/27 Feb 1718; collab. Gillier; airs in Le Théâtre de la Foire, iii (1721)
Diane (divertissement, A. Danchet), Chantilly, 8 Sept 1721; sym. only; vocal music by L.T. Bourgeois pubd (1721)
Le regiment de la calotte (1, Fuzelier, Lesage and d'Orneval), Paris, Foire St Laurent, 1 Sept 1721; airs in Le Théâtre de la Foire, v (1724)
Fête royale (divertissement), Chantilly, 4–8 Nov 1722; pubd (1722), see La Laurencie, i (1922), 203
Le ballet de 24 heures (comédie, prol, 4, Legrand), Chantilly, 5 Nov 1722; as op.6 (1723); music possibly known as Le ballet de Chantilly (1723)
La reine des Péris (comédie persane, prol, 5, Fuzelier), Paris, Opéra, 10 April 1725; as op.5 (1725)
La reine des Péris (parody and vaudeville, 1, Lesage and d'Orneval), n.d.; parody of the above, *F-Pn*
La triple Hécate (ballet, 2 scenes, C.-J.-F. Hénault), n.d., lib in Oeuvres inédites (1806)
Symphonie for T.-L. Bourgeois' Diane, 1721
Numerous airs and dances pubd in 18th-century anthologies

INSTRUMENTAL

Premier (–IVe) livre de [10] sonates, vn, bc: op.1 (1719); op.2 (1721); op.3 (1723); op.4 (1731); Ve livre de [6] sonates, vn, bc, op.25 (1738)
Pièces, 2 fl/vn, première suite (1723)
Concert de simphonies, suite première (–XIIe), vns/fls/obs, bc: op.8 (1730); opp.9–12 (1731); op.13, also for viols/musettes (1733); opp. 18–23 (1735–7)
Les amuzettes, vielles/musettes/vns/fls/obs, op.14 (*c*1733)
Pièces, 2 vn/fl, op.15 (*c*1734); ed. H. Ruf (Mainz, 1984)
Les petits concerts, musettes/vielles/vns/fls/obs, op.16 (1734); ed. J. Harf (Wilhelmshaven, 1975)
[6] Concerto, 4 vn, vc, bc, op.17 (1734); 2 ed. R. Blanchard (Paris, 1973)
Sonates, 2 vn, op.24 (1738)
[4] Concerto, 4 vn, vc, bc, op.26 (1739); no.4 as Le carillon (n.d.); 2 ed. R. Blanchard (Paris, 1973)
Les jolis airs, 2 vn, premier (–VIe) livre: opp.27–9 (*c*1740–45); op.31 (1749); opp.32–3 (*c*1750)
Menuets nouveaux avec la basse (n.d.)
Various pieces pubd in 18th-century anthologies

(2) Louis Aubert [*le jeune, le fils*] **(i)** (*b* Paris, 15 May 1720; *d* after 1783). Eldest son of (1) Jacques Aubert. Taught by his father and hailed as a child prodigy, he was a back-desk violinist at the Opéra by the time he was 11 and perhaps even when he was only eight. In 1732 Joseph Francoeur nominated him to the 24 Violons du Roi, although he was not officially appointed until 1746. In 1753 he offered his father's violin for sale: it was a 17th-century instrument designed by Nicoló Amati. By 1756 he was first violinist and one of the principal conductors of the Opéra orchestra. He retired from these duties in 1774 with a pension and special gratuities 'in consideration of 43 years of service'; his name can be found on lists of patrons as late as 1783. Considering that he was active at a later time, Louis was a more conservative composer than his father; his sonatas, each of which is really a series of dances, reflect the French early 18th-century style. He is remembered more for his *simphonies*, which have been mentioned among the precursors of the French symphony; but his works seem to look backward rather than forward. In four of the six *simphonies*, for example, all the movements are in the same key, and in orchestrating them he used three violins and bass without a viola as intermediate voice, the combination that his father had used in the concertos of the 1730s.

An Etienne-Louis Aubert, presumably distinct from Louis (and probably a younger brother), took (1) Jacques Aubert's place in the 24 Violons in 1746 and was relieved of his position on Jacques' death in 1753; no compositions survive in his name.

WORKS

all published in Paris

[6] Sonates, vn, bc, op.1 (1750); some for fl
6 simphonies à quatre, 3 vn, bc, op.2 (1755)
6 trio, 2 vn, vc (n.d.)

(3) Jean-Louis Aubert (*b* Paris, 15 Dec 1732; *d* *c*1810). Writer, dramatist and abbé, son of (1) Jacques Aubert. He may have composed some of the music to his own plays (*Jephté ou le voeu*, 1765; and *La mort d'Abel*, 1765), but he is remembered more for his essays on music, the most famous being his reply to J.-J. Rousseau's controversial *Lettre sur la musique françoise*. In his *Refutation suivie et détaillée des principes de M. Rousseau de Genève touchant la musique françoise* (1754) (taking up arms in the Querelle des Bouffons) Aubert met Rousseau on his own ground and, in language often sarcastic and witty, stressed the genius of French composers such as Rameau, Leclair and Mondonville.

ELIZABETH KEITEL/M. SIGNORILE

Aubert, Louis(-François-Marie) (ii) (*b* Paramé, Ille-et-Vilaine, 19 Feb 1877; *d* Paris, 9 Jan 1968). French composer. Something of a child prodigy, Aubert sang with Fauré at the Madeleine, and as a boy treble took the solo part in the first performance of his Requiem. He entered the Paris Conservatoire in 1887 and became a pupil of Marmontel, Lavignac and Diémer and subsequently of Fauré. Aubert wrote songs and piano music as well as several ballets and incidental music but left only one opera, *La forêt bleue*, a fairy-tale piece with a happy ending that engagingly depicts the original characters of Pérrault.

While his early songs are little more than salon pieces, his mature language was influenced by Fauré, in its turns of harmony, and later by Ravel. He became a masterly orchestrator and employed modes extensively. *Dryade*, a programmatic work dating from the time of *La forêt bleue*, is typical of a style which uses Ravelian harmony and exotic arabesques. The successful *Habanera* for orchestra marked a distinct change of approach to a more dissonant style. The influence of jazz emerges in the ballet *Cinéma*, a series of pastiche pieces on various film stars, while the orchestral *Offrande*, a tribute to the victims of war, leaves behind the Ravelian style in favour of an elegaic language which uses dissonant added notes and octatonic devices. The several orchestrations he made of his songs made a significant contribution to this repertory. As a pianist, Aubert gave the first performance in 1911 of Ravel's *Valses nobles et sentimentales*, a work which is dedicated to him. His writings include *Notice sur la vie et les travaux de Gustave Charpentier* (Paris, 1956) and *L'orchestre* (Paris, 1951), the latter written in collaboration with Landowski.

WORKS
(*selective list*)

VOCAL

Songs (1v, pf, unless otherwise stated): Sous bois (L. Tiercelin) (1892); Vieille chanson espagnole (A. Houssaye) (1892); Rimes tendres (A. Silvestre), 1v, orch, 1896–8, arr. 1v, pf (1900); Fatum (A. Oeris), 1897; Melancholia (A.L. Hettich), 1897; L'inconnu (M. de Tonquedec) (1899); Légende (R. de Marès) (1899); Noël pastorale (Hettich) (1899); Péché véniel (Ludana) (1899); Sur le bord (Oeris) (1899); Chanson de mer (Sully-Prudhomme), 1900; La lampe du ciel (C.M.R. Leconte de Lisle), Mez, T, 1900; La lettre (H. Barbusse), 1900, orchd (1914); D'un berceau (Hettich), 1900; Les yeux (Sully-Prudhomme), 1900, orchd (1909); Déclaration (H. Giraud), 1901; Hélène (A. de Bengy-Puyvallée), 1901, also orchd; Secret aveu (E. Haraucourt), 1901; Les cloches (Ludana), 1902, arr. 1v, female vv, chorus, orch; Nocturne (P. Verlaine), Mez, Bar/T, 1902; Cache-cache (de Bengy-Puyvallée), Mez, Bar, (1903), arr. S, chorus; Sérénade (H. Vacaresco), 1906, orchd (1919); Première (de Bengy-Puyvallée) (1907); Crépuscules d'Automne (F. Hérold and others), 1908, 2 also orchd; Odelette (H. de Régnier), 1910; Roses du soir (R. Vivien), 1910, orchd (1910); Nuit mauresque (Vivien), 1911, orchd (1911); 2 poèmes (J. Chenevière) (1913), also orchd; 6 poèmes arabes (F. Toussaint), 1915–17, orchd 1919; Aigues marines (Vivien), 1918; Au pays (L.-P. Fargue), orchd, 1920; De Ceylan (R. Chalupt), 1920; Sérénade mélancolique (G. Jean-Aubry), 1923, also orchd; La fontaine d'Hélène (P. Ronsard), 1924, also orchd; 3 chants hébraïques (T. Klingsor), 1925, orchd (1926); Le pays sans nom (E. Schneider), 1926, also orchd; L'heure captive (R. Dommange), 1v, pf, vn obbl (1928); La mauvaise prière (Chalupt) (1932), also orchd; La berceuse du marin (R. Champlay), 1933, orchd 1933; Tendresse (Champlay) (1933)

Other: Sagesse (J. Autran), 3 female vv, 1879; Matin de Pâques (G. Ardant), légende sacrée , S, Mez, Bar, pf, 1898; Invocation à Odin (de Bengy-Puyvallée), Bar, male vv, 1901, also orchd; O Salutaris, S/T, chorus, vn, org (1903); Pie Jesu, 1v, org (1903); Tu es petrus, ?chorus, 1917; Saisons (sym. poem, ?Aubert), Mez, chorus, (org, orch)/(4 sax, d bn), 1937; Incantation, chorus, jazz orch, orch, first perf. 1943; Ave Maria, chorus (1956)

OTHER WORKS

Dramatic: Chrysothemis (ballet-pantomime, 1, H. Ferrare), Vichy, Casino, 28 July 1904; La forêt bleue (op, 3, J. Chenevière, after C. Perrault), 1904–10, Geneva, Opera, 7 Jan 1913; Cinéma (ballet, R. Jeanne), Paris, Opéra, 13 March 1953

Inst: Berceuse, pf (1895); Romance, op.2, pf, 1897; Fantaisie, op.8, pf, orch, 1899; 3 esquisses, pf, 1900; Suite brève, op.6, 2 pf, 1900; Madrigal, op.9, fl, pf (1901); Valse caprice, op.10, pf, 1902; Lutins, op.11, pf, 1903; 2 pièces en forme de Mazurka, op.12, pf (1907); Sillages, op.27, pf, 1908–13; Habanera, orch, 1917–18, also pf 4 hands; Esquisse sur le nom de Fauré, pf, 1922; Introduction et allegro, fl, pf (1922); Caprice, vn, orch, 1924; Dryade, tableau musical, orch, 1924; Sonata, vn, pf (1927); Feuille d'images, pièces enfantines, pf 4 hands (1930), also orchd; Offrande, orch, 1947; Aubade, vn, pf (1948); Tombeau de Chateaubriand, op.44, orch, 1948; Improvisation, 2 gui, 1959–60; Tableaux symphonique, orch [concert version of Cinéma, ballet, 1953]

Many song arrs. and ballet orchestrations

RICHARD LANGHAM SMITH

Aubert, (Pierre-François-)Olivier (*b* Amiens, 1763; *d* Paris, *c*1830). French cellist and guitarist. He studied music at the *maîtrise* of his home town but was self-taught at his principal instrument, the cello. In 1787 he was established as a cello teacher in Paris, and he played for 25 years in the orchestra of the Opéra-Comique. Aubert also took up the guitar after Ferdinando Carulli's famous appearance in Paris in 1808, and later taught the guitar in the rue du Faubourg-Montmartre, where he also published music. He wrote important methods for the cello (1802) and the guitar, and one book of solfège. His published compositions, which show him to have been a cellist of considerable ability and to have enjoyed favour in Vienna, Zürich and Milan as well as Paris, begin with three sets of string quartets opp.1, 2 and 4, but consist mainly of duets for two cellos of which one, op.13, is based on Paris street cries: *Les marchandes de plaisirs d'artichauds, de pommes de terre et de gateaux de Nanterre*. There are five books of potpourris for guitar and some sets of guitar duets. In 1827 Aubert published his 44-page *Histoire abrégée de la musique ancienne et moderne, ou Réflexions sur ce qu'il y a de plus probable dans les écrits qui ont traité ce sujet*, the fruit of 25 years' reflection – a long time, as Fétis observed, devoted to very little. (*FétisB*; *MGG1*, K. Stephenson)

HUGH MACDONALD

Aubéry du Boulley, Prudent-Louis (*b* Verneuil, 9 Dec 1796; *d* Verneuil, 28 Jan 1870). French composer and teacher. His later achievements in the encouragement of amateur music-making in the provinces were foreshadowed in his youth when, at the age of 11, he wrote some marches for the local wind band at Verneuil. He played the flute and the horn, and in 1808 went to Paris to study composition with Momigny and later with Méhul and Cherubini at the Conservatoire. He returned to Verneuil in 1815 and divided his life between music and the management of his estate in the village of Grosbois nearby. He composed an opera *Les amants querelleurs*, accepted by the Opéra-Comique but played at the Théâtre du Gymnase in 1824. He was prolific in the popular genres of the time and devoted much attention to the guitar, for which he wrote a tutor. Many of his chamber works combine the guitar with strings or wind. He also supplied several books of wind music for the newly reorganized National Guard. In 1830 he published his *Grammaire musicale*, an introduction to musical theory, presented in dialogue form, which ran to three editions. Thereafter his main preoccupation was the coordination of music in his local region,

especially music for wind band. In 1835 he formed a society of wind bands drawn from Evreux, Nonancourt, Dreux, Vernon, Alençon, Chartres and other towns of the area west of Paris, which came together twice a year to form a massed band of several hundred players. Despite ill-health du Boulley travelled from village to village providing instruments and instruction and recruiting players. His own village had a band of over 20. He published an account of the society in 1839 with a list of his own works. His opus numbers exceed 170 and include, besides much music for brass and wind band and guitar, a symphony for full orchestra (1847).

WORKS

Les amants querelleurs (oc, 1), Paris, Gymnase, 1824
Sym., orch, 1847
Works for military band: Marche funèbre; Collection of military music, 1830–32; Collection of fanfares, 1835–6; Cantata in honour of St Cecilia, 3vv, band, 1836; Collection of music for brass, 1858–9; Collection of syms., ovs., fantasias; Les échos des rives de l'Eure, op.152
Chbr and inst (most mentioned by Fétis): Septet, fl, cl, hn, gui, vn, vc, b; Qnt, fl, pf, vn, vc, gui; 7 qts, pf, vn, fl, gui; many trios and duos; Contredanses and waltzes, op.2, 2 gui; 3 sonates faciles, pf, op.1; La bataille de Montmirail, pf, 1814; romances, quadrilles, waltzes, polkas, gui; others
Méthode complète et simplifiée pour la guitare, op.42 (Paris, n.d.)

HUGH MACDONALD

Aubin, Tony (Louis Alexandre) (*b* Paris, 8 Dec 1907; *d* Paris, 21 Sept 1981). French composer and conductor. He studied at the Paris Conservatoire (1925–30) with Samuel-Rousseau (harmony), Noël Gallon (counterpoint) and Dukas (composition), winning the Prix de Rome in 1930 with *Actéon*. Having studied conducting with Gaubert (1934–5) he took up the artistic direction of the RTF station Paris Mondial (1937–44) and then served as a conductor for French radio (1945–60), for whom his work included a recording of *Ariane et Barbe-Bleue*. In 1945 he was appointed professor of composition at the Conservatoire, and in 1969 he was elected to the Institut. In 1979 he became president of the Académie des Beaux-Arts and was made a Commandeur of the Légion d'Honneur. His compositions pursue the more harmonically rich and colourful aspects of the music of Ravel and Dukas. In *Actéon* (1930) he achieves a sense of mystery by combining dissonant clusters with a repeated motif. His only opera *Goya* is notable for its jocular inclusion of pastiche Spanish and folk elements.

WORKS
(*selective list*)

Op: Goya (5, 4 tableaux, R. Escholier), 1968–73, Lille, Opéra, 28 Nov 1974
Ballets: Fourberies [after G. Rossini] (after Molière), 1950; Variations [after F. Schubert], Paris, 1953; Grand pas [after J. Brahms], Paris, 1953; Périls, 1958; Au fil de l'eau, 1964
Vocal orch: Actéon (cant., P. Arosa), S, T, B, orch, 1930; Cressida (A. Suarès), spkr, S, T, chorus, orch, 1935; Jeanne d'Arc à Orléans, 1943; Chant d'amour, chant de mort de Troilus (A. Suarès), T, orch, 1962
Orch: Sym. romantique, 1937; Le chevalier Pécopin, after V. Hugo, 1942; Suite danoise, 1945; Sym. no.2, F, 1951; Suite éolienne, fl, cl, str, 1958; La joconde, after L. da Vinci: *La gioconda*, 1961; Concertino dell'amicizia, fl, str, 1964; Divertimento dell'incertezza, cl, str, 1967; Concertino delle scoiattolo, ob, pf, str, 1970; Concertino della brughiera, bn, str, 1975
Chbr and solo inst: Prélude, recitatif et final, pf, 1930; Str Qt, 1930; Pf Sonata, b, 1933; Le sommeil d'Iskender [for Le Tombeau de Paul Dukas], pf, 1936; Cantilène variée, vc, pf, 1937, orchd 1944; Toccatrotta, hpd, 1972; Hidalgoyas, gui, 1975
Songs: 6 poèmes de Verlaine, 1v, pf, 1932
Incid music, incl. Athalie (J. Racine), 1943; film scores

Principal publishers: Editions françaises de musique, Leduc, Billaudot

PAUL GRIFFITHS/ANDREA MUSK

Aubry, Georges Jean. *See* JEAN-AUBRY, GEORGES.

Aubry, Marie (*b* c1656; *d* Paris, 1704). French singer. She first appeared on stage as Diana in *Les amours de Diane et d'Endymion* by Sablières at Versailles (1671). Her performance impressed Robert Cambert, who cast her as Phyllis in his pastorale *Les peines et les plaisirs de l'amour* (1671). She created six leading roles in Lully's operas: Aeglé in *Thésée* (1675), Sangaride in *Atys* (1676), Io in *Isis* (1677), Philonoé in *Bellérophon* (1679), the title role in *Proserpine* (1680) and Andromeda in *Persée* (1682). She assumed such a 'prodigious size' that she retired in 1684 because 'she could not walk and appeared *toute ronde*' (F. Parfaict: *Histoire de l'Academie royale de musique*, MS, 7741, *F-Pn*).

Aubry fanned the antagonism between Lully and Guichard, her former lover. She told Lully that Guichard plotted his murder by asking her brother to mix arsenic in Lully's tobacco. There followed a bitter trial lasting nearly three years.

JAMES R. ANTHONY

Aubry, Pierre (*b* Paris, 14 Feb 1874; *d* Dieppe, 31 Aug 1910). French musicologist and philologist. He graduated in philology (1892) and law (1894), and subsequently became *archiviste paléographe* at the Ecole des Chartes in Paris (1898). He took a diploma in Armenian (1900), and after travelling in Central Asia published articles on Armenian church music and on music of the Tajiks and Sarts in Turkestan. He later taught in Paris at the Institut Catholique, the Ecole des Hautes Etudes Sociales and at the Schola Cantorum, through whose Bureau d'Edition he issued his early articles.

Aubry brought to bear on musical problems the skills of the philologist (comparing concordant sources and establishing the best reading for a text) and of the palaeographer. In this he resembled his contemporary Friedrich Ludwig and others of the senior generation of 20th-century music scholars. He continued the work of Coussemaker and Riemann in the field of 13th-century French music, making texts available in edition and facsimile: his name is closely associated with three major sources, the Roman de Fauvel, the Chansonnier de l'Arsenal and the Bamberg manuscript. He produced much textual criticism in article form, and two series of

larger studies, many of them in collaboration with literary scholars.

Aubry is known particularly for his work on the sources of troubadour and trouvère song. His rhythmic interpretations of monophonic song were largely based on the application of Franconian rules to the ligatures of the notation. In 1907 (with *La rhythmique musicale* and the recast form of 'Iter hispanicum') he adopted the modal interpretation (*see* RHYTHMIC MODES) evidently developed by Ludwig and J.B. Beck. A dispute arose between Aubry and Beck in 1909 as to which of them was the originator of modal theory; the result was Aubry's death from a foil wound, apparently while preparing for a duel.

WRITINGS

Huit chants héroïques de l'ancienne France, XIIe – XVIIIe siècle: poèmes et musique (Paris, 1896, 2/1896) [music in 2nd edn only]

IAN D. BENT

Aucassin et Nicolette. A French 13th-century *chante-fable*. The only surviving example of the genre, its sole source is *F-Pn* fr.2168. It tells, in prose, the romantic story of the love of a count's son for a foreign girl-captive. Interspersed in the narrative are verse sections (laisses) written in lines with equal numbers of syllables, all sung to the same double phrase of melody (a relic of narrative singing; *see* CHANSON DE GESTE), concluding with a single four-syllable line, which forms a musical coda. The melody is published in the standard edition by Roques and in the translation by Matarasso.

JOHN STEVENS

Auckland. City in New Zealand. Located in the north of the North Island, it is the country's largest city, with a population of approximately one million. European settlement dates from 1840; organized musical activities from 1845 featured the bands of the 58th and, later, 65th Regiments of the Imperial Forces. They supplied the music not only for military events but also for balls, soirées, outdoor concerts and church occasions. The Auckland Choral Society, founded in 1855, continues to the present day; other notable choirs have been the Auckland Liedertafel (later Royal Auckland Choir), the Albyn Singers and the choirs of Holy Trinity and St Patrick's cathedrals. The Dorian Choir, formed in 1935, established an international reputation under the direction of Peter Godfrey. The Primary School Choral Festival is well established after 50 years.

Opera has had a chequered life in Auckland since the 1860s, with a heavy dependence on touring groups such as the Lyster, Simonsen, Musgrave, Williamson and Pollard companies. The National Opera Company was short-lived (1979–83), but the merger of Mercury Opera with the Metropolitan Opera in 1992 to form Auckland

Opera (now Opera New Zealand) marked a resurgence of interest and success, helped by the opening of the Aotea Centre in 1989. With its 2256-seat auditorium, it is the first venue in Auckland with the facilities for a full operatic production. Operetta has been well served by the Auckland Light Opera Club, founded in 1919.

The role of the enthusiastic amateur has been central to Auckland's active musical life, supported by societies, schools, church and community choirs, brass bands and retailers. Maughan Barnett, the city organist, and the Municipal Band performed free concerts in the Town Hall for many years. The Bohemian Orchestra (1914–36) and the Auckland SO (1939–47) attempted to provide a range of orchestral works. The professional Auckland Philharmonia Orchestra was established in 1986, preceded by the Auckland String Orchestra (1940), later the Symphonia of Auckland and Auckland Regional Orchestra. It maintains a busy concert schedule across a broad repertory. The Town Hall and the Aotea Centre are the main musical venues; smaller ones include the Maidment Theatre (opened 1975), the University of Auckland Musical Theatre (1986) and the Bruce Mason Centre (1996).

The School of Music (from 1970 to 1981 called the Conservatorium) at the University of Auckland provides performers, composers, teaching and a wide range of musical activities. A chair in music was established in 1888. Composers attached to the university have included Douglas Mews and John Rimmer. The university also houses the Archive of Maori and Pacific Music. Music education in secondary schools is starting to reflect the strong Maori and Polynesian influences in the city, which have also affected emerging styles of popular music in the Auckland area. As the country's largest population base, Auckland has had a pivotal role in establishing and maintaining the national reputations of those working in popular music and jazz.

LIBBY NICHOL

Auda, Antoine (*b* St-Julien-en-Loiret, 28 Oct 1879; *d* Brussels, 19 Aug 1964). Belgian musicologist of French birth. He was a choirboy in the Maîtrise de St Joseph, Marseilles, where he experienced a large repertory of plainsong and 16th-century polyphony, under the direction of J.-B. Grosso. He became a lay brother of the Salesian order, and (after a year in Paris) taught in Liège from 1905 to 1925. Following a year in Tournai he settled in Brussels, where he lived until his death. Among his many interests was a far-sighted fascination with colour photography; he also first demonstrated the use of microfilms as aids to scholarship at a congress of archaeology at Mons in 1928.

Auda's chief work centred on plainsong, the music of Liège, scales and modes and the concept of *tactus* in music before 1650. In his *tactus* work, he gave pride of place to A. Tirabassi, whose doctoral dissertation (1925) prepared much of the ground that the two men were later to explore with a zeal and devotion fostered partly by the general opposition which met their conclusions. This resistance led Auda into several protracted scholarly disputes (carried out in articles and published letters) notably with Casimiri and Van den Borren. His last publication (finished a month before he died) was a complete survey of musical examples and theory clarifying the concept of *tactus*. This volume is an impressive testament to his logical scholarship; however, as it was privately printed, delayed by his death, and very difficult to obtain, it has been generally neglected. Apart from his major researches, Auda published studies of two neglected musicians with whom he felt a personal connection: the 19th-century Belgian organist and composer P.-L.-B. Thielemans, born at Woluwé-Saint-Pierre (the part of Brussels in which Auda lived), and the 16th-century adolescent prodigy Barthélemy Beaulaigue, poet and composer from Marseilles (the town where Auda himself had spent his adolescence singing polyphony). Auda dedicated this second study to the memory of his former teacher J.-B. Grosso.

DAVITT MORONEY

Audefroi le Bastart (*fl* 1190–1230). French trouvère. The dedication of two chansons (*Amours, de cui j'esmuef* and *Pour travail*) to Jehan de Nesle, castellan of Bruges, suggests that they were written before 1200, when Jehan joined the Fourth Crusade with Conon de Béthune. The interpolation of the first strophe of *Destrois, pensis* into Gerbert de Montreuil's *Roman de la violette* (1225 or slightly later) indicates that Audefroi belonged to one of the earlier generations of trouvères. He was probably a native of Picardy, perhaps of the area near the Artois border. He may have been associated with the Arras *puy*; the *Registre* records the death of his wife in 1259.

Although he was the creator of ten *chansons courtoises*, Audefroi did not achieve the recognition that such early trouvères as Gace Brulé or the Chastelain de Couci achieved. His works are to be found chiefly in the Noailles Chansonnier and the Manuscrit du Roi (*F-Pn* fr.12615 and 844), and appear only rarely in as many as four sources. His six romances (*Bele Emmelos*; *Bele Idoine*; *Bele Ysabiaus*; *En chambre a or*; *En l'ombre*; *En nouvel tens*), however, are an important contribution to the genre, elaborating on the older, popular tradition of the *chanson de toile*. The freshness of these works, their use of monologue and dialogue, and their expansive length (9–25 strophes) are distinguishing traits. Half of them open with a series of dodecasyllabic lines on a single rhyme, closing with octosyllabic refrains. The use of the hexasyllabic line as the main or sole structural unit of one romance and two *chansons courtoises* is also distinctive, and *Com esbahis* is one of a group of only 14 works in the repertory that open with a four-syllable line.

All of the romances except *En l'ombre* open with the characteristic repeat of the first phrase (two of them employing a varied repeat). Half employ no further repetition, but the rest exhibit either motivic quotation or varied repetition of some kind. The *chansons courtoises* employ bar form, except for *Pour travail*, which is non-repetitive. Several melodies are characterized by a comparatively small range. *Bele Emmelos* – with nine strophes – spans only a 5th, including a whole step below the final; two other works remain within the compass of a 6th. Of the two melodies that range widely, one involves a probable error of clef, whereas the other is a late setting. Most melodies are at least moderately florid. None survives in mensural notation, although there are brief suggestions of regular patterns of rhythmic organization in *Destrois, pensis*, *Fine amour* and *Onques ne seu chanter*.

THEODORE KARP

Auden, W(ystan) H(ugh) (*b* York, 21 Feb 1907; *d* Vienna, 29 Sept 1973). English poet, naturalized American. Of all the mid-20th-century poets, Auden was the most actively concerned with music; the third part of his *Collected Poems* (New York, 1945) consists of 38 'songs and other musical pieces', including the five lyrics set in Britten's cycle *On this Island* (1938), his *Song for St Cecilia's Day* (1941) and arias from his 'choral operetta' *Paul Bunyan* (1941). With Britten he collaborated on films (*Coal Face*, 1935; *Night Mail*, 1936), broadcasts (*Hadrian's Wall*, 1937; *The Dark Valley*, 1940), plays (*The Ascent of F.6*, 1937; *On the Frontier*, 1938), on the 'symphonic cycle' *Our Hunting Fathers* (1936) and on cabaret songs for Hedli Anderson (1938). Two quotations from the *St Cecilia* poem show how well Auden wrote words for music. The opening lines:

> In a garden shady this holy lady
> With reverent cadence and subtle psalm,
> Like a black swan as death came on
> Poured forth her song in perfect calm

demonstrate his command of cantabile, of rhythm and of vowel pattern, while the subsequent scherzo section is prompted by the lilt of:

> I cannot grow;
> I have no shadow
> To run away from,
> I only play.

In 1948, Auden declared himself an 'opera addict'; his friend Chester Kallman 'was the person who was responsible for arousing my interest in opera, about which previously, as you can see from *Paul Bunyan*, I knew little or nothing'. In that year Kallman and Auden collaborated on the libretto for Stravinsky's *The Rake's Progress*. In 1953 they published *Delia*, a delicate masque, written for Stravinsky but unset. Thereafter for Henze they produced two librettos, *Elegy for Young Lovers* and *The Bassarids*, and for Nabokov adapted *Love's Labour's Lost*. Their last libretto, *The Entertainment of the Senses*, was an antimasque for insertion into the Gibbons-Locke *Cupid*

and Death (1653, 1659). It was posted to its composer, John Gardner, a few days before Auden's death. About half of *The Rake's Progress* and, by Auden, 'about 75%' of *Elegy* has been credited to Kallman – though, in a joint essay, the collaborators described themselves as a 'corporate personality'. Auden's theories about opera (among them: 'a good libretto plot is a melodrama in both the strict and the conventional sense of the word; it offers as many opportunities as possible for the characters to be swept off their feet by placing them in situations which are too tragic or too fantastic for "words"') were set out in several essays; his practice produced the most elegantly wrought librettos of the day. *Elegy*, for example, opens with full-voiced pentameters, linked by patterns of alliteration and internal rhyme:

> At dawn by the window in the wan light of today
> My bridegroom of the night, nude as the sun,
> with a brave
> Open sweep of his wonderful Samson-like
> hand

and, among its variety of carefully planned forms, includes simple songs:

> On yonder lofty mountain
> a lofty castle stands
> where dwell three lovely maidens,
> the fairest in the land

and scherzo patter:

> Blood-pressure drops,
> Invention stops;
> Upset tum,
> No images come

as well as conversational exchanges for recitative, conventional declarations of love, and a chorale. Despite his preference for opera in the original, Auden was also drawn to fit words to existing scores, and with Kallman he made translations of operas by Mozart (*Die Zauberflöte*, 1956; *Don Giovanni*, 1960), Weill (*Die sieben Todsünden*, 1958; *Aufstieg und Fall der Stadt Mahagonny*, 1960) and Dittersdorf (*Arcifanfano*, 1965). These are mellifluous, elegant, and better poetry than anything else of the kind, but on occasion they stray far from the original – quite deliberately so, since 'a too-literal translation of the original text may sometimes prove to be a falsification'.

Many composers have been attracted to set Auden's poetry, among them Berkeley (*Night covers up the rigid land* and *Five Poems*) and Maw (in his *Nocturne*); the 'Christmas Oratorio' *For the Time Being* attracted settings from both Marvin David Levy and (of the first section, 'Advent') Thea Musgrave. His poetry has also inspired purely instrumental works such as Berio's orchestral *Nones* (1954) and Bernstein's Symphony no.2, subtitled 'The Age of Anxiety' (1949). Later poems written specifically for musical setting include two translations in Barber's *Hermit Songs* (1953), Stravinsky's *Elegy for J.F.K.* (1964) and Walton's *The Twelve* (1965). Auden and Kallman were the text editors of *An Elizabethan Song Book* (Garden City, NY, 1955), whose music editor was Noah Greenberg, and in 1957 Auden wrote the narratives for Greenberg's performing edition of *The Play of Daniel*.

ANDREW PORTER/R

Audiffren, Jean (*b* Barjols, Provence, bap. 24 Sept 1680; *d* Marseilles, 8 Aug 1762). French composer and priest. The son of Jean-Baptiste Audiffren and Marguerite Fabre, he presumably received his initial musical training as a choirboy at Barjols church; in 1694 he entered the service of the chapter of the Old Cathedral in Marseilles, where he was taught by the precentor, Melchior Barrachin. In 1696 he received the tonsure, and about the turn of the century began to show his talents. In 1702 he became deputy precentor at Marseilles Cathedral; from 1716 to 1720 he was precentor of the primate's church of St Trophime at Arles and subsequently held the same office at Marseilles Cathedral until his retirement in August 1758. He was the teacher of Charles Levens. Audiffren's masses, although of unequal merit, contain some fine

movements, and attest to the existence in southern France at this period of a concertante style of *missa brevis* with instruments or continuo.

His nephew, Joseph-Lazare Audiffren (*b* Marseilles, 21 Oct 1736; *d* Marseilles, 17 June 1804), was organist at the royal abbey of St Victor in Marseilles from 1771 to 1786, and at the cathedral until 1790, when the chapter was dispersed in accordance with the decree of the Civil Constitution of the Clergy. His only known work is the *Premier recueil d'ariettes* with keyboard and violin accompaniment (Paris, 1773).

GUY BOURLIGUEUX

Audinot [Odinot, Oudinot], **Nicolas-Médard** (*b* Bourmont-en-Bassigny, Haute-Marne, 7 June 1732; *d* Paris, 21 May 1801). French impresario, singer and dramatist. He first made his name as a singer with the Opéra-Comique (after about 1758), chiefly in artisan roles; no doubt it was to exploit this special talent that he was allowed to put on an *opéra comique* of his own, *Le tonnelier*, after La Fontaine's *Le cuvier* (Foire St Laurent, 28 September 1761). The work failed but Audinot nevertheless joined the Comédie-Italienne when that company merged with the Opéra-Comique in 1762. Audinot revised the libretto of *Le tonnelier* with A.-F. Quétant, and the work was revived on 16 March 1765 at the Comédie-Italienne with new *ariettes* and ensembles by various composers. In this new version it had considerable success in France, Holland and Germany alike. Audinot left the Comédie-Italienne in 1767 and soon became one of the principal impresarios of the Paris stage. After attracting crowds to his puppet show at the Foire St Germain, he opened the Théâtre de l'Ambigu-Comique on 9 July 1769, remaining its owner-manager until 1796 (for his many disputes with the political authorities see Isherwood, 187–91). The Ambigu-Comique used child actors at first; Audinot then employed adolescents, whom he exploited in morally dubious circumstances. On the other hand, the repertory of his theatre, initially dominated by skits and coarse farces, was enriched during the 1780s by moral plays and heroic and romantic pantomimes. It is difficult to evaluate the place of music at the Ambigu-Comique, but such composers as Botson, André-Jean Rigade and Papavoine were regularly employed there in the 1770s.

Audran, Edmond (*b* Lyons, 12 April 1840; *d* Tierceville, nr Gisors, Oise, 17 Aug 1901). French composer. Son of Marius-Pierre Audran (1816–87), at one time tenor at the Opéra-Comique, Audran studied under Jules-Laurent Duprato at the Ecole Niedermeyer, where he won the composition prize in 1859. In 1861 he moved with his family to Marseilles, where his father became a singing teacher and later director of the conservatory. He himself became organist at the church of St Joseph, for which he wrote religious music including a mass (1873) which was also performed at St Eustache in Paris. His other compositions included a funeral march on the death of Meyerbeer and some songs in Provençal dialect. His early attempts at *opéra bouffe* brought an invitation from Cantin, director of the Bouffes-Parisiens and himself a native of Marseilles, and with *Les noces d'Olivette* (1879) and *La mascotte* (1880) Audran established himself in Paris as a rival to Lecocq and gained international fame. He was the most successful French operetta composer of the 1880s, but apart from *La poupée* (1896) his later works were less successful. During his last years he suffered a mental and physical breakdown which caused his withdrawal from Paris society and eventually led to his death. Audran's scores show a considerable talent for comedy and have great melodic appeal and rhythmic variety.

WORKS
(*selective list*)

OPERETTAS

first performed in Paris unless otherwise stated; publication dates are of vocal scores published in Paris; for complete list see GroveO

PBP – Paris, Bouffes-Parisiens

Le grand mogol (ob, 3, H. Chivot and A. Duru), Marseilles, Gymnase, 24 Feb 1877; rev. in 4 acts, Paris, Gaîté, 19 Sept 1884 (1884)
Les noces d'Olivette (opérette, 3, Chivot and Duru), PBP, 13 Nov 1879 (1880)
La mascotte (oc, 3, Chivot and Duru), PBP, 29 Dec 1880 (1881)
Gillette de Narbonne (oc, 3, Chivot and Duru), PBP, 11 Nov 1882 (1883)

ANDREW LAMB

Aue, Hartmann von. *See* HARTMANN VON AUE.

Auenbrugger [D'Auenbrugg], **Marianna von** (*fl* Vienna; *d* 1786). Austrian keyboard player and composer. The daughter of Leopold von Auenbrugger, a well-known Austrian physician who wrote the German libretto for Antonio Salieri's comic opera *Der Rauchfangkehrer*, she studied composition with Salieri and published her only known work together with two of his odes. Marianna and her sister Katharina, both distinguished keyboard players, were known to Haydn and to the Mozart family. Haydn dedicated six of his piano sonatas to them (H XVI: 3–59 and 20). In a letter of 25 February 1780 to his publisher Artaria, Haydn wrote that, 'the approval of the *Demoiselles* von Auenbrugger ... is most important to me, for their way of playing and genuine insight into music equal those of the greatest masters. Both deserve to be known throughout Europe through the public newspapers'. Leopold Mozart, in a letter to his wife (12 August 1773), also refers to 'the daughter of Dr Auenbrugger ... who ... play[s] extraordinarily well and [is] thoroughly musical'. Her *Sonata per il clavicembalo o forte piano*, a three-movement Classical sonata of great charm and feeling, was published in Vienna by Artaria in about 1781. It has recently been edited by B. Harbach, *Women Composers for the Harpsichord* (Bryn Mawr, PA, 1986) and S. Glickman (Bryn Mawr, PA, 1990).

SYLVIA GLICKMAN

Auer, Leopold (von) (*b* Veszprém, 7 June 1845; *d* Loschwitz, nr Dresden, 15 July 1930). Hungarian violinist and teacher. He began his studies at the age of eight at the Budapest Conservatory with Ridley Kohne, continued them at the Vienna Conservatory with Jakob Dont (1857–8), and, after concert tours in the provinces, completed them with Joachim in Hanover (1863–4). After a successful début at the Leipzig Gewandhaus, he was engaged as orchestral leader at Düsseldorf (1864–6) and then at Hamburg where he also led a string quartet. Visiting London in 1868, he played Beethoven's Trio op.97 at the Musical Union with Anton Rubinstein and Piatti. On Rubinstein's recommendation, Auer was appointed to succeed Wieniawski as violin professor at the St Petersburg Conservatory in 1868; he remained there until 1917. He also taught outside Russia: in London during the summers of 1906–11 and in Loschwitz (Dresden) in 1912–14. In June 1917 he left strife-torn Russia for Norway, ostensibly on a holiday, and sailed for New York in February 1918. Despite his age, Auer still gave concerts and taught, both in New York and at the Curtis Institute in Philadelphia.

Auer spent half a century in St Petersburg, during which time he exerted a decisive influence on the Russian violin school. As court violinist, one of his functions was to play the solos at the Imperial Ballet. Traditionally, these were entrusted to famous violinists (among Auer's predecessors were Vieuxtemps and Wieniawski), which stimulated Tchaikovsky and other composers to write attractive solos for them. From 1868 to 1906 Auer led the string quartet of the Russian Musical Society; he also conducted the society's orchestra in 1883 and from 1887 to 1892.

Auer's technique lacked a certain virtuoso flair – perhaps because of the poor physical structure of his hand – and in the early years some Russian critics compared him unfavourably to Wieniawski; yet his noble and fine-grained interpretations of the great concertos succeeded in convincing the sceptics. Tchaikovsky (*Sérénade mélancolique*), Glazunov, Arensky and Taneyev all dedicated works to him. Yet he declined the dedication of Tchaikovsky's Violin Concerto, declaring it technically awkward and too long. Tchaikovsky rededicated it to Adolph Brodsky who gave the première in 1881. Auer later made some revisions in the violin part and played the concerto in 1893, shortly before the composer's death.

Auer's influence as a teacher grew slowly. His first students to arouse world-wide attention were Elman in 1905 and Zimbalist in 1907, followed by Heifetz, Polyakin and many others. Most of his students came to him as finished technicians so that he could develop their taste and interpretative powers. His approach was geared to the temperament of each. It is more appropriate to speak of an Auer style than of a school: virtuosity controlled by fine taste, classical purity without dryness, intensity without sentimentality. The so-called 'Russian' bow grip (ascribed to Auer by Flesch in his *Kunst des Violin-Spiels*) consists of pressing the bow stick with the centre joint of the index finger; the result is a richer tone, though at the expense of some flexibility. The heritage of the Auer style can still be felt in today's Russian school.

Auer's transcriptions and arrangements are tasteful but largely forgotten. His editions of the Classics are still useful, as are his *Violin Playing as I Teach it* (New York, 1921/*R*) and *Violin Masterworks and their Interpretation* (New York, 1925/*R*). He also published *My Long Life in Music* (New York, 1923).

BORIS SCHWARZ

Auerhan, Chrétien. *See* URHAN, CHRÉTIEN.

Auernhammer [Aurnhammer, Aurenhammer], **Josepha Barbara** (bap. Vienna, 25 Sept 1758; *d* Vienna, 30 Jan 1820). Austrian pianist and composer. She was the 11th child of Johann Michael Auernhammer and Elisabeth Auernhammer, née Timmer. She studied with Georg Friedrich Richter, Leopold Kozeluch and, from 1781, with W.A. Mozart, with whom she fell in love. On 27 June 1781 Mozart wrote of her: 'I dine almost daily with H. v. Auernhammer; the young lady is a fright, but plays enchantingly, though in cantabile playing she has not got the real delicate singing style. She clips everything'. In the same year Mozart dedicated his sonatas for piano and violin K296 and K376–80/374*d-f*, 317*d*, 373*a* to her. (The dedication to Auernhammer on the edition of the piano variations *Ah, vous dirai-je, maman* K265/300*e* was added in 1785 by the publisher Christoph Torricella.) Auernhammer corrected the proofs of several of Mozart's sonatas, and her performances with him were enthusiastically described by Abbé Stadler. At a private concert in

the Passauerhof in Vienna on 23 November 1781, she and Mozart played the sonata for two pianos K448/375*a* and the double concerto K365/316*a*. They also appeared together in concerts in January 1782 and on 26 May 1782. After her father's death, Mozart found lodgings for Auernhammer with Countess Waldstätten in the Leopoldstadt area. A legacy of almost 20,000 gulden from her great-uncle Karl Timmer on his death in 1785 was probably the basis of Auernhammer's decision to continue devoting herself to her career as a pianist. In 1786 she married a civil servant, Johann Bessenig (*c*1752–1837), with whom she had four children. She continued to appear regularly in concerts at the Burgtheater and privately, amd gave her last public concert on 21 March 1813 with her daughter Marianna, who also made a name for herself as a singing teacher and pianist. Auernhammer composed mainly piano music, particularly variations, which are marked by a comprehensive knowledge of pianistic technique and an artistic use of the instrument.

WORKS

printed works published in Vienna unless otherwise stated

Kbd variations: 6 on Nel cor più non mi sento [G. Paisiello: La Molinara] (Speyer, 1791); 6 on Der Vogelfänger bin ich ja [Mozart: Die Zauberflöte] (Offenbach, 1792; 1793); 8 on contredanse [S. Viganò: La figlia mal custodita] (1794); 6 on La stessa, la stessissima [A. Salieri] (1799); 6 variazioni per il pianoforte (1801); 6 on march [L. Cherubini: Les deux journées] (1803); 6 variations sur un thème hongrois (1810); 10 on theme from ballet Les folies amoureuses (n.d.); 10 variations dédiées a Madame de Brown, op.63 (n.d.)

Other works incl. 6 German lieder (1790), 2 kbd sonatas, vn sonata, 6 minuets for kbd

RUDOLPH ANGERMÜLLER/MICHAEL LORENZ

Auffmann [Aufmann], **Joseph Anton Xaver** (*b c*1720; *d* after 1773). German composer and organist. Shortly before 1759 he succeeded F.X. Richter as Kapellmeister to the Prince-Abbot of Kempten-Allgäu, holding the post until 1756. He published *Triplex concentus organicus, seu III. concerti organici a octo instrumentis* as his op.1 (Augsburg, 1754). On leaving Kempten he worked for a time in Straubing, where he composed the incidental music for two plays, *Hirlanda* (1756) and *Pompejus Magnus* (only text material is extant, *D-MT*). The survival of several works – an organ concerto in F, organ preludes and a concerto in D – at Donaueschingen (*D-DO*) suggests that he held a post at the court there. In 1773, when Auffmann was organist and composer to the Bishop of Pruntrut, Switzerland, he dedicated two symphonies to the Zürich Musiksaalgesellschaft.

ADOLF LAYER/PETER JANSON

Aufheben (Ger.: 'to lift up'). The term was used, together with closely related words such as the synonym *erheben*, as well as *heben* ('to lift'), *abheben* ('to lift off') and ABSETZEN ('to take off'), by many 18th-century writers in connection with string bowing. The manner in which the term was employed implies that the bow should be raised clear of the string to produce an articulation. However, the technical means for doing this, and the extent to which the bow was expected to be raised, are generally unspecified; though in relation to specific contexts some writers clarified their meaning with expressions like *ein klein wenig gehoben* ('raised a little bit'; G.S. Löhlein: *Anweisung zum Violinspielen*, 1774, p.80), or *ganz von den Saiten abgehoben* ('completely lifted off the string'; J.F. Reichardt: *Ueber die Pflichten des Ripien-Violinisten*, 1776, p.24). It seems clear that whenever such terms were used there was no suggestion of the employment of a springing bowstroke.

Aufschnaiter [Aufschneider, Auffschnaidter], **Benedict Anton** (*b* Kitzbühel, bap. 21 Feb 1665; *d* Passau, bur. 24 Jan 1742). Austrian composer. His main appointment was in Passau, where he succeeded Georg Muffat as court Kapellmeister in 1705. He spent his early years in Vienna, where he may have been a pupil of Johannes Ebner (a member of the well-known family of organ players and son of Wolfgang Ebner) whom he declared his model. Apparently he came into contact with members of the Viennese nobility, and he may have been employed at a court. In a letter of 1724 to Prince-Bishop Lamberg, while complaining about the quality of the violinists in Passau, Aufschnaiter claimed to have had in Vienna, where he spent many years, '16–18 excellent musicians' at his disposal. His op.1 (of which no copy is extant) was dedicated to Count Ferdinand Ernst von Trautmannsdorf, who may have been his employer. In 1695 his op.2 appeared in Nuremberg with a dedication to Archduke Joseph (later Emperor Joseph I). Under the title *Concors discordia* it contains six orchestral suites which show Italian concerto grosso structure but also an apparent French influence; they probably followed the example of Georg Muffat. All that is known of op.3 is that it was dedicated to Emperor Leopold I; no copy is extant. Op.4 consists of eight church sonatas published under the title *Dulcis fidium harmonia symphoniis ecclesiasticis concinnata*, which appeared in 1703 and were dedicated to the four early fathers of the church and the four evangelists. These are orchestral sonatas for two solo violins (which have complicated double stops), two violins ad libitum, viola, violone and organ; they may have been inspired by Heinrich Biber's works. From 1705, when he became Kapellmeister at Passau, Aufschnaiter was active as a composer of church music (although he was not officially appointed cathedral Kapellmeister as Muffat had been). His opp.5 and 8 comprise vespers for four voices, strings and continuo instruments (1709, 1728), his op.6 five masses (1712) and his op.7 offertories with two solo violas (1719). In all his church works Aufschnaiter favours a more traditional style similar to the Roman cantata style; there are fewer demanding violin passages and double stops than in his earlier works, and he prefers to please with melodic charm. In his theoretical writings

he emphasizes the difference between church, chamber and theatre music.

WORKS

Concors discordia, 2 vn, 2 va, vc, op.2 (Nuremberg, 1695)
Dulcis fidium harmonia symphoniis ecclesiasticis concinnata, 2 vn solo, 2 vn, va, vle, org, op.4 (Augsburg, 1703)
Memnon sacer ab oriente animatus, seu Vesperae solemnissimae, 4vv, str, 2 bc, op.5 (Augsburg, 1709)
Alaudae V ad aram purpurati honoris victimae sive Sacra V [5 masses], 4vv, vn, 2 va, 3 tpt, 3 trbn, ?org, op.6 (n.p., 1712)
Aquila clangens, exaltata supra domum Domini, sive 12 offertoria, 4vv, 2 vn, 2 va solo, 2 bc, 2 trbn ad lib, op.7 (Passau, 1719)
Cymbalum Davidis vespertinum seu Vesperae pro festivitatibus, 4vv, 2 vn, 2 va, 2 bc, op.8 (Passau, 1728), 2 with 2 tpt and 2 ob ad lib
Miserere pro tempore quadragesimae, op.9, *c*1724, unpubd, ?lost
Opp.1 and 3 lost
6 Miserere, *A-KR* [4 also in *D-OB*], ?orig. intended as part of op.9
Numerous other works, incl. masses, requiems, responses for Holy Week, grads/offs, *A-KR*, *D-Bsb*, *Dkh*, *Mf*, *OB*, *Po*, *Rp*, *S-Uu*
Praeludien, Fugen à 4, formerly *A-GÖ*, lost

Aufstrich (Ger.). In string playing, denotes 'up-bow'. *See* ABSTRICH. *See also* BOW, §II, 2(i).

Auftakt (Ger.). *See* UPBEAT.

Aufzug (i) (Ger.). *See* ACT.

Aufzug (ii) (Ger.). A type of trumpet ensemble music performed at German-speaking and associated courts for ceremonial processions, entrances and exits, at festive mealtimes and on other special occasions, also termed 'Einzug', 'Intrada', and (after 1740) 'Marsch' or 'Fanfare'. It first appeared about 1570, apparently in Dresden; it is related to the older, longer SONATA for five or six trumpets with timpani, which it had replaced at other German courts by about 1660, and to the INTRADA for other instruments. The Aufzug contrasts CLARINO melody (notated for the first time in this genre) with rhythmically active lower parts. The trumpet music in Praetorius's *In dulci jubilo … cum Tubis* (1619) is modelled on the early *Aufzug*. By the 18th century the ensemble included three to six trumpets, normally with timpani; the repertory of the Portuguese *Charamela Real* from the 1760s for one to four choirs, each of six trumpets with timpani, marks the musical highpoint. Composers of *Aufzüge* include Schmelzer, Speer, Zelenka, C.P.E. Bach, Altenburg and Diabelli.

PETER DOWNEY

Augener. English music publishers. The firm originated in 1853, when Charles Louis Graue, formerly employed by Ewer & Co., set up as a foreign music importer in London with the assistance of George Augener (*b* Hessen-Fechenheim, 1830; *d* London, 25 Aug 1915), who had come to England in 1852 from employment in the firm of André in Offenbach. Graue was succeeded by Gustav Scheuermann in 1854, and in 1857 Augener left to set up on his own. The following year he bought the Scheuermann business at public auction and took over its premises, trading as Augener & Co., and opening a branch in Brighton in 1860. Scheuermann set up briefly elsewhere in 1859 for a couple of years. In November 1898 the firm acquired the trade name and goodwill of ROBERT COCKS, and the two businesses were fully amalgamated as Augener Ltd in 1904. With George Augener's retirement in 1910, Willy Strecker purchased full control of the concern; through him it reverted to B. Schotts Söhne of Mainz in 1913, though with the outset of the war Schott forfeited its ownership. About 1960 Augener acquired the firm of Joseph Weekes, and in 1961 that of JOSEPH WILLIAMS. In May 1962 the firm, together with its various concert and wholesale concerns, was purchased by Galaxy Music Corporation (New York) and made part of GALLIARD LTD; this firm was subsequently absorbed by STAINER AND BELL, in whose catalogue the Augener titles now appear.

The firm began mainly as importers of foreign music, and from 1873 to 1937 held the sole agency for Peters Edition. As a publisher it was notable for the adoption of lithographic methods, and active from 1867 in producing cheap editions of the classics as well as modern works in their extensive Augener Edition. In 1878, under the direction of William Augener (*b* ?1854–5; *d* Tunbridge Wells, 19 June 1904), George's eldest son, it began printing its own publications, achieving a high standard of production; from 1871 to 1960 it published the *Monthly Musical Record*, with Ebenezer Prout (whose theoretical works it also published) as its first editor, followed by J.S. Shedlock, Richard Capell, J.A. Westrup and Gerald Abraham. The firm was particularly identified with educational music, especially piano works, and published many volumes of music for examining bodies.

PETER WARD JONES

Augenmusik (Ger.). *See* EYE MUSIC.

Augér, Arleen (*b* Long Beach, CA, 13 Sept 1939; *d* Leusden, Netherlands, 10 June 1993). American soprano. As a girl she sang in a church choir and studied the piano and violin. She studied singing and the violin at the University of California, later took singing lessons in Chicago with Ralph Errolle, and won a scholarship to Vienna in 1967. At her audition she so impressed the conductor Josef Krips that he engaged her for the Staatsoper, with the role of the Queen of Night in *Die Zauberflöte* for her début. Another powerful admirer at this time was Böhm, with whom she sang, and also recorded, a notable Konstanze in *Die Entführung aus dem Serail*. Appearances at the Vienna Volksoper included Marie in Donizetti's *La fille du régiment*. Her reputation as a coloratura soprano grew with débuts at the New York City Opera (1969) and Salzburg (1970), both as the Queen of Night.

With her move to Frankfurt in 1974 Augér turned more to lyric roles in opera and to the development of her career as a concert singer. She toured Japan in programmes of Bach and Handel, and worked extensively with the pianist Irwin Gage in the lieder repertory. In 1975 she sang as Fire in *L'enfant et les sortilèges* at La Scala, and in 1978 made her début at the Metropolitan Opera as

Marzelline in *Fidelio*. She was greatly admired in Britain, where she gave many recitals and sang in memorable performances of *Alcina* and *L'incoronazione di Poppea* (both of which she recorded) at Spitalfields in the City of London Festival. In 1986 her singing of Mozart's *Exsultate, jubilate* at the wedding of Prince Andrew and Sarah Ferguson in Westminster Abbey was heard by millions worldwide on television. Augér's many recordings show her as a delightful singer of Bach, Haydn, Mozart, Schubert and Richard Strauss, to whose *Vier letzte Lieder* she brought a fresh voice and mature understanding in a performance with Previn. Among her last recordings were a distinguished contribution to Graham Johnson's Complete Schubert Song Edition and *Sonnets from the Portuguese*, written for her by Libby Larsen. Her voice was of a gentle character with impressive reserves of power: her singing was unfailingly musical, and her death, after operations for a brain tumour, was deeply mourned.

J.B. STEANE

Auget [Auger], **Paul** (*b* Pontoise [now Cergy-Pontoise], *c*1592; *d* Paris, 22 March 1660). French composer. The son of a wine merchant, Auget had the money and social connections to obtain quickly a musical position worthy of his talents. He found favour with Jean-François de Gondi, Abbé of St Autin and *doyen* of Notre Dame, and through him began his career at court. He served as master of the abbé's music and at various times as singer and master to the queen, the queen mother and the king. On 13 January 1625 he became *surintendant de la musique de la chambre du roi*, a post he shared with Antoine and, later, J.B. Boësset. By 1638 he was enobled and living on a comfortable pension, but he still held his position as *surintendant* in 1654 when he participated in the coronation of Louis XIV. Contrary to statements by Prunières and others his daughter did not marry Jean de Cambefort, his successor as *surintendant* – it was one of his nieces who did so.

Only 14 compositions by Auget, all songs, survive, and it is likely that he wrote them for his own performance. Most were originally sung in *ballets de cour*: *Ballet de la folie* (1618), *Ballet royal du grand bal de Douairiere de Billebahaut* (1626) and *Ballet du sérieux et de grotesque* (1627). All but two were published twice in versions for voice alone and for voice accompanied by lute. They are typical *airs de cour*: strophic, in binary or bar forms, syllabic, simple in harmony and rhythm and restricted in tessitura. The lute part in *Les charmants attraits de vos yeux* is slightly more interesting than in most accompanied *airs* in that it is rhythmically independent of the voice and introduces the song with a motif derived from the opening vocal phrase.

WORKS

13 airs, 1v: 6 in 1617[9], 4 in 1619[10], 1 in 1621[13] [sometimes wrongly listed 1619[10]], 2 in 1628[9]

13 airs, 1v, lute: 6 in 1617[8]/*R*, 4 in 1618[9]/*R*, 1 in 1626[12]/*R*, 2 in 1628[11]/*R*; 1 ed. A. Verchaly, *Airs de cour pour voix et luth (1603–1643)* (Paris, 1961)

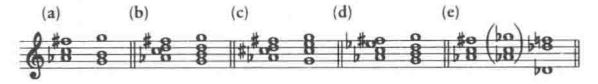
JOHN H. BARON

Augmentation (i). In PROPORTIONAL NOTATION, the process whereby note shapes acquire additional value in a simple mathematical ratio. The process is the opposite of diminution, and was normally used in Renaissance polyphony to restore to note shapes their original value after a period of diminution.

ROGER BULLIVANT

Augmentation (ii). The term describes the restatement of a cantus firmus in note values longer than when it was first sounded in a composition, a device found, for example, in a number of motets of the late Middle Ages and many masses and motets of the Renaissance. From its application to the cantus firmus, augmentation passed into the repertory of technical devices of early ricercares and fantasias, by such composers as Sweelinck and Frescobaldi (e.g. Sweelinck: *Fantasia chromatica*, bars 119–26, bass), and of contrapuntal, canonic and fugal technique generally (*see* FUGUE). It became less common in the later Baroque and subsequent periods. Since augmentation makes the theme longer in time and more noticeable, it is effective as a climax device, particularly when its first appearance is delayed until near the end of the fugue. A well-known example is Bach's C major organ fugue BWV547 where the entry of the pedals is delayed: they eventually enter at bar 49 with the subject heard for the first time in augmentation (this point also represents a prominent return to the tonic key prepared by minor-key harmonies).

In non-fugal music augmentation is also occasionally used. In Beethoven's Pastoral Symphony the hymn-like figure at bars 146–50 of the 'Storm' movement originates from augmentation of the initial motif of bar 3; and the recapitulation of the first movement of Brahms's Fourth Symphony augments the opening figure of the first subject (compare bars 1–4, violins, with 246–58, wind).



See also AUGMENTED INTERVAL.

ROGER BULLIVANT

Augmented interval. A perfect or major INTERVAL that has been increased by a chromatic semitone. The perfect 4th C–F is made into an augmented 4th by raising F or lowering C (i.e. C–F♯ or C♭–F). A doubly augmented interval has been increased by two chromatic semitones: for example, C–D𝄪, C♭–D♯ and C𝄫–D are all doubly augmented 2nds derived from the major 2nd C–D.

Augmented sixth chord. A chord built normally on the flattened submediant and containing the note an augmented 6th above (i.e. the raised subdominant): in C major, A♭– F♯. The normal resolution of this interval is outwards to the octave; thus an augmented 6th chord characteristically resolves to the chord of the dominant or to a I6-4 chord. The character of an augmented 6th chord is largely determined by the other notes it contains. The simplest type, commonly (but arbitrarily) called the Italian 6th chord, has a major 3rd above the flattened submediant and resolves more easily to the dominant (ex.1*a*). The so-called French 6th chord has both a major

Ex.1 Augmented 6th chords and their resolutions

3rd and an augmented 4th and therefore also resolves more easily to the dominant (ex.1*b*); it also contains more of the flavour of the whole-tone scale. The so-called German 6th chord has a major 3rd and a doubly augmented 4th or a perfect 5th and naturally resolves to I6-4 or V, being spelt accordingly (ex.1*c–d*); the latter resolution creates a type of consecutive 5ths called 'Mozart' 5ths (*see* CONSECUTIVE FIFTHS, CONSECUTIVE OCTAVES). In equal temperament the German 6th sounds like a dominant 7th chord, and therefore it can resolve 'deceptively' on to the chord of the flattened supertonic, or 'Neapolitan sixth' chord (ex.1*e*).

See also HARMONY.

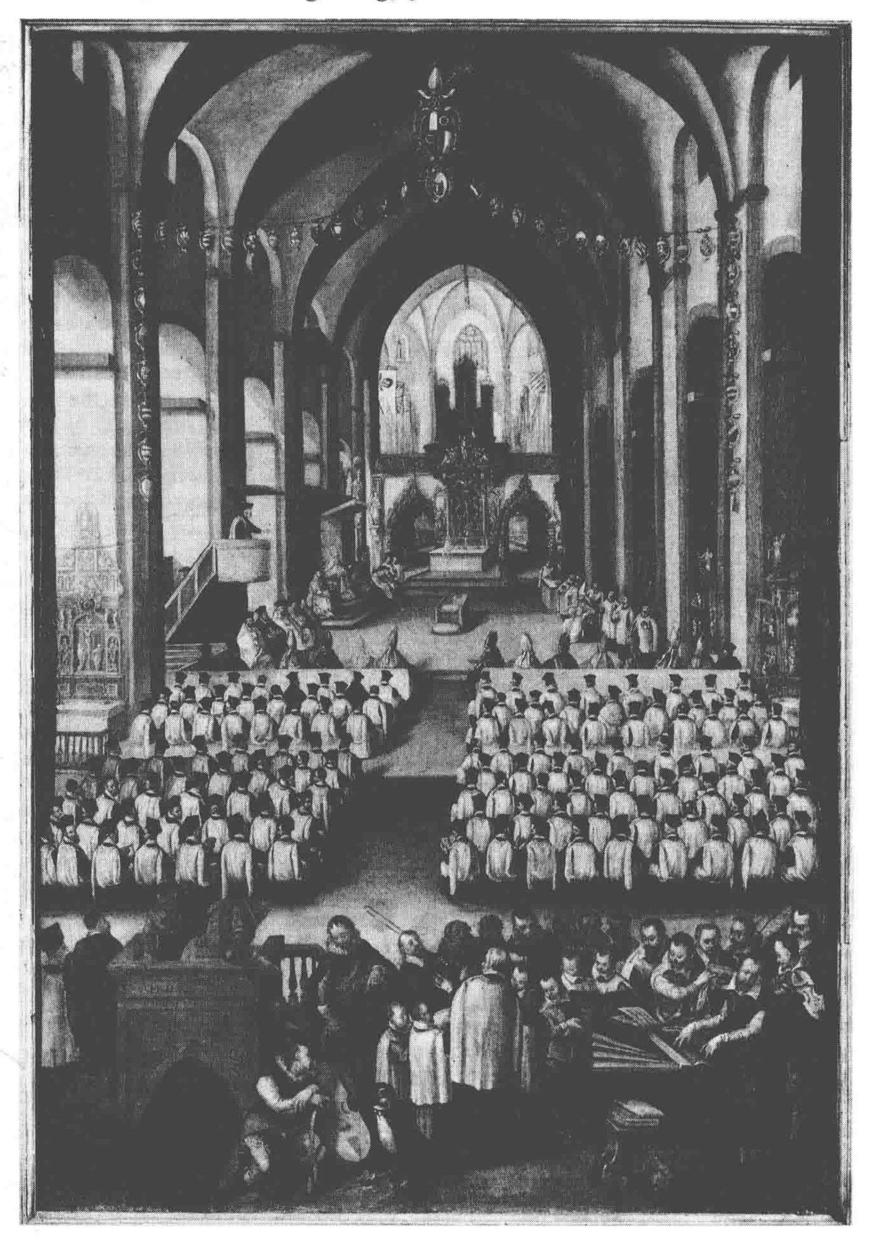
WILLIAM DRABKIN

Augmented triad. A chord built of two superimposed major 3rds, e.g. C–E–G♯, D–F♯–A♯.

Augsburg. City in Bavaria, Germany. It was founded on the Lech, Wertach and Singold rivers by Augustus in 14 BCE and was the seat of a bishopric from the 8th century. Throughout its long history the city had several periods of economic expansion which generally led to a flowering of cultural activities, particularly music. A conspicuous rivalry developed from the 12th century between the prince-bishop, who ruled the city, and the increasingly independent imperial city, which led to denominational schisms at the time of the Reformation.

1. To 1600. 2. 17th and 18th centuries. 3. 19th and 20th centuries. 4. Printing and instrument making.

1. TO 1600. In the high and late Middle Ages the principal centres of sacred music in Augsburg were the cathedral and the Benedictine abbey of St Ulrich and St Afra. These two churches cultivated liturgical music, particularly Gregorian chant, and contained the city's first organs. Hermannus Contractus (*d* 1054), the author of several treatises on music and a composer of hymns, studied at the cathedral school, and the poet and composer Abbot Udalscalcus of Maisach (*d* 1151) lived at the abbey. The cathedral received a bequest from the bishop in 1313 to promote choral singing. In the 14th century a middle-class musical culture arose, fostered by trumpeters, minstrels, lied composers and, at the end of the 15th century, the Meistersinger, and quite distinct from the courtly art of the Minnesinger. Musicians with municipal salaries were incorporated into the *Stadtpfeiferei*, and lutenists, representatives of the so-called 'stille Musik' (quiet music), also flourished in the city. Several ornate manuscripts attest to the rich musical life of Augsburg's middle class during the late Middle Ages: the Augsburger Liederbuch (1454), containing love songs and student songs, the Liederbuch of Clara Hätzerlin (1470–71), and an anthology of lieder found among the possessions of the patrician family Hörwart (1458–1513).



During the Renaissance Augsburg became a leading centre of music in Europe. The city owed much of its importance to the presence of Maximilian I, whose Kapelle included Isaac, Senfl and Hofhaimer. In the 16th century many prominent musicians, such as Virdung and Luscinius in 1510, gathered at the Augsburg Imperial Diet. Johannes Frosch, the prior of the Carmelite convent of St Anna and a close friend of Luther, helped to establish the practice of Lutheran sacred music in the city. After the Peace of Augsburg (1555) Catholics and Protestants competed to increase the role of music in their services, and the schools of St Anna (Lutheran) and St Salvator (Jesuit) vied to improve the quality of their musical education.

Soon after its founding in 1561 the cathedral Kapelle went through its first period of brilliance, performing polychoral music in Venetian style. Among the most notable members of the Kapelle about 1600 were the organists Kerle and Christian Erbach, the Kapellmeister Klingenstein (a pupil of Johannes de Cleve), and the *chorvicar* Aichinger. Lassus and Giovanni Gabrieli were on friendly terms with the abbey of St Ulrich and St Afra, where music was reorganized by F.A. Dreer after the Counter-Reformation. The leading Lutheran composer and teacher about 1600 was Gumpelzhaimer.

The FUGGER family, wealthy Augsburg merchants, endowed organs at St Anna, St Ulrich, St Moritz, St Salvator and the church of the Dominicans, paid part of the organists' salaries, established valuable music libraries and instrument collections, and engaged such prominent musicians as Melchior Neusidler, Eccard and Hans Leo Hassler. The Kollegium der Stadtpfeifer, which had a fine reputation during the 16th and 17th centuries, employed not only members of Augsburg's established families of musicians such as Schubinger, Hurlacher and Rauh, but also newly arrived virtuosos such as Jakob Baumann and Philipp Zindelin. Many Renaissance musicians born in Augsburg achieved fame abroad as composers: the Kugelmann brothers in Innsbruck and Königsberg, Sixt Dietrich in Constance, Brayssing in Paris, Jakob Paix in Lauingen and Neuberg-an-der-Donau, and Zängel in Hechingen and Sigmaringen.

2. 17TH AND 18TH CENTURIES. In the Thirty Years War (1618–48) Augsburg lost two thirds of its population, and its cultural life suffered for decades. Musical activity first revived at the Lutheran Barfüsserkirche and the cathedral, where the Kapellmeister Baudrexel and Gletle restored the concertato style introduced by Aichinger. These Kapellmeister and their successors (Johann Michael Caesar, J.M. Galley and others) were expected to be able to compose, but few of their compositions appeared in print and most of the manuscripts used by the cathedral Kapelle have been destroyed. Several of the cathedral organists were also composers, including Speth, Nauss and J.M. Demmler. Most young Catholic musicians received basic schooling at the cathedral choir school and at the Seminary of St Joseph. In addition to the cathedral, Catholic sacred music was outstanding at St Ulrich and St Afra, the Augustine monastery of the Holy Cross, the collegiate chapter of St Moritz and the Jesuit church of St Salvator. Two provosts of the Holy Cross were composers – Vitalis Mozart (a student of Christian Erbach) and Ludwig Zöschinger – and the monastery also employed the composers P.L. Hözl and P.O. Panzau.

A succession of composers began at the Lutheran Kantorei of St Anna with Tobias Kriegsdorfer and his pupils Schmezer and Merck. Their successors, P. Kräuter, Johann Caspar Seyfert and F.H. Graf, because of their educational or hereditary backgrounds, modelled their works on the compositions of north German composers, including Bach and Telemann. The choir of the Barfüsserkirche was directed by Jakob Scheiffelhut, a master of the instrumental suite; this popular form was also cultivated by Johann Fischer, son of a Stadtpfeifer and a pupil of Lully, and by Schmierer, director of the Fuggersche Stiftung. The *Gesellschaftslied* and quodlibet, favourite forms of Baroque light music, were cultivated by such

Interior of Augsburg Cathedral: painting by Tobias Maurer, 1616 (Augsburg Cathedral); the organist is believed to be Christian Erbach, and the Kapellmeister (in front of the trombonist, wearing a white surplice) is possibly Bernhard Klingenstein

notable composers as the cathedral Kapellmeister Gletle and Caesar, the government official Matthias Kelz (ii) (who also wrote sonatas and dance pieces) and, later, Rathgeber.

Middle-class amateurs met regularly in the collegium musicum (founded 1713). Talented young composers were able to compose for the frequent theatrical productions at the schools of St Salvator and St Anna, and occasionally at those of St Ulrich, the Holy Cross and the Carmelites. Music at the court of the prince-bishop reached a peak between 1740 and 1770; during this period the Kapelle included J.A. Meichelbeck, J.M. Schmid and P.P. Sales as Kapellmeister and J.G. Lang, J.B. Baumgartner and Joseph Almerigi as resident virtuosos who were also capable composers. Several musicians born in Augsburg in the 17th and 18th centuries achieved prominence elsewhere: Wolfgang and Markus Ebner in Vienna, T. Eisenhut in Kempten, Johann Fischer at northern German and Scandinavian courts, Motz in Tilsit and Leopold Mozart in Salzburg. The Mozart family had been associated with Augsburg for several centuries, and W.A. Mozart visited the city several times.

3. 19TH AND 20TH CENTURIES. The secularization of the religious chapters and the decline of the imperial city at first brought a decrease of musical activity in Augsburg. However, it was revived through the efforts of middle-class amateurs, who organized musical societies, many of which were run by teachers. These societies included the Harmoniegesellschaft, founded in 1816, the Frohsinn (1824), the male-voice choirs Liederkranz (1830) and Liedertafel (1843), the Schwäbisch-Bayerischer Sängerbund (1862) and the Oratorienverein (1866). The idea of popular education also gained ground, and found expression in such new musical institutions as the public singing

school founded by Donat Müller in 1849, the Städtisches Orchester of 1865 and the Stadttheater of 1877, and in concerts, including amateur and charity concerts (such as those given by Liszt in 1843 and by the Liedertafel in 1844), as well as festivals. The first Schwäbisch-Bayerisches Sängerbundesfest was held in 1863, and the first Schwäbisches Musikfest in 1886. Such developments were influenced by patriotic, even nationalistic sentiments, as was the repertory of the male-voice choirs, which took part in German song festivals from 1844. Much of this repertory was published in the Augsburg Liedertafel collections that began to appear about 1847.

A bridge between court and civic music had been built early in the century by the Protestant music director Ernst Häussler, C.B. Witzka, later to be cathedral Kapellmeister, and J.C. von Ahorner, when they took part in Prince-Bishop Clemens Wenzeslaus's court concerts. Protestant church music, in which C.L. Drobisch was the leading figure, took its guidelines from Catholic church music. The Catholic churches themselves were already performing works by Lassus about 1820, and thereby paved the way for Cecilianism (the annual congress of the Cäcilienverein was held in Augsburg in 1880). The city was also a centre for the performance of oratorios and cantatas, in particular Haydn's *The Creation* and *The Seasons*, Drobisch's *Johannes Guttenberg* and *Frühlings-Feier* and Mendelssohn's *Antigone*. From 1866 H.M. Schletterer introduced performances of oratorios on a regular basis. Opera also rapidly became a major aspect of musical life in Augsburg; notable productions included Rossini's *Tancredi* in 1818, Weber's *Peter Schmoll* in 1803 and *Der Freischütz* in 1822 and Wagner's *Tannhäuser* in 1854, *Lohengrin* in 1855 and the *Ring* in 1890. In addition, concert life was enhanced by touring virtuosos who included Paganini in 1829 and Liszt in 1823 and 1843. These activities were reflected in journals such as the *Allgemeine Zeitung*, to which Stephen Heller, one of Schumann's 'Davidsbündler' musicians, and Heinrich Heine contributed.

These developments made Augsburg the musical centre of Bavarian Swabia in the second half of the 19th century. Large sections of the population of the industrial city itself now took an active part in musical life; the Arbeiter-Sängerbund Augsburg was founded in 1875, and the first Südbayerisches Arbeiter-Sängerbundesfest was held in 1926. The amateur choral movement as a whole reached a peak before World War I, with some 30 male-voice choirs and around 1500 active singers. In 1936 the festival of German choral music of the Reich Association of Mixed-Voice Choirs was held in Augsburg, with performances of works by contemporary composers including H.F. Michaelsen, Heinrich Kaminski, Armin Knab, Kurt Thomas and Hugo Distler. Under Schletterer's successors W. Weber and H.K. Schmid the Oratorienverein also performed the contemporary music of the day, including works by Brahms, Mahler and Pfitzner. In 1945 A. Piechler conducted Handel's *Judas Maccabaeus* in Augsburg and Brahms's *German Requiem* in Dachau. Carl Orff, Werner Egk, Gottfried von Einem and Otto Jochum came to the city for performances of their works. In 1970 the Oratorienverein merged with the Liedertafel to form the Philharmonischer Chor, which in 1987 gave the first performance in Germany of Andrew Lloyd Webber's Requiem). While the Musica Suevica choir founded in 1983 performs forgotten works of the 18th century, the University choir gives performances of modern choral music. Contemporary operas were also performed at the Stadttheater from the beginning of the 20th century, including works by Hindemith, Weill, Krenek, Pfitzner, Weinberger and Schreker. Richard Strauss conducted *Arabella* there in 1933 and *Elektra* in 1936. The theatre building, destroyed in 1944, was reopened in 1956; it now concentrates primarily on 20th-century works. Its music directors have included István Kertész, Hans Zanotelli, Bruno Weil and, since 1995, Peter Leonard. The open-air theatre at the Rotes Tor, founded in 1929, stages a four-week opera festival in June and July.

The private music school founded in 1873 by H.M. Schletterer became a conservatory in 1925; it was given the name of the Leopold-Mozart-Konservatorium in 1948, and in 1973 became the Fachakademie für Musik. In 1998 the Fachakademie was incorporated into the new Musikhochschule Nürnberg-Augsburg. In 1905 Albert Greiner founded a singing school which in 1935 introduced a course for singing teachers; it was named the Albert-Greiner-Sing- und Musikschule in 1978. The Amt für Kirchenmusik of the diocesan authority of Augsburg, established in 1970, is responsible for all church music in the diocese. After World War II Augsburg, together with Salzburg and Vienna, became a centre for Mozart studies, and until 1995 was one of the headquarters of the Neue Mozart Ausgabe. The Deutsche Mozart-Gesellschaft was founded in the city in 1951; its journal *Acta mozartiana* has been published since 1969. The International Leopold Mozart Society was inaugurated in Augsburg in 1992. The training of music teachers acquired a new centre with the Pädagogische Hochschule of the University of Munich, founded in 1958 and later affiliated to the University of Augsburg. A chair of musicology was set up in 1980. The Oettingen-Wallerstein Hofmusik, housed in the Augsburg University library, is one of the richest musical collections from the period of Haydn and Mozart in southern Germany.

4. Printing and instrument making. The achievements of Augsburg's music scribes, engravers, printers and publishers are among the finest in southern Germany. Outstanding music calligraphers, including Leonhard Wagner, wrote splendid manuscripts at the abbey of St Ulrich and St Afra during the 15th and 16th centuries, and at approximately the same time early German music printing culminated in the magnificent choral incunabula of Ratdolt. Music printing with movable type was introduced to Germany by Oeglin, who printed the earliest odes of the German Humanists; Johann Miller, Sigmund Grimm and Marx Wirsung similarly served the Humanist movement. In the mid-16th century Melchior Kriesstein and Philipp Ulhart printed anthologies edited by Salminger. The first large retail stock of printed music in southern Germany was established in Augsburg (with affiliated branches in Vienna and Tübingen) by Georg Willer, who published his first catalogue for the Frankfurt Fair of 1564. The printing houses established by Valentin Schönig and Johannes Praetorius were continued after the Thirty Years War by Andreas Erfurt, J.J. Schönig, J.C. Wagner, Jakob Koppmayer and Andreas Maschenbauer. The booksellers Goebel, Kroniger, Schlüter and Happach and printers Simon Utzschneider, J.M. Labhart, August Sturm and J.K. Bencard further contributed to Augsburg's active trade in music selling. In the 18th century the Lotter firm assumed a leading role in music publishing as did the

music engravers J.F. and J.C. Leopold and the publishers Matthäus Rieger and J.K. Gombart. In 1803 the *Stadtmusikant* Andreas Böhm founded the music publishing house Anton Böhm & Sohn, which is still active. The publishing house of Bärenreiter, established by Karl Vötterle of Augsburg, set up business there in 1923.

Augsburg was an important centre of instrument building during the 17th and 18th centuries. About 1600 the Bildermann family and others worked on the development of early mechanical instruments, while many lute, violin, organ and piano manufacturers were also active there, most notably J.A. Stein in the late 18th century, whose pianos were highly regarded by Mozart.

ADOLF LAYER (1–2, 4), FRIEDHELM BRUSNIAK(3)

August, Peter (*b* ?Warsaw, 1726; *d* Dresden, 16 Feb 1787). German composer. He received a thorough musical grounding before becoming chamber musician and organist at the Dresden court in 1745. In the early 1750s he became first organist at the Catholic court chapel, a position he held until his death. He was responsible for the musical education of the elector's children, including the electoral prince. When the latter ascended to the throne in 1768 as Friedrich August III, August remained his musical adviser, Musizierpartner and librarian, with the tasks of procuring and copying church and chamber music for the court. As a harpsichordist he alternated with C.S. Binder at Dresden public concerts, and also took part in opera performances.

August's extant works, all in manuscript (*D-Dl*), comprise six harpsichord concertos with orchestra, two divertimentos for harpsichord and one for two harpsichords, 48 keyboard sonatas and a lute sonatina. All reflect their origins as pieces for the entertainment or instruction of the royal family. They represent the *galant* style, combining thematic development of the sequential spun-out type with clear periodization and transparent accompaniment. August also made arrangements for two harpsichords of a large number of orchestral and chamber works.

DIETER HÄRTWIG/ANNEGRET ROSENMÜLLER

Augustine of Hippo [Aurelius Augustinus] (*b* Thagaste, 13 Nov 354; *d* Hippo, 28 Aug 430). Saint, churchman and scholar. He was perhaps the most influential figure in the history of Christian thought, rivalled only by Thomas Aquinas and possibly Origen. Born in North Africa to a pagan father and Christian mother, the sainted Monica, he studied rhetoric in Carthage where he lost his boyhood Christian faith. In 373 his reading of Cicero's *Hortensius* inspired him to pursue the life of a philosopher, which he experienced first as a devotee of Manicheism. He served as professor of liberal arts for several years in his native Thagaste, moving in 383 to Rome and then in 384 to Milan, as professor of rhetoric. In Milan he came under the influence of the Christian Neoplatonist Simplicianus and St Ambrose. He was led gradually through Neoplatonism to Christianity and, after a period of retreat at Cassiacum, was baptized on Easter Eve of 387. He returned to Thagaste in 388 to form a monastic community along with a number of friends. On a visit to Hippo in 391 he was acclaimed by the people and persuaded to accept ordination. He became bishop in 395 and spent the remainder of his life administering to the needs of his diocese, preaching and writing. He died at Hippo in 430 as the city was under siege by the Vandals.

With the exception of Nicetas of Remesiana's *De bono psalmodiae*, the only patristic work devoted entirely to the subject of music is Augustine's *De musica*, a treatise on music as a liberal art. It was originally intended as one of a series of works on the liberal arts; he completed a book on grammar and began studies on dialectic, rhetoric,

geometry, arithmetic and philosophy, but only *De musica* survives. The treatise is confined to two of the three branches of ancient musical theory – metrics and rhythmics; he announced his intention at one point to compose a treatise '*de melo*', that is, the third of the musical subdisciplines, the daunting mathematical science of harmonics. It is doubtful, however, that the philosophically inclined Augustine, even if he had possessed the mathematical expertise, would have had the patience to persevere in this effort. The *De musica* as it stands is a treatise in six books, the first five of which were completed in 387. These show far more of a preference for rhythmics than metrics, exploiting and even distorting the details of classical metrical theory in an effort to display the omnipresence of the basic temporal proportions. The sixth book, written in 391 after Augustine's conversion, is more frankly philosophical; it is a cosmology of sounding number in the tradition of Plato's *Timaeus*, and a Christian theology, ethics and aesthetics of number as well.

Of at least equal significance to music history as the *De musica* are Augustine's numerous remarks about music that are scattered throughout his vast literary output. There are, for example, approving references to music as a liberal art and stern animadversions against contemporary musical practice. But of greatest interest are the many references in his sermons, of which more than 700 are preserved (including the *Enarrationes in psalmos*), to the liturgical singing of psalms; on more than 150 occasions explicit mention is made of a particular psalm or psalm verse that had been sung in the service at which the sermon was preached. A wealth of detail about the psalmodic practice of Hippo and Carthage in the late 4th and early 5th centuries can be extracted from these remarks. Finally there is the famous passage in the *Confessions* where Augustine recalls how he was moved by the psalmody of Ambrose's Milanese church, but felt remorse over the pleasure he had experienced in hearing it. The passage is utterly unique for its time in its quasi-romantic psychological penetration, yet conventional in its ultimate endorsement of the orthodox patristic position that melodious psalmody is acceptable to the Christian church.

JAMES W. MCKINNON

Augustini, Pietro Simone. *See* AGOSTINI, PIETRO SIMONE.

Augustinian canons. Augustinian canons, also known as Austin canons, or canons regular of St Augustine, are an order of priests living the full common life, as distinct from secular canons supported by prebends. The ideal of the canons regular was to imitate the 'apostolic life' of the first Christians. The most celebrated early attempt to follow this ideal was the community life established by AUGUSTINE OF HIPPO and his clergy.

It was not until the mid-11th century that the order emerged as an organized body, its rapid expansion being intimately connected with the Gregorian reform. Officially recognized by the Lateran Synods of 1059 and 1063, the revitalized order spread quickly over the whole of western Europe. In England it increased rapidly under the patronage of Henry I (1100–35). A century later it was the most numerous order in England, counting some 228 houses. Most were small priories, but the order also possessed some famous abbeys, including Waltham and Osney.

The tautological title 'Canonici regulares' was in common use by the early 12th century, by which time most houses of the order had adopted the Rule of St Augustine. This rule's complex historical and textual problems are being gradually elucidated. Existing in two versions, one for men and one for women, it is built up of several elements, notably St Augustine's Letter 211 to his sister. The rule's characteristic qualities are its fundamental sanity, flexibility and insistence on brotherly love, making it suitable for widely differing forms of apostolic or contemplative life. Besides their normal pastoral duties, the canons have undertaken the care of travellers (Great St Bernard) and of the sick (St Bartholomew's and St Thomas's hospitals in London) and the promotion of learning (Abbey of St Victor, Paris). The celebrated Hugh of St Victor contributed his *Didascalion* to the study of music in his day.

A fully developed liturgical life characterizes the order. St Chrodegang (*d* 766) strove to introduce the Roman chant and liturgy. Some independent congregations (Victorines, Premonstratensians) had their own Use. Augustinian canons have also contributed to the development of the liturgy, one of the most celebrated sequence writers being the poet Adam of St Victor. After a lapse of centuries, the Consilium ad Exsequendam Constitutionem de Sacra Liturgia recommended the adoption into the new Roman Breviary of five poems ascribed to him, among them the famous *Salve mater Salvatoris*.

Some houses appear to have had a strong tradition of polyphonic music. St Andrew's Priory in Scotland possessed the rich collection of 13th-century music now in *D-W* 677. It includes a large proportion of the Notre

Dame repertory but none of the motets. The Abbey of St Victor owned the equally famous collection *F-Pn* lat.15139 and the anonymous French *Tractatus de discantu*. It is known from archival documents that the choir of Notre Dame in later centuries paid regular annual visits to the abbey and that polyphony was sung.

Although Wolsey's Statutes of 1519 forbade the use of polyphony and excluded secular singers from conventual choirs, polyphony was undoubtedly practised in English houses of the order. Wolsey himself made provision for polyphony and organ playing by seculars during the Lady Mass and the Mass of the Name of Jesus. Thomas Tallis probably took charge of the 12 'singing-men' and five choristers employed by Waltham Abbey. Finally, at least three Augustinian canons were themselves composers of polyphony: T. Preston and W. Charite of St Mary de Pratis, Leicester, and Robert Carver of Scone Abbey in Scotland.

MARY BERRY

Augustyn, Rafał (*b* Wrocław, 28 Aug 1951). Polish composer. After reading Polish philology at Wrocław University, he studied composition with R. Bukowski at the State Higher School of Music in Wrocław (1971–4) and with Górecki at the Katowice Academy (1975–8); in 1979–80 he attended the State University of New York at Stony Brook. In 1973 he was appointed lecturer at Wrocław University, where he gained the doctorate in 1982. A broadcaster and promoter of contemporary music, especially in connection with the Warsaw Autumn, he was artistic director of the Musica Polonica Nova festival in Wrocław from 1984 to 1994. In 1990 he co-founded the music publishers Brevis.

Characterized by its lyrical expressivity, Augustyn's vocal music draws on a wide range of literary sources, from 16th-century Polish poetry (in *Carmina de tempore*) to words by Apollinaire and Gerard Manley Hopkins. Uninfluenced by sonorism, as found in the work of older Polish composers, he has preferred to establish links, for example, with early 20th-century Austrian and French music; this is particularly true of the vocal-orchestral *A Life's Parallels*. The pieces with orchestra are especially resonant and sensuous. His rhapsodic episodes are as likely to be underpinned by tonal centres or canonic writing (for example in the Second String Quartet) as they are by inventive harmonic-motivic transformations. Several works, including the 'cyclic pieces', explore different aspects of the perception of time.

WORKS
(*selective list*)

Stage: Figle szatana [The Devil's Pranks] (ballet, 1, after A. Müncheimer and S. Moniuszko), 1985; Król siedmiodniowy [Seven-Day King] (ballet-pantomime, 2, H. Tomaszewski), 1988; Cantus puerorum (sacra rappresentazione, Tomaszewski, after Bible: *Daniel*), 1993

ADRIAN THOMAS

Aulen (*fl* late 15th century). German composer. His name may refer to the German city, Aalen, then called Aulen. Nothing is known of his biography, although Martin Just has drawn attention to two men named Johannes, from Aulen, who were at Vienna University in the middle of the century. A three-voice mass apparently by an 'Aulen' exists in several sources (*D-Bsb* 40021, *LEu* 1494, *Mbs* Mus.ms.3154, *Rp* B216–19; *E-Bbc* 454 ascribed to Cuvenor, *SE* ascribed to Agricola; *PL-WRu* Mf2016; ed. in Cw, xxxi, 1934/*R*, and EDM, 1st ser., xxxiii, 1960); although the earliest source dates from the end of the century the work appears to have been composed some decades earlier. It is written in a relatively homophonic, treble-dominated manner, showing the influence of the Netherlandish chanson style, and each movement has a three-voice head-motif. A four-voice motet, *Salve virgo virginum*, attributed to 'Joannes Aulen' in one of Petrucci's collections (RISM 1505[2], ed. in SCMot, iii, 1987), is probably not by the same composer. The motet is in a later style, more typical of the works of Josquin's generation.

STANLEY BOORMAN/ERIC JAS

Auletta, Domenico (*b* Naples, 1723; *d* Naples, 1753). Italian composer and organist, son of PIETRO AULETTA. He was active in Naples as a composer of sacred music, but nothing is known of any appointments he may have held. Domenico's three sons were also musicians: Raffaele (*b* Naples, 1742; *d* Naples, 18 Feb 1768), composer of a motet *Alto Olimpo triumfate* (*GB-Lbl*), of whose life nothing is known; Ferdinando, a singer, who studied at

the Conservatorio della Pietà dei Turchini, 1759–69, with Fago and Cafaro; and the younger Domenico (*d* Naples, 16 Nov 1796), who was appointed in November 1779, with Cimarosa, 'supernumerary' organist without salary in the royal chapel in Naples and in 1796 second organist (Cimarosa having been promoted to first). The homonymy between father and son poses problems of attribution, especially as regards undated works.

RENATO BOSSA

Auletta, Pietro (*b* Sant'Angelo, nr Avellino, *c*1698; *d* Naples, Sept 1771). Italian composer. He completed his musical training at the Neapolitan conservatory S Onofrio. Some time before 1724 (according to Prota-Giurleo) he was appointed *maestro di cappella* of S Maria la Nova, an important Neapolitan church. In 1725 he composed his first comic opera, *Il trionfo dell'amore, ovvero Le nozze tra amici*, for production at the Teatro Nuovo in Naples. His second comic opera, *La Carlotta*, appeared in Naples in 1726, and his first heroic opera, *Ezio*, in Rome in 1728. At Carnival 1737 he re-emerged as a dramatic composer with the first production in Naples of his comic opera *Orazio*. This work, which was extremely popular, had a long subsequent history; it was continually modified as it was performed in city after city and quickly turned into a pasticcio. In that form it was sometimes ascribed to Auletta and sometimes to other composers. One famous production, a much-shortened version of the original *Orazio*, took place in Paris in 1752 under the title *Il maestro di musica*. The score printed in Paris in 1753 attributed the music to Pergolesi, but in fact it was by several composers including Auletta, who was represented by four items from his original opera. As a pasticcio it was also known as *Le maître de musique*, *La scolara alla moda*, and perhaps *El maestro de capilla*. An anonymous *Impresario abbandonato* (*D-Dl*) is identified in the library catalogue as a revised version of *Orazio* and was probably performed at Munich in 1749 and 1758.

For a few years after the first production of *Orazio* Auletta was much in favour among the Neapolitans. Between 1738 and 1740 he wrote no fewer than four comic operas for Naples, as well as an intermezzo for the marriage of the Infante Felipe in Madrid. After 1740, for a reason as yet unknown, his operatic output fell sharply. In the librettos of some of his operas, including *Il trionfo dell'amore* (1725), *La Carlotta* (1726), *Ezio*(1728), *Il Marchese Sgrana* (1738) and *L'impostore* (1740), Auletta is called *maestro di cappella* to the Prince of Belvedere.

The small amount of Auletta's surviving music contains much that is of high quality. The two arias of his earliest surviving composition, the cantata *Sulla nascente herbetta* (1718), may be criticized for some awkward harmonies; their melodies, however, are most attractive. The melodic styles are surprisingly modern for a Neapolitan composition of 1718, exhibiting the lilting, buoyant qualities that are commonly associated with Neapolitan music of the late 1720s and 30s. Ex.1, from the vocal line of the second

aria, typifies the style. Of Auletta's extant operas the short, two-act *La locandiera* is probably the most appealing. Written in 1738 to celebrate the marriage of Queen Maria Amalia to King Carlo III of Naples that year, it rivals Pergolesi's comic operas of the same period in its subtle musical characterization, its grotesque humour (especially in the parts for the elderly characters) and its portrayal of the playful yet tender feelings of youth – all achieved with the utmost economy of technical means. Once again, Auletta's attractive melodies are a crucial factor in the success of the work. His accompaniments are discreet and his orchestration never overbearing.

WORKS

DRAMATIC

Il trionfo dell'amore, ovvero Le nozze tra amici (op comica, 3, C. de Palma), Naples, Nuovo, aut. 1725, *D-MÜs*

MICHAEL F. ROBINSON (WITH ROSA LEONETTI)

Aulí, Juan (*b* Felanitx, Mallorca, 19 Dec 1796; *d* Felanitx, 10 Jan 1869). Spanish organist and composer. He had a precocious musical talent and was already an organist when he entered the Dominican order in 1814. On the dissolution of the Spanish monasteries in 1823, he wandered over Spain for several months, but in November of the same year he was allowed to return to Mallorca. In 1825 he went back to Madrid to complete his theological education, playing the organ for a time at the church of S María de Atocha and being introduced to King Ferdinand VII. In 1828 he returned to Mallorca, living a very active musical life at the convent of S Domingo. The Mendizábal law of 1835 forced him to abandon his orders and to leave his native Mallorca. Shortly afterwards he became an organist at Gibraltar. In 1836 he returned to the Balearic Isles, where he settled in Felanitx and spent the rest of his life composing, serving occasionally as an organist and producing his own operas at the local theatres. His *Misa de coro*, with organ accompaniment by Antonio Noguera (Palma de Mallorca, 1887), is severe in style and frankly monastic in feeling. Other sacred works include a *Missa del santísimo sacramento*, *Te Deum*, *Stabat mater* and hymns. Only a few fragments survive from his operas *Norma* and *La doncella de Misolongi*; other stage works are *El sepultero* and *Grecia*. He also composed some piano pieces, including a set of variations. His extant manuscripts are in the Arxiu de Música Històrica de Sant Felip Neri, Palma de Mallorca and the Arxiu de la Parròquia de Sant Miguel, Felanitx.

J.B. TREND/ANTONI PIZÀ

Aulin, Tor (Bernhard Vilhelm) (*b* Stockholm, 10 Sept 1866; *d* Saltsjöbaden, 1 March 1914). Swedish violinist, composer and conductor, brother of VALBORG AULIN. He studied from 1877 to 1883 with J. Lindberg (violin) and C. Nordqvist (theory) at the Swedish Royal Academy of Music and in Berlin from 1884 to 1886 with E. Sauret (violin) and P. Scharwenka (composition). He was active as an orchestral musician in the early years of his career and served as leader of the Swedish Hovkapell from 1889 to 1902. In 1887 he founded the Aulin Quartet, which made annual tours of Sweden and other northern European countries until it was disbanded in 1912; it specialized not only in the Classical repertory, particularly Beethoven, but in a wide-ranging representation of the works of Scandinavian composers, above all Berwald, Grieg, E. Sjögren and W. Stenhammar. From 1890 Aulin worked closely with Stenhammar, who also took part in most of the Aulin Quartet's tours as pianist. His circle of friends also included Grieg and Sjögren.

From 1900 Aulin devoted his time increasingly to conducting: until 1902 he directed the Svenska Musikerförbundets Orkester, from 1902 to 1909 the Stockholm Concert Society (founded largely through his initiative) and from 1909 to 1912 the Göteborg Orchestral Society. He conducted the first performance of Berwald's *Sinfonie singulière*, which he subsequently edited for publication. In 1895 he was elected a member of the Royal Academy of Music.

As a composer Aulin was stylistically as close to German Romanticism as to the Scandinavians. He is best remembered for the last of his three violin concertos, op.14 in C minor, a highly accomplished work reflecting the influence of Bruch and Schumann as well as that of Grieg. He also composed numerous songs and chamber works, wrote incidental music to the play *Mäster Olof* by his friend Strindberg, and made transcriptions for violin and piano of some of Sjögren's songs.

WORKS

ORCHESTRAL

3 vn concs., incl. no.3, c, op.14 (Leipzig, n.d.)
Mäster Olof, suite (incid music for A. Strindberg's play), op.22 (Leipzig, n.d.)
3 gottländische Tänze, op.28 (Leipzig, n.d.); arr. vn, pf, op.23 (Leipzig, n.d.)
4 schwedische Tänze, op.32 (Leipzig, n.d.); arr. vn, pf, op.30 (Leipzig, n.d.)

OTHER WORKS

String quartet, op.1
Numerous works for vn, pf, incl. Sonata, d, op.12; 4 Stücke in Form einer Suite, op.15 (Leipzig, 1914); 4 Stücke, op.16 (Leipzig, n.d.); Midsommar-dans, op.18 (Leipzig, n.d.); Albumblatt, op.20 (Leipzig, n.d.); Lyrische Gedicht, op.21 (Leipzig, 1908); Fyra violinstycken, op.27 (Stockholm, 1912); 4 Kinderstücke, op.33 (Leipzig, n.d.); 2 karakterstycken (Stockholm, 1892); Minnesblad [Albumleaf] (Stockholm, 1898); Fyra akvareller [Four Watercolours] (Stockholm, 1899)
Songs, 1v, pf, incl. Tre dikter af Tor Hedberg, op.24 (Copenhagen and Leipzig, n.d.); Två dikter af August Strindberg, op.31 (Stockholm, 1913); Trenne sånger (Stockholm, 1899); Vier serbische Volkslieder nach J. Runeberg (Strasbourg, 1903); Drei Lieder aus Tannhäuser von Julius Wolff, Bar, orch (Leipzig, n.d.)
Works for pf, incl. Tre albumblad, op.5 (Copenhagen, n.d.); Kleine Suite (Strasbourg, 1903); Valse caprice, pf 4 hands (Stockholm, 1887)
Studies for violin, incl. Violinskola (Stockholm, 1903)
Cadenzas for Mozart: Vn Conc. no.5, A, op.17 (Leipzig, n.d.); Vn Conc. no.3, G, op.29 (Leipzig, n.d.)
Arrs., incl. Lyriska dikter (E. Sjögren), vn, pf (Stockholm, 1903); Etüden für Violine (H.E. Kayser) (Stockholm, 1902)

ROBERT LAYTON

Aulin, (Laura) Valborg (*b* Gävle, 9 Jan 1860; *d* Örebro, 11 Jan 1928). Swedish pianist and composer, elder sister of TOR AULIN. After studying at the Swedish Royal Academy of Music (1877–82), where she was encouraged in composition by Ludvig Norman and Albert Rubenson, she was awarded a Jenny Lind grant (1885), which enabled her to study composition for a short time with Gade in Copenhagen and then to spend two years in Paris studying with Massenet and Godard. She was admired as a pianist and became sought after as a piano teacher. In 1903 she settled in Örebro where she remained until her death. Her works show harmonic refinement and a powerful temperament, while her tone poems for piano are written in a more lyrical style. The *Tre damkörer* were awarded a prize in Copenhagen in 1895. She ceased composing around the turn of the century.

WORKS

Orch: Suite, op.15, 1886

Vocal: Herr Olof, ballad, T, chorus, orch, op.3, 1880; Julsång, chorus 8vv, org, op.23; Två körer, unacc. mixed chorus, op.24, 1898; Procul este (C.D. Wirsén), S, chorus, str orch, harp, op.28, 1886; Tre damkörer, women's choir, pf, 1895; Veni sancte spiritus, mixed chorus, pf, op.31, 1898; 11 songs, 1v, pf, 1881–1900

Chamber: 2 str qts, F, 1884, e, op.17, 1889; pieces for vn, pf

Kbd (for pf unless otherwise stated): 5 tondikter, op.7, 1882; 7 pieces, op.8, 1884; Sonata, f, op.14, 1885; Valse élégiaque, 1892; Albumblad, op.29, 1898; Fantasistycken, op.30, 1898; Meditation, org

ROBERT LAYTON

Aulos (Gk.; Lat. *tibia*). A Greek reed instrument. It was the most important of the ancient Greek wind instruments. (The term has often been mistranslated 'flute' by modern scholars.)

I. The instrument. II. The performers: auletes and auletrides.

I. The instrument

1. Sources. 2. Description. 3. Origins. 4. Terminology and classification. 5. Construction: (i) Materials (ii) Pipes and assembly (iii) Holes (iv) Reeds (v) Mechanisms.

1. SOURCES. The aulos occupied an important place in Greek civilization. Information about the instrument and its use is to be found in many and varied sources extending over a period of some ten centuries. The sources fall into three main categories: texts and written records, iconographic sources and archaeological sources.

Numerous references to the aulos exist throughout Greek literature, but several works (or parts of works) contain information of a more technical nature: for example, books iv and xiv of Athenaeus's *Sophists at Dinner*; Pseudo-Plutarch's *On Music*; fragments of treatises with remarks about the instrument's bore; notes by lexicographers; and scholia to tragic and comic writers and lyric poets. No works specifically devoted to the aulos appear to have survived: only the titles of works and the names of certain authors are known, for example, the treatises *On Auloi* by Aristoxenus of Tarentum and by the Pythagorean Euphranor. Several inscriptions and various papyri (musicians' contracts etc.) contain technical terms designating auloi.

Iconographic records, which extend uninterruptedly from the earliest times (the Cycladic and Minoan periods) to the 4th and 5th centuries CE, are numerous and range from Greek ceramics to mosaics, reliefs and wall paintings. After the 1st century BCE and most notably during the Roman period, relief techniques and the quality of depictions are such that a 'realistic' view of the instruments and especially their mechanisms, which are never shown on Attic ceramics, becomes possible.

Several hundred (maybe as many as a thousand) auloi, many of them fragmentary but some almost complete, have come to light during archaeological investigations. Often capable of being dated accurately, these remains provide direct evidence of what auloi were like in a given place at a given time. Instruments dating from the 6th century BCE to late antiquity have been discovered in countries as far afield as Greece, Italy, France, the Low Countries, Egypt, Sudan, Israel, Turkey and Tajikistan. Systematic study of this evidence is yet to be made, although work has begun on the tibiae of the Roman world (see Péché).

2. DESCRIPTION. The Greek word *aulos*, even when used in the singular, usually denotes a wind instrument consisting of two pipes and two (probably double) reeds. However, since the word was also applied to any hollow, elongated tube, *aulos* may refer to any wind instrument consisting of a single pipe with or without a reed, including (occasionally) the trumpet. When qualified by the term *polukalamos*, the aulos is an instrument with several pipes of unequal length, otherwise called *surinx*, the ancient equivalent of modern pan-pipes (*see* SYRINX). The pipes of Greek auloi were always cylindrical. Instruments with a conical bore first appeared among the Etruscans and then in the Roman world. A very slightly flared bell at the end of the pipe occurs in a few specimens from the end of the Hellenistic and imperial periods.

To play the double aulos, instrumentalists placed the two double reeds between their lips. Their embouchure was sometimes sealed by a PHORBEIA (mouthband) perforated by two small holes to take the reeds; the pipes could be held either close together or further apart. On many Attic vases the little fingers are placed under the pipes, probably to give a better grip when the instrument was made of a heavy material such as ivory or metal.

3. ORIGINS. The Greeks never regarded themselves as the inventors of the aulos: they saw it as an instrument of foreign origin (Aristoxenus classed it among the *ekphula organa*). Some writers considered it to have come from Libya, but most thought it was from Phrygia. If the lexicographers are to be believed, some of the instrument's indigenous names passed into Greek (i.e. *phōtinx*, *elumos*). In line with the typically Greek habit of identifying a 'first inventor' (*prōtos heuretēs*), authors invariably attributed the aulos's invention to one or another personnage, including Seirites, a Libyan 'of the people of the Numidians' (Athenaeus, *Sophists at Dinner*, xiv.9, citing the historian Douris of Samos, an attribution taken up by Pollux, *Dictionary*, iv.174), the semi-legendary auletes Olympus and Hyagnis, and even the Phrygian satyr Marsyas. Beginning in the the first half of the 5th century BCE, however, there were attempts to 'Hellenize' the origins of the aulos, a trend that became particularly

dominant at the end of the 4th century BCE. The instrument's invention was no longer ascribed to some barbarian character but to a Greek divinity, either Apollo himself (Anticleides and Istrus, as quoted in Pseudo-Plutarch, *On Music*, 1136a–b) or Athena, who is described as immediately rejecting it (Pindar, *Pythian*, xii.7ff; Epicharmus as quoted by Athenaeus, op. cit., ii.84; and many Latin texts referring to the tradition).

The true origins of the aulos remain obscure, even though Mesopotamian, Cypriot, Egyptian and Anatolian iconographic records attest the existence of the double aulos at very early periods around the Mediterranean basin as well as in Cycladic culture (Minoan marble statuettes dating from *c*2200 BCE). Nonetheless, the Hellenic aulos with two straight pipes of equal length always remained distinct from its supposed ancestor the Phrygian aulos, one of whose pipes ended in a joint that was either curved or made of horn, hence its Greek and, later, Latin name *keras* ('horn'; fig.1).

4. TERMINOLOGY AND CLASSIFICATION. The generic term *aulos* embraces a wide variety of instruments. As early as the 4th century BCE Greek authors endeavoured to draw up analytical classifications, of which the clearest are found in the Aristotelian *On Things Heard* (804a) and Aristoxenus's *Harmonic Elements* (ed. Meibom, 21). According to Aristoxenus (in Athenaeus, *Sophists at Dinner*, xiv.36) there were four categories covering 'more than three octaves'; from the highest to the lowest auloi they are the parthenian ('of young girls'), the 'childlike' (*paidikoi*), auloi to accompany the kithara (*kithariatērioi*), the 'perfect' (*teleioi*) and the 'more than perfect' (*huperteleioi*), the two last-named being also grouped under the term 'masculine' (*andreioi*). This classification by range has no bearing upon the practical use, material, origin or form of the instrument. Yet, its terminology goes hand in hand with certain terms known from other sources in connection with musical practice: 'Pythian aulos', suitable for playing the *nomos* of the same name and described as 'virile' (thus placing it among the *auloi teleioi*); 'kitharist auloi', that is, auloi played with the kithara or an instrument of the same register; and the much-discussed *aulos magadis*, about which Greek scholars cannot agree, although it is likely that it had qualities similar to the magadis, a kind of harp capable of playing octaves (see A. Barker: 'Che cos'era la "mágadis"?', *La musica in Grecia*, ed. B. Gentili and R. Pretagostini, Rome, 1988, pp.96–107). This points to the simultaneous existence, if not of several coherent classifications, at least of a variety of terminology, for which evidence may be found in the works of non-specialist and specialist authors alike, both Greek and Latin.

Some terms used for the instruments were derived from the materials of construction: *lōtos* (the wood of the nettle-tree), *buxus* (a Latin term that came to be used for the box-wood tibia), *kalamos* and *donax* (used for rustic instruments made of reeds), and *ebur* (Lat. 'ivory'). In addition there are several terms which came to be used typologically but whose original usage was related to geographical provenance: the *hellenikos aulos* ('Greek aulos'), which embraced all auloi with straight pipes, as distinct from the *elumos*, thought to be an indigenous name for the *phrugiaulos* ('Phrygian aulos'); the *gingras*, a small, very high-pitched instrument of Phoenician origin; and the *phōtinx*, an Egyptian aulos with a single pipe and possibly no reed. The term *plagiaulos* (literally 'oblique aulos') was used for the transverse flute with no reed.

1. Phrygian aulos (or Berecyntian tibiae) with kerata: detail of a relief from a marble sarcophagus, mid-3rd century CE *(Catacombs of Praetextatus, Rome)*

No doubt the authors of the works *On Auloi* endeavoured to bring some kind of order into the terminology. A papyrus containing a young aulete's contract of apprenticeship (see Bélis and Delattre) shows that the terms used in everyday language and by scholars were not those employed by professionals: instrumentalists, teachers of the aulos, and probably the instrument makers, too, had a kind of jargon of their own.

5. CONSTRUCTION.

(i) Materials. While amateur musicians and particularly shepherds made their own auloi from reeds, using fire to bore the holes, professional musicians always turned to

specialist craftsmen (*aulopoiai*) to provide them with more durable, more attractive and, above all, more sophisticated instruments. Materials of a less perishable nature and more suitable for working were used for this purpose: ivory, bone, wood and metal, as the written sources and the remains of instruments show.

Makers of bone instruments used animals with long bones capable of providing sections measuring some 15 cm when worked, for instance, the legs of stags and the front legs of donkeys, which were much valued by Greek and Roman craftsmen alike. If Plutarch is to be believed, Theban craftsmen were the first to use the legs of stags, deer and fawns, which made the 'most sonorous' kinds of instruments (*Banquet of Seven Sages*, 150e–f). Latin authors provide evidence that donkey and deer bones continued in use throughout antiquity (Callimachus, *Hymn to Artemis*; Pliny the Elder, *Naturalis historia*, xvi.172; Antipater of Sidon, *Anthologia palatina*, 305, etc.); excavated auloi fragments confirm this, although examples made of the bones of sheep or cattle, materials not mentioned by classical authors, have also been discovered. A good many almost intact instruments, or sections of instruments, made of bone and ivory have survived (Alexandria, Tarento and Delos).

For wooden instruments, tree species with dense fibres (and therefore resistant to humidity) and long, thick, straight branches were chosen. Box (the Libyan *lōtos*, identified as the jujube tree of today) and nettle-tree – woods, as Pliny pointed out (xvi.212), that do not crack or split, are durable and not inclined to rot – were also popular with makers. A single text (Pollux, *Dictionary*, iv.71) mentions laurel 'with the pith removed'. The only wooden auloi to have come down to us are a few complete instruments from Ptolemaic Egypt, now in the Louvre, and the famous Elgin Pipes in the British Museum, which appear to be made of sycamore. Metal seems not to have been used for the body of auloi, but only as a covering for a bone or ivory tube. References to bronze, orichalc or silver auloi are therefore probably not to be taken literally. However, some specimens discovered during excavations do have coverings or rings made of these costly, precious metals; archaeology thus complements the accounts of the written sources and corrects the details.

(ii) Pipes and assembly. All the sources – written, pictorial and archaeological – show that the bore of the Greek aulos was strictly cylindrical, that is, of constant diameter. This is the characteristic of what the Greeks called the 'Hellenic aulos' (Aelian, quoted by Porphyry in his commentary on Ptolemy's *Harmonics*, i.3). Only the Etruscans and then the Romans made instruments with a conical bore (see Jannot). All the remains of instruments conform to this rule, including the upper joints with their bulbous outer shape into which the reed was inserted (the auloi of Delos, the Agora of Athens, and Corinth, the Elgin Pipes in the British Museum, and the double aulos in the Louvre, made of a single piece of wood including a bulbous swelling, also have a constant internal bore). The diameter varies from one specimen to another. Among the 30 or so sections found on the island of Delos, internal diameters range from 7·7 mm to 15 mm; five fragments have a bore of 10·5 mm, and three a bore of 12 mm. The average is an internal diameter of about 10 mm, which in today's terms seems very narrow, certainly much narrower than the bore of the modern clarinet or flute. However, there are notable and wide-ranging disparities, which must correspond to the different kinds of instrument, from the small *auloi paidikoi*, very narrow and with a high range, to the *auloi huperteleioi*, with large-bore pipes to produce a deeper sound. The walls of the *huperteleioi* are usually 1·5 mm thick, whether the instrument is made of wood, bone or metal, giving an external diameter of some 15 mm. To judge by the surviving complete instruments, each pipe might consist of five or six joints, each about 15 cm long, assembled on the tenon and mortise principle, with the tenon always at the lower end. The entire pipe might therefore reach a length of 60–70 cm. Since the maximum reach of the players' fingers would not be greater than about 20 cm, it is evident that the holes arranged along these very long pipes could be stopped only with the aid of mechanical devices.

(iii) Holes. As a rule the holes (*trupēmata*, *trēmata*) are never shown on Attic or Apulian ceramics, even by a talented painter who would otherwise depict every detail (fig.2). This seems to have been a convention of stylization. The only exceptions are a few vases showing auletes holding pipes in their hands (the fragments of a red-figure Attic cup in the severe style of *c*490 BCE in the Musée du Cinquantenaire, Brussels, Inv. A 1331; the bottom of the Marsyas Cup, 4th century BCE, in Berkeley, University of California, Inv. 8.935). In the literature, too, authors show little concern for the practical aspects of instrument making; the most that can be learnt is that the holes were bored with a drill. Those passages in works of the Pythagorean school concerning the number and arrangement of the holes of auloi should not be taken as accurate

2. Aulos player wearing a phorbeia, or mouthband: detail from a Greek amphora, Attic Red-figure style, c480 BCE (British Museum, London)

descriptions but rather as ideas put forward by theorists anxious to give proof of their calculations of musical intervals. The only reliable evidence for this aspect of construction is archaeological.

It is likely that instruments made during the Archaic period, as with rustic instruments made of reeds, had only a few holes, four or five to each pipe, capable of being stopped by the fingers alone. A commentator on Horace quotes a passage from Varro's *De lingua latina*, to the effect that tibiae in former times had only four holes; Varro claims to have seen such instruments in a temple of Marsyas. Sometime after the beginning of the 5th century BCE the instrument played by professional auletes seems to have merited the description *polutrētos* ('with many holes') and *poluphthongos* ('with many sounds'), much to the displeasure of thinkers such as Plato, a declared opponent of the virtuoso style and a champion of the (lost) cause of asceticism and simplicity in music. During the last quarter of the 4th century BCE Aristotle alluded to 'those who see an analogy' between the 24 letters of the Greek alphabet and the interval separating the *bombux* (the lowest note of the aulos) from its highest note (*Metaphysics*, 1093a29–b4).

The holes were mostly on the upper surface of the pipe, but there were also holes underneath to be stopped by the thumb, as found in a number of joints made of bone, wood and ivory. Usually the thumb-hole was placed between two holes on the opposite surface, calling for the hand position frequently shown by painters of red-figure Attic ceramics, with the aulete's thumb placed between his index and middle fingers, as on the Kleophrades amphora (fig.2). Such an arrangement probably avoided boring three holes dangerously close together on the same side of the pipe, especially in the upper joints of the instrument. The majority of holes are perfectly circular, with impeccably trimmed edges and no sign of repairs or errors; they are usually 6–7 mm in diameter, capable of being stopped with the finger-tips. There are also non-circular holes: those of an oval shape were probably intended to be partially stopped in order to produce intervals smaller than a semitone; others, in the shape of a cat's eye (in tibiae from Pompeii), perhaps resulted from corrections to the tuning.

Certain sections of auloi discovered at Delos, in Athens, and near Dushanbe in Tajikistan, have rectangular holes along the length of the pipe. These were obviously too far apart to be stopped manually, and it is likely that they were operated by some form of mechanism (see §I, 5(v) below). Although the holes are usually strictly aligned along the pipe, the lowest hole in a joint is sometimes set slightly to one side so that it could easily be stopped by the shorter little finger. Holes arranged all over the surface of the pipe, as in the large Pompeian tibiae, were obviously stopped by mechanical devices: the player's fingers would not have been adequate, especially to reach the most distant holes. However, there is no reason to believe that the side holes were always meant to be stopped by the little finger; as vase painters often showed, this finger could be placed under the pipe, no doubt to provide better support, particularly when an instrument might be weighed down by bronze or silver rings or coverings.

(iv) Reeds. Probably because it functioned as the organ of sound production, the reed was called 'tongue' (Gk. *glōtta*, *glōttis*; Lat. *ligula* or *lingula*: 'little tongue'). Partially split straws were used for rustic instruments, but there is overwhelming evidence in the sources that a special kind of reed, known as *zeugitēs* ('musical reeds'), was used throughout antiquity for most auloi and tibiae. The most sought-after reeds came from the floating islands of Lake Copais in Boeotia, north-west of Thebes (Theophrastus, *Enquiry into Plants*, iv.11; Pliny the Elder, *Naturalis historia*, xvi.168–72), where the best workshops specializing in double reed manufacture were located. The marshes of the Celenes region of Phrygia also provided material for high-quality reeds (Strabo, *Geography*, xii.8.15).

It is clear from Greek and Latin texts that makers took particular care over the harvesting and manufacture of their reeds (see Bélis and Péché, 1996). The plants were required to be of at least two years' growth, and specimens described as 'eunuchs' (without plumes) were preferred. Until the middle of the 4th century BCE the reeds were gathered in mid-September, but after the great floods of the lake in 338 BCE the date was brought forward by three months to 'a little before the solstice, or at the time of the solstice'. After harvesting, the reeds were bunched together and left to dry for several years; during the first winter they were wrapped and left out of doors. When spring came the reeds were cleaned and cut into sections at the internodes; only the middle part of a section, of a length no less than two palms (14·8 cm), was retained. After a final drying, the manufacture of the reed began.

A section was split in half lengthways to provide two symmetrical blades that would form the double reeds fitted to each of the two pipes of a single instrument in the hope that they would be perfectly 'in tune'. Each blade was then folded in half, split, and one of the ends tied by thread wound around several times; the vibrating end was called the 'mouth' (*stoma*). The reed was inserted into the mouthpiece so that the bottom of the mouth was level with the olive-shaped swelling of the bulb (*holmos*) that fitted into the upper joint of the instrument (*hupholmion*). According to Theophrastus, the manufacturing process did not always go smoothly, many reeds being spoilt despite the craftsmen's best efforts. Theophrastus emphasized the important point that 'until the time of Antigenidas', a virtuoso aulete active between 392 and 353 BCE, reeds were rather hard; the maker would season them before use, and players would moisten them with saliva or even grease before playing. When the instruments were not being used, auletes would place the reeds in a small ivory box with a lid (a *glōttokomeion*), and this was attached to the case in which the pipes were kept.

(v) Mechanisms. As with the holes, the mechanisms are by convention never shown on Attic and Italic ceramics; certain polychrome items, for example, a small votive plaque from Pitsa, show joints in different colours, no doubt to illustrate the difference between bone and bronze (as Pindar confirms). Funnel-shaped projections do not appear until the Roman period; so far as can be determined, their function was to increase the length of the air column, by plugging the holes, in order to obtain chromatic notes. They are most frequently found on Phrygian auloi after the 2nd century BCE. Although the name of these particular devices is not known, it appears that *kerata* was the term for the large horn-shaped mechanisms (see fig.1) which allowed the player to stop holes; a lever would cause a ring perforated by a hole of the same dimensions to slide around or up and down the

tube, thus opening or closing the hole. The function of the *kerata* was also to increase the length of the air column, perhaps to obtain chromatic degrees.

From the 5th century BCE onwards, written sources mention progress in the manufacture of auloi; it seems that during the course of the century the aulete Pronomus invented a means of modulating, but no further details of this technique are known. Other authors give the names of certain mechanisms but do not describe them in sufficient detail to permit definite identification; for instance, Aristotle explained how *suringes* allowed the aulos to play in octaves, and at the time of Demosthenes a famous aulete called Telephanes of Megara refused to fit his auloi with these devices, preferring to use a less virtuoso instrument, one in keeping with the musical style he favoured. It is possible that the *suringes* were slides, and although texts referring to them remain obscure, future examination of surviving instruments in a good state of preservation (e.g. an aulos from Pergamon and others from Tajikistan) may help to clarify this question.

It is worth emphasizing that the virtuoso players of antiquity never had to make do with rudimentary wind instruments of only approximate accuracy. Their instruments always issued from specialist workshops, some of which were extremely famous and attracted the custom of the best musicians of the time. So far, the only workshop to have been located precisely is that near the Temple of Apollo on Delos (see Bélis, 1988). Worked with great precision by highly qualified craftsmen using rare and valuable materials, fitted with ingenious mechanical devices and individually made to order to the detailed specification of instrumentalists, the Greek auloi and Roman tibiae were high-performance, powerful and precise instruments, evidence of the degree of perfection that could be attained by the technology of the ancient world.

II. The performers: auletes and auletrides

1. The aulete: definition and related terminology. 2. Social status of auletes. 3. Virtuoso auletes: training and career. 4. Auletrides.

1. THE AULETE: DEFINITION AND RELATED TERMINOLOGY. An 'aulete' (Gk. *aulētēs*; Lat. *tibicen*) was a male player, either amateur or professional, of the aulos; 'auletride' (*aulētris*) was the name for a female player of the instrument. These terms should not be confused with 'aulode' (*aulōdos*), the singer accompanied by an aulete. The generic term *aulētēs* gave rise to a number of more specific (though often quite obscure) terms. They fall into three distinct categories, according to whether they denote (*i*) the kind of instrument played by the aulete, (*ii*) his function or employment, or (*iii*) his repertory.

(*i*) *Kalamaulēs* or, less commonly, *kalamaulētēs*, is literally 'an aulete who plays a reed aulos' with a single pipe (Athenaeus, *Sophists at Dinner*, iv.78, quoting the *Dialectics* of Amerias of Macedonia). These two words were taken over directly into Latin, as seen for instance in the funerary inscription of the 'calamaula' Eutychianus and in the *Notae Tironianae* (107.2). *Monaulos* designates an aulos with a single pipe, but in an epigram of Hedylus quoted by Athenaeus (op. cit.) the word appears to be used poetically to refer to the player (i.e. Theon) accompanying mime. *Ascaules*, the Latinized form of *askaulēs* (a hybrid Greek term formed from *askos*, 'beyond', and *aul*[*ēt*]*ēs*), signifying a player of the bagpipes, is found in a poem by Martial (*Epigrams*, x.3.6–8); the true Latin equivalent, *utricularius* (deriving from *uter*, 'beyond'), was applied to Nero, who towards the end of his life planned not only to play the lyre on stage but to perform on the hydraulis, as a *choraulēs* (see §1(iii) below) and as an *utricularius* (Suetonius, *De vita Caesarum*, vi [Nero], 54.1). *Keraulēs* or *kerataulēs* means, strictly, a player of the *keras*, a short trumpet made of horn but also, as mentioned above, the name for the Phrygian aulos, one pipe of which had a strongly curved end (*keras*). A very ancient term, *keraulēs* occurs in a fragment by Archilochus (*c*650 BCE). A *tumbaulēs*, who played the *aulos keras* at funerals, was a kind of *keraulēs*. All the terms in this group are of infrequent occurrence.

(*ii*) A *trieraulēs* was an aulete on board a trireme of the Athenian war fleet who played the instrument to encourage the oarsmen and to set the stroke rate. In an inscription of the early 4th century BCE (*Inscriptiones graecae*, ii, 2), the list of sailors on the warships includes a certain Sogenes of Siphnos, 'aulētēs', who is mentioned just after the three chief officers. The word *trieraulēs* is found in other, more literary texts, as in Demosthenes' oration *On the Crown* (referring to Phormion, 'slave of Dion of Phrearres' and lover of the wife of Demosthenes' rival Aeschines) and in Philodemus (*On Music*, iv.72). *Spondaulēs*, an 'aulete of libation', is found during the Roman period in inscriptions at Olympia though not elsewhere; however, other temples did recruit auletes annually for cult purposes, for example, at Delos, where the players were women.

(*iii*) The single, generic term *aulētēs* was used for the highly esteemed virtuoso players who gave recitals and also competed against each other, especially at sacred festivals. However, at the beginning of the Hellenistic period (the last quarter of the 4th century BCE), other, more specific terms began to appear in connection with two musical genres – the solo *aulos* and the *aulos* with chorus, both of which were originally performed by auletes until they decided to specialize in one or the other category.

Reflecting this specialization, the periphrases *aulētēs puthikos* ('aulete [playing] the Pythian [*nomos*]'), *kuklios aulētēs* ('cyclical aulete') and *aulētēs meta chorou* ('aulete with chorus') were replaced by the simpler terms *puthaulēs* and *choraulēs*, which became current during the 1st century BCE in literary texts as well as inscriptions. Latin either took over these Greek terms or adapted them slightly (*puthaula* and *choraula*). From the 1st century CE, a further distinction seems to have applied to those auletes who were employed in hierarchic companies of professional musicians: the *prōtaulēs* (*prōtaulos* is also found) was the 'first aulete', or head of the company, as distinct from the *hupaulēs*, the 'second aulete'.

2. SOCIAL STATUS OF AULETES. In both Greece and Rome, auletes might occupy very different places on the social scale, depending on the circumstances of their employment and their musical competence. In general, the profession was not highly esteemed; in fact 'to lead an aulete's life' had a distinctly pejorative meaning. A number of proverbs and sayings depict auletes as unscrupulous, grasping, self-interested, vain and mindless; one lexicographer likened them to the parasites who played during sacrifices. Most were of humble origin or of very low rank and led a frugal existence; those like Phormion who served on the triremes were slaves; some were part of rich men's households, and it was said that 'whenever the cook does

something wrong, the aulete gets the beating' (Athenaeus, *Sophists at Dinner*, ix.26, quoting *The Islands* by the comic writer Philyllius).

By contrast, the most prominent auletes had brilliant careers, which brought them great popularity and, according to Lucian (*Harmonides*), ensured their 'fame and fortune'. They were recognized in the street; rich men or princes would offer them colossal fees to give private recitals or play in musical competitions; and various rulers, beginning with Philip of Macedonia and after him Alexander and all the Hellenistic monarchs, sought to attach them exclusively to their courts. Living on intimate terms with the rich and powerful, auletes would sometimes neglect their art in favour of a life of debauchery. Comic poets and satirists often ridiculed their jealousy, impertinence, profligacy, gluttony and heavy drinking; and various works tell of their eccentricities and love of luxury, their collections of precious stones, the price of the fabrics used for their costumes, and their efforts to acquire instruments made from the finest materials. Plutarch mentioned the famously wealthy aulete Ismenias of Thebes, who in about 350 BCE paid the huge sum of seven talents for the auloi of a Corinthian instrument maker. The demand for instruments of high quality increased during the Hellenistic period and seems to have been particularly marked during the Roman empire, to judge by the splendour of the tibiae found at Pompeii, some of which are covered with silver, or have sections covered with bronze decorated to the highest degree of workmanship.

Earlier, in 5th-century Greece, virtuoso auletes, whatever their fame, apparently led more moderate lives and were less open to criticism. There are two possible explanations: first, in classical tragedies the aulete was less important than the poet and chorus; second, in the early pan-Hellenic competitions held every four years (the Pythian Games at Delphi and the Isthmian and Nemean festivals) the victor was rewarded by a simple wreath, whereas after the 3rd century BCE it became customary to bestow in addition an increasingly large sum of money. Greek moralists lamented this change as marking the decline of art for art's sake.

3. VIRTUOSO AULETES: TRAINING AND CAREER. Young auletes ambitious for a professional career at the highest level were trained by experienced virtuosos, men who themselves might have been victors at the great competitions or else had acquired a sound reputation at the religious festivals organized by important cities such as Athens, Sparta, Thebes and Delos. From the end of the 5th century BCE Thebes was predominant in both the number and excellence of its auletes, among whom were Pronomus, Ismenias, Antigenidas, Timotheus and Caphisias; representatives of the Theban school, acknowledged by all Greeks to be the best, were paid high fees to pass on their art to young men of means.

First, however, a prospective aulete had to persuade his chosen master to accept him. A truly demanding teacher would have only three or four pupils at a time, who, like pupils of the various philosophical schools, would usually live with him for several years. Fees were completely at the master's discretion and were undoubtedly very high. Timotheus of Thebes, a famous aulete of the last quarter of the 4th century BCE, charged double any instrumentalist who came to him from another school, on the grounds that he would have twice the amount of work to do, first ridding the newcomer of his bad habits and then teaching him better ones. Greek and Latin authors stress the time and effort necessary to acquire perfect mastery of the instrument, and there is much evidence of the toughness of the great teachers: a pupil found at fault would be ridiculed in front of the others and might well have his ears boxed or even be beaten; errors of style were punished particularly severely by purist teachers. There was great competition between the schools. Some famous auletes would take their pupils to hear their rivals' followers to show them 'the wrong way to do it'. Vehement criticisms of technique and style were often voiced publicly: 'You played a wrong note, just like all the pupils of Timotheus', a member of the audience shouted at one aulete during a concert.

Because of the intense competition to reach the top rank of players, a newly formed virtuoso would have a fierce struggle ahead of him, particularly in the early stages. Unless he managed to perform brilliantly in a competition or gain public approval by some other means, he would have little hope of making his name. Honorific and funerary inscriptions show that a musical career could begin very early; child auletes took part in special competitions before going on to compete against adults. Greek writers mention several exceptional careers, including that of Sacadas of Argos, whose six successive victories at the quadrennial Pythian festival placed him in the unrivalled position of 'best musician' for a period of 24 years. Many virtuoso auletes, like their singer or kithara-playing colleagues, were constantly travelling, and most took part in the regular or occasional competitions organized by great cities or rulers throughout the Mediterranean basin.

Less technically accomplished auletes, who were unable to enter the most prestigious competitions, might belong to the companies of musicians and actors known as *dionusiakoi technitai*; those of lesser ability still could join smaller troupes (*sumphōniakoi*), working within a limited geographical area for lower fees. During the Hellenistic period, the three most important groups of *technitai* were based in Attica (at Teos in Ionia and at Isthmia and Nemea) and were granted financial and diplomatic privileges; participation in the musical festivals of the most famous temples was shared out among them. Various inscriptions relating to the powerful *technitai* companies and a number of papyri from Egypt provide limited information about the circumstances of engagement of these musicians. The evidence, in the form of contracts containing different types of clause, not only indicates the level of professionalism attained by the musicians, but also includes details about payment – whether in money or in kind (bread, oil, wine), the content and duration of programmes, the instruments required, the penalty for breaking a contract, and the means of conveying the musicians' most valuable possessions (instruments and clothing).

In post-Republic Rome tibia players, except for those soloists who managed their own careers, were grouped into colleges (*collegia*) or corporations, which were genuinely professional institutions. Like their Greek predecessors, the members took part in public ceremonies, particularly divine worship (no sacrifice in the ancient world conformed to the prescribed ritual without musical accompaniment on an aulos). The auletes who led troops into battle in Sparta and Crete belonged to a rather

different category from the rest, one about which little is known.

4. Auletrides. Women musicians were not allowed to perform in public in ancient Greece, either at the competitions or in recitals. However, like the *psaltriai* (women string instrument players), the *aulētrides* and the Roman *tibicinae* might sometimes be both excellent musicians and women of very easy virtue, hired to enliven banquets and all-male parties. Aristotle's *The Constitution of the Athenians* (50.2) explains that the ten city *astunomoi* prohibited their being paid more than the legally fixed tariff of two drachmas, and that the *proxenoi* would institute criminal proceedings should that sum be exceeded (Hyperides, *For Euxenippus*, 3). If several people wanted to hire the same musician, the *astunomoi* decided the matter by lot.

A great many auletrides came from Aegion and Piraeus and were the most sought after. The names of some have come down to us, either because a painter wrote a woman's name on a vase (e.g. Helike, on a stamnos painted by Smikros; and Syko, 'the Fig', on a krater painted by Euphronios), or because they became high-class prostitutes or the mistresses of historically important men. One of these musicians was Lamia, the mistress of Demetrius Poliorcetes (*c*300 BCE), who scandalized all Greece by aspiring to take part in the aulos competition in the Pythian festival at Delphi; another was Bromias, whose lover Phayllus, tyrant of Phocis, stole offerings for her from the temple of Delphi (*c*355 BCE). In general, however, the ambition of such a girl was to escape the wretchedness of her life by winning the love of a young man of good family who would buy her from her pimp and marry her: this is the subject of a number of Greek and Latin comedies (*comoediae togatae*). Among the least fortunate of the *tibicinae* were the *ambubaiae*, generally of Syrian origin, who were brought to Rome to play in the streets or taverns.

ANNIE BÉLIS

Aumann [Aumonn, Aumon, Auman], **Franz Josef** [Franz-Seraph, Johann, Leopold] (*b* Traismauer, 24 Feb 1728; *d* St Florian, 30 March 1797). Austrian composer. He was a choirboy in the Vienna Jesuit hostel, where he befriended Michael Haydn and J.G. Albrechtsberger. In 1753 he entered the Augustinian monastery of St Florian; in the following year he took vows there, in 1757 was ordained a priest and from 1755 until his death served as *regens chori*. His works, circulated only in manuscript, show the influence of the Neapolitan and Venetian schools, although the local traditions of Vienna and Salzburg as well as the particular performance requirements of his monastery also affected his style. His early masses and requiem settings are in a strong, cantata-like idiom with many sectional divisions, although the later through-composed *Missa brevis* shows a preference for simpler settings (two *missae brevissimae* are accompanied only by continuo). He wrote two secular Singspiele which contributed to the development of the Austrian dialect farce. His contemporaries commented particularly on his command of counterpoint, and his colourful harmony and delight in formal experimentation impressed the young Bruckner. A *Missa profana*, sub-titled 'a mass to satirize stuttering, bad singing and the onerous office of a schoolmaster', is attributed to Mozart and to Florian Gassmann in two Viennese copies, but a manuscript of the work in Göttweig and a notice in the Vienna Nationalbibliothek show it to be Aumann's.

WORKS

Lat. sacred: 37 masses with orch, 4 lost; 12 requiems, 1 lost; Gradual; 22 offertories, 3 lost; 7 Vespers; 29 psalms; 25 Magnificat; 10 litanies; 4 Te Deum; 8 responsories; In exequiis; hymns; sequences; duet cants.
Ger. sacred: Missa germanica (Wir werfen uns darnieder); 4 Passion orats, 2 lost; arias and songs with orch
Secular vocal: 2 Spl; Missa profana (Missa parodica, Faschingsmesse); couplets; lieder, canons
Inst: 3 syms., 2 doubtful; 9 divertimentos; 9 cassations; 7 parthias; Serenata, str, wind insts
MSS mainly in *A-GÖ*, *H*, *LA*, *SF*, *SEI*, *Wn*

PETER DORMANN

Aumerus. *See* AMERUS.

Aura (from Lat. *aura*: 'breath'). An instrument consisting of several heteroglot Jew's harps, invented by J.H. Scheibler and described in his short treatise of 1816. It was largely a response to the contemporary – and short-lived – vogue of the jew's harp on the European concert stage. Scheibler himself was one of its more accomplished practitioners, and published some of his own compositions and arrangments for the instrument in his treatise.

Scheibler's aura consisted of two identical star-shaped frames made from sheet metal or horn, and joined in the centre by a handle with a screw. Mounted into the frames were two sets of five jew's harps, each held in place by the screw of the handle so that their steel reeds pointed inward. The handle of each frame was grasped between the thumb and index finger and the reed was struck with a downward motion of the fourth finger. The harps in the right-hand frame were tuned *f–g–a–b♭–d′*, and those in the left-hand frame *c–d–e♭–e–f*. To make tuning easier, Scheibler affixed balls of sealing wax to the tips of the reeds. A performer could alternate among the jew's harps quite rapidly, simply by rotating the frames. Scheibler marked the jew's harps in the left-hand frame with red dots, and those in the right-hand frame with vertical bars or note names; he also incorporated these markings into his scores so that performers would know exactly which jew's harp to use for any particular passage.

To extend the range of the instrument, jew's harps tuned to higher or lower fundamentals could be added. W.L. Schmidt (1840) described one consisting of 12 jew's harps, six to a frame, and another consisting of 20 jew's harps, ten to a frame, which both Schmidt and Scheibler believed to be a practical limit; additional jew's harps would make the aura too cumbersome and difficult to learn. In spite of their efforts to promote the instrument, it was all but forgotten by the middle of the 19th century.

Schmidt used the terms 'aura' and 'mouth-harmonica' synonymously, believing the timbre of the instrument was comparable to that of a harmonica. His usage is a little confusing and lingers in some of the literature; the aura invented by Scheibler is not a harmonica, and Scheibler did not follow Schmidt's usage.

See also JEW'S HARP.

KEVIN MOONEY

Aureli, Aurelio (*b* Murano, Venice; *fl* 1652–1708). Italian librettist. He wrote some 50 librettos, including a few adaptations. Until 1687 he seems to have lived mainly in Venice (except for a brief sojourn in 1659 at the Viennese court), where he was a member of the Accademia Delfica and the Accademia degli Imperfetti, both of them probably offshoots of the famous Accademia degli Incogniti, among whose members there were many librettists. From 1688 to 1694 he was employed by the Duke of Parma; during this period he produced about a dozen dramatic works, all set by the court composer Bernardo Sabadini. Most of his subsequent librettos were written for Venice and other cities of the Venetian republic. He occasionally revised texts of other librettists, including Moniglia and Morselli. His works are whimsical and at times bizarre transformations of the most disparate historical and mythological source material. They reflect the evolution of Venetian taste (to which he admittedly pandered) from the libretto's first point of stability to the era of Arcadian reform.

THOMAS WALKER (with NORBERT DUBOWY)

Aurelian of Réôme [Aurelianus Reomensis] (*fl* ?840–50). Frankish writer. His only known work, *Musica disciplina*, is generally regarded as the earliest extant medieval treatise on music. It is the sole source of evidence concerning Aurelian and his milieu; no other 9th-century writer mentions the text or quotes from it, and it is not listed in surviving Carolingian library catalogues. Palaeographical studies have enabled the earliest extant manuscript of the *Musica disciplina*, *F-VAL* 148 (ff.57*v*–89*v*), to be dated to the middle third of the 9th century, so providing a *terminus ante quem* for the date of the treatise's composition. The preface gives some indication of the circumstances in which the treatise was written and provides certain clues about its possible date. Aurelian refers to himself as a former member of the monastery of St Jean de Réôme (in the diocese of Langres), but having been dismissed from the abbey and wishing to atone for his offence, he dedicated the treatise to Bernardus, the abbot, whom he also described as a 'future archbishop'. The name Bernardus does in fact appear in a list of the abbots of St Jean de Réôme published in the 17th century, in which he is said to have been abbot in about 846 and subsequently bishop of Autun; but no other record of a Bernardus among the 9th-century bishops of Autun has been traced. Without further evidence concerning Aurelian or Abbot Bernardus, therefore, it is impossible to prove beyond doubt Gushee's suggestion that the *Musica disciplina* was written in the 840s.

Aurelian never referred to himself in the treatise as a monk, but his familiarity with the plainchant repertory, particularly psalmody, strongly suggests that he was a member of a monastic community. That the treatise was written at some monastic centre other than St Jean is likely, maybe at St Amand, which not only possessed many of the books quoted by Aurelian in the *Musica disciplina* but was also where *F-VAL* 148 was copied.

The importance of the *Musica disciplina* rests mainly on its status as the first known medieval music treatise (other than the brief account of ancient music theory by Isidore of Seville); it provides not only valuable evidence for the repertory and performing practice of Gregorian chant in Francia during the first half of the 9th century – a period from which almost no notated melodies are known – but also an insight into the early development of Carolingian music theory. The question of whether

Aurelian should be regarded as the first medieval theorist, rather than the first whose writings have survived, is not easily resolved. There is no evidence that a tradition of writing about music existed before the reign of Charlemagne (768–814). Interest in music as an intellectual discipline reappeared in the West only during the last decades of the 8th century, when Alcuin, a scholar at the Frankish court, sought to revive the ancient liberal arts – of which music was one – as the basis of ecclesiastical education. The earliest descriptions of the art, from the late 8th and early 9th centuries, show that Carolingian scholars were only just beginning to rediscover the Latin manuals of ancient music theory, especially those by Cassiodorus, Martianus Capella and Boethius, and that they found the contents of such works difficult to understand.

The only surviving account of music thought to have been written before the *Musica disciplina* is the text known as *De octo tonis*, a work that has been ascribed to Alcuin, although his authorship is unlikely. This text amounts to no more than a very brief definition of the eight tones and the terminology associated with them; it exists in several versions, of varying length and detail, and is often found attached to tonaries. Aurelian used *De octo tonis* to form part of chapter 8 of his treatise, and although the earliest manuscript of the *Musica disciplina* predates all the extant versions of *De octo tonis*, it is probable that the most primitive forms of the latter text existed before Aurelian composed his work (see Huglo, 1971).

The *Musica disciplina* falls into two distinct sections: the first is a compilation of quotations from writers on ancient music theory, in particular Boethius, Cassiodorus and Isidore of Seville; and the second fulfils the statement given in the preface that the work is to be concerned with 'certain rules of melody they call *toni* or *tenores*', that is, the system of the eight tones (Aurelian never used the term *modus*), thought to have been adopted by Frankish cantors in the late 8th century from Byzantium (*see* MODE, §II, 1). The treatise concludes with a discussion of various aspects of plainchant, including the origins of particular chants, the importance of music in the Church and the definition and history of certain chant genres; there are also further appeals, in the same manner as the preface, to Abbot Bernardus.

In the first section (chaps.1–7), Aurelian's choice of material includes descriptions of the music of the spheres, the ethical effects of music, its inventors (Jubal, Pythagoras and so on) and its division into the subjects of harmonics, rhythmics and metrics; all these were common in early Carolingian definitions of the musical art. Aurelian's most original contribution was his inclusion of selections from Boethius's treatises *De institutione arithmetica* and *De institutione musica*; the latter in particular is not thought to have been widely read before the second half of the 9th century.

Aurelian assumed that the theory described by Boethius was relevant to the music of Gregorian plainchant, and at a few points in his treatise he attempted to integrate the two traditions. In chapter 2, for example, he displays an understanding of the mathematical proportions of the intervals of the octave (2:1), 4th (4:3), 5th (3:2) and whole tone (9:8) described by Boethius, and demonstrates each interval by citing examples from the chant repertory. This passage in the *Musica disciplina* is the first evidence that Carolingian scholars were beginning to apply the mathematics of Boethius to the sound of chant and using it to define intervals precisely. Yet at the same time it reveals the gulf that existed between ancient music theory and the practice of Carolingian chant, for Aurelian also attempted to associate each of the four intervals with a different authentic chant tone, stating, for example, that the introit antiphon *Inclina Domine aurem tuam* belongs to the tone of the *authentus protus* because it contains the intervals of an octave; this attempt to unite ancient theory and medieval chant has no musical basis. With the exception of the mathematical measurement of intervals, however, Aurelian's use of Boethian material is limited to the non-technical descriptions of music, such as the division of the art into *Musica mundana*, *humana* and *instrumentalis*, and the difference between the *musicus* and the *cantor*. Later generations of Carolingian scholars improved upon Aurelian's understanding of Boethius as they sought to reconcile ancient music theory with contemporary chant practice.

The second section of the *Musica disciplina* (chaps.8–19) begins with an introduction (8–9) to the eight tones: the etymological meaning of their names is discussed ('De octo tonis') and the characteristic melodies associated with each tone are described using the intonation formulae *noannoeane*, *noeagis* and so on; the treatise is the earliest evidence for the use of such formulae in the West. Aurelian also includes the story of how the emperor Charlemagne ordered the introduction of four additional tones.

In chapters 10–17 each tone is described in turn, focussing particularly on the melodic transitions (*differentiae* or *varietates*) between the recitation formula for the psalm verse and the antiphon in the introit, communion and offertory of the Mass and in the Office responsories and antiphons; chapter 18 is a summary of the numbers of *differentiae* belonging to each tone and within each genre of chant. Over 100 different chants are cited as examples and Aurelian assumes that the whole repertory is subject to the system of the eight tones and that the classification of individual chants to particular tones is fixed (although he was aware that some cantors disagreed with a number of his classifications). Later sources, such as tonaries, generally confirm Aurelian's assignment of chants to tones. Aurelian had no pitch-specific notation or terminology at his disposal to demonstrate the melodies of the various *differentiae*, and so their general characteristics are described verbally; the Boethian mathematical definition of intervals which Aurelian discussed in the first section of the *Musica disciplina* is not used to describe the melodies of the *differentiae*. It is clear, however, that Aurelian used neumatic notation, for in chapter 19, which is an account of the recitation formulae of the psalm verses, musical notation is essential to the discussion, is explicitly referred to throughout and is used in two places in the text; the *Musica disciplina* provides the earliest concrete evidence for the use of notation in the West. The other examples of notation in the earliest manuscript of the treatise, *F-VAL* 148, are of a different type, known as Palaeo-Frankish, and are later additions to the work.

Almost no evidence concerning the use or readership of the *Musica disciplina* survives from the century or so after *F-VAL* 148 was copied. The treatise may have been read fairly widely during the 11th century, when most of the

extant versions of the text were written, but Aurelian's name is rarely mentioned by other medieval writers on music, although he was cited by Berno of Reichenau (*d* 1048). It is probable that his work was quickly superseded by later 9th-century theorists who displayed a better understanding of Boethian music theory and how it could be applied to Gregorian chant.

JANE BELLINGHAM

Aurelius Augustinus. *See* AUGUSTINE OF HIPPO.

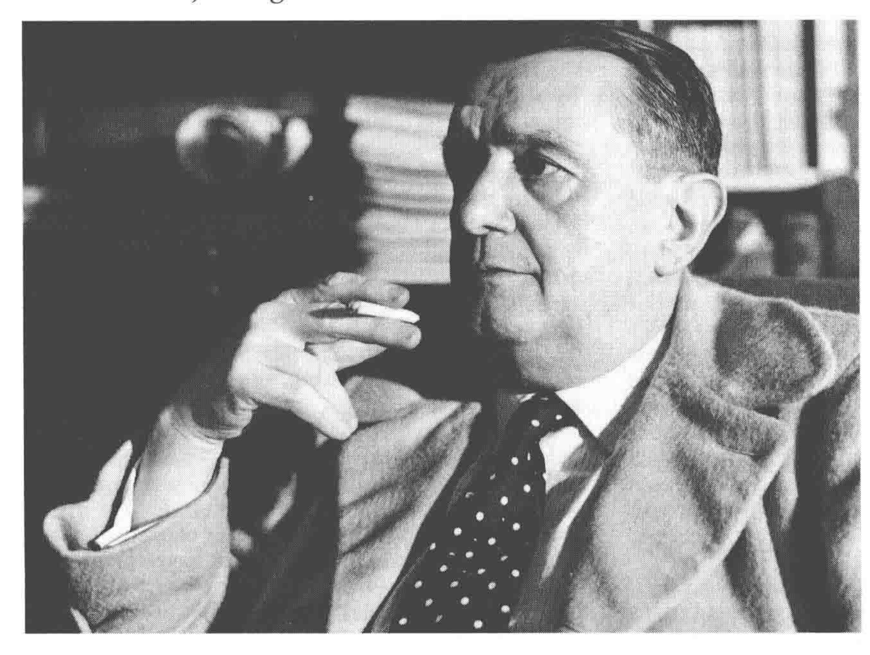
Auriacombe, Louis (*b* Pau, 22 Feb 1917; *d* Toulouse, 12 March 1982). French conductor. He attended the Toulouse Conservatoire, where he won first prizes for violin (1931), singing, recitation (1937) and harmony (1939). He studied conducting under Markevich at the International Conductors' Course at Salzburg between 1951 and 1956. It was with the orchestra of the Salzburg Summer Academy that he made his first appearance as a conductor (Linz, 1956). Later he assisted Markevich in his conducting courses in Salzburg and Mexico (1957), Santiago de Compostela (1966), Madrid (1967) and Monte Carlo (1968). In 1953 he founded the Orchestre de Chambre National de Toulouse, an ensemble of 12 strings and harpsichord, which specialized in Baroque music but also played many contemporary works. These included the first performance of *Ombres* by Boucourechliev (1970, Toulouse) and the American première of *Ramifications* by Ligeti (1970, Washington, DC). As musical director of this orchestra, which rapidly acquired an international reputation, Auriacombe made several recordings, some of which won the Grand Prix du Disque. Although his experience was principally with chamber orchestras, he also conducted larger bodies, including the Orchestre du Théâtre du Capitole, the orchestras of Toulouse and Paris radio, and the Paris Conservatoire Orchestra. He retired in 1971 because of illness.

CHRISTIANE SPIETH-WEISSENBACHER/R

Auric, Georges (*b* Lodève, 15 Feb 1899; *d* Paris, 23 July 1983). French composer. He spent his childhood in Montpellier, studying at the local conservatory and receiving piano lessons from Louis Combes who introduced him to the music of Debussy, Ravel and Stravinsky. He independently discovered the music of Satie in the periodical *Musica*. Combes also presented him to Déodat de Séverac and gave him free range of his extensive library of modern French literature. Auric was composing from the age of ten (later destroying most of his earliest works), and in 1913 his parents moved to the capital so that he could enter the Paris Conservatoire. Schmitt and Koechlin took great interest in him, as did Roussel, who in 1914 arranged a performance of his songs *Trois interludes*, a charming work of remarkable maturity.

The young prodigy was regularly invited out, and by the age of 15 Auric was acquainted with Stravinsky, Apollinaire, Cocteau (who dedicated *Le coq et l'arlequin* to him in 1918), Radiguet, Braque and Picasso, and was discussing sociology with Léon Bloy and theology with Jacques Maritain. At the Conservatoire he studied with Georges Caussade and met Honegger, Milhaud and Tailleferre. In 1914 he left the Conservatoire in order to study composition with d'Indy at the Schola Cantorum. A fine pianist, Auric played Satie's piano works in public and wrote an article, 'Erik Satie, musicien humoriste' (*Revue française de musique*, 10 Dec 1913), which led to his becoming acquainted with Satie himself, a close friendship that lasted until Auric wrote a highly critical article on *Relâche* (1924).

By the time he found himself a member of Les Six, the style of his music – brilliant and often acidly aggressive – had become well established, and works such as the *Huit poèmes de Jean Cocteau* (1919) or the foxtrot *Adieu, New York!* (1920) show how he can be considered, along with Poulenc, the group's most typical representative. On hearing his 1922 incidental music for Molière's comédie-ballet *Les fâcheux*, Diaghilev asked him to transform it into a ballet. First performed in Monte Carlo on 19 January 1924, it shows a facility for mood creation and a virtuosity in the manipulation of highly varied material that presages his film music. Other successful ballets followed: *Les matelots* (1924) and *La pastorale* (1925) for Diaghilev, *Les enchantements de la fée d'Alcine* (1928) for Ida Rubinstein, while occasional instrumental works such as the Piano Sonatina (1922) or *Cinq bagatelles* (1925) evince a certain unpretentious charm. Auric was also writing regularly for various music and avant-garde literary revues closely linked with the dadaists and surrealists.



A new expressionism and seriousness of purpose is evident in his Piano Sonata (1930–31), a work that interested Dukas and Cortot, though it did not have the success the composer hoped for. In this sprawling work, Les Six is largely forgotten in favour of Skryabin and a grandiloquence of rhetoric. The 1930s saw a few instrumental pieces (Violin Sonata, 1936; Woodwind Trio, 1938), but were more notable for the start of a long series of scores for films that include some of the classics of French cinema: *A nous la liberté* (dir. R. Clair, 1931), *L'éternel retour* (dir. Cocteau and J. Delannoy, 1943) and *La belle et la bête* (dir. Cocteau and J. Delannoy, 1946).

In the 1940s and 50s Auric composed several ballets and one of his most important works, the Partita (1953–5) for two pianos, although film music increasingly occupied him, his biggest popular success coming with *Moulin Rouge* (dir. J. Huston, 1952).

In the 1960s and 70s Auric's lively and sympathetic interest in the avant garde came to the fore in his own music, in the series of *Imaginées* and *Doubles-jeux*. The flirtation with serialism, the concision, and the play of light and shade are admirably suited to Auric's Protean muse.

In 1954 Auric succeeded Honegger as president of SACEM, becoming its honorary president in 1979. He was elected to the Institut in 1962 and was a vigorous and galvanizing director of the Paris Opéra and the Opéra-Comique from 1962 to 1968.

Much has still to be discovered about Auric, a public figure, but a secretive man and an enigmatic composer

Georges Auric, 1958

who so often seemed to hide his feelings behind a curtain of rhetoric. His best works are probably his most unpretentious. Though he is most at ease in stage and film music, Auric has a delicate sense of poetry that comes out particularly well in his songs and instrumental slow movements.

WORKS
(*selective list*)

DRAMATIC

Sous le masque (op, L. Laloy), 1927
Ballets: Les mariés de la tour Eiffel (after J. Cocteau), 1920, collab. 'Les Six'; Les fâcheux, 1923 [based on incid music]; Les matelots, 1924; Pastorale, 1925; Les enchantements de la fée d'Alcine, 1928; Rondeau, 1928 [for L'éventail de Jeanne]; La concurrence, 1931; Les imaginaires, 1933; La fontaine de jouvence, 1946; Quadrille, 1946; Le peintre et son modèle (B. Kochno), 1948; Phèdre (Cocteau, after Sophocles), 1949; Chemin de lumière, 1951; La chambre, 1954; Le bal des voleurs (after J. Anouilh), 1960
Incid music: Les fâcheux (Molière), 1922; Marlborough s'en va-t-en guerre (M. Achard), 1924; La femme silencieuse (after B. Jonson), 1925; Le dompteur (A. Savoir, after J. Théry), 1925; Le mariage de monsieur le Trouhadec (J. Romains), 1925; Volpone (after Jonson), 1927; Les oiseaux (after Aristophanes), 1928 [rev. 1966]; Le quatorze juillet (R. Rolland), 1931; Margot (E. Bourdet), 1935
Film scores: Le sang d'un poète (Cocteau), 1930; A nous la liberté (dir. R. Clair), 1931; Lac-aux-dames (dir. M. Allegret), 1934; L'enfer du jeu (dir. J. Delannoy), 1939; L'éternel retour (Cocteau, Delannoy), 1943 La belle et la bête (Cocteau), 1946; La symphonie pastorale (dir. Delannoy), 1946; L'aigle à deux têtes (Cocteau), 1947; Hue and Cry (dir. C. Crichton), 1947; Orphée (Cocteau), 1949; Moulin Rouge (dir. J. Huston, 1952); Lola Montes (dir. M. Ophuls), 1955

INSTRUMENTAL

Orch: Ouverture du 14 juillet, 1921 [from ballet Les mariés de la tour Eiffel]; Ritournelle, 1921 [from Les mariés de la tour Eiffel]; Fanfare, wind band, 1924; La Seine, un matin ..., 1937; Ov., 1938; Phèdre, ballet suite, 1949; Chemin de lumière, ballet suite, 1951; Ecossaise, 1952 [for La guirlande de Campra]; ML (Allegro final), 1956 [Variations sur le nom de Marguerite Long]
Chbr: Suite, 6 insts, 1924 [from Marlborough s'en va-t-en guerre]; Aria, fl, pf, 1927 [rev. 1976]; Sonata, G, vn, pf, 1936; Trio, D, ob, cl, bn, 1938; Impromptu, ob, pf, 1946; Imaginées I, fl, pf, 1968: Imaginées II, vc, pf, 1969; Imaginées III, cl, pf, 1971; Imaginées VI, v/ob, ens, 1976
Pf: L'après-midi dans un parc (Gasparet Zoe), 1914; Prélude, 1919 [for Album des six]; 3 pastorales, 1919–20; Adieu New-York, 1921; Sonatine, G, 1922; 5 Bagatelles, duet, 1925 [from La femme silencieuse and Le dompteur]; Petite suite, 1927; Sonata, F, 1930–31; 3 Morceaux, 1934 [from Lac-aux-dames]; La Seine, un matin ..., 1937 [from A l'exposition, collab. Delannoy, Ibert, Milhaud, Poulenc, Sauguet, Schmitt, Tailleferre]; 3 Impromptus, 1940; 9 Short Pieces, 1941; Danse française, 1946; Impromptu, d, 1946; Valse, 2 pf, 1949; Partita, 2 pf, 1953–5; Double-jeux I–III, 2 pf, 1970–71; Imaginées V, 1976

VOCAL

5 chansons françaises, chorus, 1940
Songs: 3 interludes (R. Chalupt), 1914; 8 poèmes (Cocteau), 1919; Les joues en feu (R. Radiguet), 1920; Alphabet (Radiguet), 1922; 5 poèmes (G. de Nerval), 1925; 2 romances (M. Desbordes-Valmore), 1926; Vocalise, 1926; 3 caprices (T. de Banville), 1927; 4 poèmes (G. Gabory), 1927; 5 chansons (L. Hirtz), 1929; Printemps (P. de Ronsard), 1935 [from Margot]; 3 poèmes (L.P. Fargue), 1940; 3 poèmes (L. de Vilmorin), 1940; 6 poèmes (P. Eluard), 1940–41; 4 chants de la France malheureuse (L. Aragon, Eluard, J. Supervielle), Mez, orch, 1943; 3 poèmes (M. Jacob), 1945–6; 2 poèmes (H. de Montherlant), 1965; Imaginées IV (onomatopeia), v, pf, 1975; Imaginées VI, v/ob, ens, 1976
Principal publishers: Chant du monde, Durand, Eschig, Heugel, Leduc, Noël, Salabert, Schott

JEREMY DRAKE

Aurisicchio [Euresicchio, Eurisechio, Orisicchio], **Antonio** (*b* Naples, *c*1710; *d* Rome, 3/4 Sept 1781). Italian composer. He studied in Rome, according to Giazotto, and supported himself by playing the organ in various Roman churches. Then, like so many southern Italian composers of his generation, he made his professional début in Naples with a comic opera in the Teatro dei Fiorentini, in 1734. To judge from his operatic production he was back in Rome again by the early 1740s, where the librettos of his works call him *maestro di cappella napoletano* – a conventional honorific which may or may not be taken at face value. In 1747 he became a member

of the Congregazione dei musici di S Cecilia, to which all professional Roman musicians belonged. By 1751 he was working as assistant to Francesco Ciampi, *maestro di cappella* of S Giacomo degli Spagnoli and, after Ciampi's death, succeeded him as chief director on 30 November 1756, a position he held until at least 1766.

A libretto of 1754 names Aurisicchio as 'Virtuoso di Camera' of Cardinal Domenico Orsini d'Aragona. On 28 November 1776 he was appointed *maestro di cappella* of the Congregazione dei musici di S Cecilia, remaining in this important position until 15 April 1779. Aurisicchio's death in September 1781 was of sufficient public interest for his funeral service in S Maria in Via to be reported in the Roman news journals. The legend that Aurisicchio died young, reported by earlier historians, seems to have been started by Burney who, having visited Rome in 1770, ought to have known better.

A hint about Aurisicchio's personality may be found in an account written to Padre Giovanni Battista Martini in 1755 by Prospero Marmiroli of a social gathering in Rome at which Aurisicchio boasted of the praise he had had from Martini for his own works; Marmiroli dismissed him as a knave and a fool ('gran birbo è quell'Asino Regnicolo'). However, it should be remembered that Martini had in fact earlier found Aurisicchio's music worth serious technical consideration, as the letter dated 12 August 1747 from another Roman correspondent, Girolamo Chiti, shows. Whether or not Aurisicchio was a braggart, he was capable of generosity: in 1778 he warmly and successfully recommended the young composer Giuseppe Pedota – not, apparently, one of his own students – for the position of *maestro di cappella* at the cathedral in Orvieto. Both Grétry, after studying in Rome in 1760, and Burney, after his visit there ten years later, expressed admiration for Aurisicchio's work and attested to his popularity with the Roman musical public.

Aurisicchio's reputation now must rest, as it did during his own time, on his church music. Although he obviously did not disdain the quick income brought by an occasional opera commission, it should be observed that many of these commissions were for a species of operatic hack work: for intermezzos (or 'farsette', as they had come to be called in Rome, where the genre maintained a vigorous life long after going out of fashion elsewhere in Italy, transformed in style and shape into miniature *opere buffe*) or for the revision of works by other composers. Though an aria by Aurisicchio was sufficiently admired to be included in the pasticcio *Attalo* for London in 1758 (and subsequently printed by John Walsh in his Favourite Songs edition), it was, Burney said, his 'only air that was ever sung on our stage'. Again in Burney's account, so high did Aurisicchio rank among Roman composers for the church, that 'upon any festival wherever he is *Maestro di Capella*, and has composed a mass, there is sure to be a very great crowd'.

In Ziino's opinion Aurisicchio demonstrated his talents most impressively in large-scale polyphonic sacred pieces, where skilful fugues contrast with sections in highly decorated solo style. Otherwise, his aria and instrumental styles are characteristic of the period, exhibiting simply constructed but appealing melodic surfaces over essentially tonic–dominant harmonic foundations.

WORKS

SACRED

Surviving church music includes: 2 masses, 3 short masses (Ky, Gl), several mass sections; at least 26 motets; 3 Lezioni for different days; Mag; cants., incl. La morte di Giesù, Già sento fremere le fauci orribili, Dunque fia vera; TeD; Dixit Dominus, 5 settings; Beatus vir, 4 settings; sacred songs, hymns, ps settings, miscellaneous liturgical pieces; Oratio Jeremie prophete; Studi sopra il canto fermo del Benedicamus solenne. MSS mainly in *D-Bsb*, *MÜd*, *MÜu*; Archivio della Chiesa Nazionale Spagnola, Rome; Archivio Capitolare, Rieti; also *B-Bc*; *F-Pn*; *GB-Cfm*; *I-Rsc*, *Rvat*

STAGE

Chi dell'altrui si veste presto si spoglia (commedia, T. Mariani), Naples, dei Fiorentini, wint. 1734

L'inganno deluso (int a 4), Rome, Argentina, carn. 1743

Il cicisbeo consolato (farsetta a 4, C. Mazzarelli), Rome, della Pace, carn. 1748

Chi la fà l'aspetta (int a 3), Rome, della Pace, carn. 1752

Andromaca (os, A. Salvi/A.G. Pampani), Rome, Argentina, carn. 1753; 6 arias in *GB-Lbl*

Eumene (os, G. Pizzi), Rome, Argentina, carn. 1754; *P-La*

Lo sposalizio all'usanza (farsetta a 3), Rome, Valle, carn. 1757

Arias in Didone abbandonata, 1745; Alessandro dell'Indie, *I-FZc*

MISCELLANEOUS

Componimento drammatico … per solennizare gli augustissimi nomi … di Francesco I … e di Maria Teresa, 1747

3 other componimenti, Rome, 1747; Rome, 1760; Florence, 1762

Betulia liberata, Rome, S Girolamo della Carità, 1756

Il furo Camillo, cant., Rome, Collegio Calasanzio delle Scuole Pie, 1760

Giunone placata (componimento drammatico, for the marriage of Filippo Bernualdo Orsini and Teresa Caracciolo), Rome, carn. 1762

JAMES L. JACKMAN/ENRICO CARERI

Ausdrucksvoll (Ger.: 'with expression'). A direction for expressive playing found particularly in German music of the generations after Beethoven. Brahms marked the opening of his *German Requiem* '*ziemlich langsam und mit Ausdruck*' ('quite slow and with expression').

See also TEMPO AND EXPRESSION MARKS.

□

Ausfaltung (Ger.). *See* UNFOLDING.

Ausführung (Ger.). A term used in Schenkerian analysis. *See* LAYER.

Auskomponierung (Ger.). In Schenkerian analysis (*see* ANALYSIS, §II, 4–6), the elaboration of a given contrapuntal-harmonic plan. The term is often rendered in English as 'composing-out', but 'elaboration' is a common alternative. The process of *Auskomponierung* begins with the tonic triad; its initial elaboration produces the URSATZ

comprising a conjunct descending URLINIE supported by a I–V–I bass ARPEGGIATION. At subsequent structural levels (*see* LAYER), various techniques of PROLONGATION are applied.

'Composing-out' is sometimes used more generally, in a non-Schenkerian context, to mean the working-out of the implications of some special feature of a piece; for example the C♯ in the seventh bar of Beethoven's 'Eroica' Symphony may be said to be 'composed-out' when it is interpreted as D♭ in the recapitulation of the first movement.

Austbö, Haakon (*b* Kongsberg, 22 Oct 1948). Norwegian pianist. He gave his first recital in Oslo at the age of 15 and later studied in Paris, New York, Munich and London. In 1970 he became the first non-French pianist to win the Concours National de la Guilde Française des Artistes Solistes in Paris, and he gained international attention in 1971 when he won the Olivier Messiaen Competition for contemporary music. Austbö's repertory is large and exceptionally wide-ranging, but he has won particular renown for his playing of Skryabin and Messiaen both in concert and on disc. A gifted and dedicated teacher, he joined the piano faculty at the Hogeschool voor de Kunsten Utrecht in 1980, and that of the Sweelinck Conservatory, Amsterdam, in 1994. His playing combines a broad tonal palette with an acute and flexible rhythmic profile and is notable alike for its emotional range and its penetrating intellectual command.

JEREMY SIEPMANN

Austin. American city, capital of Texas. The first settlers (1835) were predominantly of German descent. The city was incorporated in 1839. The Austin Lyceum was established in 1841 to promote the study of the arts. It was disbanded the following year. Evening concerts were given in the grounds of the capitol from 1846. In the late 19th century the city, whose population numbered about 15,000, had three opera houses, giving performances by local artists and later visited by touring companies, and a number of vocal and instrumental ensembles that performed regularly. The Austin SO, founded in 1911 and conducted by Hans Harthan, was a loosely organized amateur group that performed sporadically until 1938 when it hired its first paid conductor, Hendrik Buytendorp. In 1948 the players joined the American Federation of Musicians and hired Ezra Rachlin, who conducted until 1969. Other conductors have included Akira Endo (1975–80), Sung Kwak (1982–96) and Peter Bay (1998–). The orchestra gives eight pairs of subscription concerts and numerous 'pops' concerts annually, and has an active community outreach programme. The annual 4th of July Concert on the banks of the Town Lake attracts an audience of 60,000.

The Austin Civic Opera Company was active from 1927 to 1931. The Austin Lyric Opera was founded in 1983 with Walter Ducloux as musical director (retired 1996) and Joseph McClain as stage director; its first production was *Die Zauberflöte* (1987). The company mounts three productions each year at the University in the Performing Arts Center or the Paramount Theater (an old opera house), and engages internationally known and mostly American singers as well as local performers. Highlights have included the American première of Rossini's *La pietra del paragone* (1992).

The community supports several choral organizations (including Austin Choral Artists, Austin Civic Chorus, Austin Vocal Arts Ensemble, Capital City Men's Chorus, New Texas Conspirare Choir) and instrumental ensembles (Austin Chamber Ensemble, Chamber Soloists of Austin, La Follia, Austin Chamber Music Center, Austin Wind Ensemble, Austin Symphonic Band and others). In addition to the productions of the Austin Lyric Opera and the University of Texas, operas are also staged by the Austin Gilbert and Sullivan Society. In 1993 the New Texas Festival was founded. It was renamed New Texas Music Works in 1999.

Austin is the site of the University of Texas, which created a school of music in 1919. The music department sponsors more than 400 performances each year by student and faculty soloists and ensembles, as well as performances, masterclasses and lecture-recitals by visiting musicians. University ensembles include the University of Texas Opera Theatre, directed by Robert Desimone, and the University of Texas SO. The choral programme is headed by Craig Hella Johnson. The Bates Recital Hall (700 seats) houses one of the world's largest tracker organs (Rowland-Visser). The faculty has included the composers Paul Pisk and Kent Kennan, the performers Gerard Souzay, Charles Rosen and Jess Walters, and the musicologists Gilbert Chase and Gerard Béhague. The Grand Concert Hall of the Performing Arts Center seats 3000, and the Opera Theater 400. The university maintains the Lomax folk music archives. Included among the musical holdings of the Harry Ransom Humanities Research Center Library are manuscripts of compositions by Stravinsky, Berlioz, Debussy, Ravel, Copland, Fauré and Dukas. The centre houses the largest institutional collection of music and music-related materials by Paul Bowles and Nicolas Nabokov.

Austin is also noted for its active popular music community, particularly in the areas of country, blues and blues-influenced rock and roll, and identifies itself as the 'Live Music Capital of the World'. Each spring there is a South by Southwest music festival and conference, the largest of its kind, with performances by hundreds of popular musicians from around the world. The Austin community supports a full-time non-profit radio station devoted solely to classical music (KMFA).

HUGH CULLEN SPARKS/JERRY YOUNG

Austin, Elizabeth (*b* Leicester, *c*1800; *d* after 1835). English singer. Performances in Dublin in 1821 led to engagements

at the Theatre Royal, Drury Lane (début on 23 November 1822), and the English Opera House. On 10 December 1827 she made her American début at the Chestnut Street Theatre, Philadelphia, in Arne's *Love in a Village*; her New York début was at the Park Theatre on 2 January 1828. For the next six years, managed by F.H.F. Berkeley, she was America's reigning prima donna, performing principally in New York, Boston, Providence, Philadelphia, Baltimore and Washington. Her repertory ranged from *The Beggar's Opera* to *Der Freischütz*; she was most closely identified, however, with Rossini's *Cenerentola* (adapted by M.R. Lacy), which she introduced to the USA. She had a high, sweet and flexible voice, but was only a mediocre actress. Her prestige began to decline after the arrival in the USA of Mary Anne Paton Wood in late 1833; in May 1835 she returned to England and retired from the stage.

WILLIAM BROOKS, KATHERINE K. PRESTON

Austin, John (*b* Craigton, nr Glasgow, 17 April 1752; *d* ? Glasgow, 1830). Scottish manufacturer and inventor of musical devices, noted for his creation of steam-powered looms and other improvements in weaving machinery. He was apprenticed to William and Walter Tait, merchants in Glasgow, and became a burgess and guild brother on 18 January 1776.

His musical inventions are preserved in his *Tonometer* (London, *c*1800) and *A System of Stenographic Music* (London, *c*1802). The former explains the use of moveable brass wheels, which Austin invented as a mechanical aid for transposition and tuning; the latter explains the use of a new musical stenography, in which Austin attempted to represent music in its most 'simple form' by reducing notation to one line and six characters. According to a review in the *Scots Magazine* (lxv, 1803, p.165) the *System* was taught for a time in several Edinburgh boarding schools and in Herriot and Watson's Hospital.

JAMIE C. KASSLER

Austin, Larry (Don) (*b* Duncan, OK, 12 Sept 1930). American composer. He studied with Violet Archer (North Texas State University), Milhaud (Mills College) and Imbrie (University of California, Berkeley). In the 1960s he also formed associations with Cage, Stockhausen and David Tudor. While a member of the faculty at the University of California, Davis, he co-founded, edited and published the journal *SOURCE: Music of the Avant Garde*. He first gained recognition as a composer through a TV broadcast of his *Improvisations for Orchestra and Jazz Soloists* (1961), performed by Leonard Bernstein and the New York PO. Since that time, Austin's works have been performed and recorded by the Boston SO, the National SO and many other North American and European ensembles. He founded and directed computer music facilities at the University of South Florida (1972–8) and the University of North Texas (1978–96), and co-founded and served as president of the Consortium to Distribute Computer Music. He has also served as president of the International Computer Music Association (1990–94).

Austin's works from the 1960s are written in an 'open style' that reflects an interest in group improvisation. Later compositions incorporate both live and recorded sound, often employing a combination of acoustic and electronic sources. Several of his works, including *Life Pulse Prelude* (1974–84), are based on studies of Ives's compositional sketches. His complete realization of Ives's *Universe Symphony* (1911–51) was recorded in 1994. In 1996 Austin was the first American to be awarded the Magistère title at the International Electroacoustic Music Competition, Bourges, an honour bestowed for his composition *BluesAx* (1995) and for his 30 years of leadership in electro-acoustic music.

THOMAS CLARK

Austin, William W(eaver) (*b* Lawton, OK, 18 Jan 1920, *d* Ithaca, NY, 15 March 2000). American musicologist. He was educated at Harvard University, where he received the BA in 1939, the MA in 1940 and the PhD in 1951; his professors included Walter Piston, Archibald T. Davison and A. Tillman Merritt. Austin began his teaching career at the University of Virginia (1945–7). He taught at Cornell University from 1947 until his retirement in 1990; in 1969 he was elected a Fellow of the American Academy of Arts and Sciences. He was a visiting professor at Princeton University during the academic year 1957–8. In 1970 he became a member of the Gesellschaft für Musikforschung.

Austin specializes in the music of Russia and the USA in the 19th century, and in the history of 20th-century music. With *Music in the 20th Century* he contributed a broad yet comprehensive survey of music from 1900 to 1950. The book deals with stylistic and technical developments, aesthetic trends and music as a facet of cultural history. The author's evaluations may be debated: Debussy is the subject of a lengthy chapter and the discussion of Schoenberg has been criticized by reviewers. But Austin avoided the use of 'isms' and similar labelling often used by writers attempting to come to grips with the musical developments of the past 75 years, and his scholarship produced a valuable body of factual material for the student of 20th-century music.

PAULA MORGAN

Austin Organs. American organ building firm. It was founded by John Turnell Austin (*b* Poddington, Beds., 16 May 1869; *d* Hartford, CT, 17 Sept 1948). The son of gentleman farmer and amateur organ builder Jonathan Austin, he emigrated to America in 1889. He first worked for Farrand & Votey of Detroit, rapidly advancing to become foreman. There he first conceived the idea of a radically different system of organ construction called the 'universal wind-chest' system; this consisted of an individual-valve chest, the lower portion of which was a walk-in air chamber with regulator. Pipe valves were operated by a thin wooden trace attached to a motor bellows for each note. Stop action was first achieved by sliders; later a pivoting fulcrum affecting the valves was used. Although Farrand & Votey allowed Austin to experiment, they showed no interest in his ideas, and in 1893 he left them for Clough & Warren of Detroit, who in the same year built their first small organ based on Austin's system. In 1898 Clough & Warren were closed by fire, and Austin moved to Boston. A year later he was persuaded by some Hartford businessmen to move to their city, and with their backing he opened a factory there in collaboration with his brother, Basil George Austin (1874–1958), who came to the US in 1893. He obtained patents for an all-electric console in 1913, and for a self-player mechanism in 1914; an improved version of the latter, called the 'Quadruplex', was made in 1924. Another innovation was the steel plate diamond-shaped hollow swell shade. Austin's mechanical ingenuity was not limited to organ mechanisms; he also designed many labour-saving machines for his factory. In 1937 he retired, and the firm reorganized under the name of Austin Organs Inc., with his nephew, Frederic B. Austin (1903–90), as president. Richard J. Piper (1904–78) joined the company in 1949, becoming vice-president and tonal director. He was succeeded in the latter position by David A.J. Broome (*b* 1932); in 1998 Bruce Q. Buchanan, formerly with J.W. Walker, succeeded him. Donald B. Austin (*b* 1933), the son of F.B. Austin, became president in 1973 and his daughter, Kimberlee J. Austin (*b* 1960) became vice-president in 1994. Noteworthy Austin organs include those in the City Hall Auditorium, Portland, Maine (1912), San Francisco Civic Auditorium (1915), the University of Pennsylvania (1926), St Joseph's Cathedral (1962) and Trinity College (1972), both in Hartford, Holy Family Cathedral, Tulsa (1984), the Shrine of Our Lady of Czestochowa, Doylestown, Pennsylvania (1991) and St John's Church, W. Hartford (1996). As of 1997 the firm has built 2774 organs.

BARBARA OWEN

Austral [Fawaz, Wilson], **Florence** (*b* Melbourne, 26 April 1894; *d* Newcastle, NSW, 15 or 16 May 1968). Australian soprano. Her real name was Wilson, but she was also known by that of her stepfather, Fawaz, before she adopted her familiar professional name. Having studied at Melbourne University Conservatorium and with Sibella

in New York, she is said to have been offered a contract with the Metropolitan Opera, but preferred to make her career in England. In 1923 she appeared at Covent Garden with the British National Opera Company as Brünnhilde in the complete *Ring* cycle, and this role was to remain her most famous; she was also successful as Isolde and Aida. Less forceful and more lyrical than many Wagnerian dramatic sopranos, she maintained a consistent beauty and evenness of tone through these arduous parts, which she also sang in the international Covent Garden seasons of 1924 and later. She married the flautist John Amadio, and toured widely with him in Australia and America. Her many admirable recordings for HMV include the pioneer late-acoustic English-language series of excerpts from the *Ring*; in the early-electric German-language series, as at Covent Garden, she shared the role with Frida Leider.

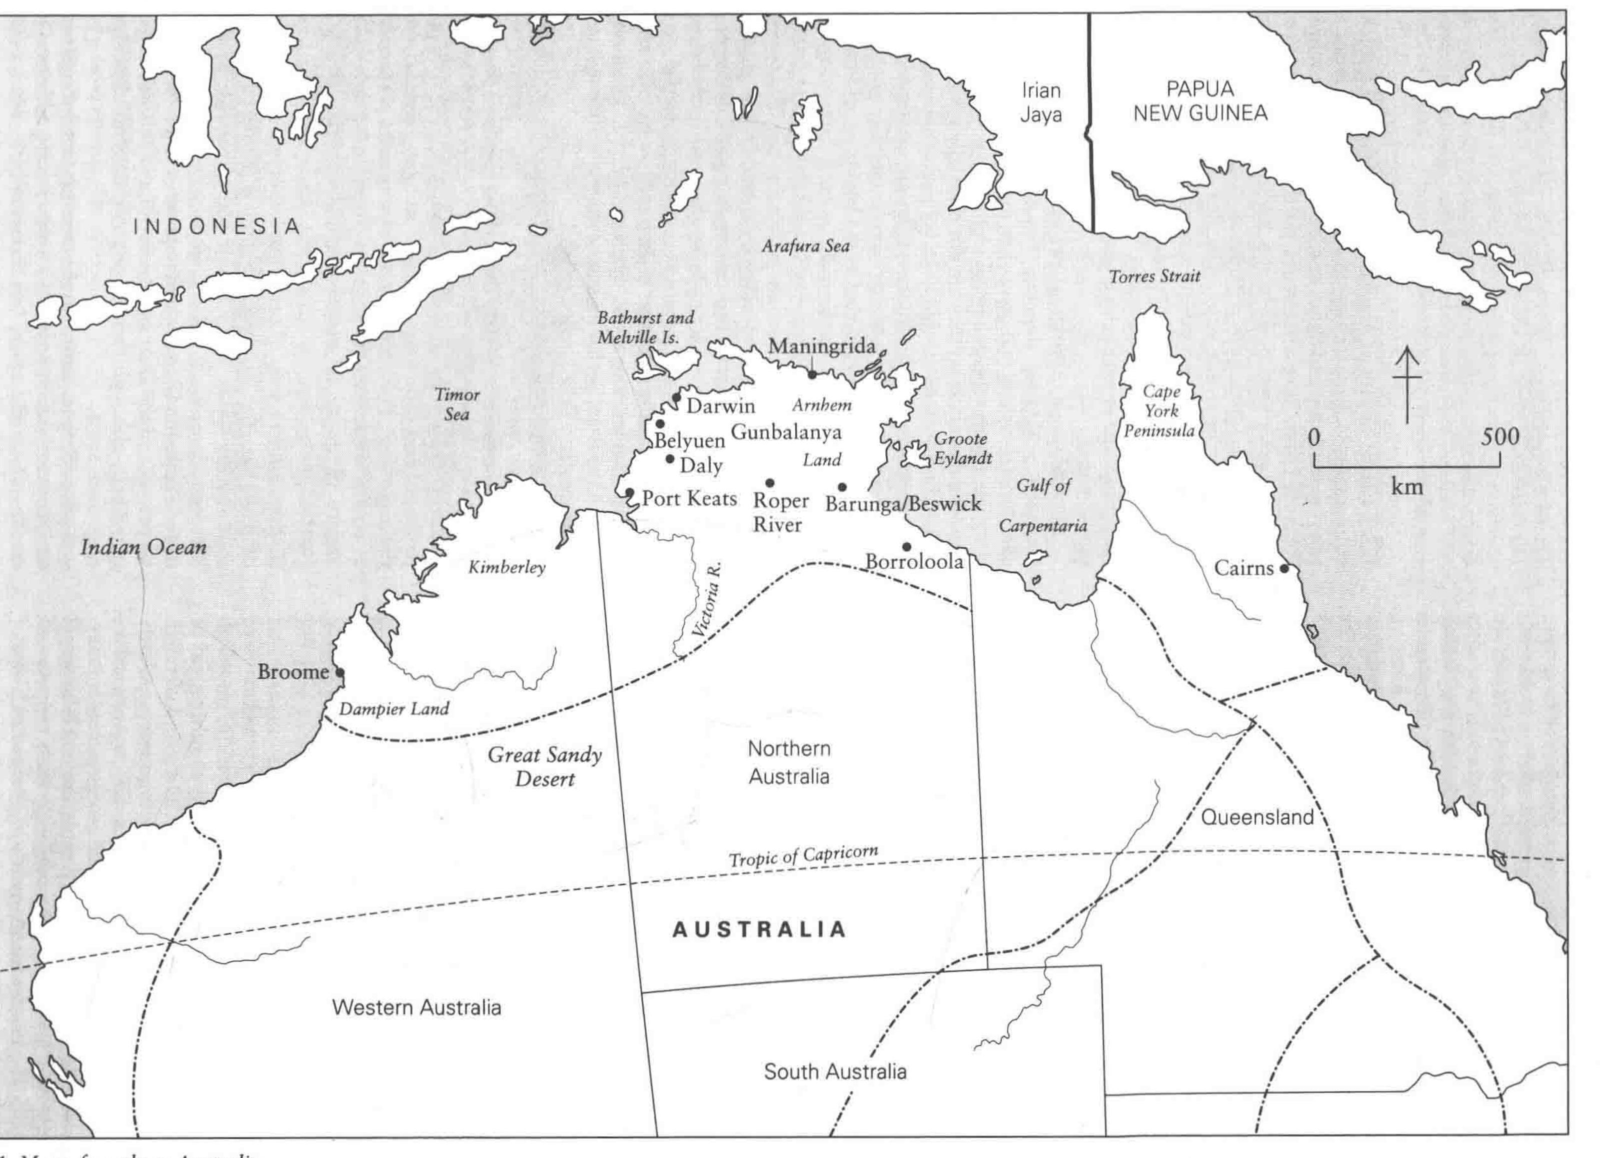
Australia. Country and island continent. It is located between the Indian and Pacific oceans south of South-east Asia and is the only continent to comprise a single nation-state. The Australian Aborigines arrived *c*40,000 years ago and developed a highly stable society with complex cultural traditions, aspects of which survived colonization by the British from the 18th century. Of a total population of 18·84 million (est. 2000), *c*355,000 people are Aborigine. Since World War II Australia has played an increasing role in Asia and the Pacific, and in the last decades of the 20th century the influence of Asian immigrants has become important.

I. Aboriginal music

Aboriginal people in Australia live in a variety of environments, including communities with predominantly Aboriginal populations and small settlements (out stations) on traditional land, as well as in country towns and cities with mixed Aboriginal and non-Aboriginal populations. Exchange of songs and dances between groups has historically been a feature of Aboriginal culture, particularly at ceremonial occasions. Songs and dances indigenous to one area were frequently adopted by people in neighbouring areas. In recent decades access to modern transportation and the electronic media has increased the interchange of cultural property between geographically distant Aboriginal populations and has led to increased participation of Aboriginal musicians and dancers in national and global culture. Symptomatic of this trend is the dissemination of the didjeridu; traditionally a northern Australian instrument – to other areas of Australia, where it has been adopted as a pan-Australian symbol of Aboriginal identity, and the immense popularity of the didjeridu within world music and New Age markets (Neuenfeldt, 1997). Popular music genres such as country, rock and reggae have become popular among Aboriginal people and are frequently combined with elements of traditional music by the many Aboriginal bands (some of which now sustain international reputations) that have sprung up in the communities, towns and cities of northern Australia.

1. NORTHERN ABORIGINAL MUSIC. Northern Australia hosts a large variety of Aboriginal languages and musical cultures (fig.1). Research on northern Aboriginal music is uneven: the music and dance of some regions, for example Arnhem Land, have attracted a great deal of attention, while others, most notably the Bathurst and Melville Islands and Cape York Peninsula, have received less, particularly in recent years. The first major surveys of Northern Australian music were carried out by A.P. Elkin and Trevor A. Jones (1958) and by Alice Moyle (1964 and 1974). More recent studies have tended to focus on the musical life of particular communities or on particular public genres.



All traditional Aboriginal performances in northern Australia – singing, dancing, the execution of visual designs and representations – are (or were in the past) associated with religious ritual. Although some are now performed in contexts that are not primarily religious (at official functions or arts festivals, for civil ceremonies and for entertainment), traditional religious ceremonies remain the most potent and significant contexts.

It is generally believed that at the beginning of time, in the period known in English as the Dreaming or Dreamtime, ancestral beings created the world and then deposited their creative power at certain sites. The power they left can be accessed today by correctly reproducing in ceremony the songs and dances originally performed by the ancestors in order to bring the world into being. Such ceremonies are regarded as both powerful and dangerous, and restrictions often apply as to who may perform or witness them. Because of the sensitivity attached to ritual performances of this type, they will not be discussed in detail in this article.

Public songs and dances, performances to which no restrictions apply with regard to who may perform or witness them, occur widely throughout northern Australia. In many cases, these are given to singers by ghosts or ancestral beings in dreams, although some, such as Arnhem Land clan-songs, are said to have existed 'from the beginning'. Public songs are in many cases performed at rituals associated with circumcision and death, in a variety of quasi- or non-ceremonial contexts and for entertainment.

(i) Kimberley region. Located in the north-west corner of Australia, the Kimberley region is bordered to the south by the Great Sandy Desert and to the east by the Victoria River (fig.1). It is linguistically and culturally distinct from the Western Desert cultures to the south (see §2 below) and the Daly and Arnhem Land cultures to the north-east, although there is ongoing cultural exchange with these areas.

As elsewhere in Australia, the most powerful songs and dances are those associated with the creative activities of the Dreaming ancestors, and there are often restrictions as to who may perform or witness them. Some of these

1. Map of northern Australia

ceremonies, such as the *Walungarri* initiation cycles of the Ngarinyin, are indigenous to the area, whereas others have come into the region through ritual exchange with groups to the south and north-east.

The most commonly encountered public performance genre in the Kimberley region is *junba*. There are a number of subgenres distinguished by the Ngarinyin people, which are principally determined by their dance paraphernalia: *jadmi*, performed with long paper bark caps and green leaves at the elbow and knee joints (fig.2); *balga*, performed with string crosses woven from coloured wool; and *galinda*, distinguished by the large painted boards carried on the shoulders of the dancers (fig.3).

While the terms *junba* and *balga* are used widely throughout the region, certain languages have their own names for songs of the *junba* type. These include *nurlu* in the southern Dampier region (Dyabirr Dyabirr, Dyugun, Ngumbarl, Nyigina and Yawuru languages); *ilma* in northern Dampier Land (Baardi and Nyul Nyul); *maru* in the southwest (Garadyarri); *dyudyu* in the south (Mangarla and Walmadyarri) and *dhamba* in the north-east (Murrinhpatha). Within each of these categories there may be a number of different song series, each usually associated with a particular composer. All these genres share important characteristics: they are normally sung by groups that comprise both males and females; their musical organization (which typically comprises isorhythmic texts set to a flexible melodic contour) conforms broadly to Central Australian principles (see §2(iv) below); they are accompanied by sticks or boomerangs and body percussion; they are composed by individuals with the assistance of spirit agents who appear to the singers in dreams and take them on spirit journeys; and they are accompanied by dance, the style and dance-paraphernalia of which varies from genre to genre.

Other commonly encountered public genres are the didjeridu-accompanied *wangga* and *lirrga*, which in terms of their musical organization, instrumental accompaniment, dance style and other features are stylistically distinct from *junba* and its related genres. *Wangga* and *lirrga* have been imported into the area from the Daly region, but their form and significance is changed in a number of ways in the Kimberley. First, the distinction between *wangga* and *lirrga* is not always recognized, and the meanings of song texts are often not understood; also, *wangga* and *lirrga* are imported to the Kimberley and are rarely, if at all, composed there. Furthermore, their function in ritual is different from that which they have in the Daly region (see §(ii) below). In general, *wangga* and *lirrga* are performed for entertainment and in the public sections of rituals that otherwise have restricted access.

Another public genre, about which less is known, is *lilydyin* (or *ludin*), comprising individually composed and owned songs from northern Dampier Land. These concern contemporary events and are sung by men without dancing. Further south, *dyabi* (or *yabi*) songs, also individually composed and owned, are performed with a rasp unique (within the Australian context) to that genre (Moyle, recordings, 1977, and von Brandenstein, 1969). Rain-making songs addressed to Wandjina, the principal creation Dreamings of the Ngarinyin, Wunambal and Worora people, were recorded by Alice Moyle in 1968 (Moyle, recordings, 1977); it is unclear whether they are still performed.

2. Dicky Tataya and others dance jadmi junba

3. *Dancers from Imintji/Tirralintji displaying painted boards and string crosses, typical of galinda and balga respectively*

A performance from the northern Kimberley of the *jadmi junba* by the Ngarinyin singer-composer Nyalgodi (Scotty) Martin illustrates many musical and dance features typical of the most commonly encountered public genres. *Jadmi* was given to Nyalgodi by the ghost (*agula*) of his grandfather, who appeared to him in a dream in 1973 and took him on a journey to Dulugun, the land of the dead, off the north-western coast of the Kimberley. There he showed Nyalgodi a song series by his deceased relations, which he subsequently shaped into the *jadmi junba* (see also §2(i) below).

Jadmi junba contains some 27 distinct songs, each of which represents a different dream experience. A complete performance is made up of a number of these. Ex.1 shows part of one of these songs. The text 'gurranda wayurlambi/ ngardarri wayurlambi' refers to the ancestral Brogla (*gurranda*), a large estuarine bird with elaborate courting rituals who first taught people how to dance, and to the paper-bark caps (*ngardarri*) of the dancers. Ascertaining the conventions whereby the melody is expanded and contracted to fit texts of different length and structure performed at different tempos is one of the principal tasks of the musical analyst. These conventions have been explicated in detail for a *nurlu* series by Keogh (in Barwick, Marett and Tunstil, 1995) and by Treloyn for *jadmi junba* (recordings, 1999).

Of the many pop bands in the Kimberley, the most well known is the rock-calypso-reggae band Kuckles. Three members of this band (Jimmy Chi, Mick Manolis and Steve Pigram) went on to create the first Aboriginal stage musical, *Bran Nue Dae* in 1990.

(ii) Daly region. The principal public song genres of the Daly region are the didjeridu-accompanied *wangga* (also *walaka*, *yindiyindi* and *djungguriny*) and *lirrga* (*lirra*). *Wangga* is indigenous to this region, where it is sung by speakers of Batjamalh, Emmi, Marri-tjevin, Marri-ammu, Marri-thiyel and Ngan'gi-tjemerri languages. The genre has been disseminated outside the Daly region to Barunga (where it is also known as *walaka*), to western Arnhem Land (*djungguriny*) and to the Kimberley. *Lirrga* was imported to the Daly region within living memory from Barunga, Beswick, Gunbalanya and Maningrida, where it is known as *gunborrg*. In the Daly region *lirrga* songs are now composed by speakers of Marri-ngarr and Ngan'gi-wumerri, with the help of local Dreaming ancestors. A number of other public genres are sung by Murrinhpatha speakers, including *dhamba*, which is stylistically related to the public genres of the Kimberley region; *malkarriny*, isorhythmically-organized songs that relate to a prophetic vision of the coming of the first missionaries to Port Keats; and *wurltjerri*, a didjeridu-accompanied genre (fig.4).

Both *wangga* and *lirrga* are performed by one, two or occasionally more singers who accompany themselves on wooden clapsticks and are accompanied by a single didjeridu player. These genres display a variety of formal structures, and it is difficult to distinguish them by musical criteria alone. Both feature spectacular male dancing, which involves a high degree of individual virtuosity, and group women's dancing that emphasizes upper body movement; however, *wangga* dancers perform the stamping movements characteristic of these genres using two legs, whereas *lirrga* dancers stamp only one leg (Marett and Page, in Barwick, Marett and Tunstil, 1995; Page, *GEWM*). The dance movements for *dhamba*, *malkarriny* and *wurltjerri* exhibit the more restrained gestures typical of both Central Australian and Kimberley dance, which are combined with the more flamboyant movements characteristic of the Daly.

Wangga, *lirrga* and *dhamba* are received in dreams by individual songmen from a variety of spirit agents. In some cases, particularly at Port Keats, the song-giving spirits are humanoid Dreaming figures known variously as Walakandha, Ma-yawa and Ginwurri for *wangga*, as

Kanybubi (mermaids) for *lirrga* and as Kunbinyi for *dhamba*. In other places, particularly at Belyuen and Barunga, *wangga* songs are given by the ghosts of deceased songmen. Song texts in some cases comprise the untranslated words sung by song-giving spirits in ghost language; these are heard as meaningless vocables. In other cases the words of the spirit are translated into human language by the singer and are heard as normal language. Meaningful song texts may refer to the song-giving process itself, to particular Dreamings or ghosts, to living people, to contemporary events or to significant places.

The two main ceremonial contexts for all five public genres of this region are ceremonies to make boys into men through circumcision (fig.5) and 'rag-burning' ceremonies performed to assist the spirit of a deceased person to leave the world of the living. In circumcision ceremonies in particular, it is not uncommon for genres from outside the region to be sung. These include Arnhem Land clan-songs (*bunggurl* or *manikay*) as well as ceremonial complexes imported from Central Australia (Stanner, 1966). All five local public genres are also regularly performed in quasi-ceremonial contexts such as building dedications, college graduations and civil ceremonies, as well as for entertainment.

4. Gypsy Jinjarr and Elizabeth Cumaiyi (Karlingkun) sing wurltjerri accompanied by Gerald Longmirr on didjeridu

A song about a man called Benmele, composed by the Belyuen songman Bobby Lambudju Lane, can serve as an illustration of *wangga* style (ex.2). In the first of the two main descents, the text 'Benmele-maka kurraitj-kurraitj

5. Colin Ferguson, Les Kundjil, Charles Kanggiang and others performing wangga during a circumcision ceremony

kabindje-noeng' ('Benmele, kookuburra, he sang for him') is set isorhythmically. Isorhythm is not, however, the thoroughgoing principle of musical organization that it is in Central Australian song or genres such as *junba* in the Kimberley; it is adopted here as just one of a range of organizational principles that *wangga* composers draw on. Thus it is abandoned in the shorter second descent, which is made up of sustained notes set to the vocable text 'i, a, n'. Before returning to the main descent at the beginning of a second rendition of the song verse, the singer sings a primarily rhythmic passage to the vocables 'e ta' in the lower octave. Even unpatterned, stick-beating is sustained throughout the song; however, many different patterns, implying a range of different metres, may be used in both *wangga* and *lirrga*. Throughout, the didjeridu plays a rhythmic drone on the pitch that is the final of the two main melodic descents. In the Daly region and western Arnhem Land (except in *wurltjerri*) there is seldom any use of the overblown tone of the didjeridu. Expert performers manipulate the upper partials of the didjeridu to produce complex 'chords' that are combined in rhythmic interactions with the vocal part (these are not shown in ex.2).

(iii) Arnhem Land. Here, song ownership is overwhelmingly group-based. Some repertories, most notably those associated with restricted or semi-restricted ceremonies, are owned by one or the other of two patrilineal exogamous moieties, Dhuwa or Yirritja. These include the clapstick- (*bilma-*) accompanied songs for the *Madayin* ceremony, different sets of which are owned by each of the moieties; the Dhuwa-owned *Kunapipi*, *Ngulmarrk* (*Ubar*) and *Djungguwan* ceremonies; and the Yirritja-owned *Yabadurawa*. The exact forms of these ceremonies, which focus on the activities of ancestral Dreaming figures, vary across Arnhem Land.

Ownership of the most commonly performed public songs (termed *manikay* in north-eastern areas of central and eastern Arnhem Land, *bunggurl* in the south-western Barunga/Beswick area and 'clan-song' in English) is invested in exogamous patrilineal clans. Each clan identifies with a set of Dreamings (*wangarr*), some of which reside on their land and some on the estates of related clans. Didjeridu-accompanied clan-songs, dances, paintings, designs and other ritual property, which are believed to have been handed down unchanged since the creation of the world, make manifest a clan's Dreamings when they are presented in ceremony.

Individually-owned, didjeridu-accompanied songs called *gunborrg* are also composed and performed in western Arnhem Land, particularly among the Maung, Gunwinggu and related language groups. *Gunborrg* are given to individual songmen in dreams and may refer either to topical events or Dreamings. They are widely performed in northern Australia, for example at Barunga and Beswick to the south, in the Daly region (where they are known as *lirrga*) and in the Gulf region (where they are known as *malwa*).

In eastern Arnhem Land yet another form of didjeridu-accompanied song, called *djatpangarri*, is performed by young unmarried men. Often described as 'fun songs', their texts comprise both meaningless vocables and references to everyday topics (Moyle, recordings, 1964, pp.31–2, and 1974). According to Waterman (1971) most *djatpangarri* follow the same melodic pattern. Recently, *djatpangarri* have been incorporated into Western popular music songs by the band Yothu Yindi of Arnhem Land. Other bands, such as Blekbala Mujik from Barunga and Sunrize Band from Maningrida, also mix elements of traditional music with rock, reggae and other popular genres.

Clan-songs (*manikay*, *bunggurl*) are grouped into series, which are usually owned by more than one clan. In central Arnhem Land these series are known by proper names such as *Murlarra* (Anderson, 1992, and Anderson, in Barwick, Marett and Tunstil, 1995), *Djambidj* (Clunies Ross and Wild, recordings, 1982, and 1984), *Goyulan* (Clunies Ross and Mundrugmundrug, recordings, 1988) or *Baratjarr* (Stanhope, 1991). In eastern Arnhem Land they are referred to by both the name of the owning clans and by the topographical subject matter of the series. While in central Arnhem Land each clan normally (though not exclusively) owns just one series, in eastern Arnhem

Ex.2 Part of a *wangga* by Bobby Lane about Benmele (text transcr. A. Marett, L. Barwick and L. Ford; music transcr. A. Marett)

Land clans own rights to more than one series. Men can sing the songs of their own clans and of their maternal grandmother's clan, or of a clan with which they share song-series.

A song-series comprises a set of clan-songs, each celebrating the activities of one of a number of totemic Dreamings associated with the owning clans. *Djambidj*, for example, is owned by (and binds together) four Burarra-speaking clans as well as a number of clans from other language groups (Hiatt, 1965, p.59). It comprises some 21 song subjects that include various animal or plant species (for example, Crow, White Cockatoo, Green Turtle or Yam), culturally-produced items (Didjeridu and Hollow Log Coffin) and spirit beings (Marrawal).

Clan-songs are sung primarily in three public ritual contexts: mortuary rites, circumcision ceremonies and ceremonies of ritual diplomacy. They may also be performed in public parts of otherwise secret ceremonies, as well as for entertainment. All ceremonial contexts require singing and dancing with visual representation of Dreamings in several media.

Mortuary ceremonies can be divided into three main stages. The first of these involves the preparation of the body and its burial or exposure on a tree platform. In the second stage, which occurs some months later, after the body has partially decayed, relatives clean the bones and paint them with ochre before handing them to female relatives for safe-keeping. The third stage (which is traditionally the most elaborate) involves crushing the bones of the deceased and placing them in a hollow log-coffin, which is then placed upright and abandoned. In some areas, as a result of Christian influence, the first

(burial) stage has become the principal element in the ceremonial complex (see, for example, Dunlop, film, 1979, and Morphy, 1984). In other areas of eastern and central Arnhem Land, the third stage remains the principal one. The film *Waiting for Harry* (McKenzie, film, 1980) documents such a ceremony during which the songs, dances and visual designs of the two song-series *Djambidj* and *Goyulan* are executed.

Mortuary practices in eastern Arnhem Land (including Groote Eylandt) appear to differ in an even more fundamental way from those in other parts of Arnhem Land in that the ceremony is concerned with the journey of the soul of the deceased from the place of death to its spiritual resting place in its clan lands. In a series of ritual episodes made up of a particular set of dances, ritual actions and songs, ancestral events associated with the particular tracts of country through which the soul is travelling are re-enacted in ceremony.

In circumcision ceremonies a boy's connection to his totems, his country and his kin is emphasized by the performance of songs and dances and the painting on his body of emblems associated with his principal totems (Keen, 1994, pp.171–91).

The ceremonies of Marradjirri or Rom have been described as 'rituals of diplomacy' or 'exchange ceremonies'. These involve the presentation of elaborately decorated poles to distant social groups, with attendant singing and dancing of clan-songs (Borsboom, 1978, and Keen, 1994). Rom ceremonies have also been performed to celebrate the relationship between the Anbarra people of central Arnhem Land and the Australian Institute of Aboriginal and Torres Strait Islander Studies in Canberra (fig.6) (For music of Torres Strait aborigines *see* TORRES STRAIT ISLANDS).

The three main musical elements in any performance of clan-songs are a vocal melody carried by one or more specialist male singers, clapstick patterns played by the singers, and a patterned drone played by a single didjeridu, although in eastern Arnhem Land some clan-songs are sung without didjeridu accompaniment. Whereas in central Arnhem Land the pitch of the didjeridu drone is often the same note as the final of the vocal melody, in eastern Arnhem Land there appears to be no attempt to make these two pitches agree (Knopoff, 1992). Women also perform songs (*ngathi manikay*) that follow the same texts, use the same images and carry the same meanings as men's songs. These 'crying-songs' are performed in free rhythm both during mortuary rituals and in less formal grieving contexts (Magowan, 1994). Songs may or may not be accompanied by dance, with men and women performing independent styles of dancing. Dance forms and gestures may also be regarded as part of the property of clans.

6. George Ganjibala dancing bunggurl during a Rom ceremony at the Australian Institute of Aboriginal Studies

In a typical performance, a particular song subject is sung a number of times followed by the singing of several song items of another song subject and so on (Stubington, 1978, and Anderson, 1992). Song subjects may be sung and danced in a number of styles. In central Arnhem Land, one major distinction is between performances in which there is no fixed metrical relationship between the voice, clapsticks and didjeridu and in which the music of each sound component is unmeasured (termed *ngarkana* in Rembarrnga language); and those in which voice, sticks and didjeridu all conform to the same metre and are aligned to produce complex formal patterning (termed *djalkmi* in Rembarrnga; see Anderson, 1992, and Anderson, in Barwick, Marett and Tunstil, 1995; Clunies Ross and Wild, 1984).

Throughout central and eastern Arnhem Land, 'measured' song items commonly comprise three parts: an introductory section in which the performers rehearse the main musical elements, the song proper and an unaccompanied vocal termination that is typically omitted when a song is danced to. The song proper consists of sung text accompanied by sticks and didjeridu (ex.3). Its beginning is usually marked by the singer or singers leaping to the highest note of the first of a number of vocal descents (marked *A*, *B*, *C* and *D* in ex.3) that form the principal melodic material of the song item. In the course of these descents, singers produce text describing the actions and attributes of the spirit being.

The opening lines of the song proper have the following meanings:

wang-gurnga guiya Cockatoo named Wang-gurnga
wnag-gurnga guiya Cockatoo named Wang-gurnga
gulob' arraidja gorges himself on seeds and grasses and hiccups
ngwar-ngwar worria dances and leaps slowly in the sky calling 'ngwair ngwair'
maningala rarei lives at his waterhole in the upland forest
(Clunies Ross and Wild, 1982, p.48).

Song texts are performed within a metrical framework articulated by sticks and didjeridu. In ex.3 each of the text lines occupies four beats. Variations in the patterning of sticks and didjeridu also articulate formal subdivisions within the song (see, for example, descent *C*, in which the stick-beating is varied and the didjeridu introduces overblown 'hoots' about a 10th above the tonic, circled in ex.3). Variant stick-beating and didjeridu hoots also mark the end of this second section.

(iv) Gulf country. South of Arnhem Land lies the Roper River. Several different types of song are recognized in the western Roper, including *lorrgon*, *manggarlagarl* and *gujida*. *Lorrgon* are associated with mortuary rites, and the other two figure in the initiation of young men. Despite a study of texts of *lorrgon* songs (Merlan, in Clunies Ross, Donaldson and Wild, 1987), little musicological study has been made of songs from this region. Songs of the *wangga* and *gunborrg* genres have also been recorded in this region.

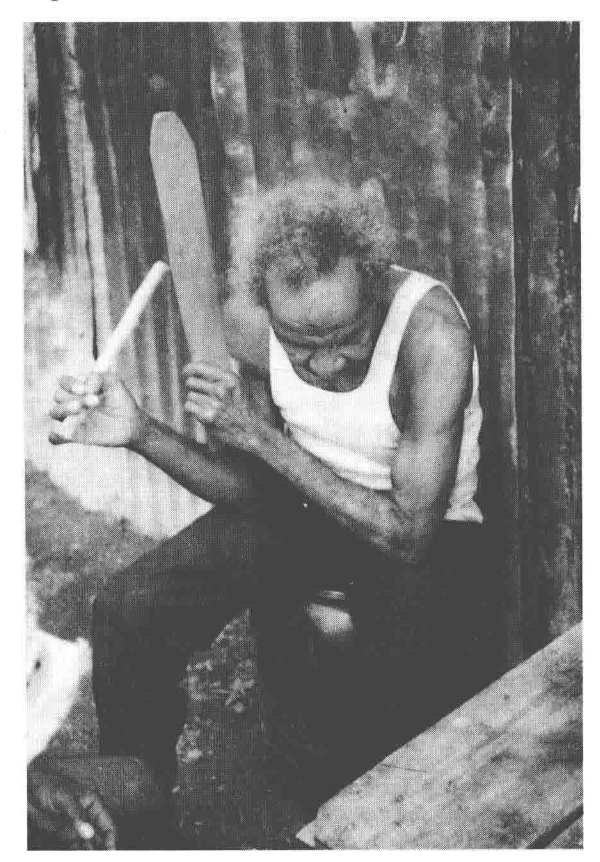
The south-west coast of the Gulf of Carpentaria supports four cultural groups, differentiated primarily by language: Garrawa, Gudanji, Mara and Yanyuwa. Mack-

Ex.3 Second section (song proper) of a performance of the song *White Cockatoo* (*Ngalilag*) from the clan-song series *Djambidj* (singers: Frank Garramanamana and Frank Malkorda; didjeridu: Sam Gumuyum; transcr. A. Marett)

notes with circled head indicate overblown 'hoot'

inlay (1998, p.44) has suggested that whereas the textual and rhythmical structure of Yanyuwa songs resembles those of Central Australian music, the melodic structures resemble those in parts of north-central and north-eastern Arnhem Land. In Yanyuwa culture, songs are classified according to the origins of the songs. Songs composed by totemic ancestors in the Dreaming are referred to as *kujika*. When performed in ceremony they are often restricted by age or gender (or both). Other restricted repertories include 'love-magic' songs such as men's *djarrada* and women's *yawalyu* (Mackinlay, 1998). These latter two genres are widely encountered in Central Australia as well as in some other areas of northern Australia. *Yalkawarra* and *Kulyukulyu* are sacred public funeral rites which, while incorporating *kujika* songs, are generally not referred to as *kujika*.

Songs may also be composed by humans (*walaba* when composed by men or *a-kurija* when composed by women), in which case they are individually owned. Songs for which there is no generic form may also be received in dreams from spirit beings. West (recordings, 1962) reported that *gunborrg* songs from western Arnhem Land are performed at Borroloola, where they are known as *malwa*. 'Malwa', which was originally the proper name applied to a specific set of *gunborrg* songs, has become a generic term in this area.



A number of song genres are performed by the Lardil of Mornington Island. These include *burdal*, a public danced form given to singers by invisible beings in dream; *kujika* songs that belong to ceremonial complexes associated with Boraloola, *yirrijirr* women's ceremonial song and dance, and *djarrada* love magic songs (Woomera, Aboriginal Corporation, 1999).

(v) Cape York Peninsula. While there has been extensive recording and documentation of the indigenous music and dance of this region (for an account of audio recordings see Moyle, 1968–9, and Koch, in Clunies Ross, Donaldson and Wild, 1987), there have been few detailed musicological studies. Moreover, almost all available studies are based on fieldwork conducted in the 1960s and 70s. The dance styles of western Cape York Peninsula have, on the other hand, been comparatively well studied (von Sturmer, 1978, and von Surmer, in Clunies Ross, Donaldson and Wild, 1987; Arnold, 1991; and Williams, 1988).

Typical of the cultures of western Cape York Peninsula are the Kugu-ngancharra, a subgroup of the Wik people. In the 1970s they possessed a repertory of ceremonial-mythical complexes, songs and dances that comprised a number of different traditions, some restricted and others public: *munka*, *wanam*, *kunalum* or *anytjalam* (turtle), *pucha*, *winychinam*, *nganycha mongkom*, *wungga a'e*, *wungga mangaya*, *panycha pinpanam* (brolga), *thahadjam*, *pidhalam*, *nydyi* and *mapla* or *malgarri*. Of these, the public, boomerang clapstick-accompanied *wanam* is the most vibrant and is seen as both the symbol and the expression of Kugu-ngancharra identity. It is associated with a major initiation ceremony concerning the ancestral Kaha'ungken brothers. There are distinctive schools of *wanam* singing and dancing transmitted from particular individuals. As in north-eastern Arnhem Land, songs are also sung in order to conduct a deceased person's spirit to its final resting site. In creating this journey, songs associated with sites along the route may be chosen from several different traditions.

The traditional country of the Dyirbal lies in the rainforests on eastern Cape York Peninsula, south of Cairns. According to Dixon and Koch (1996, pp.5–6) the last initiation ceremonies were performed in this area in the 1920s, and the last corroborees (public performances of song and dance) were performed in the 1960s. In the past, composition was attributed to spirit intervention. Many surviving songs have been handed down, though some are said to be recently composed without spirit intervention. The surviving body of recordings of Dyirbal song comprises examples of five different genres. The first two, *gama* and *marrga*, are associated with corroborees. They are sung by a man accompanying himself with paired boomerang clapsticks or sticks, and perhaps also accompanied by a woman beating a membrane stretched across her thighs (lap-drum). Most refer to everyday events, although some are concerned with the spirit world, and dances are largely mimetic. By far the most common genre is the boomerang clapstick-accompanied *gama*, songs of which typically have two lines, each of eleven syllables; three-line songs and lines with nine syllables are also found. Meaningless syllables are added in the course of singing. *Marrga* are the corroboree songs of speakers of the Mamu dialect. They are accompanied by sticks and lap-drum and typically consist of four lines, each of eight syllables. The other three song genres (*jangala*, *burran* and *gaynyil*) are all referred to as '*gugulu*', from the name of the accompanying stick, which is held vertically and struck with a piece of cane (fig.7). These songs, which often convey personal feelings, are sung by both men and women in private or semi-public contexts. Sometimes a shake-a-leg dance (a dance movement almost ubiquitous in Cape York Peninsula, wherein the feet are spread wide apart and the knees oscillated to and fro) is improvised to the songs. 'Shake-a-leg' is also used as a synonym for corroboree (i.e. a public ceremony), although shake-a-leg movements are also used in initiatory (*bora*) ceremonies.

On Cape York Peninsula, traditional styles of song and dance may be contrasted with more recently introduced forms such as harmonic Pacific island hymn-singing and related dancing. Introduced via the Torres Strait by Christian missionaries, these are now widely performed in public contexts such as sports days and other public festivals or in ceremonies to 'open' houses previously closed by deaths (Black and Koch, 1983, p.159). Unlike

7. Spider Henry strikes his gugulu stick (held vertically) with a piece of lawyer cane

traditional songs, which are received from the spirits of deceased relatives or totemic ancestors, such 'island songs' are composed by individuals. They may be sung by mixed groups of men and women and when danced are typically accompanied by drums and rattles of various sorts.

See also TORRES STRAIT ISLANDS.

2. CENTRAL ABORIGINAL MUSIC. This section covers performances of music and, where possible, aspects of the associated dance, design and ceremonies of Aboriginal people living in the area classified in the *Encyclopedia of Aboriginal Australia* (Horton, 1994) as the desert region, which includes over 40 tribal groups, only a few of which have been studied by ethnomusicologists. This vast area stretches from the desert around Alice Springs south almost to the Great Australian Bight and including the Woomera rocket range, west in places as far as the Western Australian coast, and further north than Tennant Creek. In it there are many common features and two major language groups, each with many dialects there are five Arandic and approximately 40 Pitjantjatjara-related dialects. These two language areas have the best-preserved traditions in the southern parts of the Australian continent.

(i) General. There are a number of stages of acculturation among the central Aboriginal people, more so in the city areas than remote desert locations, although all the latter can now access mass media. In addition to those traditional performers in desert areas who maintain their old song forms, there are others who dream modern songs that can be considered Dreamtime songs that include

reference to modern living; there are performers living in rural areas who introduce many non-traditional musical aspects into their performances; and there are others who, having moved to cities, create and perform majority musics (e.g. rock and Western art musics).

As elsewhere in Australia, the song tradition in this area is based around the travels of Ancestors through the region in the beginning of time. Performers say these songs have been passed from preceding generations since the time of the ancestral activities. Songs and singing have many functions in traditional life, including education, history, law, preservation of the land (for example rain charms and increase rites) and healing.

There are certain elements of desert region music that remain constant throughout the entire area. It is primarily syllabic vocal music based on cyclical structures within the three main structural fields of text, melody and rhythm. Musical instruments are only used for percussive accompaniment or for representation of spiritual beings. These general musical characteristics have also been noted among the *nurlu* of Western Australia, situated at the extreme westerly point of the desert region, although the stories and associated histories appear to have been influenced by styles from Northern Australia (see §1 above). The percussive accompaniment of desert music includes the use of paired sticks beaten together, a single stick or stone beaten on the ground, boomerangs beaten together, hand-clapping, foot-stamping (male) and thigh slapping (exclusively female). Of the instruments that are not percussive (exclusively used by males), both the bullroarer and the *ulbura ilpirra* 'trumpet' have supernatural functions; the former may be regarded as the voice of the sacred ancestor while the latter, a hollow log about 60 cm long and 5 cm in diameter whose sound is produced by singing through the instrument, replaces the bullroarer in some Aranda ceremonies. (The didjeridu is not traditional to this area but is now employed in some performances as an adopted symbol of Aboriginality.)

Song is understood to be a powerful agent in influencing non-musical events. There is a widespread belief that song enables performers to draw on supernatural powers left within the soil by the sacred ancestral people. It is only through the correct presentation, simultaneously, of all the technical features of the song that this power becomes accessible to the performers. Because the power can be used for either good or evil, strict control is maintained over the teaching of these potent songs; a system of exclusion operates, which results in only the oldest and wisest people knowing them.

The first thing children in the Pitjantjatjara (Yankuntjatjara) area learn during a performance is the correct accompaniment to the singing, which includes learning to select a suitable piece of wood for a beating-stick and how to prepare the mound of earth on which to beat the accompaniment; the initial song-instruction occurs through their involvement in the associated dance. There are traditional songs for children, which deliberately obscure the secret information that will be revealed when the same song is learnt later. Teenagers learn the names of special sites associated with the ancestral tracks by singing the songs in the geographical sequence of these Dreamtime journeys. Later, in the gender-segregated secret and sacred songs, the performers' understanding of the principles of song construction, musical coding and geographical identification enables more mature musical activity. All this learning occurs through observation in a system which does not allow the student to ask questions of the knowledgeable person.

Documentation of the musics in this area often focusses on specific aspects rather than general characteristics; thus a comprehensive statement about the music is difficult. One argument raised in research is that this music lacks creativity, being an exclusively recreative form. General observation, insiders' concepts and analytical research findings contradict this suggestion. In the Alyawarra tradition, the male musical repertory is of fixed size, while the women may dream new songs; among the Warlpiri the process of reorganizing ceremonial life has included the creation of new complexes of songs, designs and dances that are received from the Dreaming through the agency of a spirit (Clunies Ross, Donaldson and Wild, 1987, p.109). Similar processes of accession of songs and ceremonies have been noted by Keogh among the *nurlu* genre in the Kimberleys, in Western Australia. The dreamer's spirit may leave the body during sleep to interact with the *balangan* (spirits of the dead) or *ray* (childlike) spirits, during which time a ceremony may be performed that the dreamer can then bring back to the everyday world. Subjects of these *nurlu* include experiences associated with white people; songs describing the death of soldiers in World War I have also been noted (see Palmer, 1989, p.3). The Pintubi produce songs that are anonymously-composed contemporary accounts of the mythological past, but no traditional explanation is given about how the boundary was crossed between the Dreamtime and historical time in order for mortals to be taught the series.

It has been demonstrated through research that the role of the song leader is crucial in establishing basic patterns from which the desired unison singing can be maintained. Barwick shows, for instance, how the melody can be expanded and contracted to fit the text with a considerable degree of variation. She gives a number of principles that indicate that each act of performance involves constant checking of all levels of rhythmic and melodic construction in the course of making decisions about fitting the text on the melody, and she concludes that this flexibility in the system paradoxically promotes the conservation of what may seem to be very inflexible rhythmic and melodic structures (see Ellis, Barwick and Morais, 1990, pp.69–75). Creativity can also be seen to operate in so far as the traditional concept is reinterpreted with fresh insight in each performance (this can occur only after long immersion in the conventional process). Structural parameters are identified through the systematic interlocking of different structural features, and particular ritual structures are incorporated by a system of cueing, which means that an almost infinite variability in performance detail goes hand in hand with very accurate conservation of the key musical elements of melody, text and rhythm at various hierarchical levels of the cyclical structures in the total performance, including dance.

(ii) Songs for ages and stages. Songs for each age group within the community have their own structures and functions. Songs associated with birth are those used when the life of either mother or child is in danger, or to induce labour. These are not performed for researchers because of their inherent power. The texts of lullabies often stress fear but some simply reiterate, through a repeated rhythmic pattern, a simple phrase such as 'do

not cry'. Songs that children make themselves and pass on to one another have largely disappeared because of contact with European education. Only a few have been recorded, and they all have short rhythmic patterns with only two main accents, most consisting of two widely separated notes (an interval of approximately a 5th or an octave). Melodically they are different from children's songs created by adults, which are diminutive forms of the non-secret sections of adult songs and are made for training boys and girls separately in the musical, textual and dancing techniques and in the expected behaviour and extra-musical effects of songs.

Songs of adults encompass almost the entire field of music-making. The more powerful the song, the more intricate is the overlay of patterning, to a point where error at one level is impossible without disruption of the interlocking process. In general, women's songs have a narrower melodic range and less rhythmic complexity than men's songs. Men's secret songs sometimes deliberately superimpose selected sections of two separate songlines (song series): the ending of one may be performed simultaneously with the start of a related series, the men of each singing group sitting within their own circle with some of each circle sitting back-to-back.

Songs for death are directed to the soul of the departed; they concern totemic affiliation and seek to allow the soul to return to its rightful spiritual home and thus become available for future reincarnation. Other songs performed at the death of a close relative may include, as well as stylized wailing, songs intended to identify the 'murderer'.

(iii) Ceremonies, ritual knowledge and responsibilities. Ancestral history is preserved within a totem-specific, geographically-mapped 'songline' (sometimes referred to by performers as 'history song' and by researchers as a song cycle or song series), which consists of a series of smaller units of composition (verse, text, couplet, item) known among Pitjantjatjara speakers as 'small songs'. Songlines may include hundreds of small songs, each representing one piece of information in relation to the ancestor being commemorated. The small song has an identifying text and accompanying syllabic rhythm, repeated a given number of times to complete the melodic shape of the songline. Tunstill (see Crunies Ross, Donaldson and Wild, 1987, p.65) gives a practical example of the embedded geographical knowledge encoded in such a songline: a group of Pintupi, lost while travelling, sang part of a song series that mapped the way they had come, and by attending to the correct order of the song sequence found out that they had taken an incorrect turn.

The many types of small songs are identified with specific terminology by performers. Named categories of small songs include songs sung when the ground painting is being prepared; when the sacred objects are viewed during performance; to accompany body painting; at the start and at the close of the performance; to accompany specific dances; to represent the 'sonic name' of a sacred place. There are small songs, known as 'carrying' or 'travelling' songs, describing types of scenery (for example dry salt lakes) wherever these recur in ancestral travels. Individual charms may be extracted from songlines for various purposes, including rain-making, attracting a lover, causing injury to an enemy or healing. There are also small songs that link one line from each of two different texts to create a new small song. There are 'true' (sacred) small songs and 'false' ones that are taught to children in preparation for their main learning as adults. Highly secret and sacred small songs may be omitted in some presentations of the appropriate songline.

Each small song will have a section of melody that passes through the essential range of the song, displaying the characteristic melodic shape of its songline. Specific points in the rhythmic pattern fall in predetermined relationship to the melodic shape, and the text may be presented in either of two different positions on the melody. Pitjantjatjara ceremonial performances usually present a selection of songs from the complete set of related songs. Only rarely is the complete set presented by a group of performers or at an occasion: usually its performance is spread out over geographic and social space (according to the mapping and ownership of the song) and through time. Performers regard each of their songs celebrating totemic ancestors as a collection of individual couplets, which may be sung in various traditional sequences since each is a self-contained unit. Among central Australian performers the couplets containing the names of totemic ancestors are the most carefully guarded couplets in all their songs. Among the Pintubi the underlying myth is only sometimes expanded in speech between the singing of small songs, but the explanation or recounting refers directly to the events described in the small songs being performed, not to the whole myth. For them, accurate performance is the essential concept, because without it efficacy is impeded.

Although these accounts of the attitude towards the small song and its aggregation into a songline are from different tribal groups, to a large extent the concepts are common throughout the desert region. There is also a general distinction between aural and visual exposure to performances. The visual aspects of ceremony are vitally important and represent the presence of the ancestor, the design being his identification mark, while the aural aspects contain those words that the ancestor may have been expected to say. Many non-segregated presentations allow women and children to participate in the singing but without seeing the ceremonial acts.

A performance is organized by a manager, whose social and totemic affiliations oblige her or him to control ceremonial activities. The owner of the song and associated ceremony, on the other hand, is the person who leads the singing and without whose consent the performance cannot take place. Not only do owners and managers have different responsibilities dependant on totemic affiliation, but these responsibilities are further graded according to seniority and degree of traditional knowledge. Special duties are fulfilled by the song leader, the group of singers, those in charge of body painting and preparation of ceremonial objects and sites, and the dancers. The knowledgeable singer must be able to carry out all actions, since in different ceremonies the various roles will be the responsibility of different groups and individuals. Many researchers note that ownership of song includes ownership of the country through which that song travels: this has recently been the source of widespread land claims by Aboriginal people. But the relationship between ceremonies and land is not simply that of ownership. Ownership and management of songs entails responsibilities for the economic and healthy survival of the associated land, and ownership rights are transferred at death (or permanent incapacity) from the select group of descendants who know and understand

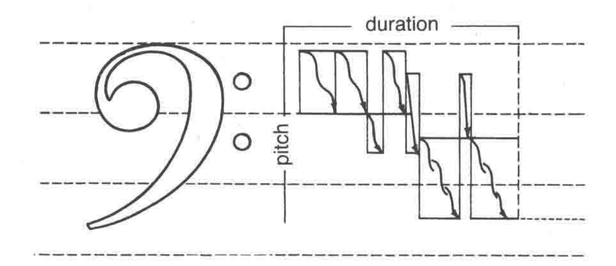
the full significance of their ancestor's song to new owners, previously selected and well-trained.

(iv) Musical structures. Terminology for musical techniques often comes from everyday language, with words taking on specific musical meanings. Although there are differences in terminology between tribal and language groups, the musical-cultural concepts expressed through these terms are widely applicable.

The word for melody in Pitjantjatjara means 'taste' or 'flavour' and in Aranda, 'scent', defining not only melody and rhythm, but also the identity of the totemic ancestor whose life essence is aroused through the performance. McCardell (1976), working in Cundalee, Western Australia, gives further terms for melody: 'tasting the melody', 'one song taste' (a single melody throughout the series), 'another taste' (change of melody within a series). There are other examples of everyday language applied to music: the Pitjantjatjara use the same word for laughter and playing as well as singing; crying is the same word as ritual wailing; 'sighing' also means humming the melody as a reminder prior to singing.

The Pitjantjatjara term *tjunguringanyi*, literally meaning 'coming together as one' or 'meeting', can also refer to singing in unison. Accidental use of harmony is classified as 'noise'. Singers consider their performances to be the product of either the desirable 'big throat' or the unacceptable 'bad throat'. The Pintubi at Balgo define unison as 'singing parallel', 'singing level', 'straight' or 'together', whereas departures from unison are called 'tangled', 'obscured' or 'lacking any melody'. The terms for the beating accompaniment can all be covered by the word 'stick', which may refer to any method of beating and the musical pattern of the beating.

'Singing' also describes the effect of powerful songs on another person during love magic, healing or sorcery. When the power of the song is placed into an object, for example fat used in some healing ceremonies, it is described as 'singing fat' (or other object). The same word may apply to some (but not necessarily all) associated ceremonial objects, each individual song in the series, the singing as a whole and the entire ceremony. The closing song of a series is described in terms of the metamorphosis of the ancestor who may be 'cooled off and metamorphosed to stone'. Strehlow, working with the Aranda people, explains that myths must conclude by relating how the original ancestors passed to their last rest; the Aranda term for this closing small song means 'to push into the ground' (Strehlow, 1971).



Richard Moyle (1979, pp.10–12) argues that the Pintubi have no concept of song composition: they believe that their song series have always existed in the spirit realm. Through activities of human spirits the series are 'found' and 'grabbed' in an act of discovery. A song without words is not a song: music is singing produced by the human voice. The primary verbal mode of explanation is song, because song is the language of the ancestors. 'To name', 'to call by name' and 'to call out one's own name' are Aranda terms for composing the texts for small songs. In ceremonies Walbiri believe they are behaving like the ancestors re-enacting ancestral events.

(a) Text. Of the three main elements in the small song (melody, rhythm and text) it is the text that conveys the sometimes obscured information about the ancestral events being recreated. The syllabic rhythm associated with each text may be the same length, or it may be half or a quarter (and rarely one third) of the length of the text. There is an inextricable connection between text and rhythm, either standing for the other. The text setting in Pintubi song centres around the division of the word group of each small song into repeated rhythmic units, usually three or four. In Pitjantjatjara small songs this division internal to the text occurs only on particular types of songs and is common in children's singing. The melodic contour is apportioned to these units so that movement may not proceed from one unit to the next until all of the text required to be performed therein has been sung. Errors in performance of texts are inexcusable: a process of returning to previous small songs and approaching the incorrect one is used until the text is presented perfectly.

In Aranda songs each couplet generally falls into two halves: the second either reiterates or restates, in slightly different words, a subject already expressed by the first half, or it introduces a new thought or statement, thereby advancing or completing the subject that has been expressed by the first half. Frequently two or more couplets share a common line. Both quantitative and accentual rhythms and repetitive and antithetical expression are used, with many couplets intended to summon forth the ancestors and their magical powers for the benefit of the men who are the guardians of the ceremonial site.

Barwick's work (Ellis and Barwick, 1989), based around Pitjantjatjara songs, examines the interlocking of moveable text structures with fixed melodic structures. She identifies what she terms a 'point of fit' in every small song: it is always marked by a melodic section boundary and by the beginning of the rhythmic-textual cycle or a text line pair, and usually but not always by a breath taken by all performers. A common practice is to place the opposite text line at the start of a small song when it is repeated immediately. This process of text line reversal shifts the interlocking of melody and text.

(b) Melody. There are three separate, closely related aspects of melody: melodic shape, particular melodies and intervallic structure. Melodic shape is normally one of descent followed, after a breath, by a significant rise to further descent. Within this broad framework are the many different melodies used, each repeating different pivotal notes for different lengths of time (fig.8). Usually occurring in pairs, the pivotal tones can be separated by intervals from about a tone to an octave. Each melodic contour can be divided into sections marked by the coincidence of ascents in pitch with significant rhythmic and textual boundaries. There are differing systems for

8. Structure of the melodic movement of a men's song as shown on an enlarged bass staff

determining the length of time singers spend in any section of the melody: some are governed by the rhythmic unit, some by the duration of the text. It is likely that these systems are used in specific areas and/or for particular functions. The precise shape of the melodic contour depends on a number of factors, including the text type and the duration of the rhythmic pattern. It is the melodic movement towards firmly established pitch frequencies that constitutes the 'flavour' of the ancestor. Any melody can cross tribal and language barriers in tracing the ancestor's travels.

(c) Intervallic system. As the basis of all melodic movement there are accepted generative intervals forming the series from which the various melodic choices are made. The system being uncovered in the songs is very different from anything reported from other musics throughout the world. Will and Ellis (1994) confirm that the complete tonal space of Pitjantjatjara songs is constituted by a set of consistently recurring frequencies, with some intervals as small as 2–6 Hz. Even common melodic elements such as glides and inflections are well-defined and consistent movements. Interval size does not change with shifts in absolute frequency, the same difference being found in different frequency ranges, while intonational variation in linear terms appears to be constant throughout the range of vocal activity. Small integer ratio intervals (3:4, 4:5 etc.) are only chance occurrences.

There is strong evidence to show that linear construction of melodies operates. For instance, in melodies with a range greater than an octave, the intervals above the octave of the final tone are linear transpositions of the corresponding intervals above this final tone. Again, in transpositions within songlines, groups of intervals around the main frequencies are transposed linearly (maintaining their frequency differences) as far as the non-equidistant tonal space allows. Furthermore, for six different songlines the differences between the final tone and the two adjacent frequencies were about 6 and 9 Hz for all songlines, although the frequency of the final tone changed from 95 to 155 Hz.

Musical practice indicates the existence of a general concept of octave identity: it is a well known and culturally accepted practice that under certain conditions, singers sing the same song or parts of it in octaves, indicating that performers are able to organize frequency production according to the 'octave ratio' of (about) 1:2. However, interval analysis shows that an octave equivalent in a melodic line exists only for the finalis (Will, 1995). All intervals in the upper 'octave' are linear shifts and not octave transpositions of their counterparts in the lower octave. With an average size of 1225·23 cents, however, the octave stretch is considerably larger than in Northern Australian songs accompanied by the didjeridu, or in Western music.

This different interval construction is the single most decisive factor preventing any easy adaptation of traditional desert region music in the face of mass media exposure to various European forms.

(d) Rhythm. The most conspicuous feature of rhythm (and the one first performed by learners) is the beating song accompaniment. In Pitjantjatjara and Aranda song, regularly spaced beats are separated by three units of the basic pulse; e.g. if the shortest syllable length is notated as a quaver, the beating is in dotted crotchets. There are several variants (ex.4). Also found are beats separated by two, four or five units of the basic pulse. Beating form

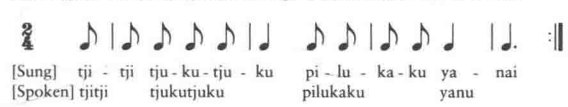
(a) Usual beating (irrespective of rhythm of song-line)

(b) 'Slower' beating

or

(c) Form often used in children's songs

or



belongs with a particular text and is not varied in repeat performances of that text. Among the Pitjantjatjara, rapid beating produced by rattling a pair of boomerangs is intended to accompany the quivering of the dancers, but among the Pintubi it is used to show the leader's dissatisfaction with the unison singing or accompaniment; occurring during the last few seconds of singing, it indicates the last item in one section of the ceremony. Performers report that they choose tempos by listening to their heartbeats, and stability of speed of beating suggests use of an external measuring device: Morais notes that there is a correlation between dance movements and beating accompaniment patterns (see Ellis, Barwick and Morais, 1990, p.130).

The Pintubi distinguish between beating accompaniment produced directly by the hands (i.e. hand-clapping, chest- and crotch-slapping), and that involving use of hand-held objects (i.e. pairs of boomerangs or sticks, or beating the ground with a single stick). They are considered integral to most song performance and are not found in non-musical situations. Beating also occurs in 'songless sacred performances' that feature occasionally in men's secret rituals, the singers participating by beating a stone or shield on the ground. This beating is understood to be acoustic masking. Another form of acoustic masking results from the accentuation of the sung rhythm, which does not necessarily coincide with the placement of the beat. There is evidence that the two can be deliberately opposed to one another and that only at key points in the rhythmic cycle will the two coincide.

There may be different syllabic rhythmic settings of the one text, for instance, a slow setting using long terminal notes and a fast setting using the same length shorter notes as the slow version, but halving the duration of the longer notes. The text of a small song is given a rhythmic shape different from spoken stresses, which always place the accent on the first syllable of a word in Pitjantjatjara. An example of the spoken form of a children's song text is shown underneath the sung form, which has the main stress on the first note of the bar, in ex.5. The masking of

Ex.5 Typical text with rhythmic setting; rec. and transcr. C. and A. Ellis

The bullocks move away from the small children, leaving many tracks by the water's edge as they go.

verbal information in this way is more deliberate in secret songs.

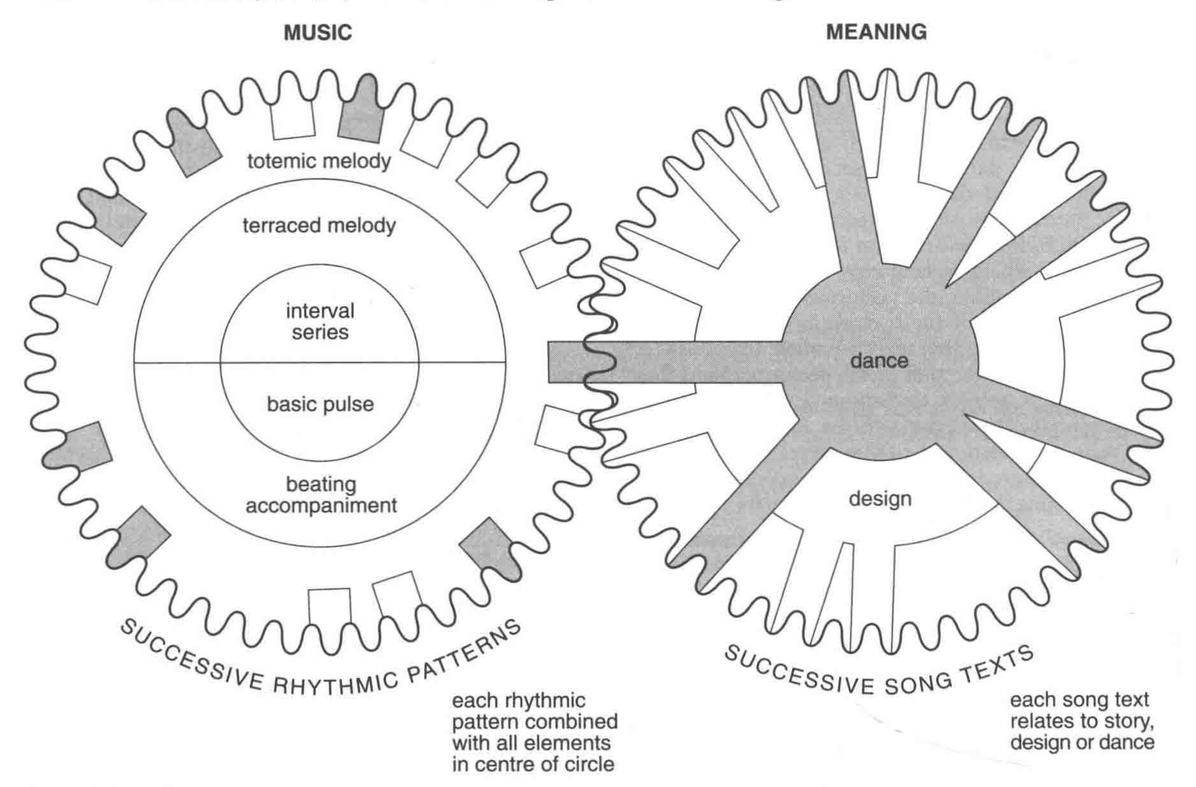
Text and rhythm are repeated until the melodic shape has been fully presented. Successive small songs in a long songline are interrelated through reference to several primary rhythmic patterns, and sections of the songline may be determined through their relationship to one rhythmic pattern that usually presents important textual information. Indeed, information from some performers indicates that where a language boundary has been crossed in the songline, the performers can decode the information content of the text by its rhythm. This is important considering that texts are often ambiguous or in languages other than that of the performer, and their interpretation is subject to various levels of meaning depending on the knowledge, age, sex and social standing of the recipient. Rhythm therefore serves a fundamental role in the songline, affecting its form, encoding information and assisting in appropriate unison performance.

(v) Dance and design. The larger scene of a performance encompasses song and ritual and includes an important role for the visual arts. The bodies and faces of actors are painted, and they may wear headdresses and other decorations. Ritual objects are also employed as symbolic expressions of the myth that is being re-enacted. Special songs must be sung during the preparation of the designs, and the power of the ancestor is only fully accessible when all elements of the music, dance and design are correctly and simultaneously presented. It can take many hours to prepare these visual representations, and singing takes place sporadically throughout the process. After the ceremony, any marks left on the ground, whether actual paintings or the tracks of the dancers, are destroyed. This is done both to preserve the secrecy of closed ceremonies and to protect individuals from the power inherent in the designs. Ellis (1985, p.73) supplies terminology related to the various aspects of design.

There are separate types of dance steps for men and women, and it is common for dance calls to occur during performances. Moyle (1979) notes that the pitch of women's dance calls remains constant throughout each woman's individual performance and is directly related to the tonic of the singing, which, for the women, is an octave above the men's. These calls are considered 'speaking' rather than 'singing' and have specific placements within the performance.

Items that include dance in a ceremonial setting may be sung without the dance. When there are dancers present the singing must last for a longer period of time, and the repetition of the entire melody must take place without pause for as long as the dance lasts. In long dances, the singers may pause after three or more repeats of the melody to allow the dancers to rest briefly. At such times the dancers turn their painted designs away from the group of singers until the small song is recommenced.

Morais has done the most extensive work on desert region dance, and in some Andagarinja women's secret ceremonies she identifies dance phrases consisting of repeated leg and arm movements, torso and head movements (or positions) and a locomotive pattern along the ceremonial ground. Dance motives are identified as an unrepeated total body movement and locomotive pattern; a smaller unit is basically a single movement pattern (or position) of the legs, arms or body, synchronized with the beating accompaniment. The smallest units of movement involve bodily extremities (e.g. fingers), and these too are linked with the smallest musical units. Ellis, Barwick and Morais (1990, pp.111–13) show how locomotion creates given types of tracks on the ceremonial ground and represent diagrammatically (pp.121–89) how the structural features of text, rhythm, melody and dance interlock. They indicate that the dances that occur informally (with the dancers undecorated) and painted closing dances are simpler in structure than the main painted dances. These use fewer body-part and locomotive patterns, few dance phrases, simpler choreographic patterns of sequences and simpler ground patterns.



In the complete performance there is an immense overlap of musical, textual and visual information, which is at times incomprehensible to the outsider. In one performance of a women's secret ceremony (Ellis, 1970, pp.119–200) the dances with designs (each representing specific meanings) occurred in conjunction with rhythmic patterns and song texts that referred to quite different incidents in the myth. Small songs used for accompanying the painting of body designs contained rhythmic references to events in the story other than the events to be presented in the dance for which the design was being prepared, whereas the song text itself merely referred to women dancing. There was constant simultaneous cross-reference: at any one point the rhythmic construction might refer to one segment of the myth, design to another, portrayal of the dance to another and text content to yet another. Multi-dimensional description of a performance shows the intricacy of overlay of design, song text, melodic/intervallic structures and rhythmic pattern, which can only be suggested in fig.9.

(vi) Change over time. There has been comparatively little research done on innovative Central Aboriginal musical styles. These styles broadly occur in two different ways: the first involves retaining small songs within a larger songline but with the thematic content changed, for example to convey the Christian message; the second is where traditional concepts are maintained, but the songs are in English and use European musical forms, particularly rock music and country and western styles.

Recent events can be encompassed in newly-composed songs of a traditional nature, and in such songs can be found the aurally transmitted history of the past century. Subjects such as cars and aeroplanes are frequent in these songs, and objects such as shoes and tobacco tins have been utilized as beating implements. Intervallic structure of such songs is often recognizably more European, as is melodic movement and rhythm; however, melodic shape and ornamentation preserve some traditional characteristics.

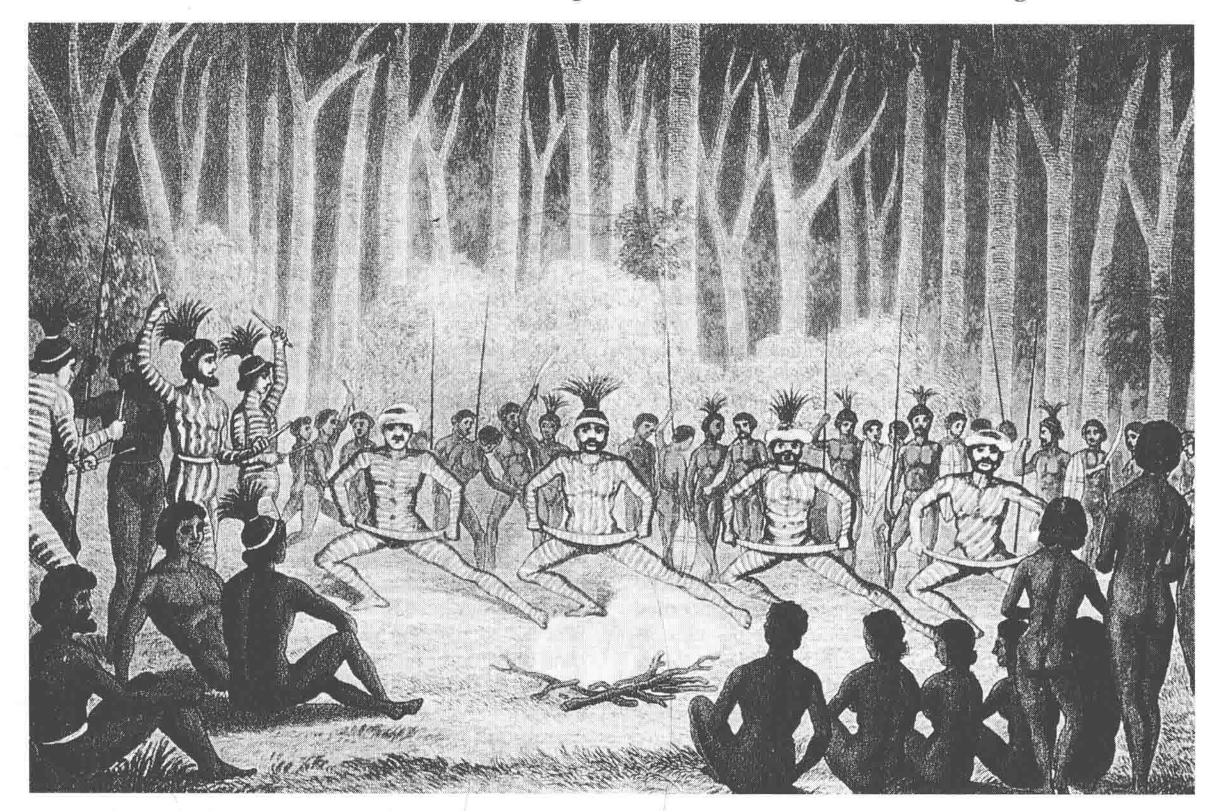
The establishment of the Centre for Aboriginal Studies in Music (CASM) within the University of Adelaide in 1975 occurred at a time when Aboriginal peoples were seeking to get their message across to the Australian public; since then, rock music has been a particularly important vehicle of their protest. CASM students study both Pitjantjatjara music from senior song people and instrumental music and composition. Bands that have emerged through this centre include Coloured Stones, Us Mob and Kuckles, all with connections to the desert region.

The granting of the Northern Territory broadcasting licence to the Central Australian Aboriginal Media Association (CAAMA) enhanced the dissemination of Aboriginal performances, both traditional and contem-

9. Interlocking of structures

porary, through radio, video and television. Other media groups have also contributed to this dissemination.

In 1988 Aboriginal rock musicians established a national Festival of Aboriginal Rock Music. Bands from the desert region who have become well known for their performances include the Warumpi Band, Isaac Yama and the Pitjantjatjara Band, Ayeronga Desert Tigers and Blakbela Mujic.



3. SOUTH-EASTERN ABORIGINAL MUSIC. The south-eastern region of Australia comprises the southern parts of Queensland, the states of New South Wales (NSW) and Victoria, parts of south-eastern South Australia, and the island state of Tasmania. As this is the area where the most intensive settlement occurred, Aboriginal groups throughout this region have had a long, harsh history of European contact. Of all the Aboriginal peoples of Australia it is those of the south-eastern regions whose culture has been most devastated by that contact.

Throughout this region there are several natural features that traditionally acted as frontiers between Aboriginal groups. The mountains of the Great Dividing Range along the east coast made contact between the coastal and inland groups difficult. Further west, the Darling river can be seen as a boundary between the south-eastern and central regions of the continent. The area west of the Great Dividing Range and east of the Darling river comprises speakers of the related languages Kamilaroi (Gamilaraay) and Wiradjuri. In the south, the Murray river also defines a distinct cultural region comprising speakers of Yorta yorta, Wemba wemba, Yita yita and similar languages.

(i) Historical background and collections. In 1788 British colonization began in the Sydney area. European contact had a destructive impact on traditional culture, and as early as 1905 ceremonial activity throughout New South Wales was drawing to an end. As a result, by the time recording equipment became available, a large number of songs, rituals and even languages were no longer being regularly practised. Research relies on historical descriptions in conjunction with recordings that were made as part of a salvage operation involving collecting and contextualizing the remaining knowledge of a small number of older Aboriginal people.

There are many descriptions of Aboriginal ceremonies and rituals written by early travellers and explorers. The most notable of these are by A.W. Howitt and R.H. Mathews, who between them documented Aboriginal culture over almost 30 years in the late 19th century. Howitt includes musical notations of three songs from the Melbourne area in Victoria (Howitt, 1904, pp.419–21), whereas Mathews includes six songs associated with the *Bunan* initiation ceremony on the south coast of New South Wales (Mathews, 1907, pp.33–5). In assessing the reliability of these notations it should be borne in mind that they were made from live performance. There are also many drawings of dances and ceremonies that help piece together details concerning body design, headdress, musical instruments and dance in this earlier period (fig.10).

The sound archive of the Australian Institute of Aboriginal and Torres Strait Islander Studies (AIATSIS), situated in Canberra, contains over 1000 traditional songs from south-eastern Australia. (The term 'traditional' is used here to describe songs that are modelled on pre-European forms albeit sometimes with European influences.) In 1899 the Royal Society of Tasmania recorded wax cylinders of songs sung by Fanny Cochrane Smith,

10. Corroboree after initiation ceremony: from C. Hodgkinson, 'Australia, from Port Macquarie to Moreton Bay' (1845)

who was born on Flinders Island. These have been discussed in detail by Alice Moyle (1960 and 1968) and are probably the earliest sound recordings from Australia, together with the Haddon recordings from the Torres Strait Islands. Both Elkin and Tindale made wax cylinder recordings in the 1930s, Elkin at Port Stephens on the central coast, and Tindale at Brewarrina (northern NSW) and Wallaga Lake (south coast of NSW). The remaining recordings were made from the 1950s onwards. Until the 1980s all recording was carried out by non-Aboriginal people, with the exception of Jimmie Barker of Brewarrina, a member of the Murawari group in northern New South Wales, who in the late 1960s and early 70s recorded his own knowledge of language, history-songs and other aspects of his culture. Most of the singers recorded represent one of the very few people in their communities who at the time of recording could still recover old songs, dances and other details from their fading memories of the past. Less than 10% of the recordings involve group singing or dancers. Early films of dance in this region are rare: one newsreel in the National Sound and Film Archive collection dates from 1931 (*Queensland Abos Put on Their War Paint*) and shows performers from Woodenbong singing and dancing; it is only five minutes in length and has been highly edited.

The AIATSIS collection contains few songs whose performance depend on associated ritual contexts, such as initiation songs, healing songs, increase songs and hunting songs. This is not surprising given that such songs have not been performed regularly for their original purpose since the early 1900s. Songs were performed for the specific purpose of recording, and often the singers were understandably diffident about singing. There are ten songs associated with initiation rites in the collection, of which half of these were recorded by Beckett at Wilcannia in 1957 and performed by George Dutton. Dutton, born in the 1880s, was initiated at 16 years of age; when ceremonial activity ceased in New South Wales he began to travel to Queensland and South Australia to attend the big ceremonies. By the 1930s Dutton was the only surviving ritual leader in New South Wales (Beckett, 1978, p.6). His performances recorded in the 1950s are exceptional, and it is a small number of such performances that represent ritual life in New South Wales in the recording collection.

(ii) Corroboree and related genres. The majority of recorded songs have been described by their performers as 'corroboree songs'. The word 'corroboree' originally comes from the Dharuk language area, which became part of Sydney. It appeared in early word lists as 'ca-rab-ba-ra' ('to dance') and 'car-rib-ber-re' (a mode of dancing), as opposed to 'gnar-ra-mang', the name of a dance in William Dawe's vocabulary list of 1788–91. One of the earliest accounts of a corroboree was written in 1793, when John Hunter described an Aboriginal performance he attended at Port Jackson in 1791, organized by two local Aborigines, Bennelong and Coalby (1793, p.213). Hunter states:

They very frequently, at the conclusion of the dance, would apply to us for our opinions, or rather for marks of our approbation of their performance; which we never failed to give by often repeating the word boojery, which signifies good, or boojery caribberie, a good dance. These signs of pleasure in us seemed to give them great satisfaction, and generally produced more than ordinary exertions from the whole company of performers in the next dance.

Although the word 'corroboree' appears originally to have referred to one specific type of dance, it is often used by Aboriginal and non-Aboriginal people throughout Australia to describe any Aboriginal performance involving song and dance. In the context of the AIATSIS collection the term usually refers to secular, occasional and informal performances.

It is clear that the term corroboree subsumes a number of different genres of song, many of which had specific names. In the Bundjalung area of northern New South Wales one of the generic terms it has replaced is *yawahr*, which originally referred to a specific type of open performance of song and dance in which men, women and children were able to participate. Other Bundjalung performance genres include *burun*, a song performed by men with a dance that involved shaking the chest, and *djangar*, a song and dance often called the 'Leg corroboree' or 'Shake-a-leg'.

This dance is also widespread in northern Queensland and the Cape York region (see §1(v) above). One popular genre of song among the Bundjalung is referred to as 'Sing-You-Down'. These songs were used to control social behaviour in communities, and their stories are concerned with some type of unacceptable behaviour such as drinking and gambling. *Two-Up* is the best-known 'Sing-You-Down' song and was composed by the Bundjalung songman Jack Barron of Woodenbong. The song describes the gambling game 'two-up', in which two pennies are spun in the air and bets are laid on whether they fall heads or tails. This song has been recorded and is still remembered today throughout the Bundjalung area. It has also been recorded on the south coast of New South Wales.

(iii) Musical structure in performance. The first detailed musicological research in south-eastern Australia was done by the linguist Tamsin Donaldson, who made a comparative study of a single song, the *Lost Boy* song, from the Ngiyampaa (Wangaaypuwan) area of western New South Wales. This song concerns the winter rescue of a lost boy by Aborigines and Europeans in the early 1930s.

Through analysis of several performances of the song, Donaldson concluded that a performance involves repeating sections of the song and hypothesized that the length of a performance might vary depending on the context of the performance. This type of expandable form depends on performers being able to signal their intentions: in the case of the *Lost Boy* song the signal is a melodic cueing pattern. The key word 'thirramakaanhthi' is sung with a descending melodic line if the performer is going to proceed directly from section 1 to section 2. If, however, the singer is going to repeat section 1, the word 'thirramakaanhthi', which appears at the end of the first line, will be sung with an upward leap in pitch (Donaldson, 1987, p.35).

Cueing devices similar to those found in the Ngiyampaa *Lost Boy* song also seem to exist to the north-east, in the Bundjalung area. One song, *Mundala*, a *yawahr* or corroboree song, was sung by men and women and included dance. *Mundala* was originally brought into the Bundjalung area from the Gungari area (near the New England area) by Bessie Comet, a Bundjalung woman who lived at Tabulam in the 1940s and 50s.

In the AIATSIS collection there are ten complete performances of *Mundala* sung by the prolific Bundjalung singer Dick Donnelly. On several occasions Donnelly stated that this was his favourite song and in 1977 actually taught this song to Willoughby and Oakes, who recorded the session. Analysis of these ten performances show melodic and textual devices that allow expansion and contraction of the song and that are similar to those discovered by Donaldson.

Mundala comprises two sections of text, called *mundala* and *gahmula*. The first section, without the last line, may be repeated any number of times, while the second section is never repeated. The last line of each section begins with a rise in pitch, usually approximately a 7th, and is used by the singer to signal to the dancers that a change in the text is about to occur. Ex.6 is a transcription of a recording made by Malcolm Calley in 1955 in Woodenbong (AIATSIS LA 1178A (9)).

By comparing this recording with others it becomes evident that it is possible to change the way the text is articulated and therefore change the length of the performance. For example, in several recordings of this song the first section is repeated. When the singer is going to repeat this section, the last textual and melodic line is not sung, but once this line has been sung the singer must proceed to the next section. Section 2 is then sung one time only, and every performance returns and ends with section 1. The singing of the last line of each section thus appears to act as a musical cue; this device seems to correspond to the principle of altering the melodic contour of the word 'thirramakaanhthi' in the Ngiyampaa *Lost Boy* song to inform the dancers of the singer's intentions.

From Donnelly's descriptions it is apparent that *Mundala* comprises two different dance steps, which correspond to the two sections of text called *mundala* and *gahmula*. The dance was performed by men, women and children, and in any performance there could be as many as 24 dancers. In several performances, Donnelly stated 'change step now' after the first occurrence of the melodic cue and 'change step again' after its second occurrence, possibly indicating a change of direction.

(iv) Instruments. Although singing is the predominant form of music in the region, clapsticks and boomerang clapsticks are often used by men (and occasionally by women) as an accompaniment. Throughout this region each language group had a different name for these instruments. In the Bundjalung area the clapsticks were called *murunu* or *mundang* and the boomerang clapsticks, *bargan*.

It is not clear whether, as in other parts of Australia, there were specific occasions during which only boomerangs or clapsticks were used, or if they were interchangeable. It is clear, however, that other objects could be used in place of specific instruments. For example, in 1970 the Bundjalung singer Dick Donnelly left his clapsticks at home and so used a pair of hammer handles during a lecture tour around the New England area. These were so successful that they were used later when Donnelly was recorded; in another recording Donnelly substituted a tin can. This sort of substitution occurs frequently throughout Australia. Body percussion such as foot-stamping and hand-clapping is also commonly used.

The possum skin bundle, drum or pillow was played by women throughout south-eastern Australia, as well as north along the Queensland coast and as far west as Adelaide in South Australia. This was called *bulbing* in the Bundjalung area and comprised an opossum skin

Ex.6 *Mundala*, Bundjalung *yawahr* song; transcr. M. Gummow

turned inside out, stuffed with feathers or rags and struck with the hand or a stick. It was held on the lap and beaten constantly throughout a song. In some regions, such as the Murawari area of western New South Wales, the pillow was made of kangaroo skin and stuffed with possum fur, and several people beat it simultaneously with their hands. The skin pillow was still being used in the early 1990s; later, as it became difficult to obtain possum skins, substitutions such as a rolled up blanket were made. In the Ngarrindjeri area near Adelaide, the pillow was still being used by women in 1951 on Hindmarsh Island during a re-enactment of the journeys of the explorer Charles Stuart (Bell, 1998, p.146). (In 1970 Jimmie Barker, a Murawari elder from northern New South Wales, recorded a performance of the skin drum; it is the only such recording in the AIATSIS archives.) Throughout this region clapsticks were played mainly by men. There were also instruments used specifically in initiation ceremonies and other ritual contexts, described in detail by Mathews (1907).

From the early 20th century onwards it was not uncommon for traditional Aboriginal performers to

perform both Aboriginal and European songs and dances. In the early 20th century European dance music such as reels and barn dances were very popular among Aboriginal communities. Aboriginal musicians performed this music on Western instruments such as violins, piano accordions, mandolins and mouth organs. The gumleaf was also played at these dances as well as at corroborees.

(v) Modern developments. Despite the long history of European assaults on traditional cultures throughout this region, there has recently been strong cultural revival activity. There are many cultural revival programmes, including Aboriginal language courses, Aboriginal traditional history, visual and performing arts courses. One such example concerns Bonalbo in the Bundjalung area, where in 1985 a non-Aboriginal teacher organized and arranged for a senior Bundjalung songman both to teach the schoolboys dances and to sing traditional songs while they danced. After some time, due to disagreements, the elder ceased teaching; the boys, however, decided to continue performing without a teacher, creating their own dances while two members of the group learnt the didjeridu, which was used instead of singing. The didjeridu was not traditionally found in this area of Australia, but it is now performed in a variety of contexts and is acknowledged as a symbol of Aboriginal culture and identity. It is in this spirit of revival and identity that many Aboriginal people have begun to document their own culture. For example, the film *Eelemarni* (1988) shows the northern New South Wales elder Millie Boyd discussing traditional stories and singing songs.

In addition to community initiatives focusing on cultural revival, there has also been intense activity in the popular music scene. Recordings of contemporary Aboriginal performers have increased dramatically. Aboriginal performers are active in country and western, rock music and Christian gospel groups. One prolific country and western singer, Dougie Young, composed songs in Wilcannia in the 1950s and is known for his reflections of the country town lives of Aborigines; the songs involved alcohol, encounters with the law and issues concerning Aboriginal identity. Since the 1950s there has been an increase in the popularity of country and western music, and the Tamworth Country Music Festival (the largest music festival of any kind in Australia) is attended by many Aboriginal performers, including Col Hardy, Troy Caser-Daley, Roger Knox and Euraba.

Another prominent singer-songwriter, Essie Coffey, was active in Brewarrina, northern New South Wales, from the 1970s until her death in 1998. She sang blues and rock but is most remembered as a film maker. Her first film, *My Survival as an Aborigine* (1978), featured the people of Dodge City, the Aboriginal community at Brewarrina, and won first prize in the documentary section of the 1979 Sydney Film Festival.

Recently, singers have emerged who perform songs with political themes. Kev Carmody, originally from southern Queensland, is a Sydney-based singer-songwriter who won the 1994 Australian Country Music Golden Awards 'Heritage Song of the Year' for *From Little Things Big Things Grow*, written with non-Aboriginal songwriter Paul Kelly about a protest in the pastoral industry. Another Melbourne-based singer-songwriter, Archie Roach, won the Australian Recording Industry Award (ARIA) for best indigenous album in 1991 for *Charcoal Lane*, which includes one of his best-known autobiographical songs, *Took the Children Away*, concerning the removal of Aboriginal children from their parents by government welfare officials in the 1960s. Many singers feature themes of cultural identity and reconciliation in their songs. The contemporary music scene in Melbourne has been researched extensively by Robin Ryan (1992 and 1994); for a comprehensive list of recordings by contemporary artists, see Dunbar-Hall (1996).

Within this urban context there are many dance groups, individuals and theatre companies that have developed successful international careers. Some offer training courses to indigenous people. In Sydney the Bangarra Dance Theatre comprises artists from all over Australia and performs unique modern songs and dances that draw on many contemporary Aboriginal traditions. Also in Sydney, the National Aboriginal and Islander Skills Development Association (NAISDA) performs works influenced by indigenous Australian cultures. There are also two major entrepreneurial agencies in Sydney that support and promote Aboriginal music and dance. The Aboriginal Artists Agency was founded in 1976 by the Aboriginal Arts Board of the Australia Council and acts as mediator and negotiator for Aboriginal artists in industries. The National Indigenous Arts Advocacy Association (NIAAA) advocates the recognition and protection of the rights of indigenous artists.

II. Western art music

1. 18th century. 2. 19th century. 3. 20th century.

1. 18TH CENTURY. Aboriginal peoples, with many diverse languages, had, at the arrival of the first European settlers, developed text-driven musical traditions of much complexity and variety. Despite sympathy for Aboriginal identity on the part of the first British colonial governor, Arthur Phillip, and some other officials and earlier European settlers, in the tradition of the 'noble savage' concepts of the later 18th century, the richness of rhythmic and melodic elements in Aboriginal musics inevitably meant little or nothing to Europeans whose own music had tended, during the 17th and 18th centuries, to lose rhythmic and melodic subtlety in its development as a language governed by actual or implied harmonic progressions. Although well-wishing amateur and professional writers, naturalists and musicians showed a sporadic interest in notating (and sometimes harmonizing) Aboriginal songs during the first 50 years of European

settlement, among them Barron Field, John Lhotsky and Isaac Nathan (1790–1864), gold rushes from 1851 onwards decisively ended any ideas that Australia might become either a moated domain for British convicts and their emancipated descendants or, in the view of a small number of idealists, a pastoral community in which indigenous and newly immigrant peoples might live together idyllically.

Anthropologists started using mechanical equipment from early in the 20th century to record and file examples of Aboriginal tribal musics. Ethnomusicologists began to study these examples after World War II and joined the anthropologists in using wire and tape recorders in more systematic attempts at stylistic definition and classification. *Corroboree*, an orchestral ballet score of major ambition and dimensions by John Antill (1904–86), first performed in 1946 in the format of an abbreviated suite, was the most notable attempt in the earlier 20th century to evoke the spirit of Aboriginal ceremonies in Western orchestral terms. Although it used to be said, plausibly, that Australian composers deriving from European and North American traditions had no more in common with Aboriginal music than they had with the music of any other non-European indigenous people, attempts to evoke the mood or memory of Aboriginal music or even to quote it to some degree have been a persistent element in the music of Peter Sculthorpe (*b* 1929), becoming stronger as his career extended, and have engaged the attention of other composers, including such diverse figures as George Dreyfus (*b* 1928) and Colin Bright (*b* 1949), as the movement towards some sort of reconciliation with Aboriginal Australia has gathered strength among non-Aboriginal Australians since the 1970s.

The first European music heard in Australia would have been whatever songs or dance tunes were performed by crews landed temporarily from Dutch ships from the earlier 17th century, from the visit of the British privateer William Dampier in the late 17th century, and from the ships of French and British explorers of the later 18th and early 19th centuries. Most of this music is unnamed, but it is on record that the French song *Malbrouk* was heard frequently at various landfalls in the Pacific at or near the time that the crews of the French explorer La Pérouse and of the First Fleet of Governor Phillip met and fraternized amiably at Botany Bay in January 1788. This tune was apparently learnt quickly by members of an Aboriginal tribe in what is now the Sydney region, showing – something that probably needed to be established at the time – that the musical sensibilities of Aboriginals and Europeans were not incompatible. The element in European music-making found to be inimical and frightening by Aboriginal Australians of that district was, it appears, the noisy beating of drums by naval and military bandsmen to mark the timing of daily routine in the infant colony.

The establishment of a first European settlement at Sydney Cove from 26 January 1788 coincided with the full flowering of the Viennese Classical style, a circumstance which inevitably meant that a settlement struggling to survive inappropriate farming methods and forms of stock mustering unsuited to a vast, unfenced frontier would not discover this music until much later in its history. Mozart's composition of his final trio of symphonies in the summer of 1788 coincided with major concerns in the Sydney community for the straying of the colony's precious cattle well beyond the confines of the existing settlement. It is, however, a matter of record that the surgeon of the flagship of the First Fleet, George Bouchir Worgan, a member of a prominent London musical family, took a fortepiano and a creditably antiquarian enthusiasm for the music of Domenico Scarlatti to the new colony.

A prevalence of fife and drum tunes and other, similar regimental music set a pattern of prominence in Australian colonial history for military ensembles and their bandmasters. Naval and regimental bandsmen, sometimes doubling on string instruments, later played for church services and Sydney's first theatres as well as for all kinds of public ceremonies. Bandmasters wrote patriotic songs (*The Trumpet Sounds Australia's Fame* dates, incongruously, from 1826), arranged popular tunes from opera and ballet as sets of quadrilles and composed waltzes, polkas and other dance music for wider public use until well into the second half of the 19th century. Convicts, forming a majority of the population of the first years of Sydney-based settlement, were sometimes encouraged to sing by humane surgeons and shipmasters during the long, dangerous voyages from Britain on the grounds that it improved their chances of survival. They were involved in 1796 in the first known performance of a late 18th-century English-type opera with spoken dialogue, William Shields's *The Poor Soldier*. But much convict music-making would have consisted of whatever songs they brought in their memories, sometimes taking the form of disrespectful or vengeful parody. *Moreton Bay*, a song commemorating the savagery of life at the penal station of that name (now Brisbane), was set, for example, by an Irish convict to a traditional tune associated with the Irish song *Youghal Harbour*.

2. 19TH CENTURY. Formal music-making, apart from performances provided by bands and the important activity involved in the accompaniment of dances, consisted in early colonial times either of private soirées sponsored by military, governmental or wealthy private sources or of occasional public series of recitals given by non-professional musicians (sometimes described in accounts of the time as Gentlemen and Lady Amateurs) or by ad hoc groupings of professionals, such as the quartet concerts given in Sydney in the mid-1830s by Vincent Wallace (1812–65), the future composer of *Maritana*, and the recitals presented with other members of his family and that of John Phillip Deane (1796–1849).

Concert-giving organizations tended, inevitably, to replicate a structure that formed the backbone of British concert life, that of the choral society. This allowed associations of amateur choristers to keep musical enterprise firmly in their own hands and to assemble or hire orchestral groupings at will. They performed major works by Handel, Haydn, Mendelssohn, Mozart and others, as well as many lesser oratorios and cantatas, and seemed as fond as their counterparts in Britain of championing spuriously attributed works such as the 'Twelfth Mass' printed under Mozart's name or 'Locke's Celebrated Music for Macbeth'. Each of the major centres – Sydney, Hobart, Brisbane, Perth, Melbourne and Adelaide – founded choral societies of this type. Their ethical self-belief existed in symbiosis with the establishment of Mechanics' Institutes and Schools of Arts on the British model from the late 1830s (in Sydney) and with the influx of shiploads of young free settlers in the same decade,

many of them zealous for education and self-improvement, under the aegis of a Presbyterian minister, the Rev. John Dunmore Lang. In the colony centred on Adelaide (now South Australia), which drew only on free settlers from its inception, groups of German immigrants, escaping from religious persecution, contributed a disposition to forming male choral groups modelled on the LIEDERTAFEL. The Liedertafel model spread to other colonies and took its place for many years alongside the British-type choral society. A member of the German immigrant community in South Australia, Carl Linger (1810–62), was one of the earliest European composers of professional competence to be active in Australia and won a prize in 1859 for setting words by Caroline Carleton, *Song of Australia*. This setting became a treasured part of South Australian traditions and was a candidate at one time for choice as Australia's national song.

When Isaac Nathan, an ancestor of the Australian conductor Sir Charles Mackerras, arrived in Sydney in 1841 with a reputation preceding him as the musician for whom Byron had written his *Hebrew Melodies* and who had set these verses for the first time, he apparently found more opportunities for professional musical activity in Sydney than in Melbourne. He became choirmaster of St Mary's Roman Catholic Cathedral in Sydney, a busy and expert teacher of singing with, to his credit, a treatise written and published in London on the subject that is increasingly cited as a source of early 19th-century practice and theory. He composed operas on the British model of short airs and spoken dialogue and produced in an opportunistic manner songs and scenas taking note of colonial events, one of them commemorating the presumed loss in the outback of the German-born explorer Ludwig Leichhardt during his first expedition and another Leichhardt's subsequent and unexpected safe arrival after that expedition. Soon after, however, sustainable discoveries of gold in what is now the state of Victoria strongly outweighed those of the original colony of New South Wales. From the 1860s until at least the end of the first third of the 20th century, Melbourne outdistanced Sydney in musical cohesion and organization, financial and political strength and in appetite for concerts, opera and other forms of musical theatre.

It was historically appropriate that the singer known internationally as Melba (Helen Porter Mitchell, 1861–1931) was the daughter of a man who became wealthy through Melbourne's late 19th-century building boom. She received her first instruction in the higher flights of singing from Pietro Cecchi (?1831–1897), a singer whose settlement in Melbourne as a performer and teacher followed his arrival in Melbourne in 1871 as part of a touring quartet of singers and his appearances with the extraordinary Lyster opera company. Melba was the most famous representative of several generations of young Australian musicians whose skills in musical performance were a means of winning international renown in a way directly comparable with the skills exhibited by young Australian sportsmen and women. In each case demonstrable skill and eagerness to succeed allowed these talented performers to bypass the idea that outstanding achievement at an international level rested on the maturation of a long, well-cultivated tradition.

After a vogue for productions of English-style operas or operatic adaptations in Sydney from the 1830s onwards, including the first original short work of ballad opera type (Edward Geoghegan's *The Currency Lass*, Royal Victoria Theatre, Sydney, 1844), the staging of operas now regarded as being in the standard repertory received an enormous boost with the start of the Australian gold rushes. Small touring companies or ensembles of soloists arrived from London or via touring schedules in North and South America. The most significant touring company of the mid-19th century was that formed and subsequently re-formed by an Irish entrepreneur, William Saurin Lyster (1827–80). His productions toured Australian cities for the best part of 20 years between 1861 and 1880, and played impressively extended seasons in Melbourne and to a lesser extent in Sydney. He introduced colonial audiences to a large repertory of new or relatively recent operas, among which Meyerbeer's *Les Huguenots* was one of the two most frequently performed works. In the late 1870s an American-born actor, James Cassius Williamson (1844–1913), began to tour the newest Gilbert and Sullivan operas and eventually became the principal agent of European touring opera companies within a regime (later taken over by the Tait brothers) that lasted under his name until the Sutherland-Williamson company of 1965. Many other entrepreneurs of opera competed in the late 19th and early 20th centuries.

The rapid growth in population and economic activity prompted by the gold rushes coincided with the era of large-scale exhibitions modelled on the Great Exhibition at the Crystal Palace in 1851. Melbourne and Sydney, in particular, advertised their financial and cultural ambitions at a series of intercolonial and international exhibitions. This development reached its peak in the Melbourne Centennial Exhibition of 1888, which celebrated the first centenary of European settlement in Australia and included among its attractions a major series of large-scale concerts directed by the English composer and conductor Frederick Hymen Cowen (1852–1935). German and Italian musicians, such as Cesare Cutolo, Paolo Giorza and August W. Juncker, who arrived in Australia to direct touring operas and other musical theatre pieces, contributed cantatas, anthems, marches and other music to the programme of large-scale colonial exhibitions or to local recital and concert programmes. New pieces of patriotic music were produced for anniversaries of settlement, for developments in Australian city and country life and to mark Australia's involvement in foreign wars. The French music critic and writer Oscar Comettant (1819–98), a musical juror for the 1888 Centennial Exhibition in Melbourne, recorded his belief in his book *Au pays des kangourous et des mines d'or* (Paris, 1890) that Australia had taken the cult of the parlour piano to lengths beyond those evident even in 19th-century Europe, estimating – perhaps wildly – that this newly colonized country contained 700,000 pianos at the time. He found it irksome as a Frenchman that so many of the pianos lodged in modest city and country houses and in isolated cabins and huts were of German manufacture.

The idea that excellence in public music-making belonged exclusively to the traditions of the choral society or the opera company began to change in Australia in the later 19th century, under the influence of the renown enjoyed in Europe and North America by orchestral and chamber music of the Viennese Classical and Austro-German Romantic schools. The decision of a number of

young Australian musicians, including Percy Grainger (1882–1961), to study in Germany in the later years of the century was a symptom of this shift of emphasis. Its potency is memorably recorded in a novel of student life and ambition in Germany, *Maurice Guest*, written by a young Australian musician who studied in Leipzig in the late 1880s and published the novel under the pen name of Henry Handel Richardson. A Melbourne-born composer, Alfred Hill (1870–1960), was among the other Leipzig students, playing in the Gewandhaus orchestra under the baton of such musicians as Brahms and Bruch. A talented and impressionable musician, Hill responded to these experiences by composing with the vocabulary of his Leipzig years until halfway through the 20th century, writing (for example) a gypsy finale in a viola concerto that postdated Brahms and Bruch by half a century or more. Grainger, who once shocked his German mentors by proposing to study Chinese music, was one of the most interesting contributors to discussion on what might constitute a distinctively Australian music, suggesting at various times that it might exhibit a deliberate monotony (reflecting the long spans of Australian landscape, in contrast to the segmented nature of European topography and much of its music); become a clearing-house of Pacific, Asian and Aboriginal styles; engage by natural inclination in wistful sentimentality on the model of music in other pioneering countries (cf Stephen Foster in the USA); be democratically equal in its part-writing and happy-go-lucky in its assignment of voices and instruments; or show an affinity, because of its origins in a predominantly warm climate, for broad Italianate dynamic shading and Italianate vocal and instrumental timbres. Henry Tate (1873–1926), a Melbourne musician and writer, suggested in nationalistic pamphlets published in 1917 and 1924 that recognizably Australian music might grow partly from instruction in Aboriginal music in schools, but more instinctively from sensitivity to the riches of melodic inflection and rhythm in Australian birdsong (in which he claimed to distinguish a 'liberty-loving' preference for the major third) and the breeze-induced sighing of the bush.

A local result of the unprecedented prestige of Austro-German orchestral music was a new emphasis on the need to establish symphonic ensembles independent of the orchestral elements in oratorio and opera. Melbourne, typically at this time, took the lead in this movement. Melbourne University's first Ormond professor of music, an English musician named G.W.L. Marshall-Hall (1862–1915), directed a newly assembled orchestra with enormous flair in the 1890s at the same time as he scandalized Melbourne society with the Nietzschean sentiments of his published verses. Sir James Barrett, an enthusiastic associate of Marshall-Hall's orchestral activities, was able to assume with breath-taking narrowness of outlook, in recalling that period from the vantage point of 1940, that the 'history of music in Melbourne really resolves itself into the history of orchestral music, as no great work can be performed satisfactorily without the assistance of a competent orchestra'.

3. 20TH CENTURY. Similar beliefs were to animate the benevolently despotic centralism of the Australian Broadcasting Commission (now Corporation) in the 1930s when it set about establishing, as part of a policy that might be described as orchestral imperialism, core instrumental ensembles of symphonic ambitions in each of the Australian state capitals on a permanent basis. The choice facing the ABC at the time was whether to bring together, as many competent musicians advised, a national orchestra of unusual merit or to risk the dilution of quality that would probably follow the establishment of permanent orchestras or orchestral nuclei in each of the six State capitals. There is little doubt that the decision to recognize State loyalties and to establish orchestras in all capital cities, however inadequate the musical result in some centres, was the right one. Each capital city developed its own subscription series of professional orchestral concerts and came to see this activity as a continuing part of its musical life rather than an occasional touring treat.

A profusion of choral societies and a marked sense of enterprise in some of them were characteristics of Australian music-making in the first third of the 20th century. Their independent enterprise tended to diminish as soon as the ABC began to take a lead in the programming of choral-orchestral concerts in the mid-1930s and to choose one major choral group in each capital city as the continuing associate of its local orchestra for public and broadcast performances. This was also a period when the ABC followed the example of Reith's BBC in establishing other, supplementary performing groups, including a number of small professional vocal ensembles, a dance band and a military band. The ABC's charter allowed it to go beyond broadcasting music where it felt that creative musical enterprise of its own was required to fill gaps in the nation's musical regime. An ABC triumvirate that took vigorous advantage of this provision consisted of Sir Charles Moses, as ABC general manager, Professor (later Sir) Bernard Heinze (1894–1982) as its initial musical director-general, later musical adviser and principal resident conductor, and W.G. James (1895–1977), a pianist and composer who became the organization's first federal director of music. Heinze successfully proposed and promoted youth concerts, schools concerts and a concerto competition that served as a model for an annual national contest. When the ABC's orchestral network was re-formed after World War II with improved funding from state and municipal sources as well as from the ABC, the identification of public music-making on a large scale with the ABC's subscription concerts was almost complete. Most solo instrumentalists and singers who toured Australia, particularly in the years following World War II, fulfilled an elaborate schedule of ABC appearances and broadcasts, to the point at which singers and instrumentalists who toured for any other organization (unless they were very famous indeed) had some difficulty in not being regarded in the public mind as second-raters. The ABC's subscription concerts rapidly grew multiple series in the larger capitals, particularly in Sydney. Sydney benefited from its position as the headquarters of the ABC and as a capital city now growing faster than Melbourne. Its continuing position as the biggest market for the sale of tickets for orchestral, chamber and solo concerts and (a little later) for opera dates from this period.

Melba took part in several tours of her homeland, including in her enterprises major operatic seasons (1911, 1924, 1928) under the combined banner of the J.C. Williamson organization and the singer herself. The remarkable 1912–13 tours of the company assembled by the Irish promoter Thomas Quinlan (solo singers, chorus of up to 70 members, permanent orchestra of up to 65

players with a reported augmentation to 100 for *Die Meistersinger*, stage and music staff, 365 tons of scenery and costumes) presented, in English, the first Australian stagings of Wagner's later masterpieces, including (in 1913) three cycles of the *Ring*; this initiative was not followed up until a further three complete cycles were presented in Adelaide in 1998, 85 years later. Opera in Australia, with its dependence on sporadic tours, was to take far longer than orchestral concert-giving to find sustainable resident bases. Gertrude Johnson's National Theatre Movement in Melbourne (beginning its work in 1935) and Clarice Lorenz's National Opera of Australia in Sydney (from 1951) were gallant organizations that became important in the years immediately after World War II, incidentally demonstrating that touring opera of any adequacy in Australia was particularly unlikely to survive without subsidy because of the country's vast distances and the related costs of touring. Opera became one of the charges of an inadequately funded Australian Elizabethan Theatre Trust (AETT). The Sydney-based opera company established by the AETT, usually known as the Elizabethan Trust Opera, began annual touring seasons in 1956, occasionally losing continuity during financial crises and dwindling into near-inaudibility during the year (1965) of the Sutherland-Williamson tour, but gradually evolving a viable schedule and drawing back to regular Australian appearances some of the many Australian and New Zealand singers who had made operatic careers abroad, particularly in London. It became independent of the Elizabethan Trust in 1970, retitling itself as the Australian Opera and, more recently, after its absorption of the former Melbourne-based Victorian State Opera, as Opera Australia. Regional opera organizations, usually consisting of administrative and artistic staff who plan seasons and recruit singers on an ad hoc basis, operated with varying degrees of vigour and regularity in all States and increasingly shared production costs through an opera conference.

Jazz achieved considerable popularity in Australia from the 1920s, leading to the formation of large numbers of local groups and, in due course, to sustained and (briefly) international careers for Graeme Bell (1935–75) and his colleagues in traditionally orientated ensembles; to local versions of bop; and to syntheses of several styles by Don Burrows and others. Country ('hillbilly') music, complete in many instances with imitation US accents copied from recorded and broadcast sources, established from the 1930s its own continuing circuit of widely admired performers (among them Tex Morton, Buddy Williams, Smoky Dawson and Slim Dusty) and was accepted by many Australians in rural areas and by many Aboriginal Australians as a completely naturalized form of music. The influence of the British-American blackface minstrel tradition, which had become popular from at least the 1840s onwards and had influenced a number of well-known traditional songs of pastoral life, reasserted its popularity in the years during and after World War I and led to the composition of a large number of songs imitating the conventional nostalgia of wanderers returning to their hometown surroundings with a backdrop suggestive of a southern US milieu and US-style expressions of endearment. Some songs born of this deliberately borrowed idiom, notably Jack O'Hagan's *The Road to Gundagai*, became for a couple of generations more widely accepted as truly Australian than any other music, including the song *Waltzing Matilda*. Post-World War II rock found its first noted exponent in Johnny O'Keefe and, as in many countries, developed in the course of time local variants which enjoyed international renown in the hands of such groups as AC/DC, Midnight Oil, Dire Straits and INXS (see also §III, 2 below).

One of the many active jazz players in Australia before World War II was a Melbourne musician named Banks, whose jazz-playing son, Don Banks (1923–80), became an accomplished concert-hall and film composer, basing himself in London for much of his career before returning to Australia in the 1970s to take on onerous offical positions, in which he was able to help raise professional standards in composition among a newer generation of young practitioners. Other Australian composers who made careers abroad at a time when Australian society was very inhospitable to any creative ambition in music (beyond the composition of patriotic songs and teaching pieces) included Arthur Benjamin (1893–1960, in London) and Peggy Glanville-Hicks (1912–90, in New York). Composers of notable talent who attempted to pursue their métier in their own country had a difficult path to follow, as the career of Margaret Sutherland (1897–1984) illustrates. John Antill, submerged for much of his career in ABC staff duties, might have been thought likely to become the Australian Copland on the strength of his *Corroboree*, but in much of his other music he sank into a conventionality that had something in common with the practice of his teacher, Alfred Hill.

Dorian Le Gallienne (1915–63), a teacher at Melbourne University Conservatorium and a music critic, was the most convincing symphonist of the years immediately after World War II, despite a long and taxing struggle with ill health. A new generation of Australian composers began to make itself felt in the late 1950s and early 60s, led by Peter Sculthorpe, Richard Meale (*b* 1932), Nigel Butterley (*b* 1935), George Dreyfus, Felix Werder (*b* 1922), Larry Sitsky (*b* 1934) and others, with some temporarily or permanently expatriate figures such as David Lumsdaine (*b* 1931), Keith Humble (1927–95) and Malcolm Williamson (*b* 1931) being added retrospectively to their number. Their activities helped to secure purposeful official funding for composition and an esteem that meant that ambitious and adventurous creativeness in music would be tallied along with comparable activities in writing and visual art among the creditable achievements of Australian society. Women composers, among them Alison Bauld (*b* 1944), Anne Boyd (*b* 1946), the New Zealand-born Gillian Whitehead (*b* 1941), Moya Henderson (*b* 1941), Jennifer Fowler (*b* 1939), Sarah Hopkins (*b* 1958), Elena Kats-Chernin (*b* 1957) and Liza Lim (*b* 1966), have figured prominently among younger generations of Australian musical creators, alongside such colleagues as Brenton Broadstock (*b* 1952), Gerard Brophy (*b* 1953), Barry Conyngham (*b* 1944), Ross Edwards (*b* 1943), Riccardo Formosa (*b* 1954), Elliott Gyger (*b* 1968), Graham Hair (*b* 1943), Brian Howard (*b* 1951), Gordon Kerry (*b* 1961), Graham John Koehne (*b* 1956), Bozidar Kos (*b* 1934 in Slovenia but beginning his formal training and compositional career after his arrival in Australia in 1965), Richard Mills (*b* 1949), Andrew Schultz (*b* 1960), Michael Smetanin (*b* 1958), Carl Vine (*b* 1954), Martin Wesley-Smith (*b* 1945) and Nigel Westlake (*b* 1958). Julian Jing-Jun Yu (*b* 1957, Chinese by birth and earlier musical education), Roger

Smalley and Andrew Ford (*b* 1943 and 1957 respectively, both of them English by birth and training) are among the relatively recent arrivals within a long list of fully equipped creative musicians who have become Australian by choice, enriching their adopted country in the process.

III. Popular immigrant musics

1. 19th and early 20th centuries. 2. After World War II.

1. 19TH AND EARLY 20TH CENTURIES. The first European settlement group of convicts and their overseers brought with them the rural and urban music cultures of late 18th-century England and Ireland, including ballads and popular theatrical songs. Vernacular performance of this transplanted music continued in informal and domestic settings, along with songs with localized texts in similar styles. Composition and performance of topical ballads by convicts, often on anti-authority themes, was noted from the first decades of settlement. Several songs of the Irish convict Frank Macnamara, written between 1830 and 1850 in Irish prosodic forms with long lines, achieved wide currency and were orally circulated into the mid-20th century, the best known being his convict's lament *Moreton Bay*. Other locally composed songs of colonial experience were printed in early newspapers as verse with a nominated air, which was frequently a popular theatrical air, a traditional melody or songs composed in the style of Irish or Scottish melodies.

Such songs were most often performed as unaccompanied narrative singing and retained their popularity as part of domestic and small-scale community performance into the 20th century, particularly in rural areas with little access to commercial public entertainment. The few contemporary descriptions of early performance practice indicate relatively slow delivery and mannerisms such as the spoken delivery of the last half-line; such features show little variation from parallel British and Irish traditional singing styles. Diatonic and gapped scales and occasional modal pitch ambiguities are sometimes found in melodies collected in the early 20th century. The four-line, 14-syllable 'come-all-ye' song form with its family of *ABBA* tunes (often truncated to a two-line *AB*) was frequently used, particularly for outlaw ballads that continued the convict tradition and were often based on Irish song styles and models.

The population boom of the goldrushes that began from 1853 was accompanied by the opening of many theatres and other entertainment venues on the goldfield settlements and in metropolitan centres. The theatrical entertainer Charles Thatcher wrote and performed many topical goldfield songs to enthusiastic audiences. Minstrel shows toured frequently and provided influential models of popular performance and repertory. In urban centres, music-hall and vaudeville circuits developed. Amateur performance also included the urban middle-class parlour ballad and performance on the upright piano; in a society where rapid social and class transitions were common, these public symbols of musical respectability and competence were broadly spread.

Professional entertainment styles influenced vernacular performance and composition, though older ballad styles continued. The rural, pastoral labour force grew in size and self-confidence in the late 19th century, its shearers and other workers creating many songs that documented and celebrated their life. A selection of these were published by the literary ballad collector A.B. Paterson in *Old Bush Songs* in 1905; other items continued in fairly marginal oral performance, and some were collected in the 1950s. These became the central canon of the Australian folksong revival of the 1950s, including such songs as *The Old Bark Hut*, *The Wild Colonial Boy*, *The Banks of the Condamine* and *Waltzing Matilda*.

Music for social dance has been one of the most important types of vernacular music-making in Australia. The great expansion of public dancing in the 19th century, especially of closed couple dances such as waltzes, polkas, mazurkas and varsoviennes, along with quadrilles, influenced rural and traditional musicians. Solo hornpipe-style step-dancing, often competitive, was also popular. Musicians, particularly in rural regions, usually did not read music and tended to play traditional tunes or modified versions of published music that were learnt orally; the modulation and thematic development found in notated dance music was modified to the simpler alternating binary structures of traditional dance music. Tunes to accompany these dances can still be found among older Australian rural players.

The most popular instruments during this period were the single-action free-reed aerophones: the button accordion, the mouth organ and the Anglo-German concertina. Fiddle players were also common, playing the instrument in styles similar to those of British and American traditional fiddlers, using the first position and open strings. Tone was often thin and light, and ornamentation limited to a few upper grace notes and pitch slides, both

up and down. Pianos were also incorporated when available.

Most musical forms were integrated into patterns of community entertainment. For more marginal immigrant groups, the construction of community required entertainment to be linked to more explicitly emblematic music. Cantonese opera troupes (with both overseas and local performers) toured the goldfields from 1858 to 1870, performing exclusively to their compatriots and often meeting with racist opposition from European miners. German emigrants, who constituted about 2% of the population, tended to be concentrated in several regions. In some areas of Southern Queensland their distinctive local dance-music culture survived into the 20th century. The German band, a small brass and reed ensemble favoured by street performers and a common feature of British musical life of the mid-19th century, also had a strong presence in public instrumental music in Australia. In the second half of the 19th century, urban middle-class Germans often formed Liedertafel groups, which were dedicated to organized amateur solo and group singing of German song and later, other music. These were generally suppressed in the anti-German feeling during World War I.

Irish immigrants made up about 25% of settler Australia. They were mainly Catholic, and because of sectarian and cultural prejudices maintained a certain distinctiveness, using music as a means of marking and expressing their identity. Irish language and its songs did not survive in Australia; public performances emphasized bourgeois song forms such as those of Thomas Moore and sentimental songs of exile, some of which were composed and published locally. Step-dancing and its associated music was practised, and with the growth of cultural nationalism in Ireland in the late 19th century, it rose in emblematic status.

By contrast, Scottish immigrants in many cases occupied a dominant place in the economy and had less reason to maintain group cohesion. Nonetheless, pipe bands and Scottish dancing have been widely followed in Australia, supported by the Victorian fashion for tartanry and by the Presbyterian establishment. Pipe bands were frequently associated with public and quasi-military organizations, and a strong branch of the dominion piping movement developed in Australia in the 20th century.

The introduction of sound recording from the beginning of the 20th century, followed by radio in the 1920s, gave Australians greater access to new musical styles and diminished the need for domestic entertainment. It also led to new, commercially disseminated styles influenced by aural and untutored musical practices.

In the 1930s the recordings of American hillbilly performers such as the Carter family, Jimmie Rodgers and singing cowboys such as Wilf Carter seized the imagination of many Australians. Local performers Tex Morton, Buddy Williams and later many others started to perform in this style and to compose local songs with rural and sentimental themes. Based mainly on American styles, these songs also incorporated features of the vernacular ballad, comic song and especially the lyrical themes of the 'bush ballad' poets of the late 19th century such as A.B. Paterson and Henry Lawson. Morton, Williams and others established an indigenous form of country music, emphasizing solo, guitar-accompanied performance, yodelling and localized lyrics. Through radio, recording and vigorous touring with travelling circuses, rodeos and agricultural shows, such performers established a strong relationship with sections of the Australian rural population.

2. After World War II. The period since 1945 has brought major changes to Australian society and to musical behaviour. American-produced popular culture genres extended their dominance; television was introduced in 1956 and increased its social reach over the next decade; and a vigorous programme of immigration was instituted in the late 1940s, involving Britain, Ireland, other European countries and, in the 1970s, Asian countries, bringing new cultural and musical forms to Australia.

Recordings of popular dance bands and vocalists were popular from the 1930s, and in the 1940s intellectual fans focused on jazz as an alliance of art music and folk music. After the war, performers such as Graham Bell led the popular movement for traditional New Orleans-style jazz involving younger radical fans. This movement and its interpretation was the first manifestation of a distanced, intellectualized engagement with popular culture, which later influenced the reception of traditional music forms in the folk movement. In contrast, country music also grew vigorously in the first decade after the war and developed a rural and urban working-class fan base. Venues for urban performance opened in the outer suburbs of Sydney, and new recording companies formed. Singers such as Slim Dusty toured continuously through rural Australia and gathered a large and durable following for the music.

Popular music was utterly changed by the arrival of rock and roll, television and 45 r.p.m. recording in the mid-1950s. As the new youth popular music market was created, Australian performers in the new rock and popular styles emerged, such as Johnny O'Keefe and Col Joye. Overseas musical models dominated; some styles, such as 'surf music', had a particular attraction for local performers and audiences in the early 1960s.

The Beatles and their immense popularity stimulated a second generation of young popular musicians. Many of the most enthusiastic and successful of these were British post-war migrants who were able to utilize their cultural connections to the new sounds. However, although a group like the Easybeats had short-lived international success, Australian performers in a Euro-American centred music industry could achieve only provincial and marginal status.

In the early 1970s, supported by the new countercultural audiences of a young intelligentsia, rock groups with a more specific local focus rose to prominence alongside independent recording companies (such as Mushroom records). Brash local themes and social styles of performance emerged, often emphasizing youthful bohemian hedonism. As this localized style (comparable with many national rock musics emergent in the 1970s) used an international musical idiom, the existence of a distinctive 'Australian sound' was frequently called into question. Some commentators have signalled the importance of venues and institutions rather than musical techniques in the creation of this music. In 1978 the growing number of new performance venues in large suburban pubs led to the 'pub-rock' or 'oz-rock' movement, predominantly hard rock presented to a male working-class audience, sometimes with localized lyrics,

typified by the group Cold Chisel. Experience within this scene was often pointed to as part of the international success of such bands as Men at Work, Australian Crawl and INXS in the 1980s.

Dance music based in recording production rather than on performance became more prominent in the 1980s, and the increased significance of dance-based musical consumption, both collective and individual, devalued the image of pub-rock. Guitar bands, identified as alternative and anti-establishment, typically amateur and performing in smaller pub venues, also reacted against the hyper-masculine, aggressive and aging image of pub-rock.

An Australian folk music movement formed in the 1950s, paralleling similar movements in Britain and America. Radical intellectuals turned to the cultural forms associated with the 1890s to stress the centrality of the 19th-century, male, rural working class in the formation of the national type and ideal. A folk movement formed, collecting and performing the songs identified with this group, recovered from oral tradition and published by collectors such as JOHN MEREDITH and JOHN STREETER MANIFOLD. By the early 1960s this movement was incorporated in the international boom in popular folk music, and a circuit of clubs formed that attracted a young, tentatively bohemian but largely middle-class following. Coffee-lounge folk venues opened, and semi-professional and full-time folksingers performed self-composed, traditional British, American and black American songs alongside songs collected from old Australian rural singers, usually with guitar accompaniment. This movement was strongly tied to the anti-war movement and espoused a liberal cosmopolitanism that supplanted the nationalism of the early part of the revival.

Much of the folk movement's following was eroded by the massive impact of the Beatles-led revolution in popular music, but a core of fans and performers remained. Many folk performers and organizers were British migrants of the 1960s and early 70s, and the model of the British pub-based folk club became dominant. Partly as a reaction to the purist attitude to performance and style in this scene, groups with a less intellectualized style of performing Australian traditional songs developed. These 'bush bands' used a FOLK-ROCK approach, with strongly rhythmic arrangements of Australian vernacular ballads mixed with Irish dance music and its characteristic instrumentation.

From the 1960s the country music movement had included performers espousing images of 'cultural authenticity' popularized by the radical, nationalist folk movement (but emphasizing nostalgia), as well as performers seeking an audience drawn to the styles of American country music. In the 1980s and 90s, perhaps as a reaction to social change and new public and media interests in national identity, performers such as John Williamson and Lee Kernaghan gave explicitly Australian material new popularity. Bush bands, by then less favoured in the folk movement, were welcomed at country music festivals, such as that held annually at Tamworth, New South Wales.

The post-war Australian migration programme brought migrants from northern, then southern and eastern Europe and the Middle East. From the late 1970s South-east Asian refugees began to arrive, followed by other Asian migrants. This has led to the establishment of immigrant communities in Sydney, Melbourne, Perth and a few other cities. Such groups (which in the first stages of southern-European migration included a large proportion of rural migrants) often form social and religious organizations and small entertainment businesses that are culture specific. Music plays a part in many of these community organizations, which often engage immigrant musicians skilled in traditional styles. Genres as diverse as Greek regional dance music, Serbian epic singing and South American harp music have been performed in contexts ranging from individual homes to metropolitan concert halls. Family-based celebrations such as weddings, baptisms and circumcisions, as well as religious calendric events celebrated by regional associations, often provide opportunities for music ensembles, particularly dance bands. Cultural maintenance organizations were formed by communities from the 1960s, promoting nationally sanctioned folkloric styles; regional popular music and especially collective folkdance to second-generation groups. Song composition in some traditional styles also takes place: Parkhill (1983) documents and analyses such items as a Cretan *rizitika* on the subject of the 1975 Australian constitutional crisis and an Arabic *zajal* epic on an Australian football final.

In the mid-1970s Australian national cultural policies shifted from migrant assimilation to cultural pluralism under the rubric of multiculturalism. Under this policy some traditional immigrant musicians and their musical style gained occasional public prominence and access to government assistance. A small network of publicly funded and community-based media outlets for ethnic minorities was developed. Local government-funded community events, as well as larger, nationally orientated cultural showcases promoted representatives of 'multicultural Australia'. Significant numbers of Anglo-Australian musicians were inspired by the existence of these forms in their midst, and some began exploring other styles. In the 1970s and 80s these musicians often collaborated with second-generation minority musicians, many of whom were inspired by overseas developments such as the Latin American *nuevo canción* and Greek retro-rebetika (*see* REBETIKA) movements.

Styles such as Texas swing or Cajun music also became popular in the 1970s, expanding in the 1990s to forms of African pop and Latin American and Balkan styles. The musicians involved and their networks sometimes developed from the folk movement and sometimes from the more intellectual fringes of the rock music scene. The growing numbers of young students from Asian countries in the 1990s often favour their own regional popular musics, forming bands playing Thai pop, *bhangra* or Malay heavy metal, sometimes with deliberate local inflections. These styles are, however, marginal. The Australian Broadcasting Corporation presents many immigrant musics in a number of radio programmes as part of its charter to represent national cultural diversity. It has also strongly fostered Australian country music through its subsidiary, ABC recordings.

Australia Ensemble. Australian chamber music group. Founded by Murray Khouri and Roger Covell in 1980 as the University of New South Wales Ensemble, it aimed to present varied chamber music programmes with a substantial commitment to new Australian music. The founding personnel were David Bollard (piano), John Harding (violin), Irina Morozova (viola), David Pereira (cello), David Stanhope (horn/second piano) and Murray Khouri (clarinet). Harding was replaced by Dene Olding in 1982 and the flautist Geoffrey Collins joined the group after the departure of Stanhope in 1983. In 1984, with an expanded international touring programme, the name was changed to the Australia Ensemble, reputedly to avoid confusion with groups from Wales. Donald Westlake took over as clarinettist in 1986, and was succeeded by Nigel Westlake (1987), Alan Vivian (1992) and Catherine McCorkill (1995), while Julian Smiles became the group's cellist in 1992. The ensemble is noted for its high performing standards, its variety of repertory and its championship of Australian music. It has toured throughout Australia for Musica Viva and internationally to North and South America, Europe, New Zealand, China, India and Japan. The ensemble's recordings range from Mozart and Beethoven to Dallapiccola and the complete string quartets of Peter Sculthorpe. Its numerous commissions, including works by Gordon Kerry, Roger Smalley, Andrew Schultz, Carl Vine, Nigel Westlake and others, have made a significant contribution to contemporary Australian chamber music.

Austral Islands. *See* POLYNESIA, §II, 3(ii).

Austria (Ger. Österreich). Country in Europe. This article deals with the area of the Republic of Austria, comprising the federated provinces (*Länder*) of Lower Austria, Upper Austria, Burgenland, Carinthia, Salzburg, Styria, Tyrol, Vienna and Vorarlberg. For the remaining successor states to the Danube monarchy, *see* CROATIA, CZECH REPUBLIC, HUNGARY, ITALY, POLAND, SLOVAKIA, SLOVENIA and ROMANIA; *see also* GERMANY for the period up to 1806.

Prehistoric signal pipes, musical instruments and iconographical representations of musical activities from the Hallstatt Period (1000–500 BCE) and the Roman occupation testify to the antiquity of Austrian civilization. The development of a musical culture from the beginning of the Middle Ages has essentially been determined by Austria's geographical position in the centre of Europe, its Alpine terrain, the coming of Christianity and the settlement by Germanic tribes. External influences, especially of the races at its borders – the Latin peoples, the Slavs and the Magyars – further affected the area's cultural evolution. Although each province has a place in Austria's cultural history, the musical centres have always been the cities of Salzburg and Vienna.

I. Art music

1. The early period. 2. Humanism and the Renaissance. 3. The Baroque era. 4. Pre-Classicism and Classicism. 5. Romanticism. 6. The 20th century.

1. THE EARLY PERIOD. Christianity brought plainsong to the country and a *cantor moderatus* is recorded in the 5th century. After the turbulent period of migration, St Rupert built the monastery of St Peter in Salzburg shortly before 700, and Bishop Virgil, a Scot who maintained contact with his homeland throughout his episcopacy, founded the cathedral in 774. Both institutions were at the centre of chant development in Salzburg when it was elevated to an archbishopric in 798 and given the task of converting the *Ostmark* ('Eastern March': Europe east of Austria and Germany). The *cantus romanus*, in the form prescribed by the Carolingian reforms, was disseminated from Salzburg under Archbishop Arno (785–821), a friend of Alcuin, while associations with St Gallen and Metz resulted in the introduction of the types of neumes used there.

The monastery of Kremsmünster was settled in 777 from Mondsee, the oldest Benedictine house in Upper Austria (748), itself a daughter house of Monte Cassino. Numerous other monastic establishments were responsible for the knowledge and dissemination of the chant repertory from the 11th century onwards. Manuscripts using neumes from Austrian monasteries date from the 9th and 10th centuries. Those of importance to liturgical history in the Alpine region include a plenary missal of 1136 from the monastery of St Paul im Lavanttal in Carinthia (*D-Sl*, Cod.bibl.fol.20), copied from a Kremsmünster original, and a 12th-century gradual with Metz neumes from the monastery of Seckau in Styria (*A-Gu* 807), which shows the adaptation of the original Roman version to the German chant tradition. A 13th-century breviary from St Lambrecht (*Gu* 134) contains the oldest version of the Corpus Christi hymn *Pange lingua* with neumes and tonary note names. The ancient *Christ ist erstanden* is the outstanding example of vernacular sacred song; the earliest complete version of the text with neumes dates from 1325 (*KN* 1213). Paraliturgical music includes sacred dramas, such as the Klosterneuburg Easter play and the so-called Erlauer Spiele, six Christmas and Easter plays from Gmünd in Carinthia, the sixth of which shows remarkable similarities to the Donaueschingen *Marienklage*, as well as rhymed Offices and hymns. In addition to the fact that there was practical musical instruction, a number of music treatises of Austrian provenance indicate that *musica theoretica* appeared in the quadrivium in monastic, cathedral and parish schools, and eventually at the University of Vienna (founded 1365). There is, nevertheless, only one well-known medieval Austrian music theorist, Engelbert of Admont.

Minnesang was established principally at the courts of the Babenbergs in Vienna, of Archbishop Eberhard II in Salzburg and of Duke Bernhard von Sponheim in St Veit, Carinthia. Numerous Minnesinger are known by name, the most important of whom are Walther von der Vogelweide, who claimed that he learnt to sing and write poetry in Austria, and the 'courtly village poet' Neidhart von Reuental, who integrated indigenous and popular elements into Minnesang. Only the names and some of the poems survive of most Austrian Minnesinger, for example Ulrich von Liechtenstein. Hugo von Montfort, a late exponent of Minnesang in the Vorarlberg, wrote poems which were set to music by his court musician, Bürk Mangolt. The last important figures in secular medieval monody were the Monk of Salzburg at the court of Archbishop Pilgrim II (1365–96) and the Tyrolean knight, Oswald von Wolkenstein. Both are also responsible for a small body of mensural polyphony and thereby stand at the threshold of an independent German polyphonic style.

Traces of Ars Antiqua and Ars Nova music survive in German manuscripts of the time and seem to have been a strong influence on the growth of indigenous German polyphony: Perotinus's organum *Sederunt* appears in an outdated and mixed notation (*Gu* 756 from the Seckau monastery), motets and a conductus in Franconian notation, also three French chansons (Stiftsbibliothek, Vorau, MSS 23, 380) and the ballade *Fies de moy* (*M* 486). Several French and Italian Ars Nova compositions appear as contrafacta among the works of Oswald von Wolkenstein. The Mondsee-Wiener Liederhandschrift, also known as the Spörlsches Liederbuch, is the source for various forms of secular vernacular polyphony from about 1400 and in particular for that of the Monk of Salzburg. Only when King Friedrich III (later Emperor) summoned Netherlandish and English musicians to his court did polyphony begin to develop rapidly: the Trent Codices (*I-TRmn* 87–92, *TRmd* 93) from the South Tyrol are the most important evidence for the rapid development of polyphony in mid-15th-century Austria. The oldest polyphonic arrangement of *Crist ist erstanden* is by Friedrich's *cantor principalis*, Johannes Brassart, a member of the Kapelle of Friedrich's predecessor, Albrecht II (*d* 1439), the first of an unbroken line of Germanic HABSBURG kings and emperors. The development of music in Austria is inseparably linked with this dynasty.

2. HUMANISM AND THE RENAISSANCE. Polyphony reached its first peak under Emperor Maximilian I, who ordered the reorganization of the Hofkapelle at Vienna in 1498, under the direction of Georg Slatkonia. The members of the Kapelle included such distinguished composers as Isaac, Senfl and Hofhaimer, whom Maximilian retained from the Innsbruck Kapelle of his predecessor, Archduke Sigismund of the Tyrol. The German Gesellschaftslied, which these composers cultivated alongside their other works, is the earliest significant German contribution to the history of polyphony, and soon became popular outside court circles. A collection of German polyphonic songs and quodlibets was compiled in Vienna (and published in Nuremberg) in 1544 by Wolfgang Schmeltzl, schoolmaster at the Schottenstift. The work of Conradus Celtis led to Vienna becoming a centre of humanism; one of the results in music was to increase the importance of the text in polyphonic song, such as in the homophonic humanist odes performed in imitation of classical style with regard to the textual metre. The earliest example is a chorus from Celtis's festival play *Ludus Dianae* (1501), performed in Linz for Maximilian I; this genre was developed by composers in the circle known as the Sodalitas Litteraria Danubiana (which included Petrus Tritonius, Benedictus Ducis, Wolfgang Grefinger, Hofhaimer and Senfl) and was diffused in the form of school songs. Netherlandish musicians became increasingly prominent when Arnold von Bruck succeeded Heinrich Finck in 1527 as Kapellmeister at the Viennese court of Ferdinand I, a grandson of Maximilian I and the first of the Austrian line of Habsburgs. Other Netherlanders who later held the post included Maessens, Vaet, Monte and Lambert de Sayve; numerous singers, teachers and organists at the imperial court, such as Buus and Luython, also came from the Netherlands.

The contemporaneous flowering of instrumental music for domestic use resulted in intabulations and lute pieces of the kind written by Hans Judenkünig, who spent his last years in Vienna. A mid-16th-century German organ tablature has survived (Landesarchiv, Klagenfurt, Sign.4/3), containing works by Senfl, Josquin, Verdelot and La Rue as well as anonymous pieces. It probably originated in one of the Carinthian monasteries which was dissolved under Joseph II's edict; it is in a neat alphabetic notation and may be the earliest of its kind.

The Flemish influence greatly increased when the Habsburg territories were further divided among the heirs of Ferdinand I (*d* 1564). Thus Innsbruck and Graz again became Habsburg residences, each with its own Kapelle, and developed into cultural centres of the greatest

influence and importance. Outstanding members of the Kapelle of Archduke Ferdinand of the Tyrol (*d* 1595) were Hollander, Regnart and Utendal, while the most distinguished musicians employed by Archduke Karl II in Graz were de Sayve and Cleve, who wrote 20 polyphonic settings of chorale tunes, including some of Protestant origins; they were published in Andre Gigler's *Gesang Postill* (1569 and 1574), the earliest music volume printed in Styria. The sacred works of such composers spread beyond court circles and into the monasteries, as demonstrated by surviving choirbooks and inventories. Archduchess Magdalena's Kapelle at the convent at Hall, Tyrol, was directed by another Netherlander, Franz Sales.

The Graz court, because of its geographical location, was the first to experience the Italian influence that gradually eclipsed that of the Netherlands. Annibale Padovano, an organist at S Marco, Venice, went to Graz in 1565 as principal instrumentalist and succeeded Cleve as Kapellmeister in 1570. On the death of Archduke Karl II in 1590 the Graz Kapelle, then directed by Gatto, was largely made up of Italians, including the organist Rovigo and the singer Zacconi. The process of Italianization continued under Karl II's successor, Archduke Ferdinand of Styria (later emperor), who employed such well-known musicians as Bianco, Giovanni Priuli, Stivori and Giovanni Valentini (i). Ferdinand sent Alessandro Tadei, later court organist at Graz, to study under Giovanni Gabrieli; thus the only surviving Gabrieli autographs came to be in the Styrian Landesarchiv in Graz. Later Netherlandish musicians in Austria also felt the Italian influence, as shown by Monte's madrigals, Regnart's villanellas and the polyphonic sacred works of de Sayve, who wrote exclusively in a Venetian style. The Netherlandish musicians were usually trained as singers, whereas most of the Italians were accomplished instrumentalists. The development of polyphony was not confined to the courts, and even before the Reformation, sacred and secular music in towns was in the hands of schoolmasters and Kantors, assisted by *Türmer* (watchmen) and town musicians. At a celebration of Mass in 1485 at St Daniel, the oldest church in the Gail Valley (Carinthia), the best singers and instrumentalists took part. The humanist Vadian studied music in Villach, and he taught at the town's thriving Lateinschule between 1506 and 1508. The earliest known guild of musicians in German-speaking lands was the Nicolai-Bruderschaft in Vienna, which was founded in 1288 and survived until 1782 when Joseph II disbanded all such brotherhoods. In some places the post of *Spielgraf* (which also appears to date from the 13th century) was created; for example, in 1464 an imperial court trumpeter, Wolfgang Wetter, held the post for Styria, Carinthia and Carniola (now part of Slovenia). Musicians and bellfounders were already established in Salzburg in the 12th and 13th centuries, and can be traced from the first half of the 15th century in the Carinthian towns of Friesach, Völkermarkt, Klagenfurt, Wolfsberg and St Veit. Noteworthy Austrian and foreign organ builders appeared from the 15th century onwards, including Heinrich Traxdorf from Mainz, who built an organ at St Peter, Salzburg, in 1444, and Hofhaimer, who was associated with Jan Behaim of Dubraw.

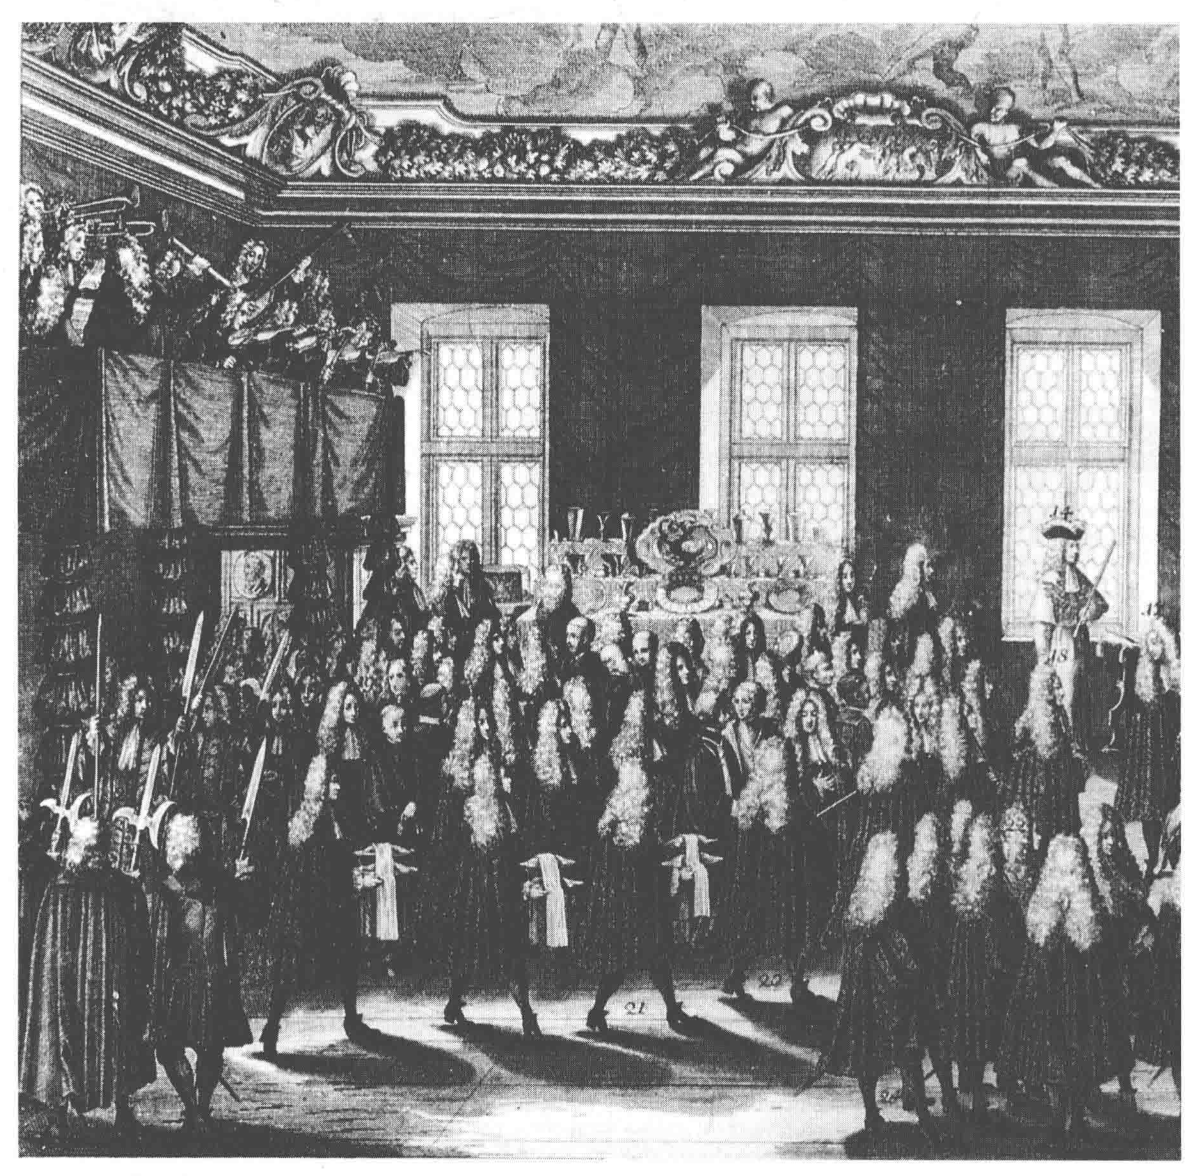
From the 15th and 16th centuries sacred and secular instrumental music in towns was often made the responsibility of a *Türmer*, a municipal appointment, while the *Landschaftstrompeter* and *Heerpauker*, who can be traced in Styria from 1527 to 1861, were typically employed by the nobility merely to swell their state; but in the late 16th century some of these musicians also performed polyphony at the Protestant abbey in Graz. The art of Meistergesang left few traces in Austria: *Singschulen* existed in Schwaz (Tyrol) from before 1532, in Steyr (Upper Austria) from 1542, from about 1549 in Wels (Upper Austria), where Hans Sachs had spent a short time in 1513, and from 1604 in Eferding (Upper Austria). The possible existence of *Singschulen* in Waidhofen an der Ybbs and Wiener Neustadt (Lower Austria), Eisenerz (Styria) and Moosburg (Carinthia) is suggested by the histories of individual Meistersinger. Music printing was introduced in Vienna in the early 16th century; music theorists were active chiefly in Vienna (e.g. Simon de

Quercu, Venceslaus Philomathes and Stephan Monetarius) and in Salzburg (Johannes Stomius, an associate of Hofhaimer).

In the 16th and early 17th centuries many people became Protestants. Preachers, schoolmasters and organists arrived from countries with an older Protestant tradition, bringing with them the Lutheran chorale. Better-known Protestant composers included Brassicanus, Hitzler (an editor who transmitted the local hymn repertory and was also a prominent theorist) and Rosthius in Linz; Peuerl in Horn (Lower Austria) and Steyr (Upper Austria); Lagkhner in Loosdorf (Lower Austria); Widmann in Graz and Eisenerz (Styria); Fritzius in Kapfenberg (Styria); Johannes Herold and Posch in Klagenfurt; and Rauch in Hernals and Inzersdorf (both near Vienna). However, the most important composer born in the Tyrol, Lechner, a Protestant convert, worked chiefly in Nuremberg. The Counter-Reformation gradually brought an end to the Protestant music tradition in Austria, which began to decline as early as 1600 and died out after the Battle of the White Mountain in 1620. But the religious schism did not impair cultural development; works of Catholic composers such as Lassus were often used in Protestant services, while organists such as Perini in Graz moved freely between employment in Catholic ducal courts and Protestant churches.

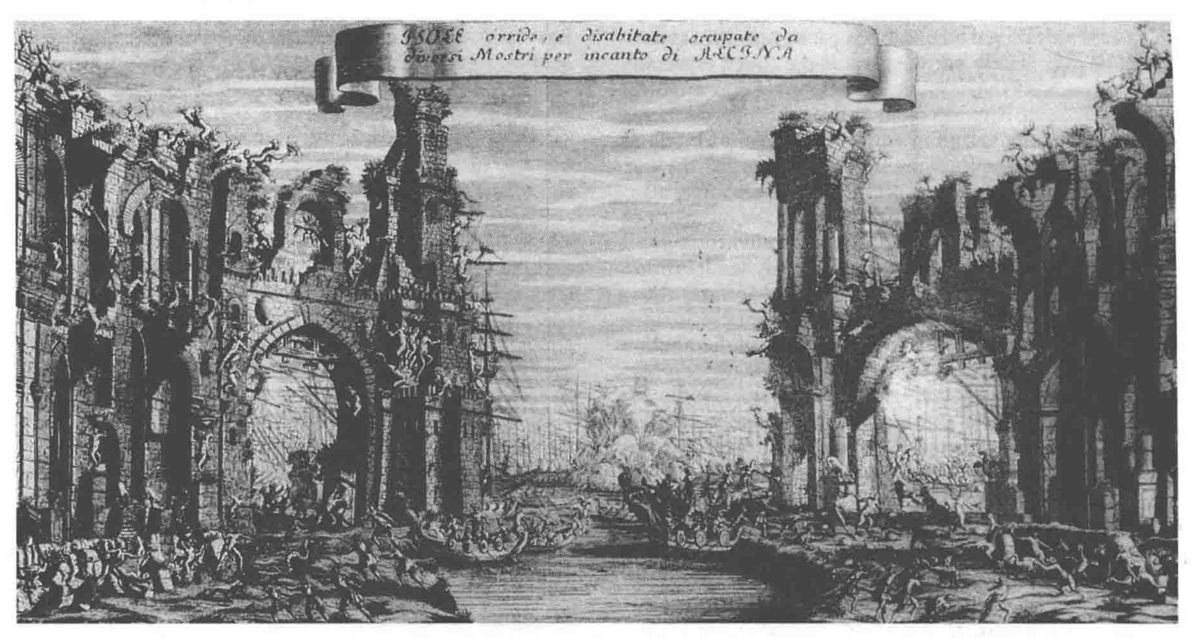
3. The Baroque era. When Emperor Matthias died in 1619, his Netherlandish-dominated Hofkapelle was replaced by the Italianized establishment brought from Graz by his heir Archduke Ferdinand of Inner Austria (Ferdinand II), an event which marked the beginning of a Baroque musical style in Vienna and, in spite of the Thirty Years War and the Turkish invasions, the most brilliant period of the imperial Hofkapelle. During the 17th century and the first half of the 18th, the Habsburg emperors, among whom Ferdinand III, Leopold I and Joseph I were themselves reputable composers, brought a large number of notable Italian musicians to the Viennese court: Bertali, Sances, Draghi, Ziani, Bononcini, Caldara, Conti, Porsile, Badia, Palotta and Bonno. Opera was first produced at the court in about 1630 and was firmly established there by the reign of Leopold I. It became a regular part of festive occasions such as namedays, birthdays, births and weddings in the imperial family, princely visits and coronations. A great theatrical event of the 17th century was the performance for Leopold I's wedding in Vienna (1668) of *Il pomo d'oro* by Cesti, who was Kapellmeister in Innsbruck from 1652 and, after the Tyrolean Habsburg line died out, assistant Kapellmeister in Vienna from 1666. Opera became established even earlier in Salzburg, under Archbishop Marcus Sitticus (1612–18), with a performance of an *Orfeo* setting in 1614, followed by an *Andromeda* in 1616. Francesco Rasi, who had links with the Camerata in Florence, presented Archbishop Sitticus with a manuscript collection of his sacred and secular monodies in 1612. Bartolomeo Mutis, Count of Cesana, whose presence at the court of Graz can be traced from 1604, was the first Italian composer working north of the Alps to have secular monodies printed (*Musiche*, Venice, 1613); he moved to Vienna with Ferdinand II. G.B. Bonometti, court tenor in Graz and later in Vienna, dedicated *Parnassus musicus Ferdinandaeus* (Venice, 1615) to the emperor; this comprehensive anthology of motets for one to five voices with figured bass contains chiefly works by well-known contemporaries, at least nine of them from the Graz court, and it shows the impact of the early Baroque style on sacred music in Austria. Another example is the *Harmonia concertans* (Nuremberg, 1623) by Posch, who was active in Carinthia and Carniola and acknowledged the influence of Viadana.

Instrumental music developed rapidly during the 17th century. G.M. Radino, later organist in Padua, and his son Giulio, whose concertos were published in Venice in 1607, served the Khevenhüllers, a powerful Carinthian noble family. In 1618–19 polyphonic canzonas and sonatas by the Graz Hofkapellmeister Priuli were printed in Venice; motets by Bernardi appeared in Salzburg (1634) and sacred works by Valentini in Vienna (1621). Early variation suites were composed by Peuerl in Steyr and, a little later, by Posch. It was as instrumentalists that Austrians first replaced foreign musicians. Hofhaimer (who was born in Radstadt) was the most important 16th-century organist. Two musicians at the Graz court were outstanding cornett players: Georg Poss, Kapellmeister to Archduke Karl, Bishop of Breslau in 1618, and Giovanni Sansoni, who had connections with Schütz. In 17th-century Vienna, the outstanding keyboard composers were Froberger and Kerll, and, on a lower plane, Ebner and Poglietti. The foundations of the Viennese violin school were laid by Italians such as Buonamente and Bertali. The long succession of Italian imperial Hofkapellmeister was finally broken in 1679–80 by the appointment of J.H. Schmelzer, an Austrian violinist and composer of international reputation. It was principally as a ballet and song composer that he introduced an indigenous element into the Venetian-dominated court music. Biber, a key figure in the development of violin music, was Hofkapellmeister in Salzburg. Muffat was his organist before becoming Kapellmeister at Passau in 1690; he studied in Paris (with Lully) and in Rome (with Corelli) and his conscious fusion of the Italian, French and German musical languages typifies the so-called *vermischter Stil*. The rise of instrumental music encouraged instrument making. Jacob Stainer of Absam founded the Tyrolean school of violin making, and notable organ builders included the families of Egedacher in Salzburg, Schwarz in Graz, and Römer in Vienna, as well as Henke and Sonnholz in Vienna, Gabler (who died during the construction of the organ in St Gallus, Bregenz, in 1771) and Chrismann, who built the organ of St Florian that later was associated with Bruckner.



Austrian taste in church music and opera was conservative; once Italian innovations were adopted, they were retained tenaciously. The Venetian polychoral style in Austria is exemplified by Valentini's *Messa, Magnificat et Jubilate Deo* (Vienna, 1621) for seven choirs, and the anonymous 53-part festival mass with continuo performed in Salzburg Cathedral, probably in 1682; it was still cultivated for its impressive effect in the time of Fux (e.g. his *Missa SS Trinitatis*). The church music of Johann Stadlmayr (*d* 1648), the best-known Innsbruck composer of the time, is also conservative. A type of oratorio, the *sepolcro*, was created by Viennese opera composers for worshipping the Holy Sepulchre during Holy Week. Baroque music in Austria reached its high point under the musically discerning Emperor Charles VI (1711–40), during whose reign the Turks were finally driven from Austrian territory. The Styrian composer and theorist Fux was imperial Hofkapellmeister from 1715 until his death

in 1741. Fux's sacred works, his most significant achievement, became widely known outside the court, especially in other parts of the empire. His music reflects a typical Baroque balance between older and more modern stylistic elements. The operas, oratorios and *sepolcri* of Fux and of his vice-Hofkapellmeister Caldara reflect for the last time the splendour of the imperial court (fig.4).



In the second half of the 17th century, the influence of the composition teaching of Christoph Bernhard (a pupil of Schütz) is evident in treatises by Poglietti, Kerll, Prinner and Samber. Andreas Hofer and Georg Muffat (whose 1699 manuscript treatise contains important elucidation of thoroughbass practice) were teachers of Samber, a Salzburg theorist who published a *Manuductio ad organum* and *Continuatio ad manuductionem organicum* (Salzburg, 1704, 1707), treatises which were succeeded by the frequently reprinted *Fundamenta partiturae* (Salzburg, 1719) of Samber's pupil, Matthäus Gugl. But it was Fux who became the first Austrian music theorist to achieve a European reputation, with his textbook on strict counterpoint, *Gradus ad Parnassum* (Vienna, 1725). The composer M.S. Biechteler von Greiffenthal was active in Salzburg from 1706; his sacred music was conservative but his instrumental works, notably the trio sonatas, show modern, Neapolitan tendencies.

After the Counter-Reformation monastic culture revived, predominantly under the Jesuits and Benedictines, and continued to flourish until the reforms of Joseph II (reigned 1780–90) struck its death-blow. The close connections between the church and schools gave music education a broad base. The works of numerous church and monastic composers such as J.G. Zechner became widely known.

An official report made in Klagenfurt in 1742 reveals the organization of musical life in towns. For centuries the schoolmaster both directed the church choir and sang

bass, and was assisted by an organist, two descant singers (boys), an alto, a tenor and the *Türmer* with his associates, who played the string instruments. These were the usual forces in town churches, where surviving music from Leoben (Styria), Gmünd and elsewhere indicate that polyphony was common in services. In the mid-17th century the parish musicians of Graz joined with the *Türmer* and town violinists to form a musicians' guild. A charter granted by Ferdinand III in 1650 assured them a privileged position in the city's musical life, but also imposed on them the obligation to provide music in the parish churches. Similar conditions, laid down by charters and privileges, also obtained elsewhere until the time of Joseph II.

4. Pre-Classicism and Classicism. The adoption of popular elements into art music, which were already a feature of the 16th-century German Gesellschaftslied, reached court circles, as exemplified by Prinner's thoroughbass songs for Archduchess Maria Antonia and German vocal music by Leopold I. In instrumental works of the transition period from Baroque to Classicism composers placed increasing emphasis on easily assimilable melody. This can be seen in the works of Gottlieb Muffat (Georg's son and a pupil of Fux), George Reutter (i), Monn and Wagenseil in Vienna; Eberlin, Adlgasser (whose best music is found in his *Schuldramen* and sacred works) and Leopold Mozart (who was most important as a teacher) in Salzburg; Steinbacher and Sgatberoni in Styria; and Haindl and Madlseder in the Tyrol. The divertimento and the string quartet gradually replaced the suite; the south German keyboard concerto took hold, owing much to the Italian violin concerto but independent of the north German keyboard concerto; the symphony became independent of the opera overture; and the *sonata da camera* ultimately led to the modern piano sonata and the genres for chamber ensemble with piano, such as the violin sonata, piano trio and piano quartet.

From the first half of the 18th century, performances outside the court theatres made opera accessible to the general public, in the Vienna Kärntnertortheater (from 1728) and by Italian itinerant troupes such as Pietro and Angelo Mingotti's company. *Opera buffa* rapidly became popular: Mingotti produced Pergolesi's *La serva padrona* in Graz as early as 1739. Soon after the middle of the century, Vienna saw the first example of Gluck's operatic reforms; in this process of renewal numerous minor masters also played their part. The combination of French and Italian stylistic features with German ones created the basis of Viennese Classicism, whose greatest representatives were Haydn, Mozart and Beethoven. This culture, enjoyed by the bourgeoisie as well as by the aristocracy, established Austrian musical pre-eminence.

After the deaths of Charles VI (1740) and Fux (1741), the imperial Hofkapelle forfeited its leading role in musical life. Its later directors included such estimable but historically unimportant composers as Predieri, J.G. Reutter, Gassmann (who instigated the founding of the Vienna Tonkünstler-Societät in 1772), Bonno and Salieri. The many aristocratic Kapellen, of all sizes, were more progressive, especially that of the Esterházys, associated with Haydn. Aristocratic and middle-class amateurs vied with each other in private and public concerts, spreading musical culture and encouraging music publishing, in which Austria had previously lagged behind Italy, England, the Netherlands, France and Germany. Music printing developed rapidly in Vienna from the end of the 18th century, with the establishment of the houses of Artaria, F.A. Hoffmeister, S.A. Steiner, Tobias Haslinger, Anton Diabelli, C.A. Spina and others. Through the reforms of Joseph II, astute at least in their social application, Austria was spared the fate of France at the end of the 18th century. Although Italians continued to play important roles in Austrian musical life well into the 19th century, they had already passed the height of their influence by the 1750s. Joseph II also gave new significance

5. Music making in a monastic community: drawing by Josef Bergler the younger, c1785 (Kupferstichkabinett, Berlin)

to the traditional military band (usually two each of oboes, bassoons and horns) by appointing such an ensemble, at a high level of proficiency and supplemented by two clarinets, as the Kaiserliche Kammer-Harmonie, to play *Tafelmusik* in place of the Hofkapelle band. This 'Harmoniemusik' ensemble became popular among the aristocracy of central Europe; Prince Schwarzenberg had such a group and Prince Liechtenstein planned to establish one in 1782. A similar group already existed at the Esterházy court in Eisenstadt. Composers who wrote or transcribed music for such ensembles were, besides Mozart and Haydn, Druschetzky, Gassmann, Joseph Fiala, Karl Kreith, Mysliveček, Rosetti, Salieri, Georg and Josef Triebensee, Johann Went and G.C. Wagenseil. The ensemble was later enlarged with flutes, trumpets, trombones and janissary instruments, and sometimes double bass or double bassoon. In mid-19th century this combination provided the basis of the new Austrian and community wind band movement. (*See* BAND (i), §II, 2(ii), and HARMONIEMUSIK).

The Viennese Singspiel evolved after 1760, influenced by *opera buffa* and *opéra comique*, but with its roots in popular comedy with musical interludes, such as the *Teutsche Comœdie-Arien* (*c*1750) attributed to Haydn. Mozart's *Bastien und Bastienne*, possibly written for performance at Dr Johann Anton Mesmer's house in Vienna, belongs to the new genre, which Joseph II encouraged by establishing a national Singspiel company in the Burgtheater. It opened in 1778 with Ignaz Umlauf's *Die Bergknappen* (fig.7) and reached its zenith with Mozart's *Die Entführung aus dem Serail* (1782). Italian opera provided strong competition and the German opera company soon closed down (which is why Mozart went back to Italian texts); but popular Singspiele by Dittersdorf, J.B. Schenk, J.B. Weigl, Haibel (Mozart's brother-in-law), Wenzel Müller and others had numerous performances at non-court theatres and became widely known outside Vienna. The crown of the genre was Mozart's *Die Zauberflöte*, first performed in Vienna in 1791, which had a profound influence on the development of German Romantic opera in the 19th century.

If German opera owed its classic form to Mozart, German oratorio was moulded by Haydn, whose *The Creation* (1798) and *The Seasons* (1801) had their first performances in Prince Schwarzenberg's Vienna palace. Church music too owed its classic profile to Mozart and Haydn, while the latter's brother Michael in Salzburg, Weber's teacher, made a specially large and pervasive contribution to the 19th-century liturgical repertory throughout the empire. The musical heritage of Mozart and Haydn passed to Beethoven, who made Vienna his home. Rejecting the ties of a permanent post which his deafness would have made impossible, he composed independently, though with the support of various noble patrons, notably his talented pupil Archduke Rudolph. Beethoven embodied the ideals of the middle class, which had newly come of age. Through Beethoven, who was no longer writing to commission, absolute music underwent an extraordinary expansion of its expressive potential and its forms, and an imposing legacy was created for future generations of composers.

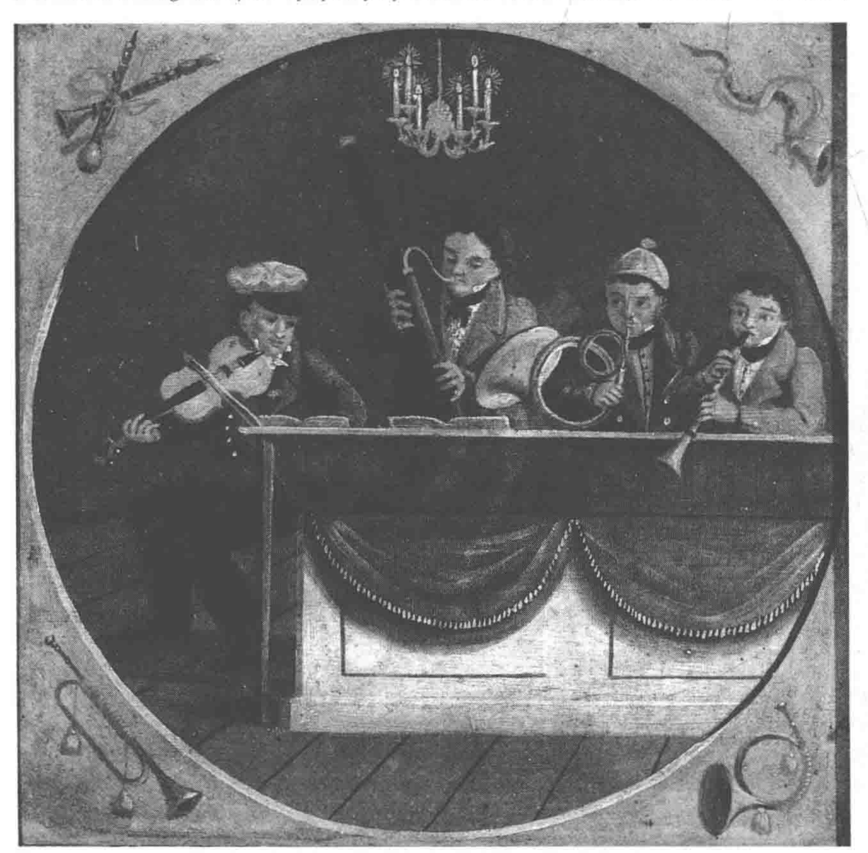
5. ROMANTICISM. Beethoven's contemporaries and near-contemporaries in Austria include such respected composers as Albrechtsberger (an eminent theorist, with whom Beethoven studied), Eberl, E.A. Förster, Gyrowetz, J.N. Hummel, Leopold Kozeluch, Wölfl, Paul and Anton Wranitzky; and Czerny (a pupil of Beethoven) attracted numerous piano pupils, the most celebrated being Liszt.

Ignaz Schuppanzigh established the Viennese tradition of public quartet recitals; the most prominent violin teachers and performers were Joseph Mayseder and Joseph Bœhm (the teacher of Ernst), Joseph Joachim (born, like Liszt, in the then Hungarian Burgenland) and the elder Georg Hellmesberger. Schubert, a generation younger than Beethoven, reinforced Austria's musical supremacy and established the importance of the lied. Like Beethoven, he wrote many of his works in Vienna or the immediate vicinity, but in 1827 ventured further afield, to Graz, where his old friend and fellow pupil of Salieri, Anselm Hüttenbrenner, the best-known Styrian composer between Fux and Hugo Wolf, came into possession of the 'Unfinished' Symphony. In 1865 he gave it to the Viennese Hofkapellmeister, Johann von Herbeck, for performance, and it finally became the property of the Gesellschaft der Musikfreunde in Vienna. This association of music lovers, led by Joseph Sonnleithner, had been officially founded in 1814 in succession to the Gesellschaft Adeliger Frauen, founded in 1812, and soon became one of the foremost institutions of Viennese concert life and a model for music societies founded by both noble and middle-class amateurs in Innsbruck, Graz (1815), Radkersburg (Styria, 1820), Linz, Klagenfurt (1828), Fürstenfeld (1832) and other towns. In 1819 F.X. Gebauer and Eduard von Lannoy, a native of Brussels, founded the Viennese Concerts Spirituels, which performed mostly Beethoven. Lannoy also contributed articles on music to Ignaz Jeitteles's *Ästhetisches Lexicon* (Vienna, 1835–7). In Salzburg, public musical life suffered a setback as a result of extreme political instability (it changed rulers four times between 1803 and 1816, when it fell to the Habsburgs) but revived with the foundation in 1841 of the Dommusikverein und Mozarteum, through the initiative of Franz von Hilleprandt. The first Mozart festival took place in 1842, under the direction of Neukomm and with Mozart's two sons participating, on the occasion of the unveiling of the statue by Schwanthaler. In the meantime, Vienna was consolidating its position as a musical capital. Rossini celebrated one triumph after another there, beginning with *Tancredi* in 1816, and Donizetti and Bellini followed soon afterwards. Paganini and Liszt were outstanding among the instrumentalists who dominated public concerts during the first half of the century. The declining standards of the opera and concerts drew sharp criticism from Schumann, who failed to establish himself in Vienna in 1838 but discovered the 'Great' C major Symphony in Schubert's legacy. Orchestras normally consisted of amateurs, reinforced by professional players only on special occasions; standards rose only after the institution of the Philharmonic concerts by Nicolai and his colleagues in 1842; from 1860 they became the centre of Viennese concert life.

6. Festsaal (now known as the Haydn-saal) in the Esterházy Palace, Eisenstadt, where concerts were held

The Viennese waltz developed during the Biedermeier era in the hands of Joseph Lanner and Johann Strauss (i), its origins lying in the Upper Austrian ländler, the *Steirer* (from Styria) and the *Deutscher* ('German dances'), which Mozart, Haydn and Schubert admired and composed. Culminating with the composer and conductor Johann Strauss (ii), the waltz conquered the concert halls and ballrooms of the world. *An der schönen blauen Donau* became the most famous Viennese waltz and *Die Fledermaus* (first performed in 1874) marked the high point of the dance-inspired Viennese classical operetta, a genre owing much to Wenzel Müller's earthy and popular incidental music for the plays of Raimund and Nestroy, as well as to Offenbach's tumultuously acclaimed operettas. Josef and Eduard Strauss were also conductors and prolific composers, who helped their brother to sweep the world with Strauss dances. Franz Suppé and Carl Millöcker did the same for operetta, with remarkable interpreters like Marie Geistinger and Alexander Girardi contributing to their success.

A widespread awareness of traditional music, previously transmitted only orally, arose during the Romantic era and led to systematic collections and catalogues. Concert performances, which adapted traditional music to the conventions of art music, were given by the 'Alpensänger' on successful tours abroad. Song inspired by traditional influences also became immensely popular; for example, both *Stille Nacht, heilige Nacht*, written in 1818 in Arnsdorf in the province of Salzburg, with words by a village priest, Josef Mohr, and music by the schoolmaster and organist F.X. Gruber, and the sentimental song in Carinthian folk style, *Verlassen bin i*, by Thomas Koschat, were translated into many languages. Other forms of popular music which have retained their appeal are the songs associated with the inns in the vineyards of the Viennese suburbs (*Wirtshaus-* and *Heurigenlieder*), *Schrammelmusik*, named after the brothers Johann and Joseph Schrammel, and military marches, evolved from bugle calls as well as from traditional songs and soldiers' songs and mostly composed by regimental bandmasters and bandsmen, notably Philipp Fahrbach (father and son), Julius Fučik, Joseph Gungl, Karel Komzák (father and son), Franz Lehár (father and son), E.N. von Rezniček, Josef and V.H. Zavrtal and C.M. Ziehrer.



Male-voice choral singing, harking back to Michael Haydn, received considerable impetus from the 1848 Revolution. Choral societies were founded in many cities and towns around the middle of the century, including a Männergesangverein in Vienna (1843), in Salzburg (1844) and in Graz (1846), of which one of the first chorus masters was Conradin Kreutzer. A community band movement began to develop in the same period.

Austrian supremacy in instrumental music and song in the second half of the 19th century was maintained by Brahms, Bruckner and Wolf. The development of opera was determined by Wagner, who, despite critical hostility, found rapid public favour, especially in Vienna and Graz,

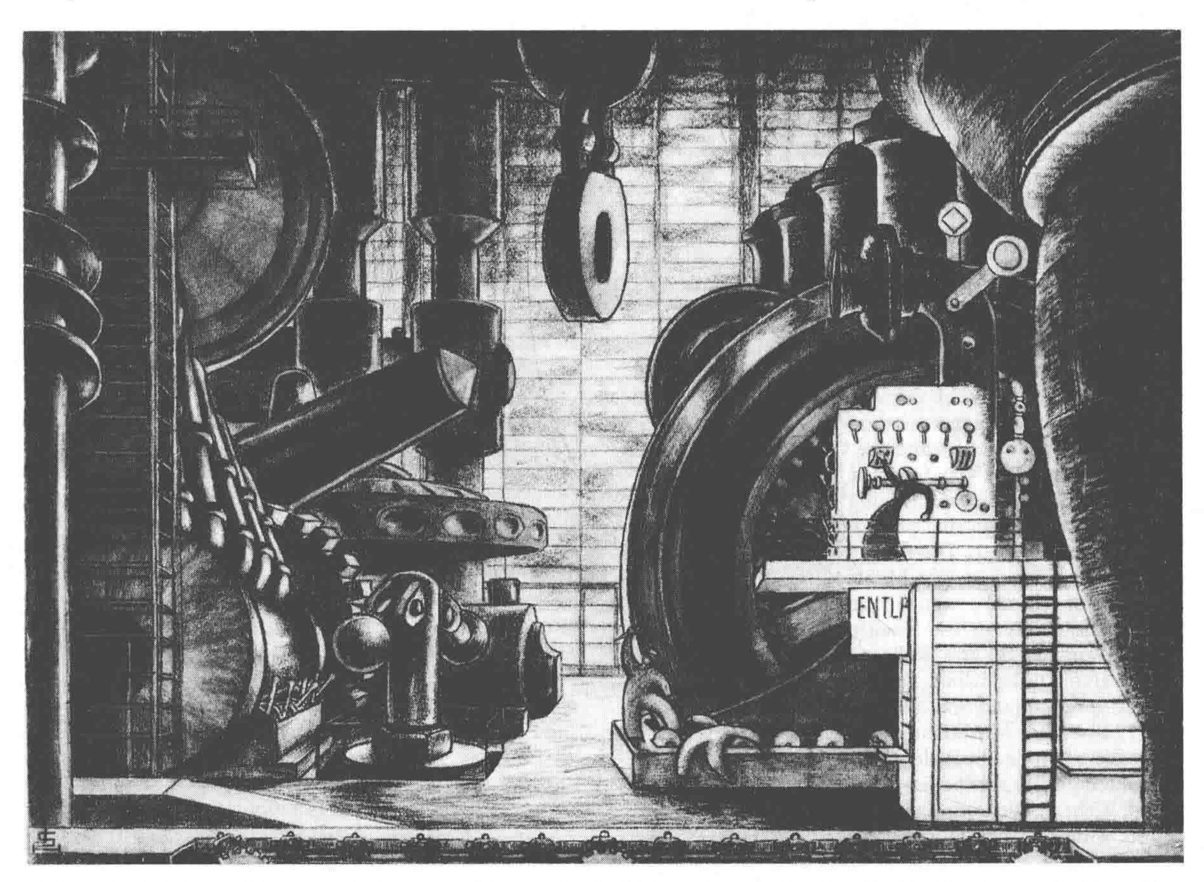
where *Tannhäuser* was performed in 1854 before its Viennese première. Wagner visited Vienna ten times between 1832 and 1876. Joseph Hellmesberger (i), Hanslick and Julius Epstein introduced Brahms to musical Vienna, which became a second home for him, the heir of the Viennese Classical composers, as it had been for Beethoven. Other Austrian towns associated with Brahms include Bad Ischl, Pörtschach on the Wörther See (Carinthia) and Mürzzuschlag (Styria), where he spent summers. Bruckner lived more than half his life in Upper Austria and is the province's outstanding composer. He was an organist and conductor in St Florian and Linz until 1868, when he became a teacher of theory and the organ at the Vienna Conservatory. Despite Wagner's influence, the organ remained the determining factor for his conception of orchestral sound. The dispute between the supporters of Brahms and Bruckner was aggravated by the influential critic Hanslick and his championship of Brahms. Nevertheless the co-existence of diverse artistic personalities remained a characteristic of Austrian musical culture. Hugo Wolf first studied the piano at Johann Buwa's music school in Graz, one of the most important music academies in Styria. Wolf then studied with the Styrian Robert Fuchs in Vienna, where he spent the rest of his life. There his supporters, including Bruckner's pupil Joseph Schalk, enthusiastically promoted his songs. Noteworthy achievements in popular opera were made by Brüll and Kienzl. Graz was outstanding among the provincial cities in the second half of the 19th century; its opera, where such conductors as Carl Muck, Schalk and, in the early 20th century, Krauss, Oswald Kabasta and Böhm acquainted the public with contemporary as well as classical works, was for performers a springboard to the most famous theatres. The music theorist W.A. Rémy (1831–98), who came to Graz from Prague, taught Busoni, Reznicek, Kienzl, Weingartner and Heuberger. At the same time the Carinthian-born Friedrich von Hausegger worked in Graz as a critic and aesthetician, advocating Wagner's ideas. In Salzburg in 1880 the Internationale Mozart-Stiftung, founded by Carl von Sterneck in 1869–70, united with the Mozarteum (which had severed its links with the Dommusikverein) to form the Internationale Stiftung Mozarteum.

6. THE 20TH CENTURY. In the years around 1890 the culture representative of the Austrian monarchy came face to face with an aggressive modernity. In close relation to literature, architecture and the visual arts (the Vienna Sezession movement was founded in 1897), music experienced a radical renewal, bridging the much debated gulf between Brahms on the one side and Bruckner and Wagner on the other. The first prominent figure in this progressive movement was Mahler (fig.10). The Vienna Hofoper, of which he was director from 1897 to 1907, was at the centre of the intellectual debate; Mahler's adherents included Egon Wellesz, Berg, Webern, Schoenberg, Stefan Zweig, Klimt, Freud and Guido Adler. Until the anti-modern (and anti-Semitic) change of direction in the 1920s, the Musikhistorisches Institut of Vienna University, founded by Adler in 1898, was another refuge for contemporary composers. Its graduates included Karl Weigl, Webern, Wellesz, Hans Gál and Ernst Toch. Weigl, Bruno Walter, Zemlinsky and others worked as Kapellmeister under Mahler and continued his tradition of perfectionism in performance. Zemlinsky was a major figure as both conductor and composer, and his pupils

10. Gustav Mahler: portrait by Arnold Schoenberg, 1910 (private collection)

and colleagues included Weigl, Alma Schindler (who married Mahler in 1902), Korngold, Hans Krása, Viktor Ullmann and Webern. The self-taught Schoenberg, in particular, regarded Zemlinsky as the foremost authority on music and a committed campaigner on behalf of musical innovation When Schoenberg set out to dissolve traditional tonality around 1908, he was still working closely with Zemlinsky. However, although Zemlinsky kept abreast of these increasingly experimental procedures, he did not adopt them in his own compositions. Schoenberg himself became the next entral figure of modern music in Austria. His pupils in Vienna included Webern, Berg, Wellesz, Hanns Eisler, Edward Steuermann, Max Deutsch, Hans Erich Apostel and Ullmann.



Even composers who were not close to the Second Viennese School in technique or aesthetic outlook shared the sense of a new departure that it inspired. Josef Mattias Hauer had developed a 12-note system by about 1920, in parallel to Schoenberg, although the musical results were quite different. Franz Schreker, who had studied modern painting and literature as well as the early work of Schoenberg and the music of Zemlinsky and Richard Strauss, became one of the most frequently performed German-language operatic composers of the 1910s and 20s. With the advent after World War I of the Neue Sachlichkeit movement, which originated in Berlin rather than Vienna, Schreker came to be regarded as a late Romantic, although as a teacher of Ernst Krenek, Max Brand and Felix Petyrek he had paved the way for some of the most successful composers of the 1920s.

The central position of Vienna in the final years of the Austro-Hungarian monarchy is perceptible in many cross-currents: for instance, Mahler had already reorganized the Budapest Opera before he was appointed to Vienna; Lehár settled in Vienna only after spending years in Budapest, Prague and Trieste; and Zemlinsky remained in touch with Vienna during his 16 years as director of the Prague German Theatre. The independent musical life of Graz, Salzburg and Innsbruck, too, was perceptibly influenced by developments in Vienna.

After the collapse of the monarchy, the musical life of the much smaller republic of Austria showed an increasingly anti-modern bias. The departure of Schreker and Schoenberg for Berlin, in 1920 and 1926 respectively, marked a wave of emigration; musicians leaving Vienna for Berlin alone included Karol Rathaus, Krenek, Max Brand (fig.11), Felix Petyrek, Toch and Eisler, as well as many composers of operetta and film music (notably Ralph Benatzky, Robert Stolz, Nico Dostal, Wilhelm Grosz and Hans J. Salter). Those who stayed in Austria, including Joseph Marx (i) and Franz Schmidt, composed mainly in a late Romantic style. Moreover, anti-Semitic, pro-Nazi sentiment was becoming increasingly evident (a Nazi poster campaign was mounted against Krenek's *Jonny spielt auf* in Vienna in 1928). In this fascist climate Austria offered a congenial home only to composers and performers of innocuous light music. For countless musicians the Anschluss of 1938 meant exile or internal emigration, and in some cases arrest and deportation. A cursory glance at the Austrians in Californian exile alone indicates the scale of this exodus: émigrés included Schoenberg, Eisler, Krenek, Walter, Toch, Oscar Straus, Rathaus, Stolz, Eric Zeisl, Korngold, Salter, Max Steiner, Ernest Gold and many others. With the forcible exclusion of a huge number of Jews, Catholics, patriots, socialists and communists, Austria was dominated by an 'Aryanized' adherence to tradition which excluded jazz, Neue Sachlichkeit, Expressionism, dodecaphony and all forms of experimentation.

The situation remained largely unchanged in the years following the war. With the revival of Austrian national awareness, music-making was dominated by the traditional Classical and Romantic repertory. The influential *Österreichische Musikzeitschrift* (ÖMZ) was founded in 1946, and the Vienna Staatsoper, which had been destroyed in the war, was reopened in 1955, the year of the reconstitution of Austria as an independent and democratic country. Little was done, however, to reintegrate the exiles. The post-Romantic composers (Joseph Marx (i), Egon Kornauth, Ernst Ludwig Uray, Otto Siegl) retained their influence and their high reputation, especially in Graz. Meanwhile, neo-classicism, as represented by such composers as Marcel Rubin, Alfred Uhl, Paul Angerer and, to a lesser extent, Gottfried von Einem, was widely regarded as a progressive style; the most influential models for composers up to the 1960s were Hindemith, Stravinsky and Bartók.

A smaller group of composers, notably Robert Schollum, Karl Schiske and Helmut Eder, cultivated a synthesis of tonality and the serial techniques of the Second Viennese School. But in general the implications of the Viennese School still remained as ignored as the experimentation of Neue Sachlichkeit (which was a topic among the young postwar composers, e.g. Paul Kont and Gerhard Rühm). The remaining disciples of the Second Viennese School (Hans Erich Apostel, Hanns Jelinek) came to reject the postwar serialists' interpretation of Webern, and themselves were regarded outside Austria as conservative.

11. Set design by Johannes Schröder for Prologue scene ii (the machine hall) in Max Brand's 'Maschinist Hopkins', Stadttheater, Duisburg, 13 April 1929 (Theatermuseum, University of Cologne)

International recognition among avant-garde composers was achieved first by the Hungarian exile György Ligeti, and later Friedrich Cerha, with their striking post-serial compositions, and by Roman Haubenstock-Ramati, who took his guidelines more from innovations in the visual arts than from the musical avant garde of the postwar period. Pupils of Schiske who took part in the Darmstadt summer courses (Gösta Neuwirth, Erich Urbanner, Kurt Schwertsik, Otto M. Zykan) tended to maintain a sceptical or playful distance from the avant-garde belief in progress. A pointedly detached reaction that emerged after the 1960s was a style of neo-tonality tinged with irony (Schwertsik, Zykan, H.K. Gruber). Since then, more and more composers have cultivated an anti-experimental striving for 'comprehensibility' and 'naturalness' (Iván Eröd and, later. Herbert Willi) or have sought to intermingle 'serious' music, 'light' music and jazz (Gerhard Wimberger, Werner Pirchner and, later, Franz Koglmann and others).

But the diminishing impact of specific schools on compositional techniques or styles in Austria has from the 1980s onward, again paved the way for more determined efforts of composers to be innovative. Even composers of similar aesthetic orientation G.F. Haas, Beat Furrer, Christian Ofenbauer, Wolfram Schurig, Bernhard Lang, Klaus Lang and Olga Neuwirth) have adopted highly individual standpoints. A number of composers draw on extra-musical stimuli, taken from film and video (Neuwirth), literature (Gerhard Rühm, Clemens Gadenstätter), performance art and visual art (Peter Ablinger, Nader Mashayekhi, Hermann Nitsch). In the field of performance this spirit of innovation has been reinforced by internationally renowned ensembles (Die Reihe, founded 1958; Klangforum Wien, founded 1985) and by festivals (the Musikprotokoll at the Styrian Autumn Festival, Graz, from 1968; Wien Modern, founded in 1988).

Electronic music studios were founded at institutions in Salzburg, Vienna and Graz 1965. Since then the cultivation of electronic music in Austria has ranged from 'acousmatics' (Dieter Kaufmann) through computer composition (Karlheinz Essl) and media art (the 'Kunstradio' of Österreichischer Rundfunk) to ambient music and noise music (Christian Fennesz). In addition, jazz (the Vienna Art Orchestra), improvised music (Wolfgang Mitterer, Burkhard Stangl, Werner Dafeldecker, Radu Malfatti, Fritz Novotny) and the 'Austro-pop' initially modelled on American examples have developed as vivid genres. Moreover, the activities of experimental electronic pop labels (mego, Sabotage) in the 1990s are partly a reaction to oligopolistic concentrations in the mass-media industry.

II. Folk and traditional music

1. Historical documents (to 1800). 2. Collection and research after 1800. 3. Musical styles.

1. HISTORICAL DOCUMENTS (TO 1800). Theological and legal writings, iconographic sources and finds of musical instruments provide indirect evidence, from the early Middle Ages onwards, of a wealth of folk music rooted in the pastoral culture of the eastern Alpine area. For instance, an account in the Nonsberger Märtyrerbericht of CE397 gives a detailed description of the function of music and song in the execution of three Christian missionaries: the 'tuba', a kind of bark trumpet, summoned the community to rituals, roused warriors to battle and, like the sound of bells, was supposed to avert misfortune. The singing of the local people was harsh, raucous and appallingly shrill to the ears of a stranger; the 'singers' may, however, have intended to produce such an effect in order to conjure up numinous terrors. This account emphasizes the role of fear and horror in archaic religious ritual and music. The records of the Christian councils at Salzburg and Trent in following centuries refer repeatedly to licentious heathen songs, unbridled pleasure taken in the playing of lutes and pipes, and the clerical Feasts of Fools when musicians and jugglers performed. In particular the church forbade the laments for the departed, described as 'carmina diabolica' (devilish songs), which people used to sing over the dead by night.

Musicians played for dancing, and this was regarded as their principal employment in town and country alike. Many ecclesiastical prohibitions and sermons, condemning secular dancing as a diabolical counterpart of the dance of heaven, show that dancing was widespread and very popular, both in rituals and as entertainment. Historically, musicians practised their art in the region where they lived, for instance in the Tyrol, and in Admont and Aussee in upper Styria. A house in the town of Wels in Upper Austria has pictures of dancing dating from the 15th century, described by Richard Wolfram as the oldest depictions of folkdancing in Austria. Documentation reveals that itinerant and rural musicians played the fife and drum, the fiddle and the bagpipes.

The manuscript tradition which began in 11th-century monasteries provides many references to singing and songs. In the early 14th century, for instance, the Styrian rhyming chronicler Ottokar (from Gaal) not only mentions the 'lotersingarae' and 'muotelsingarae' who used to perform their defamatory songs at the tables of lords and retainers in Vienna, but also gives evidence of the oral transmission of the Nibelungenlied. The early 13th-century Carmina burana manuscripts (*D-Mbs* Clm 4660), made famous by Carl Orff, was compiled in the southern border region of the Bavarian linguistic area, possibly in the Styrian monastery of Seckau or the new foundation at Bressanone in the southern Tyrol.

The invention of printing made it possible to disseminate songs in entirely new ways after the late 15th century. The sacred songs of the Reformation were as much in the spirit of the older, oral tradition as the songs of the Counter-Reformation (Nicolaus Beuttner's *Catholisch Gesang-Bůch*, Graz, 1602). Adaptations of folksong for sacred purposes betray their origin when their tunes are specified in handbills and songbooks. As a record of newsworthy events, historical narratives also found their way into the folk tradition, for instance a song about Christian warfare against the Turks printed by Hans Singrener of Vienna in the *Toler melodey* of about 1520–30. Didactic ballads and catechistic legends are found in particular profusion at this time. Examples of the former genre are *Herzog Ernst* (whose tune was used in the early 16th century for the ballad of *Der Ritter aus der Steiermark*), *Tannhäuser*, *Das Schloss in Österreich*, and later ballads of social criticism such as *Die Brombeerbrockerin*, *Ritter Blaubart* (*Halewyn*), *Doktor Faust* and *Der Graf und die Nonne*. An example of the latter genre is *Der Ritter und Martyrer Floriani*, printed in 1705 by Heyinger in Vienna. Handbills very seldom gave musical notation; naming the tune enabled a performer to sing the text. It has been possible to reconstruct many of these tunes, however, from comparative studies of melodies and from recent traditions.

2. COLLECTION AND RESEARCH AFTER 1800. The concept of the *Volkslied* ('folksong'), formulated by Johann Gottfried Herder in the 1770s, spread in Austria about 1800. The earliest evidence of deliberate folksong collection occurs in the topographical and statistical survey of Neuberg in Styria of 1803, which gives the words and melodies of seven songs, including a *Lulezer* as sung by the dairymaids on the Alpine pastures, in broad melodic construction and without text. The survey was made at the instigation of Archduke Johann and asked for the 'description of the principal popular entertainments and pleasures, rustic games, etc., of the people, with information about the most common folksongs or those peculiar to a certain place, national melodies, with the music if possible, dances, etc., and details of the usual musical instruments'. In this the purpose of early Austrian folksong collections differs from the literary aims of such collectors in Germany as Brentano and Arnim, who edited *Des Knaben Wunderhorn* (1806–8). Probably the most interesting documents from the Archduke Johann collection were those provided by Johann Felix Knaffl, financial administrator of Fohnsdorf. In his 'Attempt at a Statistical Account of the Financial District of Fohnsdorf in the Judenburg Region', he tried to show the difference between the music of rustic performers and the contemporary 'classical' music of such composers as Haydn. He gave a German dance in what he described as its 'botched' version (*verhunzt*,:to his mind, incorrectly harmonized and performed by rustic musicians who could not keep in tune) and also in its 'correct' version (ex.1). The independent Austrian approach to folksong collection at this period is also evident in the appeal for songs to be collected in all parts of the monarchy, made in 1811 by the Viennese Gesellschaft der Musikfreunde.

Also of great documentary value are the first folksong collections to be printed in Austria: Meinert's *Alte teutsche Volkslieder in der Mundart des Kuhländchens* (1817) and Žiška and Schottky's *Oesterreichische Volkslieder* (1819), the former collection without but the latter including musical notation (fig.12: *Drei Wünsche*, from Žiška and Schottky, illustrates the wide-ranging melodic structure found in the Alpine area). Von Spaun's *Lieder, Tänze und Alpenmelodien* (1845) is the first of a series of Austrian literary editions of folksongs. At the same period Alpine

(a) 'botched' version

(b) 'correct' version

singers from the Tyrol, Salzburg and Styria toured Europe and America, performing in traditional costume and bringing *Heimatlieder* ('homeland songs') and traditional love songs as well as the *Jodler* (yodel) into concert halls and places of light entertainment. These were the folksong genres to which collectors, publishers and performers turned increasingly, while narrative and historical genres such as the ballad and the legend attracted little attention. Arrangements of folk music were performed in the salons of the aristocracy and the middle classes, for instance Eduard von Lannoy's *Nationale Sang-und Tanzweisen des österreichischen Kaiserstaates: eine Sammlung charakteristischer Rondos für das Pianoforte*, published about 1830 in two volumes, one for Austria and one for Styria, and Bernhard Romberg's *Divertimento über Österreichische-Volkslieder für das Violoncello mit Begleitung des Piano-Forte.* Archduke Johann, who had instigated folksong collection in Austria, was not only the dedicatee of many editions of folksongs and compositions in the folk style, but also frequently featured himself, as 'Prinz Johann', in songs of the folkloristic type.

Peter Rosegger's suggestion that a 'society for the performance of the old folksong' should be formed (*Bergpredigten*, 1885) led to the founding of the Deutscher Volks gesang-Verein in Wien by Josef Pommer in 1889. This new choral manner of performing folksong, with its national German aspects, spread only slowly in several German-speaking Austrian cities. The journal *Das deutsche Volkslied* began publication in Vienna in 1899, dealt with all activities relating to folksong and continued until 1947. Pommer's name is also connected with the 'production theory', according to which folksongs began as anonymous compositions by the people, who then polished them. Consequently, it was thought, folksongs inherently would be 'of the people', simple, plain, natural, true, heartfelt and national in tone (J. Pommer, 1915, p.155). In 1901 the Viennese publishing firm Universal Edition proposed an independent plan for the collection and publication of Austrian folksongs which was approved by the Minister of Culture. At Pommer's suggestion, this led to the creation in 1904 of a folksong project under the auspices of the Austrian Ministry of Information, whereby a number of experts (linguists, musicologists and folklorists) would coordinate the collection and academic publication of folksongs. However, the outbreak of World War I prevented this plan from being realized. A volume of songs from the Gottschee area, described as being ready for press before 1915, was not completed and published until over 50 years later (in three volumes, 1969–84, ed. Brednich and Suppan). Since the end of World War II, and in changed political circumstances, the Österreichische Volksliedwerk organization has put Pommer's ideas into practice in extracurricular education for young people and adults. Comparative musicological and ethnomusicological work on Austrian folksong was, however, slow to begin.

3. Musical styles. The epic and stichic forms of the Gottschee ballad tradition derived from older, medieval styles of song and continued into the 20th century. This tradition was first 'discovered' by German scholars who found relics of the Kudrun epic and the old dialect in the texts, and eventually Walter Wiora pointed out its specific musical character. The people who were moved by the Counts of Ortenberg in the 14th century from the

12. *'Drei Wünsche', from 'Oesterreichische Volkslieder', the first printed Austrian folksong collection, compiled by F. Žiška and J.M. Schottky (Pest, 1819, p.183)*

Carinthian area of the east Tyrol to the Gottschee area in southern Krain (now Slovenia) lived in linguistic isolation but not without contact with their south Slav neighbours, and over six centuries they maintained musical practices of the late medieval sung narrative. The typical series of descending, closely graduated lines is well illustrated by the ballad *Der ausgeweidete Jäger* ('The Disembowelled Huntsman'; Brednich and Suppan, 1969, no.9: ex.2).

Ex.2 The Gottschee ballad *Der ausgeweidete Jäger*, text and melody in the 'old style' (from Brednich and Suppan, vol.I, p.48).

Biə vriə ischt aûf kluains Jagərle!
Es schteangait schmuaraisch guər vriə aûf,
Es ziəhət ahin in an vinschtrn Bolt;
Pənochtən tet kluains Jagərle.

Another example is the ballad *Der Tod und der Schultheiss* ('Death and the Village Mayor'; Brednich and Suppan, 1969, no.119: ex.3).

Ex.3 The Gotschee ballad *Der Tod und der Schultheiss* (from Brednich and Suppan, vol.I, p.426).

Biə vriə ischt aûf nârə dar raichə Shûppon!
Ar schteanôt schmoarônsch guər vriə aûf nâr,
Ar kraizigət shi schean, ar drbûgət shi schean,
Ar lêgət shi â guər scheandr uən nâr,
Ar ziəchət ahin am Bâge proit nâr,
Ùnd îmon pəgêgnt dar grimmigə Toat.

Epic and stichic forms are found in the Gottschee legends and in the early sacred cries and songs of the *Erlauer Spiele* (ed. Suppan and Janota, 1990).

Alpine vocal forms are marked by wide-ranging melodies in natural notes still played on trumpets made of wood, cowhorns, other animal horns and the more recent alphorn. They include the *Almschrei* (calls for gathering cattle together or summoning people to work) the *Alpsegen* and *Kühreigen*, the *Juchzer* and the *Jodler*. These forms are primarily concerned with acoustic communication: signals between people, between people and animals, or between people and gods. In this context Wiora speaks of 'elementary forms of singing' belonging to a development preceding song itself. The rhythmically free, strongly melismatic movements, without verbal or tonal links, have mainly been recorded in the Salzkammergut area by Konrad Mautner and Hans Gielge. Characteristics of the *Almschrei* are the powerfully sung high note and the descending melodic structure associated with exhaustion. In ex.4, an *Almschrei* from the Salzkam-

Ex.4 *Almschrei* from the Salzkammergut, with untuned alphorn F (×) (Sichardt, 1939, p.48).

mergut, the uncertain melodic construction, in which the fourth oscillates between F and F♯, indicates the influence of the natural scale (of the alphorn).

Ex.5 Canonic *Jodler* (of the *Nacheinander* type) from Rottenmann (after Sichardt, 1939, p.24).

2. Überschlag

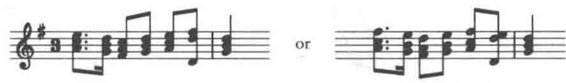
Sichardt gives an account of the polyphonic *Jodler* of the Austrian Alps, which is stylistically and formally related to Renaissance music in an area always noted for the close links between sacred and rustic musical forms. Both the tenor and the canonic principles occur in the records of oral tradition. Often, as in the songs of the Carinthian *Wildsänger*, the leading voice is in the second tenor, so that the polyphony builds up from the centre, as in vocal polyphony of the 15th and 16th centuries. The terms used also indicate this feature when the high voice is described in folk terminology as the '*Überschlag*' ('superius') (ex.5). Ex.6 is an example of a two-part

Ex.6 Two-part *Jodler* of the *Nacheinander* type from Irdning (after Sichardt, 1939, p.25).

Nacheinander Jochizer, recorded near Irdning in the Ennstal area of Styria.

The pastoral melos survives in a stylized form and has adapted to the major scale in polyphonic sung forms of



the yodel, in the instrumental *Ländler* dances of Upper Austria and in Styrian dances, with mannerisms also appearing at times in the melodic and, above all, the rhythmic structure, and in the original and quick 3/4 rhythms of the Salzkammergut *Schleunigen*. Only the main part is fixed; the bass and the accompanying parts are improvised after it has been heard. Accompaniment frequently consists of a flute or clarinet, two fiddles and bass (ex.7). For gradual progressions when there is no

Ex.7 'Styrian' dance from the Salzkammergut (Haager, 1979, p.41).

alternating harmony, the harmonization scheme consists of a series of triads or 6th chords, and the main part is the lowest (ex.8).

Ex.8 Chord progressions in Alpine polyphony (after Haager, 1979, p.40).

Ländler and Styrian dances are played sometimes on the diatonic or 'Styrian' dulcimer, sometimes on the diatonic or 'Styrian' accordion first made in the 19th century, with the choice of keys limited to tonics, subdominants and dominants.

From the beginning of the 19th century, folksong collection has levelled out and simplified what used to be a primarily oral tradition by writing it down, adapting it to tempered tuning and obliterating characteristic regional performance features relating to techniques of ornamentation and slurring, rhythmic irregularities and individual forms of polyphony. In this way, with a few exceptions, an artistically inert, homogenized kind of Alpine folk music was created from Vorarlberg and the Tyrol to Lower Austria and the Burgenland, a style that could be easily reproduced in its polyphonic triads and 6ths in the major, and could thus be easily trivialized. This was the origin of the 'Upper Krain Sound' in the fashionable light music of the 1970s and 80s, an ensemble for dance and light music consisting of clarinet, trumpet, euphonium, accordion, guitar and percussion, sometimes with song. Austria's most popular television programme, the folkloristic 'Musikantenstadl', took the 'Upper Krain Sound' far beyond Austria itself in the shape of what was known as *Lederhosenmusik*. In the 1990s, hybrid forms mingled techniques of electronically amplified rock music with Alpine folk music traditions (e.g. 'Hubert von Goisern').

The *Kärntnerlied* ('Carinthian song'), on the other hand, has retained some individuality, particularly through the five-part polyphony with a high upper part (ex.9) performed only by men (*Wildsänger*), and especially in its further development as the *Neues Kärtner Volkslied*. Carinthia is notable among the provinces of Austria in that its vocal traditions are stronger than those of instrumental music. Amateur musical activities reflect this fact: Carinthia has more choirs than community wind

Ex.9 Five-part *Kärntnerlied*.

bands, while in the other Austrian provinces wind bands considerably outnumber choirs.

Within the Republic of Austria, a Slovenian minority in Carinthia, and Croatian and Hungarian minorities in the Burgenland maintain the musical traditions of their countries of origin. For both the south Slav groups, the *Tambura* ensembles (*see* CROATIA) have recently become a symbol of their ethnic independence.

HELLMUT FEDERHOFER/WOLFGANG SUPPAN (I,1–5), BERNHARD GÜNTHER (I,6), WOLFGANG SUPPAN (II)

Ausweichung (Ger.: 'digression'). A change of key. *See* MODULATION (i).

Auszug (i) (from Ger. *ausziehen*: 'to draw out', 'to extract'). A term used to designate a vocal score (*see* SCORE, §1) of an opera or similar work.

Auszug (ii) (from Ger. *ausziehen*: 'to draw out', 'to extract'). A slide (*see* ZUG (ii)) of a trombone or slide trumpet.

Auteri-Manzocchi, Salvatore (*b* Palermo, 25 Dec 1845; *d* Parma, 21 Feb 1924). Italian composer. He was the son of the mezzo-soprano Almerinda Manzocchi, who in the 1820s and 30s had created a number of roles in operas by Donizetti and others. His most successful opera was *Dolores*, which was widely performed in Italy. Isabella Galletti Gianoli, who sang the title role, included it in her regular repertory and contributed to the opera's popularity. Of his other operas, *Il negriero*, *Stella* and *Il Conte di Gleichen* were well received by Italian critics, but were not so widely performed. Auteri-Manzocchi's style was heavily influenced by Verdi, but also showed some debt to Bellini.

Autheman, Nicolas. *See* HOTMAN, NICOLAS.

Authentic cadence. A perfect CADENCE made up of a dominant chord followed by tonic chord (V–I), both normally in root position; the term is contrasted with 'plagal cadence', whose penultimate chord is a subdominant. The term is used mainly in American writings, which sometimes state that the uppermost note in the final chord should be the tonic.

Authenticity. The term 'authenticity' has been used in several senses relating to music. The most common use refers to classes of performance that might synonymously be termed 'historically informed' or 'historically aware', or employing 'period' or 'original' instruments and techniques. A concern with historical performing practices is a by-product of 19th-century historicism and is evidenced, for instance, in the production of critical and Urtext editions, in Mendelssohn's performances of earlier music, in the restoration of plainchant by the monks of Solesmes and in the colourful antiquarianism of Arnold Dolmetsch. However, 'authentic' performance was not to become a central element of Western performance until the 1970s, when it began to prove an extraordinarily successful direction for many performers and groups, encouraged by a buoyant recording industry. (*See also* EARLY MUSIC.)

'Authentic' performance may refer to one or any combination of the following approaches: use of instruments from the composer's own era; use of performing techniques documented in the composer's era; performance based on the implications of the original sources for a particular work; fidelity to the composer's intentions for performance or to the type of performance a composer desired or achieved; an attempt to re-create the context of the original performance; and an attempt to re-create the musical experience of the original audience.

Many critics and scholars have questioned the ideals and aims of the historical performance movement and the term 'authenticity' itself has come in for particularly stern criticism, for example from Joseph Kerman and Richard Taruskin. To Taruskin, 'authenticity' suggests a form of cultural elitism which can imply that any other type of performance is 'inauthentic', as if a forgery or an act of almost purposeful deceit. He further notes that very little in historical performance is truly historical since so many aspects of performance have to be invented or co-opted from existing practices. Moreover, the style of performance and the selection of historical data are conditioned by modern taste and thus represent the hidden musical corollary of high modernism. In an interesting twist of terminology, Taruskin suggests that historical performance is in fact 'authentic' as a true symptom of modernist thought.

Few, however, would dispute that the movement for historical performance has brought with it many advantages. Initially centred on Baroque performing practice, the movement has expanded in all historical directions, even producing period performance of 20th-century music. While the use of the term 'authenticity' has dropped considerably since the early 1990s ('historically informed' or 'period performance' are more common), there is no doubt that it has contributed to the success of the movement. In an age that has experienced both the catastrophic destruction of cultural artefacts and a phenomenal expansion of technological production and reproduction, there is a definite craving for the 'original' and 'authentic' in many areas of Western society. The postwar era has also seen the spectacular growth of interest in 'authentic' restoration and period style in architecture. The cultural theorist Fredric Jameson may be correct in suggesting that the various standardizations of global capitalism and the concomitant expansions of

the media and technology towards the end of the 20th century has resulted in a weakening of our historicity. This means that we are no longer so fully aware of our place within human history and are not so able to appreciate ourselves as historically conditioned beings. Thus this period has seen, by way of compensation, a large number of historicist revivals, most notably religious fundamentalism. In these revivals, adherence to details that are assumed to be historically precise and unambiguous may serve to cover the radical difference between the present and the various pre-modern ages. If this analysis is correct, the concept of 'authentic' performance may be a symptom of a postmodern, rather than specifically modern, condition.

Given that the imperative to pursue 'authentic' performance is far greater in our age than ever before, it must respond to a cultural need that was never so crucial. This, in itself, should suggest that the term 'authentic' is dangerous, since it implies some standard of transhistorical truth, to be valid whatever the era. However much we may feel that a particular instrument conditions the playing style, we are still likely to make it sound how we, however subconsciously, want it to sound, even if this directly opposes existing practices. Indeed, a comparison of 'authentic' performers over three decades shows what radical differences might be afforded by increased experience and changes in interpretative fashion. Moreover, it is naive to assume that, were we to hit on exactly the same sounds as those of yesteryear, listeners today would be affected in precisely the same manner as those of the past. Differences in cultural perspective backwards in time are probably as great as, if not greater than, those between different cultures today.

The movement for historically informed performance is, however, one of the most significant developments in performance styles in the 20th century. It has opened up a wide range of possibilities for new ways of performing and hearing and, shorn of its claims to 'authenticity', represents an attitude to performance that, at its best, is both vital and invigorating.

The term 'authenticity' can also be applied, as in the popular art world, to works that are proved to be genuine, demonstrated by the work of a particular composer. However, even this, the simplest use of the term, is by no means unproblematic. Much music, especially before the Renaissance, was not written with the concept of a single, definitive composer in mind. Furthermore, composers, even in the 19th and 20th centuries, may not have had total control over every element of production. Both scribes and publishers might modify a composer's notation to conform to a particular house style and might edit the music at several levels, with or without the composer's consent. Indeed, musical works created within an environment of copyright laws and commercial process almost inevitably involve multiple wills, all conspiring to create a distinctive 'authentic' work.

The 'authenticity' of a work is often seen to be dependent on the 'authenticity' of its sources: if no manuscript or print directly connected with the composer is evident some editors have tended to exclude the work from the official output. Scholars have been reluctant to use issues such as style or quality as ways of authenticating a work; scientific textual study has often unseated the less certifiable assumptions of stylistic criticism. But the absence of evidence is not simply negative evidence for the authenticity of a work.

'Authenticity' is also a prominent term in German philosophy of the 20th century. Although Theodor W. Adorno was highly critical of Heidegger's concept of authenticity (as the state of those who take responsibility for their existential status), he uses a modified form of this concept in his philosophy of music. Authentic musical works are those that conform with Adorno's (negative) dialectical conception of musical truth, works that forge their own internal consistency while acknowledging the historical nature and social function of the material. Such works are necessarily conflicted 'failures', presenting reference to the outside world within autonomous form (and, in the human condition after the Holocaust, this means that the sublimation of suffering completely exhausts the formal possibilities of music).

JOHN BUTT

Authentic mode (from Gk. *authentos*, Lat. *authenticus* or *authentus*). Any of the church modes whose AMBITUS, or range, includes the octave lying immediately above FINAL. The term is thus applied to the four odd-numbered modes of Gregorian chant (1, 3, 5 and 7), whose Greek-derived names are DORIAN, PHRYGIAN, LYDIAN and MIXOLYDIAN; the ambitus of each of these odd-numbered modes is about a 4th higher than that of its corresponding even-numbered PLAGAL MODE, the term with which 'authentic mode' is contrasted.

The earliest definition of the term is given in Hucbald's *De musica* (?c880; *GerbertS*, i, 116): 'Every authentic tone [i.e. mode] rises from its final up to the 9th [above]. It descends, moreover, to [the tone] next to it, and sometimes to the semitone or to the [minor] 3rd'. Later, the lower limit of the ambitus of an authentic mode was restricted in theory to the subfinal, which lies a tone below the final in the modes where it is available (1st, 3rd and 7th). The contrast between authentic and plagal was extended to the IONIAN and AEOLIAN modes when these (and their corresponding plagals) were added to the original eight church modes in Glarean's *Dodecachordon* (1547).

The word 'authenticus', notwithstanding its Greek derivation, is not reflected in the early Byzantine modal terminology, unlike its counterpart *plagalis*; an 'authentic' Byzantine mode was simply designated *echos* (the later *kyrios* seems to be a back-translation from the Latin system).

HAROLD S. POWERS

Auto (Sp.: 'act', 'judicial proceeding', 'decree'.). A Spanish dramatic work that developed from medieval liturgical drama. The earliest *autos* were religious or allegorical plays with a clear didactic or exemplary purpose, and the term was used in a broader sense in the late 15th century and into the 16th to designate one of many kinds of play, secular or religious in nature. As with the *farsa* and *égloga*, lyric poetry and songs were included in the performance of *autos* by Gil Vicente, Lucas Fernández and Juan del Encina, in very stylized ways. Typically an

auto or a *farsa* would end with a *villancico*, though some incorporated songs more directly into the drama.

The *auto sacramentale* was an allegorical religious play on the Eucharist performed during or as an adjunct to public, outdoor processions for Corpus Christi from the 16th to 18th centuries. The best known and historically most important examples of this genre are those by Pedro Calderón de la Barca written for performance at the city of Madrid's annual Corpus Christi celebrations. From 1648 until his death in 1681, Calderón supplied the texts (as well as instructions for staging and costumes) for these open-air performances. His *autos* are one-act plays with songs, preceded by a *loa* (prologue) and usually followed by a short comic skit or danced number such as an *entremés* or *baile*. Written in polymetric verse, they are elegant examples of Counter-Reformation religious instruction through very beautiful Baroque poetry, song and spectacle. A number of Calderón's *autos* use classical mythology as the basis for religious allegory. They were performed with elaborate scenery and special effects on special platforms on wheels (*carros*), though they became so popular that many were then performed for weeks on end in the public theatres after the Corpus festival. Around the several performances of the *autos* during the octave of Corpus (usually two autos were performed each year), special danced entertainments were contracted (*danzas de espadas*, *de cascabeles* etc.) and performed by specialists. Instrumental and vocal music of many sorts (songs, sections of recitative, choruses, instrumental pieces) were brought into the *autos* as important audible props and for the direct expression of special characters. Many of the composers employed by the royal chapels in Madrid, such as Juan Hidalgo, Cristóbal Galán and others, composed songs for the *autos* of Calderón, as did theatrical musicians of the acting troupes such as Juan Serqueira de Lima, Manuel de Villaflor and José Peyró.

Performances of Calderón's *autos sacramentales* continued after his death in 1681, though a few other writers also contributed to the development of the repertory, most notably Francisco de Bances Candamo and Antonio de Zamora in Madrid. The standard form established by Calderón seems to have been continued in the 18th century, although the tradition died out and the genre had outlived its function by about the middle of the century. A royal decree of 1765, which ran counter to the wishes of many in the ecclesiastical community, prohibited the further performances of the *autos sacramentales*; before then they had been widely performed in Spain and in the Hispanic New World, with great acclaim.

LOUISE K. STEIN

Autograph. A manuscript written in the hand of a particular person; in normal musical parlance, the manuscript of a work in the hand of its composer. It is thus generally distinguished from 'copy', a manuscript in the hand of another person. There may exist more than one autograph manuscript for a given work: for example, the replacement finale of Beethoven's String Quartet in B♭ op.130 survives in two autographs, the writing of the second having been necessitated by the extreme amount of revision and recomposition carried out in the first. In such cases it is usual for the two autographs to be described respectively as *Urschrift* and *Reinschrift*. 'Autograph' may be used adjectivally, for example in referring to 'a copy of the "Eroica" Symphony with Beethoven's autograph corrections'. The term 'holograph' is sometimes used to distinguish a manuscript wholly in the hand of its author or composer (*see* HOLOGRAPH).

For the period before 1600 relatively few manuscripts of works wholly or largely in the hand of the composer can be identified with any certainty (for a discussion of the problems and a list of suggested attributions in the period *c*1450–1600, see Owens, 1997; for earlier cases, see Bent, 1967–8, and Stone, 1994); and in the case of some medieval repertories the distinction between autograph and copy becomes difficult to sustain when a scribe's editorial intervention is such that a significantly different text results from the process of 'copying'. The survival of composers' autographs increases greatly for the period after 1600. And while the advent of computer-based music processing has rendered them theoretically obsolete, preparation of an autograph score remains a normal stage in the process of composition.

NICHOLAS MARSTON

Autoharp (Ger. Akkordzither: 'chord zither'). A box ZITHER of German origin, popular in the USA from the late 19th century. The player strums the strings with his fingers, a fingerpick or a plectrum; damper bars controlled by buttons damp all the strings except those that sound the required chord. The basis of the instrument is a box, about 30 cm long, 45 cm broad and 3 cm deep (see illustration). Instruments for popular use are factory-made, in the USA and Germany, and are finished with a black lacquer and a soundhole beneath the bars; instruments used for folk music are hand-made in America,

Autoharp with six chord dampers, German, 19th century (Stearns Collection, University of Michigan, Ann Arbor); the fingerboard with frets, beneath the A string, is unusual

lightly varnished with a wood finish and may include marquetry or other decoration. The strings, which are graded in thickness, are attached to wrest-pins; they number between 15 and 50, or even more, and the range is between two and four octaves (*C–c‴*). Some instruments are diatonic, others partly or fully chromatic. A 15-string instrument is likely to have only three bars, giving the tonic, the subdominant and the dominant 7th of C major. A nine-bar instrument may offer a selection of chords, including these basic chords in two keys and a range of related chords. Autoharps used for folk music may offer fewer chords per key, but a wider range of keys. Some manufacturers supply spare, blank bars for the player to fit as he wishes. The circle of 5ths, normal on other extended diatonic instruments such as the accordion, the zither and the dulcimer, is unusual on the autoharp. Examples of autoharps that are fully chromatic or include frets (see illustration) have also been manufactured.

According to Sachs, the autoharp was invented by C.A. Gütter of Markneukirchen. The first American patent was granted in 1882 to Charles F. Zimmermann, a German who had emigrated to Philadelphia in 1865. He had already devised a new system of musical notation using 'tone numbering' for use with the accordion, and the development of the autoharp was a logical step. He began production in 1885 and sold 50,000 instruments within three years (see Moore, 1963). He offered a wide range of models, from one with 21 strings and three bars to a 'concert harp' with 49 strings, six bars, slides and levers, enabling it to produce 72 different chords. Zimmermann sold his controlling interest in the company in 1892 to ALFRED DOLGE, who moved the factory to Dolgeville, New York; by the mid-1890s Dolge was manufacturing 3000 autoharps each week, which were sold by door-to-door salesmen and through sale catalogues as well as by local music shops. He produced nearly half a million instruments, but the advent of the gramophone and commercial factors led to the firm's failure in 1898. The instrument was also known in Britain.

Instruction manuals and collections of music for the autoharp (e.g. *Collection of Popular Figure Music for C.F. Zimmermann's Miniature Autoharp*) were commercially distributed as early as 1885 and helped to promote the instrument as a means of providing rhythmic accompaniment to a simple melody or to singing. In this style of playing, the autoharp was laid flat on a table or stand, and a melody plucked with the first finger while chords were strummed with the thumb and first finger. This method required little musical or technical skill and the autoharp thus became known as the 'idiot zither'. A playing style which emphasized the melodic capabilities of the instrument was developed in the mid-1890s and introduced to the public by Aldis Gery, who toured with the Victor Herbert Band. At about the same time, the instrument was introduced to the southern Appalachian mountain region through mail-order catalogues, travelling salesmen and 'home' missionaries.

Around 1910, the autoharp enjoyed a further phase of popularity in the USA, when it came to be used in social gatherings, by travelling preachers, and for therapy by hospital workers. The Pianoharp Company of Boston obtained the right to manufacture autoharps in 1910; in 1926, this company merged with Oscar Schmidt International, of Jersey City. Schmidt's instruments were modelled on Zimmermann's less complex ones. Fretted Industries, of Illinois, bought the firm of Oscar Schmidt in 1978, and continues to manufacture the instruments, as do a number of German firms. The autoharp is still used, especially in schools, for the teaching of rudimentary harmony.

A tradition of using the autoharp for folk music developed, largely independently of the popular tradition, in the Appalachian mountains at the turn of the century. The early style used for folk music was similar to the popular style of the 1880s in that the instrument was laid on the lap or on a table. A noted exponent was Ernest ('Pop') Stoneman, who made the first recording of the instrument in 1924, and developed a style consisting of short strokes in strict rhythm rather than long strokes in free rhythm, bringing forefinger and thumb together in a pinching action; this style allowed for greater agility. The lap playing style was further disseminated in the southern mountain tradition and in early recordings of country music by Sara Carter (of the celebrated Carter family singing group), who used the autoharp for rhythmic accompaniment. Maybelle Carter developed a third style of playing in the 1950s, plucking the strings in the middle instead of close to the hitchpins, and playing erect, holding the instrument vertically against her chest, thus permitting greater flexibility in the use of microphones and in plucking styles. In the popular style, where melodic movement is slow, the player arpeggiates upwards from

the bass note, finishing on the melody note; in the folk style, where dance music, fiddle tunes and fastmoving songs may be performed, the arpeggiation is downwards from the melody note (the bass may be provided by a supporting instrument or even omitted). The folksong revival of the 1960s inspired players to use the autoharp for harmonic and rhythmic accompaniment or as a melody instrument. Since then, innovations in tuning, playing styles and repertory have resulted in the expansion of the instrument's versatility and increased its musical potential. Recent techniques include the use of metal or plastic plectra or metal thimbles. The instrument has been used in rhythm-and-blues, folk-rock, Caribbean, flamenco, jazz, Celtic and New Age styles. Electric autoharps have also been made.

In the 1980s a network of autoharp aficionados was developed through magazines and newsletters, including *Autoharpoholic* (1980–), *Autoharp Teachers Digest*, *Autoharp Quarterly* (1989–) and *Autoharp Clearinghouse* (1989–). Competitions, clubs and festivals provide public venues for performance on the autoharp, and there are many workshops on old-time and American folk music where instruction on the instrument is offered.

Autumnus, Johann Andreas. *See* HERBST, JOHANN ANDREAS.

Aux-Cousteaux [Hautcousteaux], **Artus** [Arthur] (*b* ?Amiens, *c*1590; *d* Paris, *c*1656). French composer and singer. Although his birthplace is not known, there were families bearing this name in Amiens; a member of one, a relative of the composer, served as mayor of the town. Aux-Cousteaux studied under Jean de Bournonville at the choir school of the collegiate church at Saint Quentin. From 1613 to 1627 he sang *haute-contre* in Louis XIII's chapel. A period at Noyon followed about which little is known. He succeeded Bournonville as *maître de musique* both at Saint Quentin (1631) and Amiens (*c*1632–4). On 24 June 1634 he relinquished this more lucrative post for that of a 'clerk' *haute-contre* at the Ste Chapelle in Paris. In spite of a recalcitrant and quarrelsome nature ('scandalous, insolent and disrespectful acts committed daily during the Office'), Aux-Cousteaux advanced rapidly and by 1643 was *maître de musique*, secure in the protection of no less a personage than Mathieu Molé, first president of Parlement. He left the Ste Chapelle about 1651 and received a canonry at the church of St Jacques de l'Hôpital, where he remained until his death.

Although esteemed by Gantez for his ability to write both 'agréable' and 'grave' music, Aux-Cousteaux was characterized by Brossard as a 'rank pedant' who 'never wished to hear of adding *Basses-continues* to his works' (*Catalogue*). In its use of conservative polyphony, Aux-Cousteaux's religious music perpetuates the 'learned' tradition of Du Caurroy and Bournonville. His chansons are models of clear textual declamation but in general lack the melodic grace of Antoine Boësset or Etienne Moulinié. They are closer in spirit to the Le Jeune of the 1612 *Meslanges* than they are to the more progressive *airs de cour*.

In 1656 Le Petit printed Aux-Cousteaux's settings of Godeau's *Paraphrase des psaumes de David* (a first edition of 1654 is lost). At the time of his death, Aux-Cousteaux was working on a new edition of the psalms. Le Petit approached Gobert who agreed to render the melodies 'plus agréables'. The new edition was published in 1659 with Gobert's name substituted for Aux-Cousteau's.

Auxiliary note [neighbour note] (Fr. *broderie*; Ger. *Hilfsnote*). An unaccented NON-HARMONIC NOTE that lies a half step or whole step away from a 'main' note, which it ornaments; the auxiliary note is approached from and returns to the main note directly (e.g. *e–f–e* and *b–a–b* over an E minor chord; *f* and *a* are the auxiliary notes). A similar configuration where the middle note is accented is a form of appoggiatura. In Schenkerian analysis, 'neighbour note' is the preferred term for an auxiliary note prolonging a pitch of the fundamental line. □

Auxiliary stop. *See* ACCESSORY STOP.

Auza-León, Atiliano (*b* Sucre, 5 Oct 1928). Bolivian composer, violinist and writer. He was a choirboy at Sucre Cathedral and in 1950 graduated as a music teacher from the Escuela Normal in that city. He studied at the La Paz Conservatory (1953–5) with Eisner (counterpoint), Maldonado (violin) and Estenssoro and joined the National SO as a violinist. On returning to Sucre he studied composition with Hochmann and piano with Thorrez. He received a scholarship to the di Tella Institute in Buenos Aires, where his teachers were Ginastera, Gandini, Suarez Urtubey and Davidovsky (1965–6). He taught at the Escuela Normal in Sucre (1971–2) and at the Escuela Normal Simón Bolivar in La Paz (1976), and was composition teacher at the La Paz Conservatory (1976). In 1992 he was elected vice-president of the Bolivian Society of Composers and Authors.

CARLOS SEOANE

Avant garde (Fr.: 'vanguard'). A term derived from French military history where it signified an advance group clearing the way for the main body of troops. The connotations of frontiers, leadership, unknown territory and risk accompanied the term as it was appropriated for and by artists. An early instance of such appropriation was Saint-Simon's proposal that artists might serve as an 'avant garde' in the establishment of his new secular and scientific utopia (*Opinions littéraires, philosophiques et industrielles*, 1829). This is of some significance, as it already suggests that an avant garde might be motivated both by intellectual specialization and by social dissent.

In our own age the term is often used loosely to describe any artists who have made radical departures from tradition, but it has also been freighted with particular meanings, and these have supported a more specific usage referring to art histories of the late 19th and early 20th centuries, the era of cultural history usually labelled 'Modernism'. Here an avant garde would be differentiated from an *ars nova* and from an *ars subtilior*, neither of which need be period-specific. Thus an avant garde shares with an *ars nova* its experimental profile, and with an *ars subtilior* its élitist taste-public, but it carries two additional burdens, both relatable to Saint-Simon's use of the term. First there is a commitment to the idea of continuous progress within a single, notionally unified culture (underlying even its most anarchic manifestations), together with an acknowledgment that such progress is barely compatible with any suggestion of limits or boundaries to our knowledge and experience. Secondly there is an active engagement – whether critical (as in Adorno's interpretation) or reintegrative (as in Peter Bürger's) – with a social world from which it feels itself separate. In both respects an avant garde is historically contingent, and thus may have a defined end as well as a beginning.

Within the historical period of Modernism we can sharpen the categorical focus of avant-garde music by distinguishing it from two opposing categories. The first is 'classical music', a category that emerged in the 19th century and was institutionalized above all in the public concert. The second is 'popular music', distinguished by its untroubled acceptance of the commodity status inherent in a middle-class 'institution of art' (to use Bürger's phrase). Relative to these repertories, an avant garde began to take on a clear profile in the late 19th century, though it was made up of aesthetically and stylistically contrasted elements. One variety is associated especially with the so-called New German School, notably through the programmes (and rhetoric) of Modernism – a 'music of the future' – proposed by Wagner and the Liszt circle. This prepared the ground of Schoenberg's blatant defiance of the cultural market-place. His Society for Private Musical Performances represented a powerfully symbolic moment in the development of the avant garde, closing off the populace in the interests of preserving musical language from further degeneration.

A considerable pretension attaches to this increasingly specialized 'project of greatness' in art, and that pretension, itself a function of aesthetic autonomy, might be viewed as a prerequisite for the Modernist aesthetic. Music was much more than an object of beauty; it was a mode of cognition, a discourse of ideas whose 'truthfulness' should be protected. It was from this vantage point, predicated on the authority of an avant garde (understood as 'the most advanced stage of the dialectic of expressive needs and technical means', Paddison, 1996), that Adorno surveyed the entire history of Western music. Significantly, he distinguished between the spirit of the early 20th-century avant garde and the New Music of the 1950s and 60s (Boulez, Stockhausen, Berio, Ligeti). This too has been labelled an avant garde, and some of its devices (multiple serialism, electronic composition, aleatory procedures and so on) described, often pejoratively, as 'avant-garde techniques'. Certainly the New Music shared with early Modernism the commitment to a specialized, progressive and 'authentic' art, and to a 'rhetoric of endless innovation' (Williams, 1989). Yet there is also a sense in which it represented an 'official' Modernism, supported by the institutions ('growing old' was Adorno's formulation), and as such it was far removed in tone from the explosive, campaigning and dissenting Modernism of that earlier period, when the bourgeois-romantic project of greatness reached its apotheosis.

A very different face of the avant garde was the subversive, anti-bourgeois protest associated with Dadaism and surrealism, given musical expression by Satie, and further developed in the radical aesthetic promoted by Cage and others in the aftermath of World War II. For Bürger this was the true avant garde, distinguished conceptually from Modernism through its rejection of the 'institution of art' and of aesthetic autonomy (paradoxically it represented for Bürger an attempt at reintegrating the aesthetic and social spheres). Yet from today's perspective Bürger's position seems a development of Adorno's rather than a major departure. More recent

critical theory has been compelled to go further, addressing a growing perception (it may be disillusioning or cathartic) that any notion of a single culture, on which modern art was predicated, is no longer viable. Where music is concerned, those explosive tensions between the polarized repertories (avant-garde, classical, commercial) of a unified, albeit increasingly fragmented cultural world have been defused with astonishing ease. Disparate musics can apparently co-exist without antinomies or force fields.

Within critical theory the responses to this 'postmodern condition' have ranged from Andreas Huyssen's cautious welcome of postmodern art, provided its critical potential is acknowledged, to Jürgen Habermas's proposal that Modernism remains an 'incomplete project', now in search of a new communicative pragmatism. Elsewhere, and especially outside the Adornian tradition, postmodernism has been eagerly embraced by cultural theorists such as Jean-François Lyotard, by musicologists such as Lawrence Kramer, and by many composers for whom it seems to offer a cathartic sense of release from the prohibitions of postwar Modernism. In such a climate the fate of an avant garde is clearly open to question. Arguably the concept can have only a narrow, and perhaps a rather emasculated, definition within today's culture, associated with a continuing but now decentred Modernist project. That project is sanctioned rather than dissenting. It occupies a single corner of a plural cultural field. It is neither threatened by, nor threatens, the politics and aesthetics of mass culture.

JIM SAMSON

Avanzolini, Girolamo (*b* Rimini, *c*1600; *d* Rimini, *c*1678). Italian composer and author. He was a priest and *maestro di cappella* of Rimini Cathedral. From 1649 he was librarian of the Biblioteca Gambalunghiana, Rimini. He wrote literary and historical works; all his music dates from his early years. He had some connection with the pseudonymous composer Accademico Bizzarro Capriccioso, to each of whose opp.1 and 2 (1620–21) he contributed a madrigal, one for two voices, the other for three. As a composer he is known mainly for three volumes of sacred music written mostly in a simple style suited to the needs of a provincial *maestro di cappella*: 14 eight-voice psalms with organ continuo, op.1, a book of four- and five-voice concertato masses, op.2 (incomplete), and four masses and two motets with organ continuo, op.3 (all Venice, 1623). The description 'a tre voci variate' of op.3 refers to an unusual arrangement of partbooks – one each for the highest, middle and lowest voices.

ELEANOR SELFRIDGE-FIELD

Avdeyeva, Larisa (Ivanovna) (*b* Moscow, 21 June 1925). Russian mezzo-soprano. She studied singing and dramatic art at the Stanislavsky Opera Studio (1945–6). From 1947 she was a soloist at the Stanislavsky Music Theatre, Moscow, where she sang Suzuki, La Périchole, Kosova and Varvara (Khrennikov's *V buryu* and *Frol Skobeyev*) and Mistress of the Copper Mountain (Molchanov's *Kamenniy tsvetok* ['The Stone Flower']). In 1952 she moved to the Bol'shoy Theatre, where she sang the leading Rimsky-Korsakov and Musorgsky mezzo roles, Tchaikovsky's Enchantress, Borodin's Konchakovna, Akhrosimova in *War and Peace* and the Commissar (Kholminov's *Optimisticheskaya tragediya*). She married Yevgeny Svetlanov. She toured widely, in the USA, Canada, Japan and Europe, and was made People's Artist of the RSFSR in 1964.

I.M. YAMPOL'SKY/R

Avella, Giovanni d' (*fl* 1657). Italian theorist and ?composer. His treatise *Regole di musica, divise in cinque trattati* (Rome, 1657) indicates that in 1657 he was Predicatore in the Minori Osservanti – an order of strict Franciscans – in the province of Terra Lavoro. In some reference works he is mentioned as a composer of lute music, but there are no known compositions. The *Regole di musica* deals not only with music but with a range of other subjects as well, including astronomy and astrology. However, Avella's theories and views failed to impress his contemporaries and fellow theorists: G.F. Beccatelli, for instance, in his *Annotazioni* (MS, *I-Bc*) on the *Regole*, rightly accused Avella of ignorance of musical history in attributing the Guidonian Hand not only to Boethius but also to Plato and Aristotle, and in making Guido of Arezzo a contemporary of Pope Gregory I.

JOSEF-HORST LEDERER

Ave Maria (Lat.: 'Hail Mary'). A prayer of the Roman rite. It consists of the words of the Archangel Gabriel (*Luke* i.28), the words of Elizabeth (*Luke* i.42) and a formula of petition appended in the 15th century; the present wording

was adopted in the 16th century for general liturgical use (*LU*, 1861). The first segment of the text is used as an antiphon for the Feast of the Annunciation with a 10th-century melody (*LU*, 1416). Moreover, as an Offertory antiphon it occurs once with the above-mentioned text and a modern melody (*LU*, 1318) and once with both biblical portions of the text and a medieval melody (*LU*, 355). A considerable number of polyphonic settings, often with textual variants and only loosely based on the chant melody, survive by Renaissance composers, including De Orto, Josquin, Parsons, Willaert and Victoria, and there are *Ave Maria* masses by La Rue, Morales and Palestrina. Giacomo Fogliano set the complete text as a simple four-voice *lauda* (HAM, i, 97). The title is used for Schubert's song after Scott's *Lady of the Lake*. Gounod's celebrated *Ave Maria* consists of a melody superimposed on the C major prelude from the first book of Bach's *Das wohltemperirte Clavier*. For further information See R. Steiner: 'Ave Maria [Antiphon]', *New Catholic Encyclopedia* (New York, 1967).

See also Antiphon and Motet, §II.

□

Avenarius [Habermann], **Philipp** (*b* Lichtenstein, nr Zwickau, *c*1553; *d* in or after 1610). German composer and organist. He is first heard of as an organist at Amorbach, Odenwald, in 1570 and until February 1571. The dedication of his *Cantiones sacrae* (1572) was written from Falkenau, Bohemia, where his father was working. According to Gerber he was later an organist at Altenburg and then, until 1610, at the Michaeliskirche, Zeitz. He was one of a number of minor composers working in Saxony and Thuringia in the latter half of the 16th century. His output was less varied than, for example, that of Johann Steuerlein, but the pieces in his *Cantiones sacrae* were highly regarded by his contemporaries, as is shown by the praise accorded them by Christoph Schultze. The style of his motets is conservative, as was his preference for Latin texts.

WORKS

Cantiones sacrae, 5vv (Nuremberg, 1572)
Devota acclamatio novis honoribus, 6vv (Jena, 1608)
20 other sacred works *D-Bsb*, *Rp*, *Z*, *PL-WRu*

AUGUST SCHARNAGL

Avenarius [Habermann], **Thomas** (*b* Eilenburg, bap. 17 Nov 1584; *d* after 1638). German composer, organist and poet. He enrolled at Leipzig University in 1599 as the son of a schoolmaster, Thomas Habermann, and was later tutor to the von Malnitz family at Berreuth, near Dippoldiswalde. In 1617 he was appointed Kapellmeister at Schloss Weesenstein, near Pirna, and marked Emperor Matthias's visit to Dresden with his *Panegyris Caesarea*, consisting of 1200 verses among which are 20 on the 'pleasant music' conducted by Schütz in a church service on 27 July 1617. In 1621 or 1622 he became organist at the Lambertikirche, Hildesheim, where he was twice married: on 8 October 1625 to Magdalena Rolzheussen, who died of plague about a year later, and on 29 July 1627 to Anna Dehnen. In 1630 he published his most important work, *Convivium musicale*, which includes 38 dances in four to five parts. He may have played the organ at Celle in 1635; his setting of Psalm cxxxiii is dedicated to Duke August the Elder of Celle. His last three published works consist of canons, some with basso ostinato.

WORKS

Horticello ... amorosischer Gesänglein, 4–5vv/insts, pubd 1614, lost [preface (inc.) repr. in *MattbesonGEP*, 12–14]
Convivium musicale, in welchen etzliche newe Tractamenta, als gar schöne und fröhlichen Paduanen, Galliarden, Couranten, Intraden und Balletten ... offeriret werden, 4–5 insts (Hildesheim, 1630); 17 dances ed. in Musiche varie, ii–iii (Germersheim, 1994)
Adplausus pius et augustus, das ist Christliche Fried und Freuden, Concert (Ps cxxxiii), 5vv, insts (Celle, 1636)
Viridarium musicum, a 3–4 (Hildesheim, 1638)
Fugae musicales inter fugae martiales, 3–4vv/insts (Hildesheim, 1638)
Curae curarum, 3–4vv/insts (?Hildesheim, 1639)

HARALD MÜLLER

Avenary, Hanoch [Loewenstein, Herbert] (*b* Danzig [now Gdânsk], 25 May 1908; *d* Magen, 16 Sept 1994). Israeli musicologist. He studied musicology, literature and art history at the universities of Leipzig, Munich, Frankfurt and Königsberg (Kaliningrad), where he took the doctorate under Wilhelm Warringer in 1931 with a dissertation on Minnesang. He was prevented from pursuing an academic career in Germany, and turned to publishing Jewish art in Berlin (1932–6). In 1936 he settled as a publisher in Palestine, where research in musicology had barely begun, and he had to carry on his musicological work independently, publishing articles mostly in foreign periodicals. Urged to adapt himself to the demands of a country under war conditions, he developed a chemical production process and worked as a technical manager in industry (1941–8) before joining the Israel Air Force research department. He left the service with the rank of major to take up a research fellowship in musicology at the Hebrew University, Jerusalem (1965–72); in 1966 he became a lecturer, and in 1972 assistant professor in the musicology department of Tel-Aviv University, rising to the rank of Associate Professor. He was also a guest professor in Vienna (1973) and Heidelberg (1982–3). Co-editor of *Orbis musicae* and co-founder of the *Hebrew Quarterly for Music*, he was appointed president of the Israel Musicological Society in 1971. His speciality was sacred music, particularly Jewish music and that of the ancient Near East. In 1994 he received the Israel Prize for his achievements in Jewish music research.

Aventinus, Johannes [Turmair, Johann; Thurnmaier, John; Thurnmayer, Jean; Thurinomarus] (*b* Abensberg, 4 July 1477; *d* Regensburg, 9 Jan 1534). German historian and music theorist. He studied at Ingolstadt University with Conradus Celtis, at Kraków University, and at Paris University with Jacobus Faber Stapulensis. After the death of Albrecht IV, Aventinus was appointed tutor to the young Duke of Bavaria and his brothers in 1508, and in 1517 became court historian. In this capacity he produced two of the most important and influential historical works of his time: *Annales ducum boiariae* and *Bayrischer Chronicon*.

Aventinus was the author of *Musicae rudimenta* (Augsburg, 1516; ed. in Keahey) sometimes incorrectly ascribed to Nicolaus Faber (ii). The treatise, in ten chapters, was written for the instruction of Ernst, the youngest of the three dukes. In keeping with the traditional approach to music as a part of the Quadrivium, the work deals with speculation about the origins and uses of music, solmization and the mutation of Guidonian hexachords, and the Pythagorean division of the monochord. Problems of current musical practice are only lightly touched on. Aventinus cited many musical authorities, including Plato, Aristotle, Aristoxenus, Cleonides, Boethius, Guido of Arezzo, Ugolino of Orvieto, Johannes de Muris and Gaffurius. He gave a number of terms and phrases in German as well as in Latin.

T. HERMAN KEAHEY

Ave regina caelorum (Lat.: 'Hail Queen of Heaven'). One of the four Marian antiphons retained at the Council of Trent and ordered to be sung at the end of Compline from the Purification (2 February) until Wednesday in Holy Week. Its original role in the liturgy appears to have been to precede and follow the chanting of a psalm. Of the two melodies in the *Liber usualis* the more elaborate (p.274) is certainly the older. Pre-tridentine sources have a slightly different text. Du Fay's four-voice setting, which he requested be sung at his deathbed, uses the chant melody as a cantus firmus in the tenor, with sections of the chant paraphrased in the upper two voices; the traditional text is troped with a personal supplication for mercy: 'Miserere tui labentis Du Fay'. Two other settings by Du Fay survive, both for three voices, and a *Missa 'Ave regina celorum'*, related to the four-part work. Josquin wrote a celebrated work setting both this text and that of *Alma redemptoris mater*, in which all four voices participate in the paraphrasing of the two chants. Settings by 16th-century composers include four by Palestrina, an eight-part setting with organ and a mass by Victoria, and a five-voice setting by Gesualdo.

A different text, *Ave regina caelorum, mater regis angelorum*, has a medieval melody (*LU*, 1864) used also for a number of similar texts including an antiphon for St Edmund, king and martyr, beginning 'Ave rex gentis Anglorum'. The Marian text was set, independently of the chant, by Walter Frye, in a responsorial form in which lines 3–4 were repeated after lines 5–6 to make an eight-line text. Jacob Obrecht wrote a four-part setting, taking Frye's tenor and transposing it from F (major) to D (minor); he also based his *Missa 'Ave regina celorum'* on the untransposed tenor of Frye's composition. *Ave rex gentis Anglorum*, for its part, became the basis of two 14th-century motets in a manuscript from Bury St Edmunds (Bukofzer, 1950).

JOHN CALDWELL

Averroes. *See* IBN RUSHD.

Aversi (Lat.). A term used in the 15th century to describe mass settings in which the number of voices varies from one section to the next. Although the word is found in only one manuscript (*GB-Ob* Can.misc.213), where it is used in the index to describe mass movements by Binchois, Guillaume Legrant and Bartolomeo da Bologna, it is appropriate for describing an important series of works from the first half of the 15th century in which sections marked 'duo' (or 'soli') and 'chorus' alternate.

Avery [Burton, Avery] (*b* ?*c*1470; *d* ?*c*1543). English composer. Among the English authorities to whom Thomas Morley referred in preparing his *A Plaine and Easie Introduction to Practicall Musicke* (1597) is one listed simply as 'Averie'. This is undoubtedly the 'Master Averie' who composed an organ *Te Deum* (in *GB-Lbl* Add.29996; ed. in EECM, vi, 1966) and a *Missa 'Ut re mi fa sol la'* (in *Ob* Mus. Sch.E.376–80). In the latter, however, a later hand has added the surname 'Burton' in the bass partbook, and on the strength of this Flood ventured to identify the composer of the two pieces with a number of musicians of similar names to which he found references in his search of the state papers. If these all refer to the same man the following slender biography can be constructed.

On 29 November 1494 Henry VII made a payment 'To Burton for making a Mass, 20s.'. In November 1509 a David Burton was appointed a Gentleman of the Chapel Royal and on 22 February 1511 Davy Burton was issued with livery for the funeral of Prince Henry, the infant son of Henry VIII. On 20 June 1513 the Chapel Royal accompanied the king to France where on 17 September at Tournai a *Te Deum*, attributed without justification to Burton, was performed after Mass. In June 1520 he was again in France with the Chapel Royal attending King Henry's meeting with François I at the Field of the Cloth of Gold, and in July 1527 'Master Avery' was among the Gentlemen of the Chapel who accompanied Cardinal Wolsey to France, an association that may account for the inclusion of his mass in the Forrest-Heyther collection (*GB-Ob*) in second place, after Taverner's *Missa 'Gloria tibi Trinitas'*. In a list of salaries for the year 1526 Avery Burnett, Gentleman of the Chapel, is scheduled to receive 7½d. a day. During the next 15 years the names Burton and Burnet occur in connection with various payments and grants of leases of land (listed by Flood) in the last of which, dated 25 October 1542, he is described as David Burton, Gentleman of the King's Chapel.

If the composer and the Gentleman of the Chapel Royal are the same person it remains unexplained why both manuscripts should use only the name 'Avery'; though it is perhaps because they do that Avery alone of all the Englishmen listed by Morley is familiarly addressed by his first name. On the other hand, Morley did not use the title 'Master', nor is it clear what that title's significance is. In support of Flood's identification an annotation, presumably by Thomas Tomkins himself in his copy of Morley's treatise (now in the library of Magdalen College, Oxford), describes a group of names which includes Averie as 'All these of the King's Chapel'.

Avery's *Missa 'Ut re mi fa sol la'*, the only piece of English vocal music on the hexachord, is incomplete, apparently lacking a second bass part, in spite of the fact that it occurs in a complete set of six partbooks. The mass was originally described in the *Tabula* as of 'vi parts' but this was later changed to 'v parts' and it seems quite certain that the sixth part was never copied into Mus. Sch.E.381. The work is available in a modern edition with a reconstructed sixth part (ed. J. Smart, London, 1978).

JOHN BERGSAGEL

Avery, John (*b* ?Avening, 1737/55; bur. London, 29 April 1807). English organ builder. Rigby has suggested that the John Avery baptized at Avening, about 5 miles from Stroud, on 3 January 1738 was the organ builder; the record of his burial at Holy Sepulchre without Newgate, London, however, gives his age as 52, making his probable date of birth 1755 (Matthews). Avery's reputation as a craftsman was good: 'an excellent workman ... [who] imitated Green a good deal, but was much his superior' (Sutton); 'The general characteristic of Avery's organs was that they combined quantity with quality in every department' (J.C. Bumpus, in Matthews). Major contracts included St Stephen Coleman Street, London (1775); St John the Baptist, Croydon (1794); St Lawrence, Stroud (1798); Winchester Cathedral (1799); St Margaret's, Westminster, London (1804) and Carlisle Cathedral (completed by Elliot in 1808).

Avery's workshop was in the churchyard of St Margaret's, Westminster, but in his final years his address was Queen Street, Westminster. Avery's reputation as an unreliable character – 'generally drunk and often in prison for debt' (Sutton) – is supported by contemporary sources. He died in a debtors' prison.

Avianus, Johannes [Johann] (*b* Tonnedorf, nr Erfurt; *d* Eisenberg, nr Gera, 22 Jan 1617). German writer on music, composer and schoolmaster. In 1579 he was teaching at the Lateinschule at Ronneburg, near Gera, and in 1591 he was Rektor of the Lateinschule at Gera. Later he was a preacher at Bernsdorf, near Torgau, at Munich and at Krossen, near Gera, and from 1614 until his death he was superintendent at Eisenberg. He published *Isagoge in libros musicae poeticae* (Erfurt, 1581), which is typical of the many writings on *musica poetica* of the later 16th century. Another theoretical work survives in manuscript. His only known music is a four-part occasional work, *Delphica & vera pennae literatae nobilitas* (Erfurt, 1595).

Avicenna. *See* IBN SĪNĀ.

Avidom [Mahler-Kalkstein], **Menahem** (*b* Stanislav, 6 Jan 1908; *d* Tel-Aviv, 5 Aug 1995). Israeli composer of Russian birth. His mother was a cousin of Mahler; his adopted surname combines the word 'Avi' ('father of') with the initials of his children's names. He studied at the American University in Beirut and at the Paris Conservatoire, where his teachers included Rabaud. In 1925 he emigrated to Palestine, where, in addition to his work as a composer, he served as a music critic, secretary general of the Israel PO (1945–52), chair of the Israel Composers' League (1958–71) and general director of ACUM, the Israeli performing rights society (1955–80).

In the late 1930s, after writing early works in an Impressionist style, Avidom turned towards atonal composition. While studying in Beirut and during a four-year stay in Egypt, however, he became deeply influenced by Mediterranean and Asian folk music and French culture. These influences found their expression in arrangements for the Yemenite singer Bracha Zefira (1939), the Flute Concerto (1944), Symphony no.1 'Amamit' ('Folk Symphony', 1945), Symphony no.3 'Yam tichonit' ('Mediterranean Sinfonietta', 1951) and other works. A use of modal scales, folk-like dance rhythms, oriental melodic motifs and orchestration influenced by Ravel and Les Six are characteristic of these works. Symphony no.2 'David' (1948–9) depicts the life of the biblical king, while Symphony no.5 'Shirat Eilat' ('The Song of Eilat', 1956–7) is a combination of a conventional symphonic form and a song cycle.

In the early 1960s Israeli music began to move away from regionalism towards international styles and techniques. Influenced by these trends, Avidom turned to 12-note procedures. *Enigma* (1962), a work that imitates electronic effects, displays his interest in sound patterns: the second movement is an inversion of the first, the fourth an inversion of the third and the fifth a recapitulation of the first. The Symphony no.7 (1960–61) features a four-note series (A–B–D–mi) that refers to his name. In 1974, for the first Rubinstein Piano Master Competition, Avidom wrote *ArtHur ruBinStEin*, six inventions based on the series of notes represented in Rubinstein's name (A–H–B–S–E). The last symphony, no.10 (1981), combines 12-note procedures and oriental melodies. *Bachiana* (1984–5), based on B–A–C–H, was written for J.S. Bach's 300th anniversary.

Avidom's first major opera *B'khol dor va'dor* ('In Every Generation', 1953–4) describes events in Jewish history. *Ha'preida* ('The Farewell', 1971) creates a strangely unreal atmosphere and a convincing expression of complex psychological situations. His historical opera *Alexandra ha'khashmonait* ('Alexandra the Hasmonean', 1955–6) won the Israel State Prize in 1961.

WORKS
(selective list)

Stage: B'khol dor va'dor [In Every Generation] (Spl, L. Goldberg), solo vv, 10 insts, 1953–4; Alexandra ha'khashmonait [Alexandra the Hasmonean] (op, A. MICHAL BEN-ZUR

Avignon. City in France, capital of the prefecture of the Vaucluse département. Roman chant was introduced to Avignon at the end of the 7th century by the monks of Lérins, who were summoned there by Bishop Agricol. Of the troubadours, only two songs have survived, one by Bertran Folco d'Avigno and one by Raimon d'Avigno. A university was founded in 1303. In 1309 Avignon became the seat of Pope Clement V and the centre of Western Christianity, and also a European trading centre. The 14th century was the richest period in Avignon's musical history. The papal court comprised up to 1000 people employed in up to 500 different capacities. The town became over-populated and phenomenally rich, while the court enjoyed extreme luxury. 'From this impious Babylon from whence all shame has fled, I too have fled to save my life', wrote Petrarch. There were many opulent religious services, and also festivities and secular entertainments to mark official receptions. The writing of music for the services became an excuse to try out the latest methods of composition. Pope John XXII (1316–34) issued a decretal ('Docta sanctorum') on the subject in 1325 which, however, is not the condemnation of polyphony it is sometimes said to be. Moreover, in addition to the *grande chapelle* of 30 or 40 members, Benedict XII, at the beginning of his pontificate in 1334, also established a private chapel, St Etienne, with 12 singers. In Avignon itself no trace remains of the Ordinary

repertory, which was most of the time largely improvised on the *super librum*. But two manuscripts, from Ivrea (written after 1350) and from Apt give an idea of the type of music which was fashionable: polyphonic mass fragments for three voices, using Ars Nova techniques; motets, ballades, rondeaux and virelais occasionally written in *ars subtilior* style, which flourished from 1380; and hymns, in which the liturgical melody, in decorated form, appears in the upper voice of the polyphony, anticipating the 15th-century style. Johannes de Muris wrote a motet in honour of John XXII, and Philippe de Vitry stayed in Avignon several times on missions from the French king, and composed an isorhythmic motet in honour of Pope Clement VI (1342–52). The Apt manuscript, on the other hand, contains a Gloria by Baude Cordier which is quite different in feeling and much nearer to 15th-century style. The papal court was receptive to musical novelties, and composers in the service of Clement VII (antipope, 1378–94), and of Benedict XIII (antipope, 1394–1424) included Bosco, Matheus de Sancto Johanne, Hasprois, Haucourt and Philippus de Caserta. In 1372 an organ, one of the first in France, was installed in the Franciscan monastery at Avignon. Jewish music also flourished under the Avignon popes since Clement V protected the Jews from the expulsion orders of King Philip the Fair (1306) and the musical traditions of the synagogue were thus preserved in the four communities of Avignon, Carpentras, Cavaillon and L'Isle sur Sorgue.

The deposition of Benedict XIII at the Synod of Pisa (1409) led to the decline of the chapel choir, but the departure of the popes did not mean the end of all Avignon musical life; in 1449 organs were installed at the cathedral and in 1454 at St Agricol (restored 1489–93). At the end of the 15th century there were two organ makers in Avignon, Barthélémy Prévot and Ramon Vitus. In 1481 Archbishop Giulio della Rovere founded a cathedral choir school for the study of plainchant, and the post of *maître de chant* was created at the university in 1497. The first of many festivities with processions, allegories, music and dancing, characteristic of the Renaissance and clearly influenced by Italy, seems to have been in 1473 for the reception of Cardinal Charles de Bourbon. An early printing industry was briefly established: Etienne Briard, a type founder, cast new characters for music printing, and Jean de Channey published (1533–5) settings of the Mass, Lamentations, *Magnificat* and hymns by Carpentras, who died in Avignon in 1548. But the Avignon printers soon lost their importance to rivals in Lyons. In 1547 Claude Noguyer taught 'letters and musical instruments' to young children. Victor de Montbuisson, an Avignon lutenist at the end of the century, pursued his career in Kassel and The Hague: three of his galliards were included in J.-B. Besard's *Thesaurus harmonicus* (RISM 1603[15]). The late 16th century saw the first substantial collection of Provençal noëls, 130 carols from Notre Dame des Doms (1570–1610). The modern treatment of music in the town's religious ceremonies and secular festivities gave a livelihood to several violin bands, which sometimes included woodwind. A description of the festivities at a reception for Queen Marie de Médicis in November 1600 is in the *Labyrinthe royal de l'Hercule gaulois* (Avignon, 1601); the music for this occasion, by the cathedral organist Antoine Esquirol, was in the Venetian style. In 1622, for the visit of Louis XIII, an exceptional orchestra, 120 strong, was conducted by Sauveur Intermet (*d* 1657), canon and *maître de chapelle* at St Agricol, at that time the main musical centre. Its choir school was reputed to be one of the best in the kingdom and Intermet's reputation spread as far as Paris. When a dramatic performance was mounted in the Jesuit college, Intermet's airs so pleased the king that he asked for a copy of them and next day requested that motets by the canon should be sung during Mass. In 1660, for Louis XIV's visit, another *maître de chapelle*, Béraud (*d* 1687), composed a special motet. The 17th century was the heyday of the Provençal carol; one of the finest collections was of the 57 *Noëls nouveaux* published in seven volumes by Nicolas Saboly between 1669 and 1674. He was responsible for their texts but the music consists of traditional Provençal and French tunes. J.-J. Mouret, the future 'musicien des Graces', was born in Avignon in 1682 and received his musical education there, in the cathedral choir school. During the last years of the century, Pierre Gautier's Marseilles opera company enjoyed great success at Avignon; in 1688 he even staged *Bellérophon* for two private performances in the home of the Marquis de Blauvac. Italian singers and composers were equally successful in Avignon; the repertory of the chapel included works by Carissimi and others.

Nicolas Ranc directed a permanent opera company from 1705, and music lovers remained numerous in the 18th century. Two guilds were formed in the mid-18th century, St Grégoire and Ste Cécile, for 'singing musicians' and 'symphonic musicians' respectively; they acquired a monopoly for giving public concerts, and were able to perform such large-scale choral works as settings of the Psalms by Blanchard and Lalande. But musicians with creative talents tended to leave Avignon to try their luck in Paris. Rameau directed the cathedral choir school, but only from January 1702 to May 1703; three or four years later Mouret left, and Jean-Claude Trial (1732–71), a choirboy in the cathedral choir school, became co-director with Berton of the Paris Opéra from 1767, and Antoine Trial (1737–95), who had the same background, went on to a glorious career as an opera singer in the Théâtre des Italiens in Paris. Pierre Ligon (*b* 1749, known as the abbé Ligon) witnessed the success of his comic opera *Les deux aveugles de Franconville* in Paris; his nephew and pupil, Joseph Agricol Moulet (*b* 1766), after leaving Avignon became a famous harpist. At this point strong regional feeling made itself felt in Provence and Languedoc. At the beginning of the 18th century Mallet, *maître de chapelle* at St Pierre, had composed *Cantates patoises* and an *Impromptu de Nismes*. In the following century Aubanel undertook the reprinting (1803 and 1807) of early regional works, including the carols. The hymn of the *félibres* (modern Provençal writers) 'la coupo santo' was based on a carol by Brother Sérapion, an Avignon monk of the mid-17th century. About 1850 J.S. and M. Crémieu collected together *Chants hébraïques suivant le rite des communautés israélites de l'ancien Comtat Vénaissin*. The lawyer J.V. Avy, at about the same time, became interested in the Apt manuscript. This interest matched that of certain Romantics in the works of the Renaissance and then of the Baroque period. F.J. Séguin, who edited Saboly's carols with piano accompaniment (1856), put on performances of works by Palestrina, Bach and Handel, and composed some *Préludes dans la tonalité grégorienne*. There was also a renewed interest in chamber and symphonic music: for example, Fuzet Imbert composed a

quartet and a *Poème symphonique* and in 1897 the Société Avignonnaise de Concerts Symphoniques was formed.

In 1899 Charles Bordes founded the Schola Cantorum of Avignon with the aim of reviving old church music – Gregorian chant and the works of Victoria, Josquin and Palestrina. The Schola Cantorum organized a festival, the Fêtes Musicales d'Avignon, in the first year of its existence. A new Théâtre Municipal was opened in 1825 in the Place de l'Hôtel de Ville for opera and drama. Destroyed by arson in 1846, it was rebuilt within a year, with a seating capacity of 960. Restored in 1900 and again in 1978, the theatre is now the city's opera house. The season runs from October to June with six productions, each of which usually receives three performances. The Opéra d'Avignon has been directed since 1974 by Raymond Duffaut, who since 1982 has also directed the Chorégies d'Orange. The city has a national conservatory. The Festival d'Avignon, although principally devoted to drama, has since 1972 introduced contemporary music theatre works into its programmes, performed in the cloisters in which Avignon abounds. Performances have included premières of works by composers such as Maurice Ohana, Claude Prey, Antoine Duhamel, André Boucourechliev, and Philip Glass (*Einstein on the Beach*, 1976). The holdings of the Bibliothèque Municipale include music and various records of the city's musical activities.

MARCEL FRÉMIOT/CHARLES PITT

Avignone, Bertrand di. *See* FERAGUT, BELTRAME.

Avilez [Avilés, Avilés Lusitano], **Manuel Leitão** [Leitam, Leitán] **de** (*b* Portalegre; *d* Granada, between 13 Sept and 25 Oct 1630). Portuguese composer. He was a choirboy at Portalegre Cathedral, where according to Barbosa Machado he studied with António Ferro. By 1601 he was *maestro de capilla* at Úbeda. Early that year he tried for a similar post at the royal chapel at nearby Granada but did not secure it until two years later; he was inducted on 28 August 1603. He composed copious vernacular festive music (which is now lost), beginning in 1606; on 24 November of that year the royal chapel authorities granted him special leave to compose Christmas *chanzonetas*. The library of João IV of Portugal contained two of his polychoral masses, one, *Salva Theodosium*, in 12 parts, possibly written in 1603, the other the eight-part *Ave Virgo sanctissima*. His surviving music (in *E-GRcr*) includes four penitential motets (*Domine non secundum peccata nostra*, *In jejunio et fletu* and *Adjuva nos* for four voices and *Adjuva nos* for three), two four-part Passions – one for Palm Sunday (St Matthew), the other for Good Friday (St John) – and two incomplete Lamentations verses, *Quomodo sedet sola civitas* and *Non est inventus similis illi*, both for four voices.

ROBERT STEVENSON

Avirmed, Baataryn (*b* 1936, Hovd, west Mongolia; *d* Aug 1998). Altai Urianghai Mongol epic bard (*tuul'ch*). Avirmed performed in the deep declamatory *häälah* vocal style and accompanied himself on the two-string plucked lute, TOPSHUUR (see illustration). Although born after the communist revolution in Mongolia, Avirmed inherited this traditional vocal style and associated folk-religious beliefs (*see* MONGOL MUSIC).

At least seven generations of Avirmed's lineage were bards; his grandfather is believed to have been the famous bard Jilker. Included in Jilker's repertory were the epics *Bayan Tsagaan Övgön* ('Rich White Old Man'), *Argil Tsagaan Övgön* ('Snow White Old Man') and *Naran Han Hövgüün* ('The Boy Naran Khan'), all of which were also performed by Avirmed. Other members of Avirmed's family who performed included his father, Baatar, and uncles Buyan, Shirendev and Rinchen.

Avirmed began training seriously at the age of 13 years. His principal teacher was his paternal uncle, Shirendev. After ten years, he gained recognition as a

Baataryn Avirmed of the Altai Urianghai playing the topshuur, Hovd, west Mongolia, 1989

bard by performing throughout two whole nights before Jilker, his pupil Choisüren and Shirendev. He then received the *ulamjlalyn hadag*, a ritual scarf of succession, which was tied to the head of his *topshuur*. He performed in 'modern' theatrical contexts and received a gold medal in Ulaanbaatar for his rendition of *Altain Magtaal* ('Praise-song of the Altai') on the occasion of the 50th anniversary of the communist revolution. With the onset of democracy in Mongolia in 1990, Avirmed began to teach the traditional style to his son Dorjlaln, his nephew Oldoh and his younger brother Seseer.

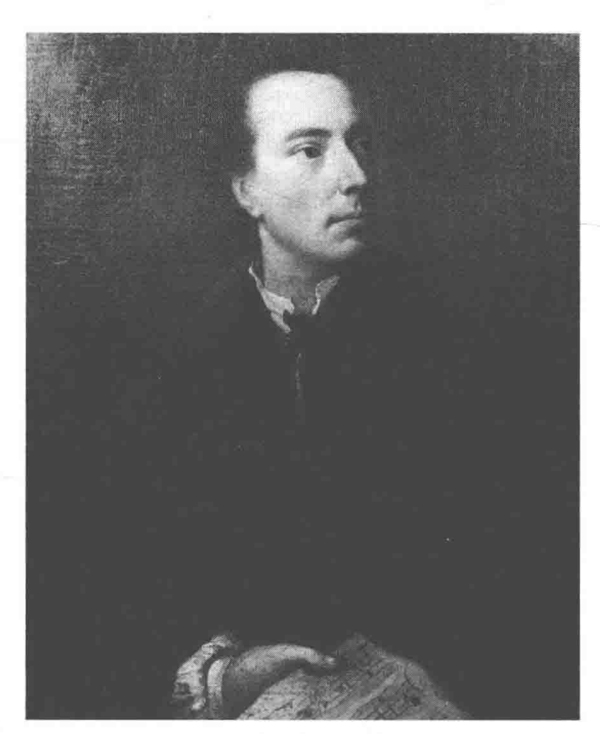
CAROLE PEGG

Avison, Charles (*b* Newcastle upon Tyne, bap. 16 Feb 1709; *d* Newcastle upon Tyne, 9/10 May 1770). English composer, conductor, writer on music and organist. He was the most important English concerto composer of the 18th century and an original and influential writer on music.

1. Life. 2. Writings. 3. Compositions.

1. Life. He was the fifth of nine children born to Richard and Ann Avison. Since his father, a Newcastle town wait, was a practising musician, his musical training probably began at home. Later, while in the service of Ralph Jenison, a patron of the arts and MP for Northumberland from 1724 to 1741, he had opportunity for further study. He had additional support in his musical development from Colonel John Blathwayt (or Blaithwaite), formerly a director of the Royal Academy of Music, the operatic organization in London. There is no evidence that, as has been claimed, Avison went to Italy, but William Hayes and Charles Burney wrote that he studied with Geminiani in London.



The earliest known reference to Avison's musical activities is an announcement of a benefit concert on 20 March 1734 in Hickford's Room, London. On 13 October 1735 he was appointed organist of St John's, Newcastle, an appointment that took effect only in June 1736, when a new organ had been installed. On 20 October, on the death of Thomas Powell, he became organist at St Nicholas (now the cathedral) at a yearly salary of £20.

In October 1735 a series of subscription concerts was organized in Newcastle, along the lines of those held in London, Edinburgh and elsewhere, under Avison's direction. In July 1738 Avison was formally appointed musical director, beginning with the fourth season; he retained the directorship of the Newcastle Musical Society, as well as the post at St Nicholas, until his death. He took part in other musical activities in Newcastle, including concerts at the pleasure gardens and benefit concerts. He also collaborated with John Garth in promoting a series of subscription concerts in Durham, which were held on Tuesdays; theatre productions in Newcastle and Durham were on Wednesdays, the Newcastle concerts on Thursdays, and on Sunday evenings from about 1761 informal concerts were given in a room added for the purpose to the St Nicholas vicarage. Mondays and Fridays were reserved for Avison's private pupils on the harpsichord, violin and flute. Some of the performers in the Avison-Garth concerts included Giardini, Herschel, Shield, and Avison's sons Edward and Charles. Geminiani is believed to have visited Avison in 1760, while travelling between Edinburgh and London, but there is no record of his playing in any concerts. Although Avison was criticized for the anti-Handelian remarks in his writings, Handel's music was well represented in the Newcastle and Durham concerts. In the 1750s Avison and Garth organized a Marcello Society in Newcastle devoted to the performance of choral music and in particular to the edition of Benedetto Marcello's *First Fifty Psalms* which the two men were preparing for publication.

Avison's reputation was not confined to Newcastle. A letter signed 'Marcellinus' in the *Newcastle Journal* (17 March 1759) summarizes some of the opportunities he refused elsewhere: before he was established in Newcastle he had a favourable prospect of establishing himself in London; he was offered the organist's post at York Minster in 1734 (accepted by James Nares), two organists' posts in Dublin on Geminiani's recommendation between 1733 and 1740, a teaching post in Edinburgh with participation in the Musical Society there, and the succession to Pepusch as organist at the Charterhouse, London, in 1753. Burney wrote that Avison was 'an ingenious and polished man, esteemed and respected by all who knew him; and an elegant writer upon his art'.

Avison married Catherine Reynolds on 15 January 1737. Three of their nine children lived to adulthood: Jane (1744–73), Edward (1747–76) and Charles (1751–95). Edward succeeded his father as organist of St Nicholas and musical director of the Newcastle Musical Society, and was a friend of John Wesley; Charles, who held various appointments as organist in Newcastle, including that at St Nicholas from 1789 (succeeding Mathias Hawdon), composed several works and published a hymn collection. The Avison family is buried in the churchyard of St Andrew's, Newgate Street, Newcastle. Robert Browning had a lifelong interest in Avison; his poem *Parleying with Certain People of Importance in their Day: with Charles Avison* was supposedly inspired by a march by Avison in his father's possession.

2. Writings. Avison's creative output can be divided between writings and musical compositions. Whether he was the author of numerous book reviews and music articles signed 'C.A.' in the local newspapers and magazines during his mature years is conjectural. He often included dedications and substantial, informative and sometimes controversial prefaces ('advertisements') with his published music. His op.3 includes a lengthy preface discussing performing practice in concertos, which was incorporated the next year into his most important literary work, *An Essay on Musical Expression* (which Burney

Charles Avison: portrait attributed to Francis Lindo, c1760 (Laing Art Gallery, Newcastle upon Tyne)

thought to be the first of its kind on musical criticism in England).

The *Essay* is in three parts. Part i contains a brief discussion of the effect of music upon the emotions and character, and a section on the analogies between music and painting. Part ii is a systematic critique of some composers and their styles. Part iii is devoted to remarks on instrumental performance, especially of concertos. The *Essay* was highly controversial, especially in its critical judgments, for example Avison's view that Geminiani and Marcello were superior composers to Handel. William Hayes published (anonymously) a critical review in January 1753 called *Remarks on Mr Avison's Essay*. His criticism, although limited to the first and second parts of the *Essay*, was longer than the total original work, and included several interesting digressions. Avison published *A Reply to the Author of Remarks on the Essay on Musical Expression* on 22 February 1753, and later that year he published the second edition of the *Essay*, which included his *Reply* and also *A Letter to the Author, concerning the Music of the Ancients* by Dr John Jortin. The *Essay* was not all Avison's own work, but, on his own admission, that of a 'junto', never mentioned by name. It could have included Dr John Brown, who along with Avison and several others was a member of a literary club in Newcastle, the poets Thomas Gray of Cambridge and the Rev. William Mason of York (who is known to have contributed some material), Dr John Jortin of London, Joseph Barber, the engraver and printer in Newcastle, and Robert Shaftoe, a brother-in-law of Ralph Jenison.

Avison's bias towards certain composers may have come partly from his musical training with Geminiani. While reviewers felt Hayes was correct in much of his criticism, they also praised Avison's own judicious observations. The third edition of the *Essay* (1775) consisted of a reprinting of the second edition; in the same year a German translation of the first edition was published in Leipzig.

3. Compositions. As a composer Avison is best known for his concerti grossi for strings. His op.2 was revised twice: first, when Walsh published it (along with two additional concertos) as organ concertos in the style made popular by Handel, second when Avison reworked all eight concertos into his op.6. In 1758 he issued his opp.3, 4 and 6 as *Twenty Six Concertos ... in Score for the Use of Performers on the Harpsichord*. The idea of a full score came from the publication of Corelli's concertos and sonatas edited by Pepusch (*c*1740) and of Geminiani's opp.2 and 3 (1755). Avison did not always adhere to his original texts in the later full-score versions; there are many revisions as well as movements transposed or substituted without explanation. His op.9 was a versatile and popular work, advertised as being playable several ways: by full string orchestra, as quartets, for harpsichord or organ with accompaniments, or as harpsichord 'sonatas'.

In general, Avison's concertos are modelled on Geminiani's; stylistically there is little difference between the early works and the late ones. If somewhat lightweight in texture and content, Avison's concertos are unusually tuneful; he was a firm believer in the value of 'air' or melody. His op.4 no.4 was very popular in the Concert of Antient Music, where it was much played between 1785 and 1812 along with concertos by Corelli, Geminiani, Sammartini and Handel. During the 19th century the Andante cantabile from op.9 no.5 was set to several religious texts, with numerous arrangements for hymnals and vocal ensembles and transcriptions for various instruments.

Of Avison's chamber music, his op.1 trio sonatas are in a typical Baroque style. However, after he introduced Rameau's *Pièces de clavecin en concerts* (1741) at the Newcastle concerts in the early 1750s, Avison modelled his later sonatas on Rameau's, which are essentially keyboard pieces with accompaniments for other instruments. His opp.5, 7 and 8 were the earliest of their kind to be composed in England. Earlier publications of accompanied keyboard sonatas usually had an accompaniment of a single violin or flute, but Avison's accompaniments were for two violins and cello, with the harpsichord part (in a complex style, closely akin to Geminiani's in his *Pièces de clavecin*) written out with great care and completeness, independent of the string parts, which do little more than provide supporting harmony. These sonatas clearly arose from Avison's objections to the Handelian type of keyboard concerto and the repetitiveness of its ritornello form. In contrast to the relatively conservative concertos, there is evidence here of stylistic change. These works were imitated by a number of composers in north England and the Midlands, most notably John Garth.

Avison's surviving original sacred works are limited to a verse anthem, a hymn and a chant. In collaboration with Giardini he composed a section of an oratorio, *Ruth*, which was first performed at the Lock Hospital, London, on 15 April 1763; it was repeated on 13 February 1765 and 25 May 1768, wholly set by Giardini.

NORRIS L. STEPHENS

Avison, John (Henry Patrick) (*b* Vancouver, 25 April 1917; *d* Vancouver, 30 Nov 1983). Canadian conductor, broadcaster and accompanist. After studying the piano privately, he took degrees at the universities of British Columbia (1935) and Washington (1936), and subsequently studied at the Juilliard School of Music (1946), Columbia (1946–7) and with Hindemith at Yale (1947). From 1939 to 1980 he was principal conductor of the CBC Vancouver Chamber Orchestra (now the CBC Vancouver Orchestra); there he gave premières of hundreds of works, including music by the Canadian composers Jean Coulthard, Barbara Pentland and Elliott Weisgarber, and earned a citation of merit from the Composers, Authors and Publishers Association of Canada. He was guest conductor with numerous Canadian and European orchestras, conducted at the Aspen Music Festival and taught at the universities of Victoria and British Columbia. He was also accompanist to Maureen Forrester, Lois Marshall and Lauritz Melchior. In 1979 Avison was made a member of the Order of Canada and in 1980 received the medal of the Canadian Music Council.

CHARLES BARBER

Avison Edition. Collection of music issued by the SOCIETY OF BRITISH COMPOSERS.

Avitrano, Giuseppe Antonio (*b* Naples, ?1670; *d* Naples, 19 March 1756). Italian composer and violinist. He came from a musical family and was a member of the Neapolitan court orchestra from the late 1690s until his death. His two sets of *sonate da chiesa* (opp.1 and 2) are notable for their fugal movements, in which the violone shares the counterpoint with the violins, while the continuo remains independent. This principle is systematized in his op.3,

which in its instrumentation is based on a model established in Naples at the end of the 17th century by composers such as Pietro Marchitelli and Giancarlo Cailò. In each sonata a brilliant first movement is followed by a three-part fugue, which is separated from a lively closing dance by a short, lyrical movement, usually in 3/2. Avitrano's works show a highly developed sense of tonal effect, particularly his op.3, in which the violins are independent of each other and often complement each other by playing in the same register. Although his violin music does not require technical brilliance from the players, it does demand a sound mastery of the bow, especially in the dance movements. His capacity for invention is limited, particularly in the slow movements, in which the thematic material is often similar to that in other slow movements of his. His harmonic development is conventional but lively. Avitrano's importance lies in his contribution to the four-part sonata, the leading genre in Neapolitan violin music.

CHRISTOPH TIMPE

Avitsur, Eitan (*b* Jerusalem, 15 Sept 1941). Israeli composer and conductor. He studied at the Rubin Academy of Music (teacher's diploma 1967, BMus 1972) and at the Salzburg Mozarteum (1976). From 1968 to 1973 he served as the director of Renanot, the Institute of Jewish Music, Jerusalem. In 1971 he joined the music department at Bar-Ilan University, where he founded an electro-acoustic laboratory in 1995. He has conducted numerous concerts in Israel, as well as national television and radio broadcasts. In 1973 he helped establish the Natanya SO, with which he has performed concerts of contemporary Israeli music. An award-winning youth orchestra conductor, he became music director of the Jerusalem Youth Orchestra in 1987.

Avitsur's compositions express a deep commitment to Jewish and Israeli culture. Many of his works are large-scale vocal compositions based on scenes from recent Jewish history. Much of his music, such as the Symphony no.2 'Shirat Hadorot' ('Generations' chanting', 1981), is influenced by traditional melodies and chants. In the *Rhapsody* for wind instruments (1991) traditional tunes and Middle Eastern *māqāmāt* are juxtaposed with a Western idiom. He has also composed Western-style accompaniments for original performances of traditional music. Other compositions, such as the Prelude for nine instruments and electronics (1972) and the Trio for percussion instruments (1992), are innovative in their use of rhythm and tone colour. Some of his concertos and chamber works show the influence of Mordecai Seter and Alexander Boskovitch. Avitsur himself cites Penderecki as a primary influence.

WORKS
(*selective list*)
for fuller list see Tischler (1988)

Vocal: Qaddish, vc, chorus, orch, 1971; Yasad Erets [He Established the Earth] (Ps civ), chorus, org, 1974; Eleh ha-banim [These are my Sons] (dramatic orat, I. Shalev, H. Hefer), spkr, Bar, orch, elecs, 1975; Meġillat Ha-esh [The Scroll of Fire] (orat, H.N. Bialik), spkr, S, chbr orch, elecs, 1976; Sym, no.2 'Shirat Ha-dorot' [Generations' Chanting], spkr, Bar, boys' choir, orch, 1981; Shirat Ha-yam [Song of the Sea] (cant.), chorus, orch, 1984; Ha-qhel le-yisra'el [The Community of Israel] (cant.), male vv, orch, 1987; Kinnor David [King David's Harp] (orat), solo vv, chorus, orch, 1996
Orch: Sinfonietta, chbr orch, 1977; Tpt Conc., 1982: Trbn Conc., 1985; Leilot Shabbat [Sabbath Eves], sym., 1986; Rhapsody, wind, 1991; The Israeli Chain, band, 1992; La blanka torre, suite, chbr orch, 1995; Rhapsody, vn, orch [based on Jewish Sephardi romances]; see VOCAL: [Sym. no.2 'Shirat ha-dorot', 1981]

ELIYAHU SCHLEIFER

Avni, Tsvi [Tzvi] (*b* Saarbrücken, 2 Sept 1927). Israeli composer of German origin. He studied composition with Erlich, Ben-Haim and Seter, and the piano with Pelleg, graduating from the Israel Academy of Music, Tel-Aviv, in 1958. From 1961 to 1975, Avni served intermittently as the director of the AMLI Central Music Library. Between 1962 and 1964 he continued his studies in the USA: at the Columbia–Princeton Electronic Music Center with Ussachevsky and in Tanglewood with Copland and Foss. Avni later taught composition and served as director of the electronic music laboratories at the Jerusalem Rubin Academy of Music and Dance (1971–95); he was appointed head of the department of theory and composition there in 1976. From 1968 to 1982 he also served as editor of *Guitite*, the bi-monthly publication of the Israeli Jeunesses Musicales, and from 1978 to 1980 he was chairman of the Israeli League of Composers. Avni was appointed chairman of the jury of the Arthur Rubinstein International Piano Master Competition in 1989 and 1992. In 1998 he won the Israel Prime Minister's prize for Life achievements as well as the Saarland prize of the Arts.

Avni's early works display eastern folk-like elements such as asymmetric rhythmic patterns while retaining classical forms including sonata and rondo. *Kashtot kayits* ('Summer Strings') (1962), his first string quartet, also reflects the influence of Bartók. Subsequently Avni turned his attention towards electronic music, the *Vocalise* of 1964, for example, integrating a pre-recorded soprano voice with electronic sounds, and *Collage* (1967) merging three sound sources, the human voice (a mezzo-soprano), instruments (flute and percussion) and tape. During the 1960s Avni absorbed other avant-garde elements, in particular an expressionist form of aleatorism. *Hirhurim*

al Drama ('Meditations on a Drama') (1965) for chamber orchestra, for instance, comprises contrasting static and dynamic elements, clusters versus melodic development, within a structure that contains aleatory sections; the work won the ACUM Prize (1966). *Five Pantomimes* for eight players of 1968 displays the use of proportional notation and a section written as a 'mobile', the work inspired by paintings by Picasso, Chagall, Kandinsky, Dali and Klee. Of Avni's compositions of the 1970s *Epitaph* (1974–9) is of particular note, an intimate, philosophical piano sonata taking its point of departure from a Jewish legend by Rabbi Nachman of Breslau. The work opens with a recitation on a single note, a prayer-like feature which appears in several other works including *Hirhurim al Drama*. At the start of the 1980s a further development in Avni's style began with signs of a simpler, though still chromatic, language, tending towards neo-tonality in an Impressionist manner. *Ahava Tahat Shemesh Acheret* ('Love under a Different Sun') (1982) – a song cycle based on love poetry from different cultures with music expressing the uniqueness of each – is an example of this change.

WORKS
(*selective list*)

Orch: Hirhurim al drama [Meditations on a Drama], chbr orch, 1966; Dimuyim l'yom chag [Holiday Metaphors], 1970; Al Kef yam mavet ze [On this Cape of Death], chbr orch, 1974; Musica Tochnittit [Programme Music], 1980; Mizmor, santour/xyl/mar, orch, 1982; Desert Scenes, 1990; The Three Legged Monster (H. MIRI GERSTEL

Avoglio [Avolio; née Croumann or Graumann], **Christina Maria** (*b* ? Mainz or Frankfurt; *fl* 1727–46). German soprano. She sang in the Peruzzi company at Brussels, 1727–8, and was at Hamburg in 1729, where she sang Cleopatra in Handel's *Giulio Cesare* and Rodelinda in Telemann's *Flavius Bertaridus*. The same year she was engaged by Fortunato Chelleri as a singer at the court of Kassel. The librettos recording her two appearances at the Sporck theatre in Prague during the 1730–31 operatic season indicate that she was employed at the court of Friedrich I, King of Sweden and Landgrave of Hesse-Kassel, but it is uncertain whether she or her husband, Giuseppe Avoglio (also a musician at the Hesse-Kassel court), ever followed the court chapel to Stockholm. In 1731 she went with her husband to Russia, where she sang for the court opera of Tsarina Anna Ivanovna in Moscow and St Petersburg until 1738. In 1740, after the collapse of G.B. Pescetti's operatic venture in London, she became closely associated with Handel. She is next heard of in Handel's letter of 29 December 1741 to Jennens from Dublin: 'Sig[ra] Avolio, which I brought with me from London pleases extraordinary'. His leading soprano throughout the Dublin season, she sang the principal soprano part at the first performance of *Messiah* on 13 April 1742; other roles included Rosmene in *Imeneo*. She was a member of Handel's company in the Covent Garden oratorio seasons of 1743 and 1744, singing the Israelite Woman in the first performance of *Samson* and Iris in the first production of *Semele*; in 1744 she created Hecate in Samuel Howard's pantomime *The Amorous Goddess* at Drury Lane. She sang at a benefit concert for herself and two local musicians at the Salisbury Assembly Room on 23 June 1746. Her Handel parts in 1742–3 require a moderate compass (*d'* to *a''*) but considerable flexibility.

WINTON DEAN, DANIEL E. FREEMAN

Avondano, Pedro António (bap. Lisbon, 16 April 1714; *d* Lisbon, 1782). Portuguese composer of Italian ancestry. He studied with his father, Pietro Giorgio Avondano, a Genoese violinist of the Portuguese royal chapel and a composer, and himself became a violinist in the same chapel; others of his family were also members. His duties as a court musician included composing the music for the ballets which accompanied the operas. He also played the violin, and at his own house in the Rua da Cruz promoted balls and concerts mainly for the foreign communities. Three collections of minuets written for these balls were published in London, at the expense of the British community in Lisbon. He was a Knight of the Order of Christ, an honour purchased for 480,000 réis, and he also played an important role in the reorganization after the 1755 earthquake of the Irmandade de S Cecília, the musicians' union of Lisbon. He wrote a *dramma giocoso*, *Il mondo della luna* (1765), and several oratorios and instrumental works.

Other members of the Avondano family, all active in the Real Câmara, include his brother António José (*d*

1783) and his son Joaquim Pedro (*d* 1804), João Francisco (*d* 1794), João Baptista André (*d* 1801), who published a set of *Quattro sonate e due duetti* for two cellos (Paris and Lyons, by 1784) and was a pupil of J.-P. Duport, and Joaquim António (*d* 1828).

WORKS

VOCAL

Le difese d'amore (cant.), Lisbon, 1764, only lib extant
Il mondo della luna (dg, 3, C. Goldoni), Lisbon, Salvaterra, carn. 1765, *P-La*

MANUEL CARLOS DE BRITO

Avosani, Orfeo (*b* Viadana, nr Mantua; *fl* 1641–5). Italian composer and organist. The title-page of his *Compieta concertata a cinque voci* op.1 (Venice, 1641) describes him as organist of S Nicola, Viadana, and he was still there when he published his only other known music, *Messa e salmi a tre voci* op.2 (Venice, 1645).

COLIN TIMMS

Avossa [d'Avossa; Avosa; Avos; d'Anossa], **Giuseppe** (*b* Paola, nr Cosenza, 1708; *d* Naples, 9 Jan 1796). Italian composer. He is often confused with his contemporary Girolamo Abos, several of whose *opere serie* are sometimes attributed to him. The family is reputed to have been of Spanish origin. His father was in the service of Spinelli, Duke of Fuscaldo, and (according to Mondolfi, *MGG1*) the duke used his influence to place the young musician in the Conservatorio dei Poveri di Gesù Cristo in Naples. There he studied with Gaetano Greco and Francesco Durante. He subsequently became *maestro di cappella* of S Maria Verticelli; according to Schmidl he also taught singing in various Neapolitan monasteries and churches. By 1749 Avossa was working in north Italy as *maestro di cappella* in Pesaro and conductor of the municipal theatre orchestra there. He married a Rosa Travi in Naples in 1758.

Although Avossa's principal fame today derives from his highly popular comic opera *La pupilla*, he probably wrote mainly church music. Surviving works have concertato textures of chorus and solo voices, contrapuntal facility, a certain adventurousness in tonal thinking and, in some cases, an essentially symphonic conception of a whole movement.

WORKS

COMIC OPERAS

Don Saverio (A. Palomba), Venice, S Moisè, aut. 1744
Lo scolaro alla moda, Reggio nell'Emilia, Cittadella, carn. 1748
Il baron gonfianuvoli, Salzburg, carn. 1750
I tutori, Naples, Nuovo, wint. 1757
La pupilla (Palomba), Naples, Fiorentini, carn. 1763, *H-Bn*; in *A-Wn* and *US-Wc* as Il ciarlone; as La pupilla ed il ciarlone, with emendations by G. Scalabrini, Copenhagen, 1769, *DK-Cb*

CHURCH MUSIC

Orats: La nuvoletta d'Elia, Ancona, 1746; La felicità de' tempi, Pesaro, 1749; Il giudizio di Salomone, Pesaro, 1751
3 masses, several mass sections, *I-Nc*; mass, *F-Pn*; 2 Mag, *A-Wn*, *I-Nc*; 2 motets, *GB-Lbl*, *I-Fc*

JAMES L. JACKMAN/DALE E. MONSON

Avotri, Kenneth. *See* KAFUI, KENNETH.

Avraamov, Arseny Mikhaylovich (*b* Maliy Nesvetay, Rostov district, 10/22 April 1886 (elsewhere 10/12 June 1886); *d* Moscow, 19 May 1944). Russian composer and theorist. He studied theory at the music school attached to the Moscow Philharmonic Society with I.N. Protopopov and A.M. Koreshchenko (1908–11) and took private composition lessons with Sergey Taneyev. From 1910 he was active as a music critic under the pseudonym Ars and, having refused to fight in World War I, fled abroad in 1914 and worked, among other occupations, as a stoker and as a circus artist. Returning to Russia in 1917 he was appointed arts commissar of the RSFSR branch of Narkompros (1917–18) and took part in the formation of the Proletkul't organization. 1923 found him working in Dagestan but in 1926 he returned to Moscow where he became involved in a number of activities: he participated in the creation of the first Russian films with sound (1929–34), he led a sound laboratory in the Cinematic Institute of Scientific Research (1932–3) and he lectured at the Moscow Conservatory on the history and theory of sound systems (1934). While living in Nal'chik (1935–41) he collected folk music of the peoples of the north Caucasus and wrote some compositions based on these materials. He later conducted the Russian Folk Chorus (1941–3). During the early Soviet era many artists attempted to integrate technology and creativity; Avraamov's work typifies this trend. He invented a graphic-sonic art which was produced by drawing directly onto magnetic tape. He also sought to overcome equal temperament and tonality by his creation of an 'ultrachromatic' 48-tone system. This method was proposed in a thesis entitled *Universal'naya sistema tonov* ('The Universal System of Tones') and was realized in his demonstrations which took place in 1927 in Berlin, Frankfurt and Stuttgart. He is considered a precursor of the *musique concrète* movement with his *Simfoniya gudkov* ('Symphony of Factory Sirens') which was performed in Azerbaijan in 1923 and later in Moscow. He also wrote a number of compositions for more conventional forces.

WORKS
(*selective list*)

Simfoniya gudkov [Sym. of Factory Sirens] (text of instructions), several choruses with spectators, cannons, foghorns, Caspian flotilla, 2 batteries of artillery guns, several full infantry regiments incl. machine gun division, hydro-aeroplanes, all of Baku's factory sirens, conductors with pistol shots, central steam whistle machine, noise auto-transports, 1922; Marsh na kabardinskiye temï [March on Kabardin Themes], orch, 1936; Aul Batïr Ov., orch, 1940; Fantasies on Kabardin Themes, orch, 1940; inst works, choral music

MARINA LOBANOVA

Avshalomov, Aaron (*b* Nikolayevsk, Siberia, 31 Oct 1894; *d* New York, 26 April 1965). Russian composer, father of JACOB AVSHALOMOV. Self-taught except for one term at the Zürich Conservatory, he spent 30 years in China, where he composed symphonic and dramatic works. Fascinated by Chinese culture, he integrated authentic Chinese thematic material into Western musical styles. In addition to composing, he became head librarian of the Municipal Library of Shanghai (1928–43) and conductor of the Shanghai SO (1943–6). He emigrated to the USA in 1947, joining his son, Jacob Avshalomov. Although he continued to compose, his work never achieved much recognition in the USA, where he became a naturalized citizen. Of his three operas, *Kuan Yin* (*c*1925), *The Twilight Hour of Yan Kuei Fei* (1933) and *The Great Wall* (1945), all composed in China, the last had the most success. First performed in Shanghai in 1945, it was also produced in Nanjing under the sponsorship of both Madame Sun Yat Sen and Madame Chiang Kaishek. In the USA, Leopold Stokowski, Pierre Monteux and Artur Rodzinski conducted his three symphonies, the second of which was commissioned by Koussevitzky in 1949. He also wrote concertos for the piano, violin and flute.

DAVID STABLER

Avshalomov, Jacob (David) (*b* Qingdao, China, 28 March 1919). American composer, son of AARON AVSHALOMOV. After emigrating to the USA in 1937, he studied in Los Angeles with Ernst Toch, at the Eastman School of Music (MA 1942) with Bernard Rogers, among others, and at Tanglewood with Aaron Copland (1947). From 1946 to 1954 he taught at Columbia University, where he conducted the university chorus and orchestra in the American premières of Bruckner's Mass in D minor, Tippett's *A Child of our Time* and Handel's *The Triumph of Time and Truth*. In 1954 he began a 41-year tenure as conductor of the Portland (Oregon) Junior SO (later the Portland Youth PO), the country's first student orchestra. A number of recordings, six international tours, and praise from New York and European audiences followed. In 1968 President Lyndon Johnson appointed him to the National Council of the Humanities. He also served on the committees of the NEA's Music Planning Section (1974–9) and the Pro Musicis Foundation (1986–92). His compositional style embraces Asian sonorities, Renaissance counterpoint and Ivesian allusions to American folk music. He has identified *Inscriptions at the City of Brass* (1957) as his most significant work. His honours include a Guggenheim Fellowship (1951), a New York Music Critic's Circle Award (1953) for *Tom O'Bedlam*, a Naumburg Recording Award (1956) for his Sinfonietta and an Alice M. Ditson Award (1965) for his work with the Portland Youth Philharmonic.

WORKS

DAVID STABLER

Awang, Khatijah binti (*b* Pasir Mas Kelantan, Malaysia, 13 Aug 1941). Malaysian *ma'yong* (dance theatre)

performer. From an early age she developed an interest in singing, dancing and acting, later participating as a singer and dancer in activities organized by both the regional radio and television stations in Kota Baharu and the Kelantan state cultural troupe, as well as in several performances marking national events in Kuala Lumpur. In the mid-1960s she joined the National Cultural Complex under the Ministry of Culture, Arts and Tourism as a dancer.

Although there have been notable performers of *ma'yong*, *main puteri* (shamanic dance) and *silat* (Malay martial art form) on both sides of her family, Awang's involvement in *ma'yong* developed mainly as a response to the Traditional Drama and Music of Southeast Asia conference, held in Kuala Lumpur in August 1969, during which the plight of the genre (then on the verge of extinction) was highlighted. The goal of the 1969 revival, led by Awang, was to save the genre from extinction by making it more visually elaborate; this resulted in the creation of the Seri Temenggung troupe of Kelantan, which Awang has led since its inception in 1970.

Seri Temenggung has become the country's leading troupe, performing extensively within Malaysia as well as overseas, and has been at the forefront of promoting *ma'yong* outside the province of Kelantan in association with various universities and cultural organizations.

Awang herself has become a valuable resource, assisting with research and efforts to preserve and document not only *ma'yong*, but traditional Kelantan performing arts in general. For her efforts in promoting *ma'yong* she has received numerous local awards, as well as the ASEAN Cultural Award. She continues to teach *ma'yong* at the Akademi Seni Kebangsaan (National Arts Academy) in Kuala Lumpur.

See also MALAYSIA, §I, 1(iii).

GHULAM-SARWAR YOUSOF

Aweke, Ashter [Aster] (*b* Gonder, Ethiopia, 1961). Ethiopian singer. Ashter began her singing career in the early 1970s in Addis Ababa, and performed with the band Roha (formerly Shebele Band). Her formative musical years were also shaped by the music of Bezunesh Bekele and the philanthropy of Ali Tango, which provided motivation for the singer. Ashter emigrated to the USA in 1981 after a few cassette releases (such as *Munaya*) in Ethiopia and has since produced important albums for Sony: *Kabu* remained among the top ten of Billboard's world music charts for ten weeks and *Aster Aweke Alive* was recorded at a sold-out concert in London in 1996. Her popularity spread further with the inclusion of her songs on compilation releases involving multiple artists, such as *Afrika*, *Under African Skies* (BBC Videos, vol.2, 1989) and *Fruits of Freedom*. Ashter possesses a unique musical style that fuses indigenous musical and linguistic traditions with influences from singers such as Donna Summer and Aretha Franklin. Along with Angélique Kidjo and Oumou Sangare, Ashter Aweke represents an important African female voice in the popular music industry. She returned to Ethiopia in 1996.

DANIEL AVORGBEDOR

Awshīyāt. Prayers sung by the priest in the Divine Liturgy of the Coptic Orthodox Church. *See* COPTIC CHURCH MUSIC, §4.

Ax, Emanuel (*b* L'viv, 8 June 1949). American pianist of Polish birth. His first teacher was his father, a coach at the L'viv Opera. The family emigrated to Canada in 1959, settling in Winnipeg, then moved to New York in 1961. Ax began seven years of study with Mieczysław Munz at the Juilliard School of Music in 1966 and also attended Columbia University (BA 1970). He had already won honours in the Chopin competition, Warsaw, the Vianna da Motta Competition, Lisbon, and the Queen Elisabeth of Belgium Competition, and had made his New York début (Alice Tully Hall, 1973) when he won the first Artur Rubinstein International Piano Competition in 1974. The next year he received the Young Concert Artists' Michaels Award, and in 1979 he won the Avery Fisher Prize. Ax has performed with many leading orchestras, including the Boston SO, the Philadelphia Orchestra, the New York PO and the LPO. In 1991 he made his début at the Proms in London, performing Brahms's First Piano Concerto. He has taken part in numerous chamber music and recital series, including performances by the Chamber Music Society of Lincoln Center, the Mostly Mozart Festival, and a three-concert series entitled 'Emanuel Ax Invites' at Alice Tully Hall. In 1980 he formed a trio with the violinist Young Uck Kim and the cellist Yo-Yo Ma; he and Ma also play together as a duo, and have made many admired recordings. Other recordings include Haydn sonatas, thoughtful readings of the Beethoven concertos, and the piano concertos of Chopin and Schoenberg.

Ax is in the front rank of his generation of pianists; his often aggressive, dramatic musical inclinations have been increasingly tempered by a maturing musical intelligence and sensibility.

JAMES CHUTE/R

Axman, Emil (*b* Rataje u Kroměříže, 3 June 1887; *d* Prague, 25 Jan 1949). Czech composer, musicologist and archivist. He studied at Prague University under Nejedlý and Hostinský, receiving the PhD in 1912 for a dissertation on Moravian folk opera in the 18th century. He studied composition under Novák (1908–10) and counterpoint under Ostrčil (1920), and he devoted himself to composition while head of the musical archive at the National Museum in Prague (1915). In the 1920s he was an official in the Society for Modern Music. His music was much influenced by the folk music of his native Moravia, but the political and social problems of the World War I period also had a deep effect on him. Passing from late-Romanticism through a transitional period marked by influences from contemporary developments, his music attained a broad lyricism with particularly strong traces of folksong and dance. Most of his works are cast in extended forms. It was in the field of vocal music that he was most successful: there are a number of valuable choral works (principally pieces for male chorus) and his song-cycles and folksong arrangements are notable.

JAN TROJAN

Axt, William L. (*b* New York, 19 April 1888; *d* Ukiah, CA, 13 Feb 1959). American composer and conductor. After private music study in Berlin, he conducted for Oscar Hammerstein's Manhattan Opera Company (which closed in 1910), then for productions on Broadway. By 1921 he had become an assistant conductor at the Capitol Theater, where silent films were presented with full orchestral accompaniment; in 1923, in partnership with David Mendoza, he replaced Erno Rapee as principal conductor. In addition to conducting, he composed incidental film music for the Capitol as needed, including 57 pieces published in the *Capitol Photoplay Series* (New York, 1923–7). From 1925 to 1929 he collaborated with Mendoza in New York on compilation scores for at least 20 MGM films, beginning with *The Big Parade*. Their collaboration continued with the music for *Don Juan* (1926), the first feature film score to be presented using the Vitaphone process, which mechanically synchronized the playback of music recorded on wax discs with the projection of the film. In 1929 or 1930 he moved to Hollywood, where he played a key role in the MGM music department. He continued to work for MGM, providing music for numerous films, until his retirement in the early 1940s.

Neither in the collaborations with Mendoza, nor in the MGM films is a distinctive Axt style easily discernible; his works of the 1920s, however, serve as excellent examples of the compilation score. In the music for *The Big Parade*, principal themes exhibit clear expressive content and undergo simple, skilful transformations; new music is interwoven with arrangements of pre-existent pieces to create a smooth pastiche. The scores of the 1930s are often sparse, consisting mainly of modest mood pieces and source music. Many of these are polished examples of MGM's star-centred style, in which the craftsmanship of the composer was subordinated to the effect of the whole.

MARTIN MARKS

Ayala Pérez, Daniel (*b* Abalá, Yucatán, 21 July 1906; *d* Veracruz, 20 June 1975). Mexican conductor and composer. He studied at the Conservatorio Nacional de Música, Mexico City (1927–32), where he was a violin pupil of Revueltas and a composition pupil of Chávez. There he allied himself with Contreras, Galindo Dimas and Moncayo in the 'Group of Four'. From 1931 to 1937 he played second violin in the Mexico SO, and he then directed a chorus in Morelia for two years. Returning to Yucatán in 1940, he quickly took a leading part in all aspects of musical life. He was director of the newly reorganized Mérida SO (inaugural concert 15 November 1944), of the Típica Yukalpetén, of the official state band, of the Yucatán Conservatory (from 1944) and of the Veracruz School of Music (from 1955); later he also worked for the Veracruz Institute of Fine Arts. He composed relatively little after 1944, but his bright picture-postcard pentatonic evocations, usually short danceable pieces with Maya titles or texts, had already established his reputation in Mexico and the USA. *U kayil chaac* was widely broadcast in a CBS concert conducted by Chávez (24 January 1936).

ROBERT STEVENSON

Ayestarán, Lauro (*b* Montevideo, 9 July 1913; *d* Montevideo, 22 July 1966). Uruguayan musicologist and ethnomusicologist. He studied in Montevideo at the Larrimbe Conservatory and at the school of law and social sciences of the university. In 1937 he was appointed professor of choral music and music history at the teachers' training institute; subsequently he became director of the division of musical research of the Instituto de Estudios Superiores, professor of musicology at the University of Montevideo (1946) and head of the musicology section of the National Historical Museum of Uruguay. He was also active as a music critic for several newspapers and as artistic director of the state broadcasting system, SODRE. Ayestarán was equally interested in music history and ethnomusicology. His first study of Hispano-American Baroque music (1941) dealt with the activities in Argentina of the Italian composer Domenico Zipoli. During the 1940s he did field

work for the National Historical Museum, making some 4000 recordings of Uruguayan folk music and publishing his studies of them. He received (among several prizes) the national award Pablo Blanco Acevedo for his major work, *La música en el Uruguay* (1953). He was a corresponding member of several music organizations, including IFMC, the Brazilian Academy of Music, the Argentine Academy of Fine Arts and ISM, and served as vice-president of the Inter-American Music Council (CIDEM).

GERARD BÉHAGUE/R

Ayler, Albert (*b* Cleveland, 13 July 1936; *d* ?New York, between 5 and 25 Nov 1970). American jazz tenor saxophonist and bandleader. He began on the alto saxophone and was playing professionally in black rhythm-and-blues bands by his mid-teens. While serving in army concert bands, he changed over to the tenor saxophone. He occasionally played in Paris clubs while stationed in France in 1960–61. After his discharge, he remained in Europe, leading a bop trio for eight months in Sweden and playing with Cecil Taylor in winter 1962–3 in Copenhagen. In 1963 he moved to New York, where he performed infrequently with Taylor. In summer 1964 he formed a quartet with Don Cherry, Gary Peacock and Sunny Murray which toured Europe later that year.

Ayler was never to find a steady audience for his radical music – his group appeared perhaps only three times in 1965 – and, although his albums were well received by the critics, he remained poor. He made no effort to clarify his music for listeners, actively discouraging musical interpretations of his recordings and instead stressing their social and spiritual issues; the inconsistent and confusing titles to his pieces further obscured his work (see Litweiler). Nevertheless, in studios and New York clubs (1965–8), at the Newport Jazz Festival (1966), on a brief European tour (November 1966) and for college concerts he was able to assemble faithful sidemen. His groups included his brother, the trumpeter Donald Ayler, one or two double bass players, such as Peacock and Henry Grimes, the drummers Murray, Milford Graves or Beaver Harris, and Cal Cobbs on piano or harpsichord. Only Cobbs remained in Ayler's new rhythm-and-blues groups of 1969–70. On 5 November 1970, shortly after having returned from a tour of Europe with his quintet, Ayler was reported missing in New York; his body was found in the East River on 25 November.

Ayler's extraordinary music of the mid-1960s rejected most of the conventions of the prevailing bop and free-jazz styles. According to Jost (who alone has surveyed his career analytically), Ayler often replaced tempered melody with sweeping flourishes; he combined these 'sound-spans' (Jost) with sudden low-pitched honks and a wide, sentimental vibrato (ex.1). His recordings of 1962–3 in Scandinavia were unsuccessful because of the stylistic gulf between the 'in-tune' bop accompanists and the 'out-of-tune' saxophone. By contrast, Peacock and Murray provided sympathetic accompaniments to Ayler's highly original playing. Their recordings (1964) juxtapose difficult collective improvisation and Ayler's simple, rhythmically square, frequently tonal themes. Sometimes these two factors are interrelated, as in the gradual deformation of the folk-like melody in several versions of *Ghosts* (1964; including one on the album *Spiritual Unity*, ESP). More often, however, the brief themes serve as foils for lengthy, exciting improvisations in which the group, avoiding predictable sounds, achieves remarkably varied textures and rhythms.

Ex.1 From the title track of *Ghosts* (1964, Debut); transcr. B. Kernfeld

Soon after the performance of *Bells* in May 1965, the balance shifted from improvisation to composition. Three tracks on *Spirits Rejoice* (1965, ESP) emphasize thematic material. Later, in a new version of *Ghosts* (1967, on the album *Albert Ayler in Greenwich Village*, Imp.), the players never depart from thematic statements. This striving for simplicity, augmented by pressure from the record company Impulse! to increase his sales, led Ayler to return to rhythm-and-blues in the late 1960s.

Unfortunately, his late rhythm-and-blues songs and his singing were dull, and his last two albums received little attention.

BARRY KERNFELD

Ayleward, Richard (*b* Winchester, 1626; *d* Norwich, 15 Oct 1669). English organist and composer. He was a chorister at Winchester Cathedral under Christopher Gibbons from June 1638 to November 1639, his father Richard being a minor canon there. At the Restoration he became Organist and Master of the Choristers at Norwich Cathedral from 12 March 1661 to mid-1664 and again from 5 December 1666 until his death. During at least part of his absence, for some unknown reason Ayleward was at the Assizes. He was buried in the cathedral on 18 October 1669.

Ayleward's output consists mainly of church music, all of which is contained in a set of partbooks formerly belonging to Norwich Cathedral which were later acquired by A.H. Mann. The Service in D major is in the 'short' style of Orlando Gibbons and was probably influenced by the music Ayleward sang at Winchester. The two Evening Services also have predominantly syllabic underlay. The verse anthems range from short pieces with one solo and four chorus parts (*Have pity upon me*) to elaborate settings, whose exceptional length and complexity of design would have made them unsuitable for the choir at Norwich in the early years of the Restoration; *I was glad*, for example, contains a verse for twelve solo voices. The style of the anthems tends towards that of Blow and Locke; *Holy, holy, holy*, one of the longer pieces, is a good example in the new idiom. An unusual feature of some of the anthems is the use of three or four solo voices of the same range; *I will not come*, for example, has a verse for four solo basses and another for four meanes. Many of the anthems have penitential texts and are in the minor mode. In *Hark, methinks I hear* Ayleward's interest in the declamatory style is particularly evident, while *O that I were* has chromatic word-painting of a madrigalian character (at the phrase 'my harp is turn'd'). *I charge you* makes dramatic use of antiphonal passages and also contains two solo sections for the organ, which performs a structural role.

The keyboard suites probably date from before the Restoration. In the D major suite the four movements are given descriptive names, in the manner of the fanciful titles adopted by Giles Farnaby and other Elizabethan and early Stuart virginalists. According to Mann, a manuscript of keyboard music (now lost) contained Ayleward's directions for tuning the harpsichord according to equal temperament. The 'Airs, dance tunes and suites' and a song by 'Mr Aylward' mentioned by Mann are by the later Theodore Aylward.

P.R. GRANGER/PETER ASTON, TOM ROAST

Ayliff [Aylif, Alyff, Ayloff, Ayloffe], Mrs (*fl* 1692–6). English soprano and actress. She sang in *The Fairy Queen* at Dorset Garden Theatre in May 1692 and soon became Purcell's leading soprano. In the *Gentleman's Journal* for August 1692 Peter Motteux referred to her performance of Purcell's italianate 'Ah me to many deaths decreed' in Crowne's play *Regulus* as 'divinely sung'. Well over a dozen of Purcell's stage songs and dialogues were published as sung by her and she was a soloist in his *Hail, bright Cecilia* (1692) and *Celebrate this Festival* (1693). In 1695 she went to Lincoln's Inn fields with Betterton's company and there she also acted a little, creating Miss Prue in Congreve's *Love for Love*. Her last recorded appearance was in November 1696 when she sang in *The Loves of Mars and Venus*, a masque with music by Eccles and Finger.

OLIVE BALDWIN, THELMA WILSON

Aylward, Theodore (*b* ?Chichester, *c*1730; *d* London, 27 Feb 1801). English organist and composer, son of Henry Aylward of Chichester. He may have sung as a boy at Drury Lane Theatre in London. His successive appointments were as organist of Oxford Chapel, London, from about 1760 until 1768; St Lawrence Jewry, 1762–88; St Michael Cornhill, 1768–81; and St George's Chapel, Windsor, 1788 until his death. Meanwhile, from 1771 he was also Gresham Professor of Music, and at the Handel Commemoration of 1784 he was one of the assistant directors. He was elected a member of the Society of Musicians in 1763, and took the Oxford degree of DMus in 1791. About 1780 he directed the Friendly Harmonists, a small glee club whose meetings were held at Anderton's Coffee House in Fleet Street. Most of his compositions were secular, and he won a Catch Club medal in 1769. He also composed for the theatre, and was involved in Garrick's Shakespeare Jubilee Procession in 1769. Harley comments that his *Six Lessons for the Harpsichord, Organ or Piano Forte* (*c*1784) are 'virtually Handelian Suites' and suggests that he was 'indulging in a conscious

piece of archaism, inspired by his participation that year ... in the Handel Commemoration'. Notwithstanding their strong Handelian orientation, these works at times reflect Aylward's acquaintance with the harpsichord music of Domenico Scarlatti. Elsewhere, there are movements equivalent to contemporary 'cornet voluntaries' for organ, while later lessons demonstrate traits characteristic of music for fortepiano, suggesting the influence of J.C. Bach.

WATKINS SHAW/GERALD GIFFORD

Ayo, Felix (*b* Sestao, Bilbao, 1 July 1933). Italian violinist of Spanish birth. When he was 14 he graduated from the Bilbao Conservatory and played Beethoven's concerto with a local orchestra. He then studied in Paris (1949–50, with René Benedetti) and at the Accademia Musicale Chigiana, Siena (1950–51, with Enescu and Principe) before moving to Rome to study under Principe at the Conservatorio di S Cecilia, becoming leader of the chamber orchestra I Musici, with which he first performed in 1952, the year of its formation. He went on many international tours with I Musici until 1968 and with them made numerous recordings, several of which received international awards. In 1968 he formed a piano quartet with Cino Ghedin, viola, Vincenzo Altobelli, cello (both from I Musici), and Marcello Abbado, piano; after Carlo Bruno succeeded Abbado as pianist in 1970 the group was named Quartetto Beethoven and has since toured in many countries. As well as making a number of recordings with the quartet, Ayo has recorded and published an edition of Bach's sonatas and partitas for solo violin. He was appointed to teach at the Rome Conservatory in 1972, becoming professor of violin in 1989.

PIERO RATTALINO

Ayre. *See* AIR.

Ayres (Johnson), Frederic (*b* Binghamton, NY, 17 March 1876; *d* Colorado Springs, CO, 23 Nov 1926). American composer. After studying engineering at Cornell University (1892–3) he worked designing electric motors. He studied composition with Kelley (1897–1901) and Foote (summer 1899) 'to perfect ... what I believed to be my proper work'. Because of ill health (tuberculosis) he moved to Las Cruces, New Mexico (1901), and then to Colorado Springs (1902), where he lived for the rest of his life composing and teaching theory privately. In 1926 he was awarded an honorary doctorate by the Cincinnati Conservatory of Music. His earlier output occasionally drew on thematic material evocative of Amerindian music, but the late works, for instance the Trio in D minor and the Violin Sonata in B minor, discard those influences in favour of a more abstract lyricism.

BARNEY CHILDS

Ayrton, Edmund (*b* Ripon, bap. 19 Nov 1734; *d* Westminster, London, 22 May 1808). English organist and composer. He was the younger brother of William Ayrton (*b* Ripon, bap. 18 Dec 1726; *d* Ripon, 2 Feb 1799), who was organist of Ripon Cathedral from 7 June 1748 until his death. He was appointed organist, *rector chori* and 'singing-man' (with the additional post of auditor, perhaps merely as an augmentation of stipend) of Southwell Collegiate Church, or Minster (now the cathedral), on 23 October 1755; in April 1756 he was granted leave of absence to study under James Nares for three months. He moved to London on his appointment as Gentleman of the Chapel Royal in 1764. He also became a vicar-choral of St Paul's Cathedral (1767), lay vicar of Westminster Abbey and Master of the Children of the Chapel Royal (1780), holding all these posts simultaneously. He resigned as Master of the Children in 1805, having earlier successfully rebutted charges that he starved the boys. In 1784 he took the Cambridge degree of MusD, and he is stated to have proceeded *ad eundem* at Oxford in 1788, which, despite absence of official record, is not impossible. Samuel Wesley regarded him as 'one of the most egregious

blockheads', but that is not the judgment of a well-balanced figure.

Ayrton's chief work is the anthem *Begin unto my God*, a large-scale work which was sung in St Paul's Cathedral at the thanksgiving service for the end of the War of American Independence in 1784. It is a very competent piece in the English tradition of Greene with strong Handelian influences. It goes outside the normal pattern of such anthems by including slightly colourful passages of accompanied recitative.

Edmund Ayrton's many sons included Edward Edmund (*b* London, 26 Jan 1765; *d* Bolton, Lancs., 5 Feb 1811), who was organist of Swansea Parish Church from 1792 to 1809, and WILLIAM AYRTON. Edmund's brother William had sons William Francis Morrall Ayrton (*b* Ripon, bap. 28 July 1778; *d* Chester, 8 Nov 1850) and Nicholas Thomas Dall Ayrton (*b* Ripon, bap. 15 Jan 1782; *d* Ripon, 24 Oct 1822); the former succeeded his father as organist of Ripon Cathedral in 1799, and the latter followed him in 1802 or 1805, retaining the post until his death.

WATKINS SHAW

Ayrton, William (*b* London, 22 Feb 1777; *d* London, 8 May 1858). English editor, critic and impresario, youngest son of EDMUND AYRTON. He was baptized at St Margaret's, Westminster, and probably studied music with his father. In 1794 he was a bass chorus singer at the Ancient Concerts, and by 1803, when he married Marianne Arnold (daughter of Samuel Arnold), a piano teacher. Through the Chapel Royal connections of his father and father-in-law, and the friendship of Frederick Nicolay (Queen Charlotte's music librarian), he had easy access to court circles. But it was his membership in the Society of Antiquaries (1807) that stimulated his serious interest in music history. In 1808 he began collecting materials for a historical music dictionary (never completed), eventually assembling one of the most remarkable music collections of the mid-19th century. Among his circle of acquaintances around this time, mostly journalists and barristers, Henry Crabb Robinson, Martin Burney (the music historian's grandson), Charles Lamb and William Hazlitt were prominent; T.M. Alsager, the *Times*'s financial writer and a notable Beethoven advocate, became a close friend.

Ayrton's social and organizational skills always outshone his musical ones – he was never known as an executant musician or serious composer – though by study and inclination he formed a refined taste, grounded in the Classical style. From 1813 he was at the forefront of English efforts to promote this repertory (in contrast with George III's antiquarian preferences) as well as to encourage music professionalism at a national level. In January that year he helped instigate the Philharmonic Society, and in July, with J.P. Salomon, tried to establish a music academy under its auspices. Successively a concert director and treasurer of the society – and, not incidentally, an honorary music reviewer for the *Morning Chronicle* (1813–26) – he proved himself a dedicated committee man.

By 1816 his administrative skills were being sought by the proprietor of the King's Theatre in the Haymarket, Edmund Waters, who hired Ayrton as managing director of the Italian opera. His success was spectacular. The repertory, including the first complete *Don Giovanni* on an English stage (12 April 1817), strong company (Pasta made her London début), and Ayrton's firm management of day-to-day operations all contributed to his standing as a person of discernment and principle – an impression confirmed when, after Waters interfered with his director's authority over singers, Ayrton resigned and sued the proprietor for damages. In 1821 and 1825 Ayrton again presided over much talked-about seasons (introducing to London, respectively, Rossini's *La gazza ladra* and Meyerbeer's *Il crociato in Egitto*), but again, in each season his authority was undermined by an aristocratic cabal and he withdrew in anger. He finally attempted to lease the King's Theatre himself in mid-1827, but was turned down by the assignors and thenceforward gave up all official connection to the house. He would later recall *Don Giovanni* as the proudest achievement of his career.

Meanwhile, in 1823 his historical interests, collecting habits and desire for influence had found expression in a new job – editor of the *Harmonicon*, the monthly music magazine founded by William Clowes and J.W. Parker. In an accessible style and attractive format, Ayrton offered readers an encyclopaedic range of articles as well as regular sections of news and review. All this was balanced by an equal part of printed music, some specially commissioned and some arranged from the editor's own collections. More important was the journal's critical voice. Knowing and technically specific – if also pedantic and by the end of the 1820s decidedly conservative – it came to be seen as authoritative and influential. The *Harmonicon* was an institution in its own right. When the journal failed financially in 1833, it was revamped as the more practical *Musical Library* (1834–7). Ayrton continued to work for Clowes on this project, and later contributed brief music articles to the *Gallery of Portraits* (1833, 1836), *Penny Cyclopaedia* (1833–46), and from 1835 onwards, the *Pictorial History of England*, *Pictorial Shakespeare*, *George III*, *British Almanac*, *Map of London* and *Standard Bible*. He also compiled and edited Parker's serial music collection, *Sacred Minstrelsy* (1834–5), then, returning to the newspaper press, served as honorary music critic to the *Examiner* (1837–53). As with most of his journalistic work, these later reviews were generally known to be his though published anonymously.

In a period still dominated by amateurism, Ayrton's achievement as a decisive administrator and editor of both music and literature remains extraordinary. His aesthetic values were those of his generation and upbring-

ing; he made no apology for them. With Mozart as paradigm, he consistently looked for what he called clear air and harmony, balance and 'correct expression'. He supported Weber and Mendelssohn (the latter enthusiastically), but was sceptical of much of Beethoven, faulting 'excessive length' or 'unintelligible form'. Though dismissive of Bellini and Donizetti, he was attracted by Rossini's music and could be articulate on its dramatic effects. Purcell's anthems, and what he knew of J.S. Bach, he found uncongenial. Such opinions, stated with the confidence and independence Ayrton invariably displayed, may strike modern readers as naive or imperceptive; what matters is that he gave his reasons, and that he was open to persuasion by effective performance and repeat hearings. He was elected to the Athenaeum in 1824, and the Royal Society in 1837.

LEANNE LANGLEY

Ayton, Fanny (*b* Macclesfield, ?1806; *d* after 1833). English soprano. She studied with Giovanni Liverati in London and with Manielli in Florence, and made her début at the Teatro di S Luca in Venice in Coccia's *Clotilde* in 1825. In 1827 John Ebers engaged her at the King's Theatre in London, where she appeared as Ninetta in Rossini's *La gazza ladra* and as Fiorella in *Il turco in Italia*. The mixed reviews she received were to be repeated throughout her short career: her acting was frequently praised more than her singing. In May 1827 she performed at Drury Lane as Fiorella in an English version of *Il turco* and later as Rosetta in Arne's *Love in a Village*. From December 1827 to January 1828 she performed leading roles with Giuseppe de Begnis's Italian opera company in Edinburgh. In April she again appeared at Drury Lane in *Love in a Village* and subsequently in other English musical works, including a version of *The Taming of the Shrew*, with music by John Braham and Thomas Cooke. She sang at the Birmingham Festival with Malibran in 1828 and 1829, and in 1831 she deputized at the King's Theatre for the indisposed prima donna Verpermann, singing the principal role in *Il barbiere di Siviglia* and later in Rossini's *Ricciardo e Zoraide*. Her last known appearances thereafter were as Isabel in *The Daemon, or The Mystic Branch* (a version of Meyerbeer's *Robert le diable*), opening at Drury Lane on 20 February 1832, when she was hissed on account of her bad intonation. Always overshadowed by foreign singers such as Pasta and British singers such as Mary Anne Wood, in Chorley's words 'she fought up courageously against disappointment and the failure of means for a year or two – and then passed out of public sight'. She married James Wilson Barlow in Liverpool on 12 July 1833.

GEORGE BIDDLECOMBE

Azaïs, Hyacinthe (*b* Ladern-sur-Lauquet, nr Carcassonne, 4 April 1741; *d* Toulouse, 30 March 1796). French composer. He began his musical career as a choirboy at Carcassonne Cathedral where he obtained his musical education. He spent most of his life in the south of France. At the age of 15 he became *sous-maître de musique* in the church at Auch; in 1765 he was appointed *maître de musique* at the college in Sorèze (Languedoc). He married Marie Lépine, daughter of the organ builder J.-F. Lépine of Toulouse. After his wife's death, Azaïs spent a year (1770–71) in Paris, where he met Gossec and François Giroust, and had some of his works performed at the Concert Spirituel. His friendship with Abbé Roussier may have helped him obtain the position of *maître et compositeur de musique*, and later director, of the Concert de Marseille, which he assumed in 1771. In 1772 he returned to the college in Sorèze (renamed Ecole Royale Militaire). In 1783 Azaïs left Sorèze for Toulouse, where he established himself as a composer and teacher; he remarried in 1788. At the beginning of the Revolution he fled to Bagnères-de-Bigorre in the Pyrenees; he returned to Toulouse in 1794.

Azaïs was proud of the success he had achieved with the performances of two of his motets, *Cantate Domino* and *Dominus regnavit*, during his stay in Paris. The *Mercure de France* (September 1770) praised his *Cantate Domino*: 'Sa composition a paru d'un bon style, d'une expression juste & d'un effet picquant'. Azaïs described *Dominus regnavit* in the *Méthode de musique* (p.150) as follows: 'j'ai fait entendre ce motet (avec succès) au Concert Spirituel, et plusieurs fois au Concert de Marseille ... tous les habiles gens qui frequentent ces Académies, ont été frappés (par l'emploie de l'accord sensible avec fausse quinte, Si, Re♯, Fa, La ... une harmonie toute nouvelle)'. Azaïs indicated that the *Mercure de France* had failed to mention his name as the composer, and that he wished it to be known.

Azaïs's six symphonies exemplify the light Italo-French symphonic style of his time fused with some influences from the Mannheim school, evident especially in the dynamics of the Symphony no.1. Usually, however, lyricism prevails (particularly in the Romance of no.1 and in the Andante of no.5); also notable are his use of minor tonalities and the presence of a slow introduction in no.6. The instrumentation comprises first and second violins, viola, bass (figured in nos.1–3), two flutes (replaced by oboes in the slow movements of nos.1–2), and two horns (not used in no.4). All his symphonies have four movements except no.3 which has no minuet. The chamber music is unpretentious and seems to have been designed for amateurs. A rather unusual instrumentation is found in the *Six trios*: violin, cello and horn or clarinet.

Azaïs's fame rested primarily on his role as a teacher. His *Méthode de musique* (dedicated to Abbé Roussier), a large textbook designed for young performers, was praised by many influential musicians at the time of its

publication, and later by La Borde (iii, p.567ff) and Gerber.

Azaïs's son, Pierre-Hyacinthe Azaïs (*b* Sorèze, Tarn, 1 March 1766; *d* Paris, 22 Jan 1845), was a philosopher, active in his early years as an organist. According to Fétis, he published a series of letters under the title 'Acoustique fondamentale' in the *Revue musicale*.

BARRY S. BROOK, CARL MOSKOVIC

Azanchevsky, Mikhail Pavlovich (von) (*b* Moscow, 24 March/5 April 1839; *d* Moscow, 12/24 Jan 1881). Russian composer and scholar. In 1858 he resigned from the civil service and went to Leipzig, where he studied music theory with Richter and Hauptmann. Later he took lessons from Liszt in Rome. While in Paris in 1886, he bought the extensive collection of music which had belonged to G.E. Anders. On his return to Russia in 1870 he was appointed honorary librarian to the St Petersburg Conservatory, and in the following year became its director. Unlike his predecessor Zaremba, he was favourably disposed towards the New Russian School, and one of his first acts as director was to appoint Rimsky-Korsakov as professor of practical composition and instrumentation. This bold step had a profound effect on the history of composition in Russia, and the conservatory soon became as important in the field of composition as it had already become in producing excellent instrumentalists and singers (one of its graduates during Azanchevsky's time was the great bass Fyodor Stravinsky, whose son Igor later became a pupil of Rimsky-Korsakov). Tchaikovsky referred to him as 'a good and kind person'. Ill-health forced him to resign in 1876. His compositions, which include chamber music, piano pieces, and songs with Russian and German texts, are pleasing rather than profound. He donated his valuable library to the St Petersburg Conservatory.

JENNIFER SPENCER/EDWARD GARDEN

Azerbaijan. Country in the Caucasus of Central Asia of 86,600 km², with an estimated population of 7·83 million (2000). Since 1828 Azerbaijan has consisted of two parts; one forms a province of Iran, whilst the other, which was a Soviet socialist republic from 1920 onwards, became independent in 1991.

1. Introduction. 2. Musical categories: (i) *Ashyg* (ii) *Mugam* (iii) Opera, ballet and orchestral music. 3. Instruments.

1. INTRODUCTION. The varieties of music found in Azerbaijan can be found across an area which extends to Kurdistan in the south and Zanjan and Ghazvin in the east. In terms of ethnicity, culture, religion and politics the Azeri are musically much closer to Iran than Turkey. Their *mugam* music also formed part of the Armenian repertory for a long time. However, there has been a tendency among the Armenians for some decades now to reject this music because of the growth in nationalism on both sides which resulted from the geopolitical division of Transcaucasia in 1917. Moreover, some popular bards (*ashyg*) belong to the Syrian Christian minority in southern Azerbaijan. Although the urban music of Azerbaijan is clearly differentiated from the music found in Central Asia by its characteristically fast rhythms, it has spread in Khiva (Chorasm) and has reached as far as Bukhara and Tashkent.

2. MUSICAL CATEGORIES. The music which has been described as 'professional' by Soviet musicologists can be divided into two distinct types, namely that of the *ashyg* and that of the musicians who practise the *mugam*. A further variety corresponds to urban music which borrows elements from the *ashyg* and *mugam* traditions as well as from the music of the Middle East and south-western Asia and the West. Finally, as a result of Soviet rule, there came into existence at the beginning of the 20th century an Azeri symphonic repertory, which draws on the *mugam* tradition.

Mugam predominates in the north of the region and in the Karabakh mountain range. It is not common in Azeri Iran, where the musicians prefer the Iranian style (School of Tabriz). The music of the *ashyg* is mainly to be found in the south, above all in the Kirovabad (north-east, Tauus, Kazakh), Karabakh and Nakhcivan (south-west) districts of the Republic of Azerbaijan as well as in Salyany (south-west) and in Azeri Iran in Tabriz, Karadagh, Maraghe, Khoy and as far as Orumïye (Rezaye). In certain regions such as Ganja both traditions exist alongside each other. *Ashyg* tend to perform in rural and provincial regions. *Mugam*, by contrast, has a largely urban audience. Apart from gatherings of experts, the festivities which are organized at weddings (*toj*) are preferred opportunities for performance in both genres.

Mugam and the music of the *ashyg*, which were less shielded from each other in the past, still share common characteristics, which are also found in Iran. These include the initial range, which is restricted to a pentachord (*jins*),

readily identifiable modes, melodic lines consisting predominantly of sequential notes, time signatures (4/4, 6/8, 3/4), brevity of compositions, arrangements of dance melodies, tone colour, the dragging of the voice and vocal techniques which are similar to those of popular singing and small instrumental ensembles (three or four musicians).

In addition to these formal similarities, some pieces have their origins in popular music and *mugam* preserves a lasting influence from popular music. *Zarbi-mugam* are compositions which contain instrumental refrains and melismatic vocal parts in non-metrical patterns, and certain songs (*täsnif*) lend themselves to being inserted into the free interpretation of a *mugam*. The instrumental dance forms *reng* or *diringi* represent a further form which is equally likely to be found in the repertory of both *ashyg* and *mugam* groups. Despite these similarities the two genres remain quite distinct from each other.

In the performance of song both male and female voices must be high and powerful. They make use of the technique of yodelling, changing from the chest to the head register with the help of appoggiaturas. This technique is also found in Iran, Kurdistan and some regions of Iraq.

(i) Ashyg. The repertory of the *ashyg.* consists of short lyric poems on amorous, moral or religious subjects and of long lyrical or epic ballads (*dastan*). The most famous of them are *Koroghlu*, *Asli vä karam* and *Lejli vä mägnun*. The metre is for the most part syllabic (*barmag*, *heja*) and the commonest form is the lyrical poem of the *goshma* variety, made up of four-line verses with 11-syllable lines, or its variants, such as the *bayati* and the *mukhämmäs*. There are also the specific genres of the *ashyg*: the *tajnis* and its variants, the *gärayli*, the *divani* (rare) and the *gazal*. These follow the rules of classical prosody (*aruz*).

Great bards of the past include: Ashyg Gurbani (16th century), Ashyg Abbas Tufarganlu (17th century), the Armenian Sayat-Nova (18th century), Ashyg Äläskär (19th century), Ashyg Talyb (his son, 1877–1979), Ashyg Abbasgul (early 20th century), Ashyg Mirzä Bayramov (1888–1954), Ashyg Islam Yusuf, Ashyg Shämshir and Edälät Nasibov (second half of the 20th century).

The art of the *ashyg* consists of readily identifiable melodic types, which are individually named and collectively known as *ashyg havasi*. It is possible to set different texts to individual melodies. The repertory of an *ashyg* is reckoned to contain about 30 melodic types; there are approximately 100 in all. These melodies are only played on the *saz*, or at the festivities which take place in the open air by ensembles of *zurna*, *nagara* and/or *balaban*. The *ashyg* play pieces known as *hava*, each of which is a melody containing a hierarchical pitch set, a set melodic range, a drone pitch, a preferred tuning and a *forud* or cadential formula (C. Albright-Farr, 1976). Most of the schools use approximately six to eight different modes, most of which are borrowed from the *mugam*. The most important among them are *rast*, *segah*, *shikästeyi fars* and *shur modi*.

Each *hava* consists of two or more separate parts. They are repeated in a specific sequence, nonetheless with considerable scope for variation. Between these sections improvised passages can be inserted. The most common time signatures are 2/4, 4/4, 3/4 and 6/8.

(ii) Mugam. The *mugam* music of Azerbaijan draws on the music of the Iranian-Arab-Turkish *maqām*, whose important theoreticians were above all Safi ad-Din al-Urmawi and Abd al-Qadir Ibn Gaibi al-Maragi (14th–15th centuries). They came from Urmiye and Marage in Azerbaijan. However, the music of today differs from that which Ibn Gaibi described, and it is thought that the traditional form of transmission was interrupted in the 18th century. This period, which remains poorly researched, was followed by a revival at the beginning of the 19th century, during which the *mugam* were collected and systematized, above all in collectors' circles such as the one based around Mir Möhsun Nävvab (1833–1918) from Susa, the author of the *Vizuh ul-Aghram*. The names of forms were retained, but due to the influence from other local musics the actual forms described by them sometimes varied from one tradition to another. Older rhythmic cycles (*usul*) were dropped in favour of formulas in 6/8 and 4/4 time. Instruments such as the *'ūd*, *qānūn*, *santūr*, *ney*, *tanbur* and *setār* disappeared in favour of a new lute, the *tar*, which together with the *kamanca* constitutes the main instrument of the contemporary *mugam*. This process of revival also spread to the western centre of Iran as well as Fars and what is now contemporary Azerbaijan. In northern Azerbaijan the focus of musical life around 1880 was the city of Susa in the Karabakh, but it was in Tiflis, the cosmopolitan centre of Transcaucasia, and later in Baku, that Azerbaijani musicians were able to gather a much larger audience.

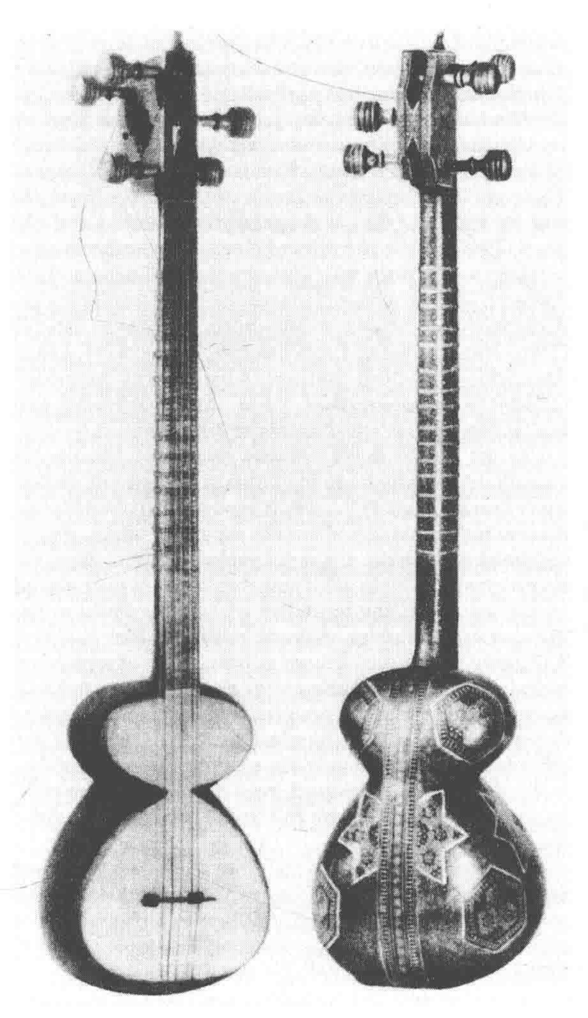
The modes of Azeri music are always heptatonic and reflect the division of the octave on the fingerboard of the *tar*. The tradition of musical theory handed down by B. Mänsurov (1911–84) and his predecessors distinguishes 13 main *mugam*: *rast*, *mahur-hindi*, *segah-zabol*, *cahargah*, *humayun*, *shushtar*, *bayati shiraz*, *shur*, *bayati*, *kurd*, *bajati gajar*, *rähab* and *nava-nishapur*. The following eight *mugam* are regarded as secondary: *dilkesh*, *kurd-shahnaz*, *dogah*, *gata*, *isfahan*, *cupan-bayati* and transpositions or variations of *mahur* and *segah*. Apart from the latter a number of other *mugam* exist, which are generally played in connection with a more important *mugam*: *vilayati*, *khojaste*, *shekästeyi fars*, *mobärrigä*, *ärag*, *pänjgäh*, *rak*, *hissar*, *mukhalif*, *mänsuri*, *saranj*, *ushshag*, *simai shams* and *bästä-nigar*.

All the *mugam* (with the exception of variants or transpositions) can serve as models for compositions such as songs (*täsnif*) and songs for dance accompaniment (*räng*). A *mugam* has a *maye*, a fundamental modal 'substance' as well as individual characteristics (*sho' be*: 'supplementary aspects', *gushe*: 'corners'), which reveal themselves in the course of its exposition. There are approximately 100 of these melodic types (*sho' be* and *gushe*), which do not serve as models for compositions, but which are played during the development of the principal *mugam*. Each of them has a name. Some of them are melodic types, others form interludes set to a certain rhythm in a fast tempo. Each of the 13 main *mugam* contains between ten and 20 of these. Some sequences can appear in other contexts. The important *mugam* are called *dästgah* (modal system), when they combine a certain number of secondary *mugam*, *sho' be* or *gushe*.

The improvised interpretation of the *mugam* requires a precise knowledge of the *gushe* and its particular technique of ornamentation. Nevertheless, this model is by and large so flexible that several levels of improvisation are

possible (including the details, the sequence of the musical components, the modulations and the pieces which connect the musical components). In this way the musician can either play the model which he has learnt by heart or distance himself from it and merely retain the modal colouring (*maye*).

Some pieces in canon form should be mentioned in connection with the *mugam*. They are called *zärbi-mugam* ('rhythmic *mugam*') and are fixed compositions for voice and an instrument, which originate from the old repertories of the *ashyg*. They are the *arazbary*, *osmanli* or *mani*, *ovshary*, *herat-kabuli* (an instrumental piece), *ärag-kabuli*, *samai shäms*, *mänsuriyyä*, *heydäri*, *uzzal-zärbi* and *garabag-shikästesi*.



Apart from these, which are essentially non-metrical pieces, there are a very large number of pieces set to a certain rhythm, which do not conform to a strict rendition of a *mugam* and its attendant *gushe*. The main genre is the *täsnif*, a song in one of the most important *mugam* in triple, quadruple or sextuple time and in different tempos. It is divided into two to six sections. *Täsnif* from the *mugam* tradition are written in accordance with the rules of metre (*aruzi*), whilst those which come from other local traditions are structured syllabically. The *sagi-name*, which no longer exists, was a form of the *täsnif* without a percussion accompaniment.

Other pieces are of an instrumental nature and in the performance of a *mugam* form a prelude (*bardast*, *därämad* and *pisro*) or an interlude in dance rhythms (*diringi*, *räng*), likewise in triple, quadruple or sextuple time. These pieces set to a certain rhythm can be accompanied by the *däf* (frame drum, often played by the singer, *khanändä*) and interpreted by a group. Pieces set to certain rhythms, which form sequences known as *chahar-mezrab*, are performed by a solo *tar*. Even if most of the *gushe* from which the *mugam* are composed are not subject to metre, they nonetheless possess a specific rhythm and a phrasing of their own, which in certain cases corresponds to a regular beat or a metrical cycle.

(iii) Opera, ballet and orchestral music. Uzeir Hajibeyov (1885–1948), was the first Azerbaijani composer of symphonies and operas. In his earliest stage works the music was left to the judgment of traditional singers, who drew on the *ta'ziye*, a Shi'a religious music drama. The only instructions concern the *mugam* in which the scenes are to be sung. Later he composed works of his own, whose themes and elements he borrowed from traditional sources. He eventually studied composition in St Petersburg and went on to write operas which only showed traditional influence in their melodic material (*Sheykh Sanan*, 1909; *Rustam i Zohrab*, 1910; *Asli i Kerem*, 1912; *Kor-oglï*, 1937). His first works were performed by an ensemble consisting largely of traditional instruments. Later works were written for a symphony orchestra augmented by Azeri instruments (the *tar* and *kamanca* among others). In 1945 Hajibeyov composed the Azerbaijani national anthem. He attempted the creation of a 'national music' by appropriating elements of the *mugam*, and this 'synthesis' between Western and the Azerbaijani musics was continued by the composers Muslim Makomayev (1895–1937), Asef Zeynally (1909–32), Niyazi Zulfugaroglu (1912–84), Ahmet Hajiev (*b* 1917), Kara Karayev (1918–82), Sultan Hajibeyov (*b* 1919), Jahangir Jahangirov (*b* 1921), Fikret Amirov (1922–84), Suleyman Äläskärov (*b* 1924), Arif Melikov (*b* 1933), Vasif Adygözälov (*b* 1935) and Agshin Alizadä (*b* 1937).

The introduction of Western music led to the founding of musical institutions: the Akhundov State Academic Theatre of Opera and Ballet (1920), the Hajibeyov symphony orchestra (1938), the Mamedgulizad theatre in Nakhcivan and the Gurbanov Theatre of Musical Comedy in Baku. Musicological research is carried out at the Hajibeyov Institute for Azerbaijani Art at the Academy of Science of Azerbaijan, Baku. The institutionalization of musics led to the use of musical notation by traditional musicians. Nearly all contemporary interpreters of the *mugam* have spent at least a few years studying in an institution and have some knowledge of Western musical notation, even if they never make use of it.

3. INSTRUMENTS. The *tar* is the principal instrument used in the *mugam* music of Azerbaijan and Iran (fig.1; ṬĀR). This long-necked lute related to the *rabāb* probably arrived in Iran at the end of the 18th century. Around 1870 Sadyg Jan Asadoghlu gave it its Azerbaijani form and added to the five traditional strings four or six sympathetic strings. The *tar* has an octagonal body made of mulberry wood with rounded corners. The top part of the body is made from two different surfaces, which are

1. Tar (long-necked lute)

2. Two musicians playing the saz (long-necked lute)

covered by the fine skin of a cow's heart. The neck has 22 movable frets, which cover an octave and a fourth. The *kamanca* is a spike fiddle with four steel strings. The body of the instrument, which is turned from a block of walnut-tree wood, is covered with a thin sturgeon skin. The instrument is held upright when played.

The *däf* (or *gaval*) is the most widespread percussion instrument (*see* DAFF). It consists of a circular wooden frame with a diameter of 38 cm, over which the skin of a catfish is stretched. Rings are attached to the inside of the wooden frame which act as jingles. The *tar*, the *kamanca* and the *däf* (the latter is played by the singer) form the traditional range of instruments for the classical music of the Azeri. The double-headed drum *nagara* is played with the fingers in the same way as the *däf* or with sticks. Other drums include the double-headed *käs*, and the *gosha nagara*, a pair of small kettledrums made of clay.

The *cogur* or *saz* is the lute of the *ashyg* (fig.2; SAZ). In its most widespread form it has an overall length of approximately 105 cm, but there are also two other forms, which measure approximately 130 cm and 70 cm respectively. Its pear-shaped body, which is made of mulberry wood, is made up of narrow slats which are glued together. The soundboard is also made from mulberry wood. It is strung with three sets of three steel strings (although in Rezaye it is strung with two sets of three strings), which are tuned according to the mode. The *balaban* is an oboe originating in Central Asia, whose wooden body with a large double reed is 27–38 cm long with eight finger-holes (*see* BĀLĀBĀN). The *saz*, *balaban* and *däf* are most commonly used by *ashyg*, especially in Iran.

The repertory of the *ashyg* and traditional songs can also be played on other instruments without a vocal part, for example on the oboe *zurna* or *gara zurna* and the double clarinet *zammare* (more often found in Iran). Other traditional aerophones include the bagpipes (*tulum*), the recorder (*tutäk*), the transverse flute (*ney*) and a small ocarina with two holes (*tutäk*).

The accordion or bandoneon (*garmon*) is also very popular, as are the clarinet (*klarnet*) and the western oboe (*gaboy*), which are occasionally used to perform *mugam*. Instruments probably introduced by Armenian musicians include the *'ūd* and the *qānūn*. It is rare, however, that these instruments are used to perform *mugam*. JEAN DURING/R

Azerbayev, Kenen (*b* Maty-Bulak, Semirechye [now Krasnogorsk], 1884; *d* Almata, 1976). Kazakh traditional composer, singer, narrator and *dömbra* player. He was born to the family of a poor herder and lost his mother when he was seven years old. His family was musically talented and Azerbayev gained the nickname *Bala-aqyn* ('Child-singer') early in his life. At the age of ten or 11 he wrote the songs *Ri qoyïm* ('Shoo, my Sheep', a shepherds' cry) and *Boz torgai* ('Sparrow'), which revealed his outstanding talent and became widely popular. Kazakh and Kyrgyz musicians often met in the region of Semirechye, and Azerbayev became famous as a performer of Kyrgyz songs and the *Manas* epic as well as the Kazakh traditional repertory; his songs also became popular in Kyrgyzstan. More than 200 of his works were recorded by the folklorists B. Erzakovich and A. Serikbayeva. Azerbayev's songs are stylistically linked with *aqyn* genres of recitation in their melodic construction, which follow the rhythm and meaning of the verse. He composed many songs in response to important events in Kazakhstan; songs such as *Attan* ('On Horseback') and *Bulbulga* ('To the Nightingale') commemorated the people's liberation movement of 1916, while *Bizdin otan zhenedi* ('Our Country Will Win') concerned World War II. His post-war songs blended elements of traditional and popular Soviet songs. He was also a creator of the modern genre of children's songs. He received the accolade of Honoured Art Worker of Kazakhstan and was awarded several orders and medals of the USSR.

ALMA KUNANBAYEVA

Azevedo, Francisco Correa de. *See* CORREA DE ARAUXO, FRANCISCO.

Azevedo, Luiz Heitor Corrêa de [Heitor, Luiz] (*b* Rio de Janeiro, 13 Dec 1905; *d* Paris, 10 Nov 1992). Brazilian musicologist. At the Instituto Nacional de Música he studied the piano with Alfredo Bevilacqua (1924–5) and Charley Lachmund (1926–7) and harmony, counterpoint and fugue with Paulo Silva; initially he was a composer, but by the late 1920s had turned to musicology and music criticism. He became librarian of the Instituto Nacional de Música (1932) and in 1934 founded the *Revista brasileira de música*, which was under his editorship until 1941 and performed a valuable service to nascent Brazilian musicology. While professor of music at the conservatory (1937–47) he held the post of titular professor at the Escola (formerly Instituto) Nacional de Música; he developed there the ethnomusicology curriculum and founded the Centro de Pesquisas Folclóricas, which produced important publications based on fieldwork throughout Brazil. He served as a consultant to the Organization of American States in Washington, DC, for its newly established Music Division (1941–2) and subsequently moved to Paris (1947), where until his retirement (1965) he was the UNESCO music programme specialist and a professor of the Institut des Hautes Etudes de l'Amérique Latine of the University of Paris (1954–68). Besides general studies on Latin American music and history, Azevedo published definitive works on Brazilian 19th- and 20th-century music and musicians and on folk and popular music. He was a founder-member of the Brazilian Academy of Music.

GERARD BÉHAGUE

Azevedo, (António) Sérgio (Arede Torrado Marques) (*b* Coimbra, 23 Aug 1968). Portuguese composer and writer. He studied with Lopes-Graça at the Academia de Amadores de Música and later with Capdeville and Bochmann at the Escola Superior de Música in Lisbon. Since 1993 he has himself taught at the Escola Superior and worked as an editor at Portuguese National Radio.

Azevedo is one of the most representative composers of the younger generation in Portugal. His music has shown many influences ranging from Birtwistle to Pärt but has in recent years settled into a more distinctively personal atonality. With a large number of works for a variety of forces, his style often employs dense textures with clearly structured undercurrents. In many more recent works, whole-tone groups can be seen as a particularly significant characteristic.

CHRISTOPHER BOCHMANN

Azguime, Miguel (Mascarenhas Pinheiro de Azevedo) (*b* Lisbon, 24 February 1960). Portuguese composer and percussionist. He studied at the Academia de Amadores de Música (1966–76), while also attending the Lisbon Conservatory. From 1975 to 1982 he studied percussion with Catarina Latino and Júlio Campos and founded various groups performing jazz and improvised music. In 1984, with a grant from the German government, he went to Darmstadt, where he studied percussion with James Wood and composition with Horatiu Radulescu, Brian Ferneyhough and Clarence Barlow. He also attended seminars with Emmanuel Nunes, Cristóbal Halffter and Tristan Murail. Between 1985 and 1986 he studied percussion with Gaston Sylvestre in Paris and Nice. On his return to Portugal he founded Miso Records (1985), the Miso Ensemble (in 1985, with the flautist Paula Azguime), and also the International Festival of Live Music (1992). Azguime's threefold activity as composer, percussionist and poet (besides his work for radio and as a record producer) closely reflects his almost mystical vision of music and art. Some of the titles of his compositions refer directly to his poetic output, while others emerge from the composer's improvisations, reminding us of Azguime's once close association with jazz and improvised music.

SÉRGIO AZEVEDO

Azione sacra (It.: 'sacred action', 'sacred plot'). One of several terms commonly applied to the SEPOLCRO, composed to texts in Italian for the Habsburg court in Vienna in the second half of the 17th century. The term was also one of many used for the Italian ORATORIO of the 18th century. Both Zeno and Metastasio called their oratorio librettos *azioni sacre*. A 'staged oratorio', or *opera sacra*, of the late 18th and early 19th centuries was also typically called an *azione sacra*. Although oratorio was essentially an unstaged genre, the *sepolcro* was presented with a minimum of staging and action and the *opera sacra* was fully staged and acted in the manner of an opera.

From the 1780s to about 1820, the theatres of Naples often presented staged oratorios during Lent and usually designated them *azione sacra*. Such works differed little from the *opera seria* of the time except for their subject matter, which was that of the traditional oratorio. P.A. Guglielmi's *Debora e Sisara: azione sacra* (1788, Naples) was favoured by numerous performances, both staged and unstaged, throughout Europe, as was Rossini's *Mosè in Egitto*, called *azione tragico-sacra* in the libretto printed at Naples in 1818.

HOWARD E. SMITHER

Azione teatrale (It.: 'theatrical action', 'theatrical plot'). Term coined by Metastasio to denote a species of SERENATA that, unlike many works in this genre, contained a definite plot and envisaged some form of simple staging. The 12 works by Metastasio so described begin with *Endimione* (1721, Naples, set by Sarro) and end with *La corona* (1765, Vienna, set by Gluck); Mozart's setting (1772) of his *Il sogno di Scipione* is one of the last examples of this short-lived subgenre. One of the most

celebrated was *L'isola disabitata* (1752), first performed in Madrid with music by Bonno. Gluck's *Orfeo ed Euridice*, to a libretto by Ranieri de' Calzabigi (1762), was originally described as an *azione teatrale*.

MICHAEL TALBOT

Aziz al-Shawān. *See* AL-SHAWĀN, AZIZ.

Azkue (Aberasturi), Resurrección María de (*b* Lequeitio, Biscay, 5 Aug 1864; *d* Bilbao, 9 Nov 1951). Basque composer, ethnomusicologist and philologist. He studied at the seminaries of Vitoria and Salamanca, was ordained priest (1888) and took a doctorate in theology. In addition he studied music with Sáinz Basabe and then at the Paris Schola Cantorum, in Brussels and at the Cologne Conservatory. He was subsequently professor of Basque language at the Instituto de Bilbao for 30 years. In Bilbao he founded a Basque school, the Basque review *Euskalzale* and a Basque opera house, for which he composed works to be performed by pupils of his school. He was a great folklorist: he collected some 2000 folksongs of his native region and published around 1000 of them; he gave numerous lectures and he helped to compile the *Diccionario de la música Labor* (Barcelona, 1954). From 1918 he was president of the Basque Language Academy, and he was a member of the Russian Academy of Sciences and the Real Academia Española de la Lengua.

GUY BOURLIGUEUX

AZ Music [A-Z]. A Sydney-based experimental music organization founded on about 5 February 1970 by DAVID AHERN. For each concert that it held a letter of the alphabet was assigned; its début was concert 'A', a 24-hour concert on 21 February 1970 which included Satie's *Vexations*. Other composers whose works were performed included Ahern, Cardew, Cage, Steve Reich and Terry Riley. Its concerts attracted considerable publicity and in one case provoked a riot (in Sydney Town Hall on 16 February 1971). From the larger AZ contingent Ahern formed Teletopa, an electronic music improvisation group, which was disbanded after an overseas tour in 1972. A-Z (as the group was called from 1973) held its last concert in August 1975.

ERNIE GALLAGHER

Aznavour, Charles [Aznavourian, Varenagh] (*b* Paris, 22 May 1924). French singer and songwriter. His parents were Armenian immigrants, and he began acting as a child. In 1941 he wrote the lyrics to the song *J'ai bu*, with music by Pierre Roche, and which brought the songwriting team to the attention of Edith Piaf. Aznavour subsequently wrote songs for Piaf (*Il pleut*, 1949), Gilbert Bécaud (*Donne-moi*, 1952) and Juliette Greco (*Je hais les dimanches*, 1950). As a singer, he toured with Piaf, but major success only came with *Sur ma vie* (1955). Such reflective and romantic songs as *The Old-Fashioned Way* and *She* (1974) brought him international acclaim, while numbers such as *Hier encore* (translated as *Yesterday when I was Young*) typify his introspective and melancholic style. His operetta, *Monsieur Carnaval*, was performed in Paris in 1965, and his film appearances include François Truffaut's *Tirez sur le pianiste* (1960) and *Edith et Marcel* (1982). He also composed the songs for the musical *Lautrec*, based on the life of the French artist, and which was given its London première on 29 March 2000. He has published two volumes of autobiography, *Aznavour on Aznavour* (Paris, 1970) and *Yesterday when I was Young* (London, 1979).

□

Azopardi [Azzopardi], **Francesco** (*b* Rabat, 5 May 1748; *d* Rabat, 6 Feb 1809). Maltese composer, organist and theorist. After early studies with Michel'Angelo Vella, he entered the Conservatorio di S Onofrio a Capuana on 15 Oct 1763 as a *convittore* to study under Carlo Contumacci and the German Joseph Doll. He left in 1767 but stayed on as *maestro di cappella* in Naples and continued to study with Niccolò Piccinni, who is said to have esteemed him greatly. In summer 1774, following an advantageous offer from Mdina Cathedral, he returned permanently to Malta as Cathedral organist with the right to succeed the then *maestro di cappella*, Benigno Zerafa. His growing interest in pedagogy resulted in *Il musico prattico* on the art of the counterpoint, published in the form of French translations and introduced as a textbook in Paris by A.-E.-M. Grétry: Cherubini based the 19th chapter of his treatise *Cours de contrepoint* (1835) on its analysis of imitation. His students included the composers P.P. Bugeja, Nicolò Isouard and Giuseppe Burlon (1772–1856). Owing to Zerafa's failing health, in 1785 Azopardi was appointed as substitute *maestro*, with an increased salary; he inherited the full title in March 1804.

Most of Azopardi's works, written mainly for the cathedral, are extant. Recent revivals have disclosed a gifted composer who fused contemporary Classical techniques with the austere contrapuntal practices of earlier

periods. This approach, which shows Piccinni's influence, is most evident in his large-scale 'Kyrie–Gloria' masses. That composed in 1776, for example, for soloists, double chorus and double orchestra, contains an eight-movement Gloria in which the inner sections of virtuoso arias in flexible ternary form and an eight-voice, madrigal-like 'Qui tollis' are framed by double-chorus numbers, with the closing 'Cum sancto spirito' starting homophonically but swelling into a majestic double fugue. The essentially symphonic conception of a whole movement is often dramatic, without however destroying a scrupulous concern for the music's appropriateness to textual spirit and meaning. Azopardi's few instrumental works, though inventive and melodious, are of less significance.

WORKS
(*selective list*)

MSS, mostly autograph in M-MDca: for SATB, instruments, unless otherwise stated

JOSEPH VELLA BONDIN

Azpiazú, Don (*b* Santa Clara, 11 Feb 1893; *d* Havana, 20 Jan 1943). Cuban pianist and bandleader. As the leader of the Havana Casino Orchestra he is best known for having launched the *El manicero* ('Peanut Vendor') craze in the United States after his band performed this number at New York's Palace Theater on 26 April 1930. Written by Moises Simon, the song became an instant hit, and within a year popular jazz artists such as Louis Armstrong and Duke Ellington had recorded versions of the tune. Expanding upon the traditional Cuban *conjunto* (sextet or septet), Azpiazú's band was a 14-piece dance orchestra with trumpets, saxophones, trombone, tuba, piano, bass and Cuban percussion. Although Latin bands already existed in New York, his was the first group to be successful with the non-Latino public, helping to catalyze the rhumba dance craze that lasted throughout the decade. The Havana Casino Orchestra recorded popular versions of other tunes such as *Mama Inéz*, *Aquellos ojos verdes*, *Siboney* and *Amapola*, and also appeared in many short and feature-length movies.

Significantly, Azpiazú is remembered for forming the first racially integrated popular dance band in Cuba, also breaking the colour barrier in the United States. After a successful European tour, he went back to Cuba in 1932, returning regularly to New York's ballrooms through the late 1930s and early 40s. A stubborn man who rejected ethnic stereotypes, he reputedly lost a job at the Rainbow Room for playing American tunes and refusing to stick to Cuban numbers. See also J.S Roberts: *The Latin Tinge: the Impact of Latin American Music on the United States* (New York, 1979).

LISE WAXER

Azpilcueta, Martín de [Navarrus, Martinus] (*b* Barasoain, *c*1491; *d* Rome, 1586). Spanish churchman and jurisconsult. He taught in Salamanca and Coimbra and spent his last 19 years in Rome, revered for his learning and piety. His numerous Latin writings were published throughout Europe in the 16th and early 17th centuries. Forkel, Fétis and others credited him with a musical treatise, *De musica et cantu figurato*, but no such work apparently exists; reports of it may stem from a misunderstanding of Walther's *Musicalisches Lexicon*. Azpilcueta's known writings on church music occur in *Commentarius de oratione horis canonicis atque aliis divinit officiis* (Coimbra, 1561) and the brief *Commentarius de silentio in divinis officiis* (Rome, 1580; Spanish and Italian translations soon afterwards). He justified music not for God's benefit but man's, as it contributed to man's ability to worship; all excesses and abuses worked against this end. Well-executed plainchant was much to be preferred, but neither polyphonic music nor instruments were inherently improper if they enhanced the attitude of reverence and did not obscure the text. His discussion of specific abuses in the liturgy of his time is of particular interest.

ALMONTE HOWELL

Aztec music. The Aztecs, a Náhuatl-speaking tribe, were one of the most important Indian groups in pre-Conquest America. According to their own tradition, the Aztecs came into central Mexico from the northern region of Aztlan in the 12th century. Based on a league of three cities, Mexico, Texcoco and Tlacopan, the Aztec empire by the time of the Spanish Conquest (1521) extended as far as present-day Central America. Approximately one million people in Mexico still speak Náhuatl. (For Mexican Indian music, *see* MEXICO, §II, 3.)

Among the pre-Conquest Aztecs, music had no independent life apart from religious and cult observances. A professionalized caste controlled public musical manifestations and training of an extremely rigid kind was

prerequisite to a career in music. Since music was always thought of as a necessary adjunct to ritual, absolutely flawless performances were demanded, such as only the most highly trained singers and players could give. Imperfectly executed rituals were thought to offend rather than to appease the deities, so that errors in the performances of ritual music, such as missed drumbeats, carried the death penalty. Singers and players enjoyed considerable social prestige and in certain cases exemption from tribute payments, because of the important role music played in Aztec life. Despite this prestige, however, the names of musicians have not survived; neither have the names of poets, unless the poet belonged to royalty such as King Nezahualcóyotl (1402–72) of Texcoco.

Music was regarded as essentially a means of communal rather than individual expression, and therefore collectively performed music rather than solo music was the norm. Instrumental performance and singing were always inseparable, as were dance and music, insofar as can be judged from the descriptions of Aztec musical performances bequeathed by Spanish 16th-century chroniclers. Certain instruments were thought to be of divine origin, and the *teponaztli* (slit-drum with two tongues played with mallets) and *huéhuetl* (single-headed upright cylindrical drum open at the bottom, played with bare hands) were held to be gods temporarily forced to endure earthly exile. The *teponaztli* (into which the blood of sacrificed victims was poured at royal accessions) and the *huéhuetl* were therefore often treated as idols. Not only were certain instruments thought to have *mana* (mysterious supernatural powers) but they were also held to represent symbolically such emotional states as joy, delight or sensual pleasure.

Aztec music communicated states of feeling that apparently even the Spaniards could grasp and appreciate, whereas much of the Indian traditional music north of Mexico meant nothing to European ears. In many instances Aztec music seems to have communicated the same emotion to Indian and European listeners alike. Thus a lament, as composed by an Aztec priest-musician, was sad not only in the opinion of the Indians who heard and understood it, but also in the opinion of Spaniards unfamiliar with the Náhuatl language. Every piece of music was composed for a certain time, place and occasion, so that a musician needed a wide repertory if he was to satisfy the demands of the different days in the 260-day religious calendar.

Although the *calmécac* (priest's seminary) at the Aztec capital served as a national conservatory and by 1450 was (according to Diego Durán, *Historia de las Indias de Nueva-España*, Mexico, 1867–80) the model for similar training institutes in surrounding municipalities, the Aztecs themselves lacked any system of music notation; if they had one, it was kept secret from Europeans. Any reconstructions of Mexican pre-Conquest music are therefore largely conjectural, based on the possibilities of surviving instruments in museums, verbal descriptions by Spanish 16th-century chroniclers and the contemporary sounds of Indian traditional music recorded in outlying areas.

Aztec musicians needed prodigious memories. Musicians not only learnt traditional songs but also composed new ones. Creative ability was prized, especially in the households of those powerful *caciques* who were able to employ singers to compose ballads telling of their exploits. Court music, at least in the Aztec and Tarascan neighbouring kingdoms, differed as much from the music of the *maceualli* (peasant classes) as did court speech from the vernacular Náhuatl and Purépecha spoken by the common people of those kingdoms.

Although Aztec music was predominantly percussive (string instruments were a European importation), the Aztecs had acute pitch sense and tuned with considerable care their various idiophones: *ayacachtli, áyotl, cacalachtli, chichuaztli, chililitli (cailiiztli), coyolil, omichicahuaztli, tecomapiloa, teponaztli, tetzilácatl*; aerophones: *atecocoli (atecuculli), chichtli, çoçoloctli, huilacapitztli, quiquiztli, tecciztli (tecziztli, tezizcatli), tepuzquiquiztli, tlapitzalli*; and membranophones: *huéhuetl, tlapanhuéhuetl*. (For descriptions and pictures of these instruments, see Stevenson, 1988.) Bold, assertive qualities such as loudness, clarity and high pitch were preferred by players and singers alike. This crying aloud to their gods served their purpose even when the common people danced (as is still done by indigenous peoples of Mexico) to do penance.

The pre-Conquest Aztecs frequently inscribed their instruments with carvings that tell symbolically the purposes served by their instruments. For instance, the various carvings on the Malinalco *huéhuetl* (see illustration), an upright drum about 90 cm tall, in the Museo de Arqueología, Toluca, show a group of captured warriors being forced to dance to music of their own making just before having their hearts torn out and waved aloft as offerings to the war god Huitzilopochtli. The Aztecs, who burst into the Valley of Mexico to found Tenochtitlan (Mexico City) around 1325, borrowed heavily from the organography of earlier cultures in the extensive territories stretching south to present-day El Salvador, which they conquered during the next two centuries. To the European conquerors, the instruments used by Aztecs, Tarascans, Otomís, Zapotecs, Mixtecs and Mayas greatly resembled each other, with only the names differing in the respective aboriginal languages. In none of these languages do 16th-century lexicographers record a single generic term for music, coming nearest to it in Alonso de Molina's *Arte de la lengua Mexicana* (Mexico, 1571) with *cuica tlamatiliztli* ('knowledge of singing'). Neither did Náhuatl have any single term for 'musician' or 'player' but numerous nouns meaning 'player on the *huéhuetl*', 'player on the *teponaztli*', 'flute player' and 'trumpet player'. The Aztec language also included numerous verbs with such varied specific meanings as 'to sing in praise of someone', 'to sing derisive songs', 'to sing tenderly', or 'to sing in a high voice' (*see also* MEXICO, §II, 1).

The *teponaztli* is still in use among the Náhuatl-speaking people of middle and western Mexico. In the town of Pómaro-Michoacán near the Pacific coast, the Náhuatl-speaking people call this instrument *teponahuastle* (a hollowed tree trunk played in a horizontal position), used to announce Christian ceremonies such as the beginning of the Holy Week pilgrimage and the call to Mass during other Christian festivities. *Teponahuastle* is very often accompanied by a church bell.

The *huéhuetl* is still in use in the valley of Puebla and Tlaxcala among Náhuatl- and Otomí-speaking people to announce the Christian Mass and the beginning of patron saint celebrations. In this region, *huéhuetl* is one of the instruments of an ensemble called *conjunto azteca* which

Aztec huéhuetl from Malinalco (Museo de Arqueología, Toluca)

includes a snare drum and a pair of *chirimías* (double-reed aerophone).

Huéhuetl and *teponaztli* are played together in particular ensembles to accompany *conchero* dances (dances with armadillo-shell guitars and conch shells). The contemporary performance of this dance resembles Aztec dances but with clear syncretism of Christian influences: it takes place on 12 December in honour of the Virgin of Guadalupe in Mexico City, and in some other festivities in Chalma, central Mexico.

The Aztec legacy as regards the use of the *huéhuetl* and *teponaztli* is clear, but there was also a process of acculturation with Spanish musical traditions that began in the early 16th century. This process changed the values and world-view of the Aztec people and transformed their music significantly. New European instruments and concepts of music and Christian cultural values were adopted by emergent musical ensembles among Náhuatl-speaking people in Veracruz and Michoacán. One example is the music for the allegorical dances about La Malinche, the Amerindian woman who was Hernán Cortés's interpreter. Performed by Náhuatl-speaking people in Acayucan and Pajapan-Veracruz, these dances are accompanied by *jaranas* (small five-string guitars), diatonic harp (12 or 28 strings) and rattles made of thin metal plates. The La Malinche dance is performed in honour of the Virgin of Guadalupe on 12 December and of San Isidro Labrador between 14 and 17 May. Another example is the music to accompany the *cuauileros* dance (the cudgelers' dance) among the Náhuatl-speaking people from Pómaro, Aguila, Coire, Ostula and Maruata in the Pacific Ocean region of Michoacán. The performance of this dance represents a battle between Aztecs and Spaniards and is accompanied by small harps of 28 strings and a violin. Dancers perform with rattles made of thin metal plates and wooden cudgels. *Cuauileros* are performed in honour of St Anthony on 13 June.

ROBERT STEVENSON/ARTURO CHAMORRO

Azzaiolo, Filippo (*b* Bologna; *fl* 1557–69). Italian composer. He is believed to have been a singer in one of the Bolognese churches, though probably not S Petronio since he is not mentioned in the account books; he may have been connected with members of the Bolognese singing academies as described by Giustiniani. His first two books of villottas were published anonymously and he acknowledged all three only in the third book, after the first two had been sufficiently successful to be reprinted. The value of these collections lies in their preservation of popular texts and melodies arranged in simple four-part homo-

phonic settings following the rhythm of the words, in which the top voice usually carries the melody. The first book contains 20 villottas, together with a 'todesca' by Girardo da Panico and madrigals by Caldarino, Spontone, Ruffo and 'P.H.', whom Vatielli believed to be Pietro de Hostia. Of interest is *Da l'horto se ne vien la vilanella*, which incorporates two 15th-century songs (of which the second, *Torèla mo' vilano*, was set by Verdelot). Also well known are *Chi passa per 'sta strada*, one of the most popular songs of the 16th century, *Ti parti cuor mio* which is found in a three-voice setting in Striggio's *Cicalamento delle donne al bucato* (1569), and *Poi che volse de la mia stella* which appears in Petrucci's first book of frottolas (RISM 1504[4]) where it is ascribed to Tromboncino.

In the second book there are eight compositions by Azzaiolo, including *Girometta, senza te*, which was arranged for 'tromboni, cornetti et cornamuse' and performed in the main square of Bologna, and was also popular among 17th-century composers including Frescobaldi. These works are often set to brisk rhythms with ornamental flourishes that enliven the homophonic textures. Several works freely mix duple and triple metres to accommodate line lengths of text. The third book contains seven pieces by Azzaiolo, of which the most interesting is *E me levai d'una bella mattina*, an eight-voice version of the canzona of the same name from the first book.

ANNE SCHNOEBELEN

Azzali, Augusto (*b* Ravenna, 1863; *d* Atlantic City, NJ, July 1907). Italian conductor, composer and impresario. His career was largely spent in touring Latin America and the Caribbean, mostly as the conductor for other impresarios, sometimes as both conductor and impresario of his own company.

His four-act opera *Ermengarda*, to a libretto by P. Martini, had its première at the Teatro Andreani in Mantua on 27 November 1886. Azzali embarked for Colombia in 1891. A six-month season in Bogotá as conductor and musical director for the Zenardo-Lambardi company was followed by an extended tour of the country and another season in the capital in 1893. During that season his *Lhidiak* (2, V. Fontana), based on an Indian legend, the first opera to be written for Colombia, had its première at the Teatro Colón (12 August). In April 1895 he started another tour that included Guatemala City, Quezaltenango, Bogotá and Medellin. In 1896–7 he was in Caracas, during which time *Lhidiak* was repeated. During the next few years his company performed in San José, Kingston, Mexico City and San Francisco, where the company folded in 1900. By 1902 he had his own company again, which travelled to Cuba and Puerto Rico. He then spent much time in Mexico, where he conducted a local première of *Tosca* in Mexico City on 27 July 1901. He died in Atlantic City while trying to save a young chorus member from drowning.

TOM KAUFMAN

Azzolini, Caterina (*fl* 1698–1708). Italian soprano. Sometimes known as 'La Valentina', and probably of Ferrarese birth, her first known appearance was in Crema in 1698. She was employed at the Mantuan court until she entered the service of Ferdinando de' Medici at Pratolino in 1700. A specialist in male roles, she appeared in ten operas there and in Florence, including Handel's *Rodrigo* (1707), in which she played Evanco. She sang in C.F. Pollarolo's *Venceslao* in Venice in 1703. Handel wrote for her within the narrow compass of *f'* to *a''*.

WINTON DEAN

Azzolini, Sergio (*b* Bolzano, 15 Jan 1967). Italian bassoonist and teacher. After studying with Romano Santi in Bolzano from 1978 to 1985, he spent four years in Hanover with Klaus Thunemann. Following success in various international competitions and a brief spell as an orchestral player, he embarked on what has been a spectacular career as soloist, teacher and chamber artist. At the age of 22 he was appointed professor at the Stuttgart Musikhochschule, exchanging this for a similar appointment in Basle in 1998. He has a number of outstanding recordings to his credit. In chamber music, he has been particularly associated with Maurice Bourgue (oboe) and Sabine Mayer (clarinet). As performer on both the modern and Baroque bassoon he is able to communicate with a remarkable degree of intensity and musicality.

Baaren, Kees van (*b* Enschede, 22 Oct 1906; *d* Oegstgeest, 2 Sept 1970). Dutch composer and teacher. The son of a music dealer, he first learned music from his father's stock of scores and recordings, before studying the piano with Rudolph Breithaupt and composition with Friedrich Koch at the Berlin Hochschule (1924–9). Also working as a jazz and cabaret pianist (under the name Billy Barney), and encouraged by his fellow student Boris Blacher, he developed simultaneous enthusiasms for Gershwin and Webern. He returned to the Netherlands in summer 1929, shortly after meeting Pijper in Berlin; some months later he began composition studies with the latter, at the same time destroying all his compositions from before 1930. The study sessions grew progressively less formal, and Pijper remained a friend and mentor until his death in 1947. After several years in Enschede, mostly working with amateur ensembles, van Baaren became director of the Amsterdam Musieklyceum in 1948. In 1953 he was appointed director of the Utrecht Conservatory and in 1958 director of the Royal Conservatory in The Hague. He, like Pijper, became the mentor of younger composers and performers (including Louis Andriessen, Bruins, Reinbert de Leeuw, Misha Mengelberg, Porcelijn, Schat, van Vlijmen and Wisse), who led the Dutch avant garde from the 1970s onwards.

Following public performances of his Piano Concertino (1934) and Trio for winds (1936), which shows Pijper's influence, van Baaren completed nothing more until 1947. His first major work, a striking cantata setting of Eliot's *The Hollow Men*, was written in 1948. While essentially tonal, the harmony grows out of a recurring six-note figure, employed as a series. For a time he wrote simultaneously in an accessible tonal style, largely for students and amateurs (as in the hearty Partita for band, 1953), and in progressively more ambitious applications of serialism. The Settetto (1952), while still reliant on Pijper's germ-cell principle, was his first wholly 12-note work; he became the first major Dutch serialist. Van Baaren's approach was rarely orthodox. Some compositions employ several unrelated rows; others involve exchange of notes within a row. The *Muzikaal zelfportret*, *Variazioni per orchestra*, *Sovraposizioni I* and *II* and the Piano Concerto, and parts of the *Musica per campane*, *Musica per orchestra* and *Musica per organo*, rely on a special formation around a tritone axis, resulting in either an all-interval row or, depending on octave placement, one in which the second half is a strict intervallic retrograde of the first (see ex.1). In portions of the *Musica per campane* and *Musica per organo*, rows of more than one octave appear: 72, 47 and 51 pitches respectively, matching the keys of the instrument.

Van Baaren's close attention to structure is seen in the five *Variazioni per orchestra*, based respectively on isometric pitch series, vertical groupings of notes, intervals, what the composer calls 'variable metres' (actually metres arranged according to interlocking numerical progressions) and groupings of durations. The 'variable metres' are a recurrent feature in the later works and lead to increasingly pointillistic textures. A special case is the sonic collage in the finale of the *Musica per orchestra*, quoting his own music, Latin dance rhythms and eight other composers from Bach to Pijper.

Van Baaren and his music were respected in the Netherlands and he received many prizes. The melodic imagination, sensitivity to instrumental colour and rhythmic vitality in his work overcame the customary resistance of audiences to atonality and won him a dedicated group of supporters at home and abroad. He was awarded the important Sweelinck Prize for his life's work as a composer in January 1970, nine months before his death.

HARRISON RYKER

Baarpijp (Dut.). *See under* ORGAN STOP.

Babadjanian, Arno Harutyuni (*b* Yerevan, 22 Jan 1921; *d* Yerevan, 11 Nov 1983). Armenian composer and pianist. He graduated from Talian's composition class at the Yerevan Conservatory in 1947, and in 1948 from Igumnov's piano class at the Moscow Conservatory; his composition studies were continued under Litinsky at the House of Armenian Culture in Moscow (1946–8). He taught the piano at the Yerevan Conservatory (1950–56) and was himself a brilliant pianist. In 1971 he was made a People's Artist of the USSR. His music draws on Khachaturian and Rachmaninoff, but is unmistakably individual, particularly in its scoring. The piano works are in a virtuoso style, liberal in their use of touch, texture, rhythm and register, and with expressive leading parts. This style was formed in the 1940s; later he introduced Prokofiev-like chromaticism, Bartókian rhythm and Schoenbergian dodecaphony into his music, achieving his best work in the Violin Sonata, the Cello Concerto and the *Shest' kartin* ('Six Pictures') for piano. Babadjanian's variation technique, an important feature of his music, springs from folk ornamentation, while peasant music forms the source of his irregular rhythms.

SVETLANA SARKISYAN

Babaian, Vahram Ohani (*b* Yerevan, 19 Aug 1948). Armenian composer. He began composing at the age of seven, then studied composition with Bagdasarian at the Melikian Music College (1964–8) and later at the Yerevan Conservatory under Yeghiazarian (1968–73). He joined the Armenian Composers' Union in 1973, and as a freelance composer has received numerous prizes and commissions. His works have been performed at festivals of contemporary music in Lithuania, Finland, Georgia, Argentina and Hungary. He is prolific and has written in all genres; his style has evolved from an expressionism which makes use of serial techniques to a Romanticism in which modality and tonality play a major role. He also makes use of impressionist and sonoristic techniques (the ballet *Pygmalion*), heterophony and micropolyphony (Fifth Symphony) and dense textures involving chords and clusters. His preference for clearly defined and logical relationships between form and content has led to unusual assymetrical proportions within works, where the sense of conflict or rhythmic gravitation overrides conventional formal considerations. His symphonies continue the tradition of Mahler and Shostakovich, with outer movements assuming the most significance; his Second Symphony, for example, follows a teleological design which culminates in the finale. Similar formal resolutions can be found in the ballet *Pan*, the opera *Hamlet* and a number of his concertos, lending a sense of coherence to his output as a whole.

SVETLANA SARKISYAN

Babán, Gracián (*b* ?Aragon, *c*1620; *d* Valencia, 2 Feb 1675). Spanish composer. In September 1649 he competed unsuccessfully for the post of *maestro de capilla* of La Seo, one of the two cathedrals at Zaragoza. In 1653 he was appointed *maestro de capilla* of Huesca Cathedral with an annual salary of 120 escudos, which was raised to 160 escudos on 29 August that year in the expectation that he would be ordained priest. He asked for more money on 1 July 1655 but was offered only another 10 or 20 escudos a year for his composition of music for Christmas and Corpus Christi. On 27 April 1657 he accepted the post of *maestro de capilla* of Valencia Cathedral. He was one of the most prolific and respected Spanish composers of his age. He wrote the *Te Deum* and two villancicos performed at Valencia Cathedral on 20 May 1659 to celebrate the canonization of St Thomas of Villanueva, the music commemorating an indult granted by Pope Alexander VII in 1665 and five villancicos sung at S Domingo, Valencia, on 8 September 1674 in honour of the canonization of St Luis Bertrán. The questions he asked during an examination of six candidates for the post of music director of the Patriarca, Valencia, reveal his profound theoretical and contrapuntal expertise (see Piedra). His music, which includes many polychoral pieces and numerous works with harp accompaniment, circulated widely and survives in Latin America as well as in Spain. A painting showing Babán and his singers protected from the plague by the Virgin Mary was formerly in the Capilla de Nuestra Señora contra la Peste at Valencia Cathedral.

ROBERT STEVENSON

Babbi. Italian family of musicians.

(1) **Gregorio (Lorenzo) Babbi (i)** (*b* Cesena, 16 Nov 1708; *d* Cesena, 2 Jan 1768). Italian tenor. Active from 1729 to 1760, he was renowned for his powerful voice and wide range (*c* to *c''*, full voice; *c''* to *g''*, falsetto), his dramatic and expressive manner and his mastery of the improvised bel canto style. Babbi sang in the major theatres of Italy (notably in Florence, Venice, Rome, Turin, Padua and Naples) and Portugal (Lisbon), in heroic *opere serie* by Hasse, Vivaldi, Albinoni, Galuppi, Porpora, Jommelli and Perez, among others. He made his début in Ravenna in 1729 and shortly thereafter was appointed 'virtuoso' to the Grand Duke of Tuscany (*c*1730/31). For the next two decades Babbi's activities were concentrated in northern Italy, in Venice particularly, and in the theatres of his native Romagna. In 1747 he entered the service of Charles III, King of Naples and the Two Sicilies and Palermo. Until his retirement in 1759, he performed almost exclusively for Charles's court in Naples and at the Teatro S Carlo. In 1759 he received a pension and returned to Cesena. His last known performance was in 1760 in Faenza when he sang a *Salve regina* composed for him by the *maestro di cappella* Paolo Alberghi. Babbi was ranked with the foremost virtuosos of his era and was included in the illustrious cast assembled for the production of Perez's *Alessandro nell'Indie* to inaugurate Lisbon's Casa de Opera in 1755 (the theatre was destroyed in an earthquake a few months later). De Brosses, who heard him in his prime in 1741, described him as the 'loveliest high-tenor [haut-taille]' and a good actor, and compared him with the French tenor Jélyotte. His range was a 5th higher than most Italian tenors of the time and equal to Jélyotte's and Amorevoli's ranges. Burney called him a 'dignified, splendid and powerful performer', with the 'sweetest, most flexible, and most powerful voice of its kind, that his country could boast at the time', and P.L. Ghezzi considered him worthy of a caricature (*I-Rvat* Cod. Lat. Ottoboniensis 3117, f.161). Babbi's style in his later years is represented by three arias identified as 'his': a setting of 'Fra sdegno ed amore' from Latilla's *Siroe* (1740; in *US-BEm*), and two settings (one incomplete) of 'Vil trofeo d'un alma imbelle' from Galuppi's *Alessandro nelle Indie* (second version, 1754, Naples; in *I-FZc*). The latter two arias appear to have been part of a larger collection of Babbi's favourite arias that was prepared for use in Faenza. These arias provide a modest suggestion of the vocal dexterity and virtuosity that earned the singer unstinting praise from his contemporaries and biographers. Babbi's first wife Giovanna Guaetti [Guaetta, Guaitti] (*d* before 1767), a soprano, sang in many operas

with him in Venice and Naples. Babbi is not known to have composed; the pieces attributed to him by Schmidl are by his grandson, (3) Gregorio Babbi (ii).

(2) (Pietro Giovanni) Cristoforo (Bartolomeo Gasparre) Babbi (*b* Cesena, 8 May 1745; *d* Dresden, 19 Nov 1814). Italian violinist and composer, son of (1) Gregorio Babbi. He spent his childhood (1747–59) in Naples, where his parents were employed in the Teatro S Carlo and in the royal chapel. After his family returned to Cesena in 1759 he was sent to Faenza (about 1763 or 1764) to study the violin with Tartini's disciple Paolo Alberghi, who also taught him counterpoint and composition. In Faenza he was *primo violino* for the *festa* of 8 December 1766 and again in 1769, 1770 and 1772. In Rimini he was a violinist in the orchestra for the 1773 opera season, and in the same year he was appointed *primo violino* in the cappella at S Petronio, Bologna, a position which he held until 1781. He became a member of the Bologna Accademia Filarmonica on 4 February 1774. He served as *maestro di cappella* in the Teatro Comunale, Bologna (1775–8), and at the Teatro Zagoni as *primo violino* and *capo d'orchestra* (1776–8).

On 3 March 1781 Babbi was engaged as provisional Konzertmeister in Dresden; after the first year his contract was formalized and extended. Under his direction the Dresden Kapelle was completely reorganized, and the orchestra acquired international renown for its accuracy, precision, discipline and brilliant, full sound. Babbi took part in the selection of musicians (with the elector); although he was officially only in charge of the violins, he actually directed the entire orchestra, and was, in effect, equal in importance to J.G. Naumann, the Kapellmeister. His administrative skills and leadership affected even the soloists and vocal ensembles, raising the level of musicianship in the church and opera choirs and generally improving the discipline and organization. Babbi's musicianship was greatly admired by the Dresden court. He is described as playing with 'fire' and 'exquisite taste', with a tone 'as full and rich as that of a cello and although he could not sustain this tone in passages requiring great agility, yet when he played an Adagio, not an eye was dry' (Mannstein). Although these comments are reminiscent of descriptions of earlier performances of Tartini's pupils including Alberghi, Babbi was incontestably 'modern' in his approach and achieved his originality through a synthesis of old and new techniques. Tartini's style and aesthetic prinicples, acquired via Alberghi, had been considered old-fashioned even before Babbi's arrival at the Dresden court, yet in his teacher's style, Tartini's 'fire' and unrivalled bowing technique is recognisable in the 'new' orchestral brilliance and precision achieved by Babbi's orchestra.

Babbi served as Konzertmeister until shortly before his death, when he retired with a pension. His compositions included symphonies for the church, the theatre and the Hofkapelle (after 1786), theatre pieces (1786), and entr'acte music performed during spoken dramas (1792–3) and operas (1796), concertos, chamber works and keyboard music for the Hofkapelle (1802–3), and arrangements of concertos and symphonies by other Italian composers. Of these, only one work has survived (keyboard version in *D-Dl*), a cantata *Augusta*, to a text by C.E. Weinlig, written in honour of the Princess Maria Augusta, and given on 21 August 1786. The cantata is scored for small orchestra (strings, wind and horns) and is a modest work consisting of a sinfonia, accompanied recitative, bravura aria and closing *coro*. The introductory sinfonia is in the three-movement cantabile style of contemporary Italian opera overtures and is remarkable for its explicit tempo and dynamic indications: sudden contrasts between *f* and *pp* or *ppp*, crescendos and diminuendos, and even *pianissimo* ritardandos ('mancando poco a poco').

(3) Gregorio Babbi (ii) (*b* ?Bologna, *c*1770–75; *d* ?Bologna, ? after 1815). Italian bass singer, violinist, composer and organist, son of (2) Cristoforo Babbi. For most of his career Babbi was active in Dresden where he maintained a dual position as supernumerary violinist (from 1788) and bass singer in the Hofkirche. He was granted leave of absence in 1790 and sang in Forlì in 1791. By 1794 he had returned to Dresden, where he continued as bass and violinist in the Hofkirche. In 1805 he was appointed one of the two solo basses in the Hofkirche, although he also retained his former salary as violinist. In the same year he became Musikmeister (as assistant to the Kapellmeister), replacing Frederick Gestewitz. In 1807 he received a pension and returned to Italy, where he served as *primo violino* and orchestra director in Bologna, first at the Teatro Comunale (1807–

8) and then at the Teatro Marsigli-Rossi. His last years were spent in Bologna, where he served as organist in one of the churches.

Babbi's four extant compositions (now in *I-Bc*) were originally written for the Dresden Hofkapelle. The two sinfonias (1804) are the most ambitious of the four works and contain several solo passages, probably a concession to the many virtuosos in the Dresden orchestra; he also wrote an orchestral pastorale (1798). Babbi's harmonic vocabulary is limited and constrained by his short phrases and square rhythms; his melodies are rather unimaginative scale or triad figures, and there is virtually no thematic development. His polacca (1797) is a concert aria in rondo form and was evidently designed to display the technical prowess of its dedicatee, his sister Giovanna Babbi (*b* ?Bologna, *c*1780), an alto who, after making opera débuts in Trieste and Venice (1796–7) and scoring a striking success in Dresden during Carnival 1798–9 (reported in *AMZ*, i, 1799, cols.331–4), permanently damaged her voice in a vain attempt to become a soprano; she left the stage in 1800. Another sister, Teresa Babbi (*fl* 1800–10), was a soprano in the Dresden Hofkapelle from about 1800 to 1806, and received the dedication of Paer's aria *Ti riposa in questo seno*.

GLORIA EIVE

Babbitt, Milton (Byron) (*b* Philadelphia, PA, 10 May 1916). American composer and theorist. He has contributed extensively to the understanding and extension of 12-note compositional theory and practice and has been one of the most influential composers and teachers in the USA since World War II.

1. Life. 2. Works: (i) Serial theory and practice to 1970 (ii) Electronic works (iii) Later serial developments.

1. LIFE. Brought up in Jackson, Mississippi, he started playing the violin at the age of four and several years later also studied clarinet and saxophone. He graduated from high school in 1931, having already demonstrated considerable skills in jazz ensemble performance and the composition of popular songs. His father's professional involvement with mathematics (as an actuary) was influential in shaping Babbitt's intellectual environment. In 1931 Babbitt entered the University of Pennsylvania with the intention of becoming a mathematician, but he soon transferred to New York University, concentrating on music under Marion Bauer and Philip James. He received the BA in music in 1935. As a student and during the ensuing years, Babbitt immersed himself in the intellectual milieu of New York, encountering influential philosophers such as Sidney Hook and James Wheelright, developing a life-long engagement with analytical philosophy, and reading widely in rapidly emerging and sometimes short-lived journals such as *Symposium* and *Politics*. His early attraction to the music of Varèse and Stravinsky soon gave way to an absorption in that of Schoenberg, Berg and Webern – particularly significant at a time when 12-note music was unknown to many and viewed with scepticism by others.

After graduation Babbitt studied privately with Sessions, wrote criticism for the *Musical Leader*, and then enrolled for graduate work at Princeton University, where he continued his association with Sessions. In 1938 he joined the Princeton music faculty and in 1942 received one of Princeton's first MFAs in music. His *Composition for String Orchestra*, a straightforward 12-note work, was completed in 1940.

During World War II Babbitt divided his time between Washington, DC, where he was engaged in mathematical research, and Princeton, as a member of the mathematics faculty (1943–5). Musically, these were years of thought and discovery, rather than of actual composition; they resulted in 1946 in a paper entitled *The Function of Set Structure in the Twelve-Tone System*, the first formal and systematic investigation of Schoenberg's compositional method. (The unpublished paper finally gained Babbitt the PhD in 1992.) Between 1946 and 1948, shuttling between Jackson and New York, he again directed his energies to composition, writing some film scores and an unsuccessful Broadway musical.

In 1948 Babbitt rejoined the music faculty at Princeton, eventually becoming Conant Professor of Music (1960); in 1973 he became a member of the composition faculty of the Juilliard School. He has also taught at the Salzburg Seminar in American Studies, the Berkshire Music Center, the New England Conservatory of Music and the Darmstadt summer courses. He has received several honorary doctorates and other honours, including a National Institute of Arts and Letters Award (1959), a Guggenheim Fellowship (1960–61) and membership in the National Institute (1965). He became a fellow of the American Academy of Arts and Sciences in 1974, received a Pulitzer Prize Special Citation in 1982, and in 1986 was elected a member of the American Academy of Arts and Letters (he also received its Gold Medal in Music in 1988). Throughout his career, he has been actively involved in contemporary music organizations, including the ISCM (he was president of the American section, 1951–2), the American Music Center, *Perspectives of New Music* (as a member of its editorial board) and the Columbia-Princeton Electronic Music Center (as director from 1959). A prolific writer of articles and reviews, he has also travelled widely as a lecturer perceptive and adept at logical extemporization: his 1983 Madison lectures are published under the title *Words about Music*. He is also an inveterate follower of popular sports, a raconteur and punster, and an omnivorous reader.

2. WORKS.

(i) Serial theory and practice to 1970. Babbitt's early fascination with 12-note practice, particularly in its formal aspects, developed into a total reconsideration of musical relations. Throughout his compositional career he has been occupied with the extension of techniques related to Schoenberg's (and Webern's) 'combinatorial' sets; with the investigation of sets that have great flexibility and potential for long-range association; and with an exploration of the structuring of nonpitch components 'determined by the operations of the [12-note] system and uniquely analogous to the specific structuring of the pitch components of the individual work, and thus, utterly nonseparable' (Babbitt, 1955, p.61). He has been a pioneer in his ways of talking and thinking about music,

invoking terms from other disciplines, such as philosophy, linguistics, mathematics and the physical sciences.

Babbitt revealed and formalized many of the most salient aspects of 12-note compositional technique in several important essays. In 'Some Aspects of Twelve-Tone Composition' (1955), 'Twelve-Tone Invariants as Compositional Determinants' (1960) and 'Set Structure as a Compositional Determinant' (1961), he systematically investigated the compositional potential of the 12 pitch class set, introducing such terms (derived from mathematics) as 'source set', 'combinatoriality', 'aggregate', 'secondary set', and 'derived set'. These terms facilitate the classification of the various types of pitch class set and contribute to the description of diverse procedures for the compositional projection of such sets. A secondary set, for example, results when a 'new' set of 12 pitch classes emerges from the linear linking of segments of two forms of a 12-note series, as shown in Table 1. Similarly, an 'aggregate can be thought of as a simultaneous statement of ... parts [of a 12-note set] ... it is not a set, inasmuch as it is not totally ordered, because only the elements within the component parts are ordered, but not the relationship between or among the parts themselves' (Babbitt, 1955, p.57). 12-note sets that yield such aggregate and secondary set formations are called 'combinatorial'. (Further distinctions between various types of combinatorial sets are discussed in the same essay.) The nomenclature that Babbitt has introduced in his prose writings has become widely adopted and is the basis for much theoretical work and composition. Moreover, in his compositions he has demonstrated the efficacy of his theories. Thus Babbitt has extended the notion of compositional creativity to encompass the development of musical systems themselves, as well as specific compositional achievements within such systems. He has also persistently explored the relationships between set transformation and derivation procedures, and virtually all other aspects of musical structure, such as grouping and form, large- and small-scale rhythm, texture and register, instrumentation and timbre.

In 'Twelve-Tone Rhythmic Structure and the Electronic Medium' (1962) Babbitt demonstrates a number of methods for interpreting the structures of pitch class sets in the temporal domain. By positing an analogy between the octave (in pitch structure) and the bar (in rhythmic and metrical structure), and by dividing the bar into 12 equal units (each of which can be musically articulated by individual points of attack), Babbitt provides a basis for mapping pitch class sets onto 'time-point sets'. Thus an uninterpreted set of integers (for example, 0, 11, 6, 7, 5, 1, 10, 2, 9, 3, 4, 8) may be interpreted as a specific instance of a pitch class set (ex.1) or as a specific instance of a time-point set (ex.2). (The time-point of a particular point of attack is a measure of its position within the bar.) In ex.2 the metrical unit is a demisemiquaver, a 12th of the whole bar; time-point 0 therefore occurs on the first demisemiquaver of the bar, time-point 1 on the next, and so on. In this example the 12 available points of attack within a bar are ordered according to the numerical set given above.) Exx.1 and 2 each represent only one of the possible interpretations of the numerical set given above; pitch classes may be presented in various registers, just as time-points may be displaced to subsequent bars, as long as the same order of presentation (of pitches or points of articulation) is preserved. Furthermore, a time-point set and a pitch class set determined by the same set of integers may unfold at different speeds: in the first four bars of the second violin part of Babbitt's String Quartet no.3 (1969–70) the first six notes may be understood as a realization in terms of pitch of the first five integers in the set indicated above (ex.3). Also, the three *forte* markings in this passage articulate the time-points that correspond to the first and third entities of the same numerical set (time-point 0 is reiterated in bar 2 before the third time-point, 6, is articulated in bar 4). The second time-point of this set is presented in a different instrumental line, the last note of violin 1 in bar 3 (ex.4). Each of the eight dynamic gradations from *ppp* to *fff* inclusive is employed in the String Quartet no.3 to articulate a particular layer of the time-point structure, and each of these layers is analogous to one of eight layers of pitch class sets simultaneously presented in the work; the eight layers of pitch class sets are differentiated by distinctions of instrumentation, register and mode of sound production (for example, the use of pizzicato and arco) throughout the work. This brief discussion of a musical fragment may serve as an indication of the extraordinary richness of structural relationships that are projected in Babbitt's music.

An earlier example of Babbitt's approach may be seen in his *Three Compositions for Piano* (1947), one of his first consistent attempts to extend Schoenbergian 12-note

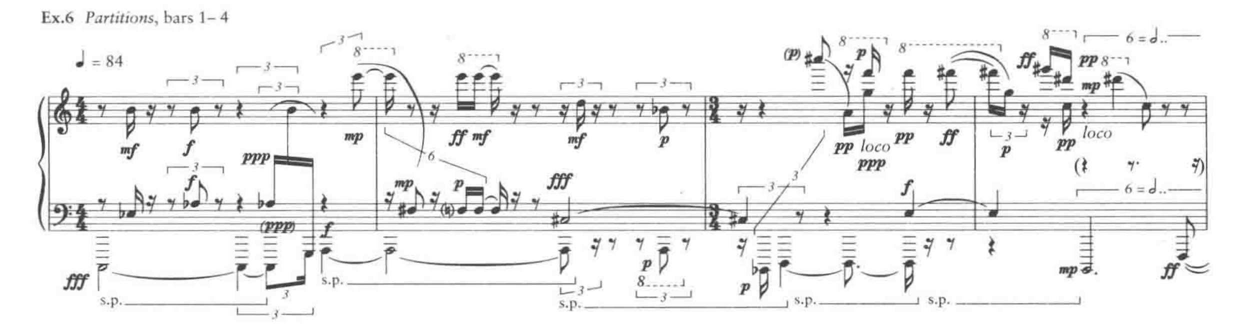
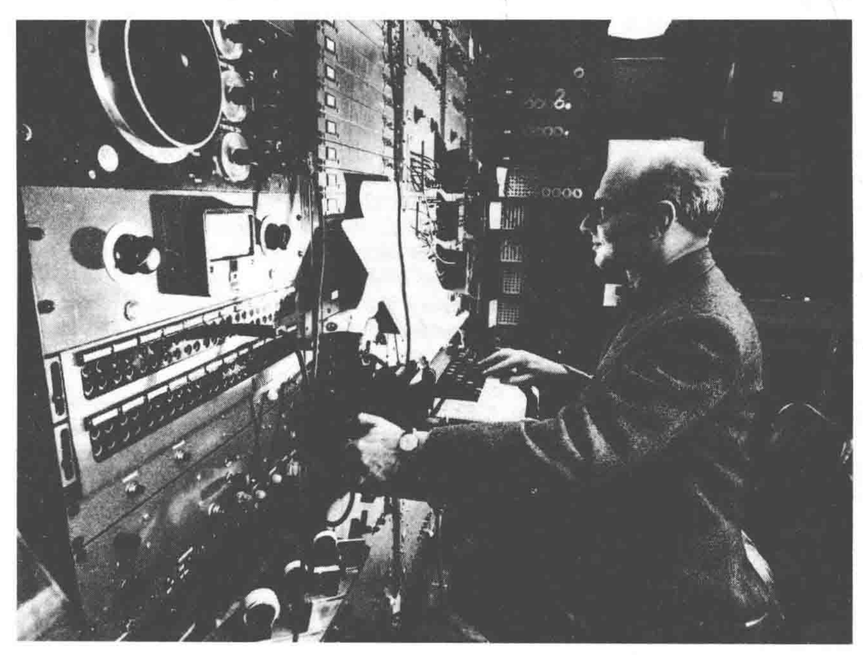
procedures. The surface of the music is, in some respects, reminiscent of Schoenberg: registrally dispersed lines alternate with thickly clustered chordal attacks (in the framework of a quasi-ternary structure), yet the absence of expressive indications and the reliance on metronome markings would seem to reveal a Stravinskian concern for a clear, undistracted projection of the temporal domain. Some of the innovative aspects of the work reside in the conjunction of the structuring of pitch and other domains, resulting in an early example of 'totally serialized' music. Points of articulation made by the superimposition of lines and the number of consecutive attacks within a contrapuntal line are determined by a set (whose prime form is 5, 1, 4, 2). In the first four bars of the work, this set is presented twice in its prime form (P), once in retrograde (R) and once in retrograde inversion (RI; ex.5). There is also a correspondence between dynamics and pitch set forms.



Babbitt's *Composition for Four Instruments* and *Composition for Twelve Instruments* (both of which were written in 1948) go a step further towards a structuring of rhythm isomorphic with 12-note pitch structuring. In the 12-instrument work a set of 12 durations emerges and operates throughout. It is transformed by 'classical' serial operations: transposition (addition of a constant to each duration number of the set), inversion (the complementation of the duration numbers), retrogression (the complementation of the order numbers of the set) and retrograde inversion. The ending of each of the three major sections of the work is articulated by the completion of a rhythmic set. The presentation of the rhythmic sets is often complex – various instruments characteristically participate in the presentation of a single rhythmic set, and more than one rhythmic set may be presented simultaneously. Nonetheless, the surface characteristics of the work delineate a simple process. Beginning with sparsely textured single events (which can be considered an extension of Webern's sound world) and slowly becoming more compact (with regard to aggregate completions), the work concludes with thicker textures and sustained sonorities, unfolding newly shaped but familiar harmonic environments.

Babbitt has been profoundly involved in the clarification and extension of the systematic aspects of 12-note composition, but his music is in no sense rigidly determined by precompositional schemes. Within the constraints of serial techniques, he uses a great range of expressive possibilities and contextually varied structures. A work such as *Partitions* (1957) demonstrates numerous precompositional constraints (such as the projection of an all-interval set, a polyphonic texture in which distinct transformations of 12-note pitch sets are unfolded in each line and aggregates formed by various vertical partitionings of segments of these lines). In the first four bars a hexachord is presented in each of four different registers (ex.6). The hexachords in the lower two registers (E♭ A♭ F♯ F C♯ E; C G A B♭ D B) are complementary and are, respectively, the retrogrades of the hexachords presented in the higher two registers. There are 49 different ways in which the pitches presented in these hexachords might be partitioned to form aggregates. (For example, each hexachord might be divided 3 + 3; or the hexachords might be divided alternately 2 + 4 and 4 + 2 etc.) The actual partitioning of pitches (1 + 5 in the highest register, 3 + 3 in the next highest register, 5 + 1 in the next register, and 3 + 3 in the lowest register) contributes to a rich pattern of interval and pitch associations and echoes. Such partitioning establishes a specific rate of movement through the pitch class sets in each register and also suggests possibilities for hierarchical distinctions among the pitch classes that constitute the sets involved. Each registral line has its own rhythm of movement through its pitch class sets, and these characteristic rhythms are varied contextually throughout the work.

Ex.5 Three Compositions for Piano, no.1, bars 1– 4



Ex.6 *Partitions*, bars 1–4

The commitment to systematic precompositional planning is maintained in works with dramatic, poetic or other associative aspects. In *Du* (1951), a song cycle for soprano and piano (which represented the USA at the 1953 ISCM Festival), there is continual interplay between the text and the vocal and piano lines. Phoneme, syllable, word and line are carefully contoured, subtly and imaginatively set to music: the pitch, durational, dynamic and registral schemata, themselves transformed from poem to poem, are allied with the verbal elements and indeed help to project the many delicate nuances of the text. These lyrical, imagist tendencies were most fully realized in *Philomel* (1964) but are also evident in *All Set* (1957), for small jazz ensemble, with its conjunction of 12-note structure (based on an all-combinatorial set) and what Babbitt calls 'jazz-like properties ... the use of percussion, the Chicago jazz-like juxtapositions of solos and ensembles recalling certain characteristics of group improvisation'.

Babbitt took a novel serial approach to handling the sonic resources of a large orchestra in *Relata I* (1965). Here timbral 'families' are correlated with set structure, with woodwind instruments as four trios, brass as three quartets, and string instruments as two sextets (one bowed, the other plucked). The work is insistently polyphonic (with as many as 48 instrumental lines), framed at both ends by massive sonorities and filled with constantly changing and recombined textures and colours. While parts of the work are analogous to other parts, there is no simple repetition: all aspects undergo reinterpretation, rearrangement and 'resurfacing'. In the more timbrally homogeneous works of the late 1960s (*Sextets*, *Post-Partitions*, parts of *Correspondences*, the String Quartets nos.3 and 4), the handling of timbre and tone-colour seems even more refined. Sonorously embodied successions of relations are projected in ever varying contexts, producing changes of 'atmosphere' from the most rarefied to the most dense, with every conceivable gradation.

(ii) Electronic works. Another continuing concern of Babbitt's has been electronic sound synthesis. At the time of the first instrumental film soundtrack, in the late 1930s, he had already recognized the enormous compositional potential of such synthesis. Two decades later, in the mid-1950s, when he was invited by RCA to be a composer-consultant, he became the first composer to work with its newly improved and developed synthesizer, the Mark II (see illustration). *Composition for Synthesizer* (1961) was Babbitt's first totally synthesized work. It was followed soon after by *Vision and Prayer* for soprano and synthesizer (1961) and *Ensembles for Synthesizer* (1962–4). His basic compositional attitudes and approaches underwent little change with the new resource; rather,

Milton Babbitt programming the Mark II RCA synthesizer (built early 1950s) at the Columbia-Princeton Electronic Music Center, New York

with the availability and flexibility of the synthesizer's programming control they were now realizable to a degree of precision previously unattainable in live performances of his music. Babbitt's interest in synthesis was not concerned with the invention of new sounds *per se* but with the control of all aspects of events, particularly the timing and rate of change of timbre, texture and intensity. (His Woodwind Quartet (1953) and String Quartet no.2 (1954) had already given some indication of the rapidity of dynamic change he wished to achieve, on both single and consecutive pitches.) The electronic medium allowed him to project time-point sets however he liked, without regard to the demands made on live performers.

Though the lucidity of his conceptual world finally became manifest under the ideal performance conditions provided by sound synthesis, Babbitt nevertheless retained his interest in live performance, and carried over to it several structural procedures from the electronic medium. Perhaps the most appealing work combining live performance with tape is *Philomel*, written in conjunction with the poet John Hollander for the soprano Bethany Beardslee. It is based on Ovid's interpretation of the Greek legend of Philomela, the ravished, speechless maiden who is transformed into a nightingale. New ways of combining musical and verbal expressiveness were devised by composer and poet: music is as articulate as language; language (Philomela's thoughts) is transformed into music (the nightingale's song). The work is an almost inexhaustible repertory of speech-song similitudes and differentiations, and resonant word-music puns (unrealizable without the resources of the synthesizer).

(iii) Later serial developments. Since the 1970s Babbitt has been extraordinarily prolific. The fecundity of his compositional thought has been revealed in such diverse combinations as female chorus, double brass sextet, orchestra and tape, and guitar duo. He has continued to explore the potential, and refine the procedures of, 12-note composition, always discovering new ways of extending and interpreting principles of combinatoriality and correlating the various dimensions of his musical universe.

In works such as *Arie da capo* (1973–4), Babbitt incorporates 'weighted aggregates' – transformations (by inversion) of pitch class arrays (abstract, precompositional designs made up of combinatorially related rows) in which at least one pitch class appears more than once (see Babbitt, 1973–4). *Arie da capo* also employs an 'all-partition array' that systematically uses all the possible partitionings of the structural elements that comprise an aggregate (in this case, all the possible partitionings of 12-note sets into as many as six parts). All-partition arrays are found in much of Babbitt's music after 1960. Each of the sections of *Arie da capo* may be construed as an 'aria' for one of the five instruments; but the conception of the aria is reimagined so that 'the central instrument dominates less quantitatively than relationally, in that its music is the immediate source of, and is complemented and counterpointed by, the music of the "accompanying" instruments'. 'Da capo' repetitions of set forms recur throughout the arias, both on the musical surface and as non-consecutive pitches associated by register, articulation or instrumentation.

A Solo Requiem for soprano and two pianos (1976–7) is Babbitt's most extended composition for voice. This magisterial work (a memorial to the composer Godfrey Winham) incorporates a wide range of vocal techniques and reveals the extraordinary range and sensitivity of Babbitt's response to a variety of dramatic and lyrical poetic texts. In *My Complements to Roger* for solo piano (1978), Babbitt succinctly demonstrates a number of methods for associating pitch and rhythmic structures. The partitioning of metrical units and pitch class sets is correlated in each bar. Often in the piece the grouping of a string of pitches extracted from the abstract pitch class array is articulated on the musical surface by presenting the pitch string within a single beat, subdivided into the same number of parts as there are pitches in the string (see Mead, 1983).

Babbitt has continued to expand the 12-note universe. Since the 1980s he has explored the premise of the 'superarray', the combination of individual arrays to form larger and more intricate 12-note structures. These very large arrays of pitch class structure have inspired ever more inventive musical textures. For example, in *Transfigured Notes* for string orchestra (1986), Babbitt divides each of four instrumental groups (1st and 2nd violins, violas and cellos) into two sub-groups and then distinguishes between three separate registers in each group in order to articulate 24 distinct areas. These instrumental groupings are then recombined to project the structural counterpoint which comprises one interpretation of the abstract superarray.

The world that Babbitt's music evokes is not simple. He has said 'I want a piece of music to be literally as much as possible'. While some critics have felt that such an attitude has resulted in a body of inaccessible music, others have praised his pioneering approach, involving as it has a systematic and comprehensive exploration of the 12-note compositional universe. His emphasis on the relationship between practice and theory, his insistence on the composer's assumption of responsibility for every musical event in a work, and his reinterpretation of the constituent elements of the Western musical tradition have had a vital influence on the thinking and music of numerous younger composers.

ELAINE BARKIN/MARTIN BRODY

Babcock, Alpheus (*b* Dorchester, MA, 11 Sept 1785; *d* Boston, 3 April 1842). American piano maker. He began his career as an apprentice to BENJAMIN CREHORE, as did his brother Lewis (*b* 13 Feb 1779; *d* Milton, MA, 14 Jan 1814); the brothers had their own firm from 1809 to 1811. Alpheus Babcock worked for, supplied pianos for, or was a partner in the following firms: Babcock, Appleton & Babcock (Boston, 1811–14); Hayts, Babcock & Appleton (Boston, 1814–15); J.A. Dickson (Boston); Christopher Hall (Norfolk, Virginia); John, Ruth and G.D. MACKAY (Boston, 1822–9); J.G. Klemm (Philadelphia, 1830–32); William Swift (Philadelphia, 1832–7); and Chickering (Boston, 1837–42). His most significant contribution to the evolution of the piano was his invention of a one-piece cast-iron frame including hitchpin plate, for which he received a patent on 17 December 1825. This invention is regarded as the basis for subsequent piano frame development. His patents for 'cross-stringing' (24 May 1830), improved action (31 December 1833), and improvement in the jack or 'grasshopper' (31 October 1839) were not of lasting importance. Many historians erroneously credit Babcock with having invented or advocated the overstrung scale. This conclusion undoubtedly results from the equation of overstringing with cross-stringing. Babcock's 'cross-stringing' patent concerns itself with unison double-strung piano strings (formed from a single wire which crosses over itself when looped over either hitch-pin or hook), not with bass strings running diagonally above the others. Babcock's instruments were acclaimed for their superb craftsmanship, and all known examples are of the square variety, patterned after English pianos of the period with a range of either five and a half or six octaves (*F'* to *c''''* or *F'* to *f''''*). Recent research has shown that stamped numerals on his pianos from the 1820s are probably cumulative serial numbers. Representative instruments are at the Smithsonian Institution, Washington DC (*see* PIANOFORTE, fig.27), Yale University, New Haven, and the Museum of Fine Arts, Boston.

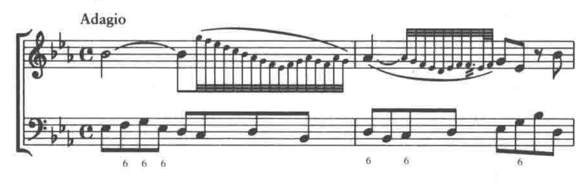
KEITH G. GRAFING/DARCY KURONEN

Babell [Babel], **William** (*b* ?London, *c*1690; *d* Islington, London, 23 Sept 1723). English harpsichordist, organist, violinist, composer and arranger. He received his early musical instruction from his father, Charles Babel, a bassoonist in the Drury Lane Theatre orchestra until he was 80, and later from Pepusch and possibly Handel (according to Mattheson, in *Der vollkommene Capellmeister*, 1739, but denied by Hawkins). Babell led an active professional life in London. As a violinist he was said to have played in the private band of George I, while as a harpsichordist, from about 1711, his name frequently appears in London concert notices, usually in conjunction with those of Corbett, Paisible and (later) Dubourg. He was also associated with Lincoln's Inn Fields Theatre. From November 1718 until his death he was organist of All Hallows Bread Street and was succeeded there by John Stanley. Babell was buried at All Hallows.

He acquired an international reputation as a harpsichordist largely through his virtuoso arrangements of fashionable operatic arias and overtures, especially those of Handel. His keyboard style was undoubtedly influenced by his close acquaintance with Handel's playing; it has been proposed that one of the manuscript settings of 'Vo' far guerra' (*GB-Lbl*) is Babell's response to a reworking and development of the material by Handel himself (Pont), but this hypothesis has found no support. These arrangements by Babell, although appearing exceptional, nevertheless give an intriguing insight into early 18th-century practices of keyboard extemporization and ornamentation. Burney commented that Babell:



> acquired great celebrity by wire-drawing the favourite songs of the opera of Rinaldo, and others of the same period, into *showy* and brilliant lessons, which by mere rapidity of finger in playing single sounds, without the assistance of taste, expression, harmony or modulation, enabled the performer to astonish ignorance, and acquire the reputation of a great player at a small expence ... Mr Babel ... at once gratifies idleness and vanity.

Hawkins, on the other hand, considered that Babell deserved his success; he remarked that Babell's arrangement of favourite arias from Handel's *Rinaldo* 'succeeded so well ... as to make from it a book of lessons which few could play but himself, and which has long been deservedly celebrated'. Babell's reputation reached France, the Netherlands and Germany, where some of his works were published; Mattheson reported that he was said to have surpassed even Handel as an organist.

The slow movements of Babell's own chamber sonatas, published posthumously, and 'With proper Graces adapted to each Adagio by ye Author', illustrate his

approach to non-keyboard-designated ornamentation (ex.1), and offer useful comparative insights. In his preface to the original edition, Walsh described Babell as his 'late lov'd friend' and remarked that 'When the World is so unfortunate [as] to lose and esteem'd Author, the only Consolation we have, is the enjoyment of his Works'. He asked owners of Babell's manuscripts to present them for publication to perpetuate 'that Beautifull and lasting Monument which his genius rais'd to him in his works'. Tilmouth (in the introduction to his edition of the sonatas

Ex.1 Sonata No.2, 3rd movt. (12 solos for a violin, hoboy or German flute, part 2)

in G minor and F minor, London, 1963) wrote that 'many of the sonatas seem best suited to the oboe, an instrument that at the time was played expertly only by a handful of professionals', and suggested that this would have prompted Walsh to prescribe other suitable instruments on the title-pages.

Babell's Concertos in 7 Parts for violins and small flute, or 'sixth' flute (a soprano recorder in D), were also published posthumously (*c*1726); four are for one sixth flute, one for two sixth flutes and one for two trebles. The string parts exclude viola, but require a solo violin. Although Handelian influence is apparent in these works, Italian inspiration is stronger, particularly that of Vivaldi, both with regard to style and execution. The title-page records that the concertos were 'performed at the theatre with great applause', and several were probably known for a decade or so before they were eventually published. At least one of them was written by December 1714, when the sale catalogue of Thomas Britton's collection included '12 Concertos by Dr Pepusch, young Mr Babel and Vivaldi'.

WORKS

printed; including arrangements; published in London unless otherwise stated

The 3rd Book of the Ladys Entertainment, or Banquet of Musick, hpd/spinet (1709) [arrs. of N.F. Haym (after A. Scarlatti): Pyrrhus and Demetrius (op); Clotilda (pasticcio)]

Marianna's charms wound my heart: a New Song for the Spinnet (*c*1710)

The 4th Book of the Ladys Entertainment, hpd/spinet (1716) [arrs. of F. Mancini: Hydaspe fedele (op); Almahide (pasticcio)]

Suits of the Most Celebrated Lessons, hpd/spinet (1717) [incl. arrs. of arias in G.F. Handel: Il pastor fido, Rinaldo, Teseo (all ops); G. Bononcini: Etearco (op); Almahide, Antioco, Creso (all pasticcios); arr. in 4 sets, each with prelude by Babell, last set incl. 2 arias by Babell with variations]; as Suits of Harpsichord and Spinnet Lessons (*c*1718); partly repr. as Pièces de clavecin de Mr Händel, op.8 (Paris, *c*1745)

The Harpsichord Master Improved . . . with a Choice Collection of Newest and Most Air'y Lessons (1718), incl. 2 items from Suits of the Most Celebrated Lessons

Rigadoon, a (melody only), 6 Dances Composed By Mr. Kellom Tomlinson (1720)

Trios de diefferents autheurs choises & mis en ordre par Mr Babel, livre 1e [2e] (Amsterdam, *c*1720), probably all arrs.

Would you I the thing discover (L. Theobald), song, in 'Tis well if it takes (play) (*c*1720)

XII Solos . . . with Proper Graces Adapted to Each Adagio, bk 1, vn/ob, hpd (*c*1725)

XII Solos . . . with Proper Graces Adapted to Each Adagio, bk 2, vn/ob/fl, hpd (*c*1725)

Babell's [6] Concertos in 7 Parts, vns, 1/2 fl, op.3 (*c*1726)

The Milk Maid, song (*c*1730)

The Musical Pocket Book Containing an Extraordinary Collection of the Newest & Best Lessons of English & Italian Aires . . . Also Some of the Most Celebrated Song Tunes with their Symphonys taken out of the Choicest Operas (*c*1735), probably incl. reprs. of earlier pieces/arrs.

MSS; including arrangements; all for keyboard solo

5 preludes, G, e, a, d, G, minuet, G, 1714–17, *GB-BENcoke**

Lesson (also as Air), E, *BENcoke*

2 pieces, G, 1 *c*1714, *BENcoke*, *Lbl**, probably by Babell

Prelude, D, *c*1714, *Lbl**, probably by Babell

Arrs. of arias in Handel: Teseo (op); Clotilda (pasticcio); ov. in Handel: Rinaldo (op); A. Corelli: Sonata, op.5 no.9; Handel: Allegro, d, HWV495b, *c*1714, *Lbl**, probably by Babell

4 versions of the arr. of the aria Vo' far guerra in Handel: Rinaldo (pubd version in Suits, 1717), *Ge*, *Lbl** (*c*1714), *WCr*, *US-NYp*

Arrs. of arias in G.F. Handel: Il pastor fido (op); G. Bononcini: Il trionfo di Camilla (op); Antioco, Arminio, Clotilda, Ernelinda, Thomyris (all pasticcios), 1714-17, *GB-BENcoke**

Lost: music for St Cecilia's Day, *c*1718; conc., ? formerly *D-Hs*

GERALD GIFFORD (with TERENCE BEST)

Babin, Victor (*b* Moscow, 30 Nov/13 Dec 1908; *d* Cleveland, OH, 1 March 1972). American pianist and composer of Russian birth. He studied at Riga, in 1928 moving to Berlin for composition with Franz Schreker and the piano with Schnabel at the Hochschule für Musik. In 1933 he married another of Schnabel's pupils, Vitya (Victoria) Vronsky (1909–92), and his career as a player thereafter was almost exclusively that of a duo-pianist with his wife. Vronsky and Babin quickly established themselves in Europe, then moved to the USA in 1937. Babin taught at the Aspen Music School (where he was director, 1951–4, and member of the Festival Quartet along with Szymon Goldberg, William Primrose and Nikolay Graudan), at the Berkshire Music Center, Tanglewood, at the Cleveland Institute of Music (where he was director from 1961 until his death), and at Case Western Reserve University, also in Cleveland. His

compositions, in a conservative, post-Romantic language, include two concertos for two pianos and orchestra, other compositions for one and two pianos, chamber music, and many songs, including a cycle, *Beloved Stranger*, on texts by Witter Bynner.

MICHAEL STEINBERG/R

Babitz, Sol (*b* Brooklyn, NY, 11 Oct 1911; *d* Los Angeles, 18 Feb 1982). American musicologist and violinist. He was largely self-taught after leaving high school. His violin teachers included Carl Flesch and Marcel Chailley; his interest in performing practice was aroused by the writings of Arnold Dolmetsch and encouraged by Igor Stravinsky, whose string parts Babitz edited for many years. From 1933 to 1937 he was a violinist with the Los Angeles PO, then, until 1952, he played with Hollywood studio orchestras. From 1941 to 1962 he was an editor for *International Musician*. In 1948 he was a co-founder of the Early Music Laboratory, an organization which promotes historical accuracy in performance through the publication of bulletins and demonstration tape recordings. Babitz was concerned with a number of aspects of performance which he believed contribute to an accurate 17th- and 18th-century style. These aspects include clear articulation, use of metric accents, rhythmic freedom within the beat and a lighter tone. He also worked for the modernization of violin fingering to facilitate the performance of works by such contemporary composers as Schoenberg and Stravinsky.

PAULA MORGAN

Babou, Thomas (*b* Liège, 12 Feb 1656; *d* Liège, *c*1740). French organist and composer. He was organist of the collegiate church of St Jean l'Evangéliste in Liège at least from 1687 to 1704 (the registers preceding and following these dates are missing); from 1703 he was assisted by a young organist, Jean Buston (*d* 1731). The Babou recorded as organist in the accounts from 1726 to 1767 is his son Jean-François-Pascal (*b* Liège, 10 April 1700; *d* Liège, 13 May 1767), who was a notary from 1726 and secretary to the chapter of St Jean from 1742; he was probably the copyist of a *Livre d'orgue* at the Liège Conservatory containing several pieces attributed to 'Mr. Babou', dated 1709 and 1710, which must be by his father. The pieces (ed. P. Froidebise, Schola Cantorum, Paris, 1959) are in a lively and brilliant italianate manner with little counterpoint, and show the introduction of a secular style into church music.

Bacarisse (Chinoria), Salvador (*b* Madrid, 12 Sept 1898; *d* Paris, 5 Aug 1963). Spanish composer. Until the outbreak of the Spanish Civil War in 1936, he lived in Madrid where he studied law and philosophy at the university, and music at the Real Conservatorio de Música; his teachers included Manuel Fernández Alberdi (piano) and Conrado del Campo (composition), among others. He was a leading member of the Grupo de los Ocho, whose efforts to combat musical conservatism coincided with the period in which the Second Republic flourished (1931–6). Between 1931 and 1934 he acted as music critic for the republican daily papers *Crisol* and *Luz*. As artistic director of Unión Radio, until the Madrid broadcasting station was closed in 1936, he promoted the performance of contemporary Spanish music both at home and abroad. He also served as a member of the Junta Nacional de Música y Teatros Líricos (founded in 1931) and as deputy chair of the Consejo Central de Música (after 1937), which founded the National Orchestra in 1938. After being appointed to direct the Gran Teatro del Liceo, Barcelona, for the 1938–9 season, he went into exile in Paris (February 1939), escaping reprisals at the end of the Civil War for his republican opinions and his signature on an anti-fascist manifesto published in 1936. From 1945 until his death he worked at RTF as an editor of Spanish-language programmes. His honours include three National Music Prizes (1923, 1931, 1934), RTF's chamber opera prize (1958) and the Jean Vigo Prize (1958).

Bacarisse's works composed in Spain can be assigned to two distinct style periods. The first (1919–23) is notable for its impressionistic, sound-oriented and non-functional compositional technique (*Dos nocturnos*, 1919; *La nave de Ulises*, 1922–3; *Heraldos*, 1923). The second, introduced by *Ofrenda a Debussy* (1926–7), is marked by neo-classical techniques; a transformation of impressionistic methods can be observed in *Tres marchas burlescas* (1928), *La tragedia de doña Ajada* (1929) and Concertino (1929), which resulted in a simplification of the complex harmonic structures characteristic of earlier works. A tendency towards musical parody created by mechanization and deformation (a prominent feature of the music of the Generación de la República to which Grupo de los Ocho belongs) can be perceived in these transitional

compositions. Gradually he developed a polyphonic style common to later compositions such as *Tres movimientos concertantes* (1934), in which he used serial techniques for the first time.

Bacarisse's compositional style remained largely unchanged in exile, although a formalization of techniques can be traced back to the moderate neo-classicism of the *Música sinfónica* (1931). Two tendencies can be distinguished: a 'humane' nature, expressed in the adoption of neo-romanticism (Concertino, 1952; *Concierto romántico*, 1954–5) and folk elements (*Fantasía andaluza*, 1948, rev. 1959); and a simplified musical language, 'dehumanized' by an extreme use of mechanical methods (*17 variaciones sobre cinco notas*, 1962). At the same time, an extremely complex style, originating in late neo-classicism and in his own early impressionistic works, emerged in his later operas and songs.

WORKS

(*selective list*)

for fuller list see Heine (1990)

Dramatic: La tragedia de doña Ajada (M. Abril), 1929, Madrid, 1929; Corrida de feria (ballet, M. Bacarisse), 1930, Barcelona, 1938, orch suite, 1930; Charlot (op, 3, R. Gómez de la Serna), 1932–3; El estudiante de Salamanca (op, 1, E. Enderiz), 1944, radio broadcast, Monte Carlo, 1956; La fausse tante, ou L'amour à Salamanque (ballet, S. Bacarisse), 1949; La sangre de Antígona (op, 3, J. Bergamín, after Sophocles), 1955; Font-aux-cabres (op, 3, J. Camp and J. Cassou, after L. de Vega), 1956, radio broadcast, Paris, 1962; Le trésor de Boabdil (chbr op, 1, A. Camp and F. Puig-Espert), 1958, radio broadcast, Paris, 1958; El retablo de la libertad de Melisendra (incid music, J. Palau, after M. de Cervantes), 1960, Paris, 1960; film scores

CHRISTIANE HEINE

Baccaloni, Salvatore (*b* Rome, 14 April 1900; *d* New York, 31 Dec 1969). Italian bass. He studied with Giuseppe Kaschmann and made his début at the Teatro Adriano, Rome, in 1922 as Dr Bartolo. In 1926 he was engaged at La Scala, where he sang regularly until 1940, first in serious roles and then, on Toscanini's advice, specializing in roles like Dulcamara, the two Bartolos and the *buffo* roles in Wolf-Ferrari's operas. During this period he contributed significantly to several complete opera recordings by the La Scala company. He appeared at Covent Garden (1928–9) and at Glyndebourne (1936–9), where his Leporello, Dr Bartolo and especially Don Pasquale set a standard of excellence. He made his North American début in Chicago in 1930 as Melitone and sang at the Teatro Colón (1931–41, 1947). In 1940 he joined the Metropolitan, and sang there regularly until 1962, giving 297 performances, mostly in the Italian *buffo* repertory. He sang Falstaff at San Francisco (1944) and made numerous tours of the USA. Portly in build and good-humoured, Baccaloni had a communicative gift for comedy and was noted for his musicianship; in his early years he displayed a rare vocal quality in his *buffo* roles. (*GV*, R. Celletti; R. Vegeto)

FRANCIS D. PERKINS/ALAN BLYTH

Baccelli, Matteo Pantaleone [Papia Leone] (*b* Lucca, 1690; *d* Lucca, *c*1766). Italian composer. He was a priest, and although he was probably *maestro di musica* at the Seminary of S Giovanni e Reparata in Lucca by 1712, the first certain notice of him there is in 1725, when the seminarians participated in some of the most ambitious music in the city. Between 1717 and 1759 the Lucca confraternity of S Cecilia performed Baccelli's music (for first and second Vespers and Mass, with orchestral accompaniment) on nine different celebrations of the saint's feast; and each year he directed the Requiem Mass for dead members. He was further honoured by election to the society's governing committee (together with Giacomo Puccini) in 1754. In 1756 his oratorio *La concezione* was presented by the Congregazione degli Angeli Custodi, Lucca. In 1758 and 1759 his seminary choir performed as 'secondo coro' for music at S Martino and S Frediano, directed by Puccini. The opera *La donna girandola* has been ascribed to him, but that is unlikely, for it appears from the libretto that its composer was married to one of the singers. Baccelli's sacred music, to judge from his extant antiphon and psalm for Vespers, the *Domine* and *Dixit*, makes great and able use of the *stile concertante*: brilliant, rapid sections alternate with andante, lyrical writing; choruses alternate with solos; counterpoint with homophony; strings, trumpets and occasionally horns combine with continuo to provide rich four- or six-part accompaniment.

WORKS

Domine ad adiuvandum me, and Dixit Dominus, S, A, T, B, SATB, 2 tpt, 2 hn, 2 vn, va, bc, 1753, *I-Ls*
La concezione (orat), Lucca, 1756, lost
Several vesper settings and masses, all lost

Bacchetta (It.). A drumstick, or the stick of a BOW or a conductor's BATON.

Bacchini [Bacchino], **Giovanni Maria** [Fra Teodoro del Carmine] (*b* Mantua; *fl* 1588–1607). Italian singer, composer and theorist. Canal erroneously gave his first name as Girolamo. He was a Carmelite priest. While at the Mantuan court, he wrote a treatise, *De musica*, now lost. In 1588 he published a madrigal, *Più che Diana*, in Alfonso Preti's *L'amoroso caccia* (RISM 1588[14]), a collection consisting of compositions by Mantuan musicians primarily associated with the church. He also published a book of masses, the *Missarum quinque et sex vocum, liber primus* (Venice, 1589). In a letter dated 26 November 1594 to the vicar-general of the Carmelite order, Duke Vincenzo Gonzaga requested that Bacchini, a 'musico castrato', be exempt from wearing his monk's habit while singing in the court chamber. In 1594 he accompanied the duke to the *Reichstag* in Regensburg and in the following year, along with Monteverdi, G.B. Marinone, Serafino Terzi and other musicians from the Gonzaga court, took part in the duke's military expedition to southern Hungary. A Mantuan court secretary, Fortunato Cardi, described musical performances directed by Monteverdi, in which Bacchini took part, on the eve of the Battle of Visegrad. It has been suggested that Bacchini sang the part of Euridice in the first performances of Monteverdi's *Orfeo* (1607). The account books of the Mantuan court mention him in 1595, 1598 and 1605.

PIERRE M. TAGMANN/IAIN FENLON

Bacchius [Bakcheios Gerōn] (*fl* ?4th century CE). Greek writer on music. He was the author of a small musical catechism preserved under the title *Introduction to the Art of Music* (*Eisagōgē technēs mousikēs*). The treatise is usually (though not always) followed in the manuscripts by a second distinct treatise but with the same title and author; the second treatise in turn is followed in most (but not all) manuscripts by this epigram:

> Of music, Bacchius the Elder described
> the *tonoi*, *tropoi*, *mele* and consonances.
> Echoing him, Dionysius writes.
> The all-powerful Emperor Constantine
> he shows to be a wise lover of the works of art.
>
> For one who, of every wise subject of instruction,
> has been seen as discoverer and giver,
> it is most unseemly to be a stranger to music.

The epigram, however, is never found with the first treatise of Bacchius when it appears alone (the earliest instance of which is the marginal text in a 13th-century hand in *I-Vnm* gr.app.cl. VI/3: RISM, B/XI, 270), and even in its earliest appearance with the second treatise (*Vnm* gr.app.cl. VI/10: RISM, B/XI, 273), the epigram is separated from the text by a large space. When it does appear, the epigram is usually followed by the musical hymns attributed to Mesomedes (2nd century CE). Nevertheless, the epigram has commonly been taken to refer to the second treatise, the attribution of which is accordingly modified (even in some of the manuscripts) to Dionysius and dated to the reign of Constantine the Great (*c*283–337 CE). The epigram could, however, be referring to another emperor of the same name, including the Byzantine Constantine VII Porphyrogennetus (905–59 CE), known for his support of classical scholarship. Although Bacchius's *floruit* has been assumed to be contemporary with Dionysius, this cannot be demonstrated on any grounds. In the end, the epigram is of no use in dating either treatise.

The first treatise, written as a series of simple questions and answers, presents a mixture of definitions and theories that cannot be assigned exclusively to any one school. The first 88 questions deal with definitions of common terms and concepts in harmonics; questions 89–101 deal with definitions in rhythmics. Some of the answers (11, 13–18, 29–34 and 38–42) make use of musical notation, recognizable from the tables of ALYPIUS. Nothing in the treatise is completely new, but several of the answers, especially in the section on rhythmics, provide useful clarification or confirmation of other sources. The unassuming character and routine content and style of the treatise suggest a date no earlier than the 4th century CE. Parts of the first treatise are also preserved in an untitled anecdoton surviving in seven manuscripts, including one of the 11th century (*D-HEu* Palat.gr.281: RISM, B/XI, 14).

The second treatise, written in prose, remarks on the inability of the senses (sight, smell, taste, touch and hearing) to make consistent quantitative discriminations, and for this reason musicians must turn to the *canon* for precise measurements. Most of this appears verbatim, but without attribution, in Bryennius's *Harmonics* (ii.6). The second treatise concludes with eight theorems demonstrating the proportions for the consonant octave, 5th, 4th, 12th and 15th; the dissonant 11th; the tone; and the impossibility of dividing the tone into two equal parts. In approach, style and content, the second treatise is entirely different from the first, and its attribution to Bacchius in some of the manuscripts is simply due to the inadvertent connection of the end-title of the first treatise with the beginning of the second.

The treatise of Bacchius was used by later writers, including Manuel Bryennius, Franchinus Gaffurius, Giorgio Valla, Francisco de Salinas, Girolamo Mei, Marin Mersenne (who published the first edition in 1623 and a translation in 1627) and others. Meibom included the treatise in his collection of 1652, but Jan's editions presented the first detailed study of the text. The second treatise was first published (under the name of Bacchius) by Bellermann.

THOMAS J. MATHIESEN

Bacchius [Bacchus, Bachus, Bachi, Bachy], **Johannes de** (*d* before 29 Jan 1557). Composer, described by Eitner as French. He became an alto in the Viennese Hofkapelle in March 1554. An Adrianus de Bachy, listed as a singer in the boys' choir of the court, may have been his son. Bacchius's works are typical polyphonic compositions of his time. The motets, most of which appeared in the large anthologies of Berg & Neuber, are in the full-voiced imitative style much favoured in Vienna. The two chansons have their roots in the Parisian style of the earlier part of the century, although they, too, have a higher level of imitative writing.

WORKS

Bacchus. *See* DIONYSUS.

Bacchylides [Bakchylidēs] (*b* Iulis [now Tzia], Keos; *fl c*470 BCE). Greek lyric poet. He was a nephew of Simonides and contemporary of Pindar; there are many indications of intense rivalry between the two as composers of victory odes and dithyrambs. Unlike Pindar, Bacchylides had little to say of the power of music; his references are correct but conventional, rendered distinctive only by colourful adjectives. Thus in one of the many victory odes the champion has returned home to the triumphal accompaniment of auloi 'that delight mortals' and revel-songs 'sweetly breathing' (Edmonds, frag.40.72–3). In another, the sound of the phorminx and 'clear-ringing' choruses are alien to war (Edmonds, frag.41.12–15; *liguklangēs* is one of many Bacchylidean coinages). Two poems begin with references to the *barbitos*, 'lyre with many strings' (Edmonds, frags.70, 71); here the term appears to be used with precision.

Baccusi, Ippolito [Baccusii, Hippolyti] (*b* Mantua, *c*1550; *d* Verona, 1609). Italian composer. Although he was a prolific composer of madrigals and sacred music, the course of his career is not well documented. His earliest position appears to have been that of assistant choir director at S Marco, Venice. That he must have held the post for only a short time can be established from a letter (in *I-MAc*) dated from Ravenna on 22 April 1570 in which he requested permission to remain another year in Ravenna, since he would be able to complete his degree by the end of a third year of study: he must therefore have left Venice for Ravenna by 1568. On the title-page of his second book of six-part madrigals (1572) he is described as director of music to the 'illustri signori di Spilimbergo', a musical society in Verona. The book is dedicated to the Accademia Filarmonica in Verona, and in the preface Baccusi indicated that he was employed as *maestro di cappella* at yet another institution there, the church of S Eufemia. The next document concerning his career occurs in the *Prattica di musica seconda parte* (Venice, 1622/*R*1967) of Lodovico Zacconi, which states that he went to Mantua in 1583 to study *contrappunto alla mente* with him and that he was a *maestro di cappella* there; Zacconi wrote as if Baccusi had held the post for some time, but the exact date of his appointment is not known. In the preface to his fourth book of masses (1593) Baccusi indicated that he was offered the choir directorship at Verona Cathedral in 1592; he accepted and remained in the post until his death.

Stylistically Baccusi belongs to the Venetian school of composers; he early came under the influence of Willaert, Rore and Andrea Gabrieli. He composed two settings of

poetic cycles celebrating the Venetian victory over the Turks at Lepanto (in his second books for five and six voices, both 1572). Other works of particular interest are the settings of Petrarch's 11-stanza canzone *Vergine bella* (1605) and of one of the cycles in Francesco Bozza's quaternion *I diporti della villa in ogni stagione* (RISM 1601[7]). Among his contemporaries Baccusi had the reputation of being a fine contrapuntist and a master of improvisation: his works certainly illustrate the first quality. Baccusi was also one of the first composers to acknowledge and recommend the practice of instrumental doubling of vocal parts (see the title-pages of his masses of 1596 and psalms of 1597).

WORKS

published in Venice unless otherwise noted

MASSES

[2] Missarum, 5, 6vv, liber I (1570)
[4] Missarum, 5, 6, 8vv, liber II (1585)
Il primo libro delle [5] messe, 4vv (1588)
Missarum, 5, 6vv, liber III (1589)
[4] Missarum, 5, 9vv, liber IV (1593)
Misse tres tum viva voce, tum omni instrumentorum genere cantatu commodissime, 8vv (1596)

OTHER SACRED

[25] Motectorum, 5, 6, 8vv, liber I (1579)
Psalmi omnes qui in vesperis a romana ecclesia decantantur cum cantico Beatae Virginis, 4vv, liber II (1594)
Psalmorum qui a santa romana ecclesia, ut plurimum in vesperis decantantur, triplici distinctorum ordine, cum cantico Beatae Virginis, 4vv, liber III (Verona, 1594)
Sacrae cantiones psalmi videlicet et omnia quae ad completorium pertinent, 5vv (1596)
Psalmi omnes qui a sancta romana ecclesia in solemnitatibus ad Vesperas decantari solent, cum 2 Magnificat, tum viva voce, tum omni instrumentorum genere, cantatu commodissimi, 8vv (1597)
Psalmi qui diebus festivis a sancta romana ecclesia in Vesperis decantari solent, 5vv (1602)
Single sacred works in 1583[2], 1592[3], 1596[1]

MADRIGALS

PATRICIA ANN MYERS/R

Bacewicz, Grażyna (*b* Łódź, 5 Feb 1909; *d* Warsaw, 17 Jan 1969). Polish composer, violinist and pianist. After early instrumental and theory studies in Łódź, she attended the Warsaw Conservatory, where she studied composition with Kazimierz Sikorski, the violin with Józef Jarzębski and the piano with Józef Turczyński (she also studied philosophy at Warsaw University). She graduated in composition and the violin in 1932, furthering her studies in Paris in 1932 and 1933 with Boulanger and the violinist André Touret. After a brief period spent teaching in Łódź, she returned to Paris to study with Carl Flesch in 1934. At the request of the conductor Grzegorz Fitelberg, Bacewicz was principal violinist of the Polish RO (1936–8) and she performed as a soloist in several European countries before returning to Poland two months before World War II. She continued as a concert violinist after the war until the mid-1950s. Her prowess as a pianist should not be ignored: she was, for example, a notable interpreter of her own Second Piano Sonata.

Among her other activities, Bacewicz was an accomplished writer of short stories, novels and autobiographical anecdotes. Among the awards she received for her music were the top prize at the International Chopin Competition for Composers in Warsaw (1949) for her Piano Concerto, first prize at the International Composers' Competition in Liège (1951) for her String Quartet no.4, first prize in the orchestral section at UNESCO's International Rostrum of Composers in Paris (1960) for her *Music for Strings, Trumpets and Percussion* and the Gold Medal at the Queen Elisabeth International Music Competition in Brussels (1965) for her Violin Concerto no.7, as well as various State awards from 1949 onwards.

Bacewicz made her most lasting mark on 20th-century music as a composer rather than as a performer or teacher (she taught composition rarely, but notably at the Warsaw Conservatory during the last three years of her life). She had an uncommonly vibrant yet modest personality and was much admired and loved by her fellow Poles during her lifetime.

Her career as a composer may be seen to divide into three broad spans, of which the first (1932–44) is largely preparatory to the second (1945–59), with the third (1960–69) a more distinct entity. The first period shows the development and refinement of Bacewicz's neoclassical persona. Although only a few of these early works have been published, her music's salient characteristics of clarity, wit and brevity are already evident in the Wind Quintet, a piece in which she seems to be following Szymanowski's example in the incorporation of folk elements. Her works from the time of World War II show a greater muscularity and unrelenting activity, with a daring disregard for traditional classical structures, as in the Sonata no.1 for solo violin. The Overture exemplifies Bacewicz's unerring ability to propel her music towards a final goal.

After the war, Bacewicz's music became increasingly personal, casting off any remaining Parisian *chic* and becoming distinctively resilient. Occasionally she indulged in pastiche (the Sonata da camera), but her stronger music is reminiscent of Szymanowski (the Violin Concerto no.3 and, later, the Piano Sonata no.2 and Violin Concerto no.5). These and other outstanding works such as the String Quartet no.3 and the Concerto for String Orchestra have mostly maintained their place in the international repertory. As with many of her contemporaries, she used folk materials (both directly and indirectly) during the period of intense socialist realism (1949–54), in large forms (the Piano Concerto) and in encore pieces for her recitals. Her output during the height of Stalinist cultural dogma is, however, remarkably free of mass songs or other pieces with a 'message'. The three symphonies are the most grandiose works, though their scoring is at times

refreshingly restrained. The chamber music reveals a tougher, more challenging musical idiom, most notably in the fourth and fifth quartets: the former is structurally loose-limbed, while the latter is highly integrated in its motivic design and adventurous for the time in its non-diatonic harmonic language. This innovatory streak in Bacewicz's musical personality is carried through into the Partita, especially in its intermezzo. By the mid-1950s Bacewicz had already moved far from conventional notions of neo-classicism.

In the late 1950s Bacewicz, like her contemporaries, had to recognize the emergence of a new generation of younger composers and an influx of avant-garde influences from abroad. Unlike some, she grasped the nettle, even though it was not always with absolute conviction. In some works, such as the String Quartet no.6, there are passages of outright 12-note writing. But she soon settled down to her own brand of chromaticism and dynamic gestures that veer from the routine (Cello Concerto no.2) to the highly imaginative (*Pensieri notturni*). At times, Bacewicz appears to have experienced some difficulty in putting pen to paper, although in 1965 she composed no fewer than seven large-scale works. The extensive self-borrowings which became evident when discarded works from 1965–7 were published posthumously seem to indicate a degree of uncertainty about the new directions she was taking. Her evident attachment to the Intermezzo from the Partita gave rise to citations from that movement's opening bars in later works (e.g. the Viola Concerto); such quotations form part of a highly successful patchworking technique that Bacewicz developed during the 1960s. There is even the suggestion in the Viola Concerto that Bacewicz, like some of her younger compatriots, was returning to folk material.

Bacewicz's position in Polish postwar music is undeniable: hers was an individual and independent voice; she was more innovative than is generally acknowledged and she carried the torch for the many Polish women composers who followed her example. Even though she may have lost her sure-footedness in the mid-1960s, this should not detract from a musical achievement that is being recognized outside Poland as one of the most remarkable of the mid-20th century.

WORKS
(*selective list*)

STAGE

Z chłopa król [The Peasant King] (ballet, A.M. Swinarski, after P. Baryka), 1953–4, Poznań, 1954

Przygoda króla Artura [The Adventure of King Arthur] (comic op for radio, E. Fischer), 1959, Polish Radio, 1959; televised 1960

Esik w Ostendzie [Esik in Ostend] (comic ballet, L. Terpilowski, after T. Boy-Żeleński), 1964, Poznań, 1964

Pożądanie [Desire] (ballet, 2, M. Bibrowski, after P. Picasso: *Désir attrapé par la queue*), 1968–9, inc.; Warsaw, 1973

Incid music for 7 plays

Bacfarc, Valentin. *See* BAKFARK, VALENTIN.

Bach. German family of musicians. From the 16th century to the 19th the extensive Saxon-Thuringian Bach family produced an unparalleled and almost incalculable number of musicians of every kind, from fiddlers and town musicians to organists, Kantors, court musicians and Kapellmeisters. The outstanding figure among them was Johann Sebastian Bach, but a great many other well-known and distinguished musicians were born into earlier, contemporary and later generations of the family.

In the following pages a list of the musical members of the family, in alphabetical order, with brief biographical notes on those who are not discussed separately, precedes an outline of the family history. §III is then devoted to the most important members of the family, in chronological order. The italic numerals *1–53* given in parentheses after the names correspond to the numbers given to members of the family in the genealogy drawn up by J.S. Bach in 1735, the *Ursprung der musicalisch-Bachischen Familie*. The numerals from *54* onwards continue on the same principle. The inadvertent fusion in the *Ursprung* of two family members, Caspar (*b* c1580; *d* 1642–4) and Lips (*c*1590–1626), into a single unnamed individual under the number *3* has been corrected, but in order to facilitate comparison the *3* is retained for them and their descendants along with the new numbers. The arabic numerals preceding the names refer to their individual entries in §III below. Non-musician members of the family are not listed, but some musicians with the surname Bach who did not belong to the main, Wechmar line are included.

I. List of the musicians. II. Family history. III. Individual members.

I. List of the musicians

Carl Philipp Emanuel Bach (*46*) (*b* Weimar, 8 March 1714; *d* Hamburg, 14 Dec 1788). Son of Johann Sebastian Bach (*24*); see §III (9) below.

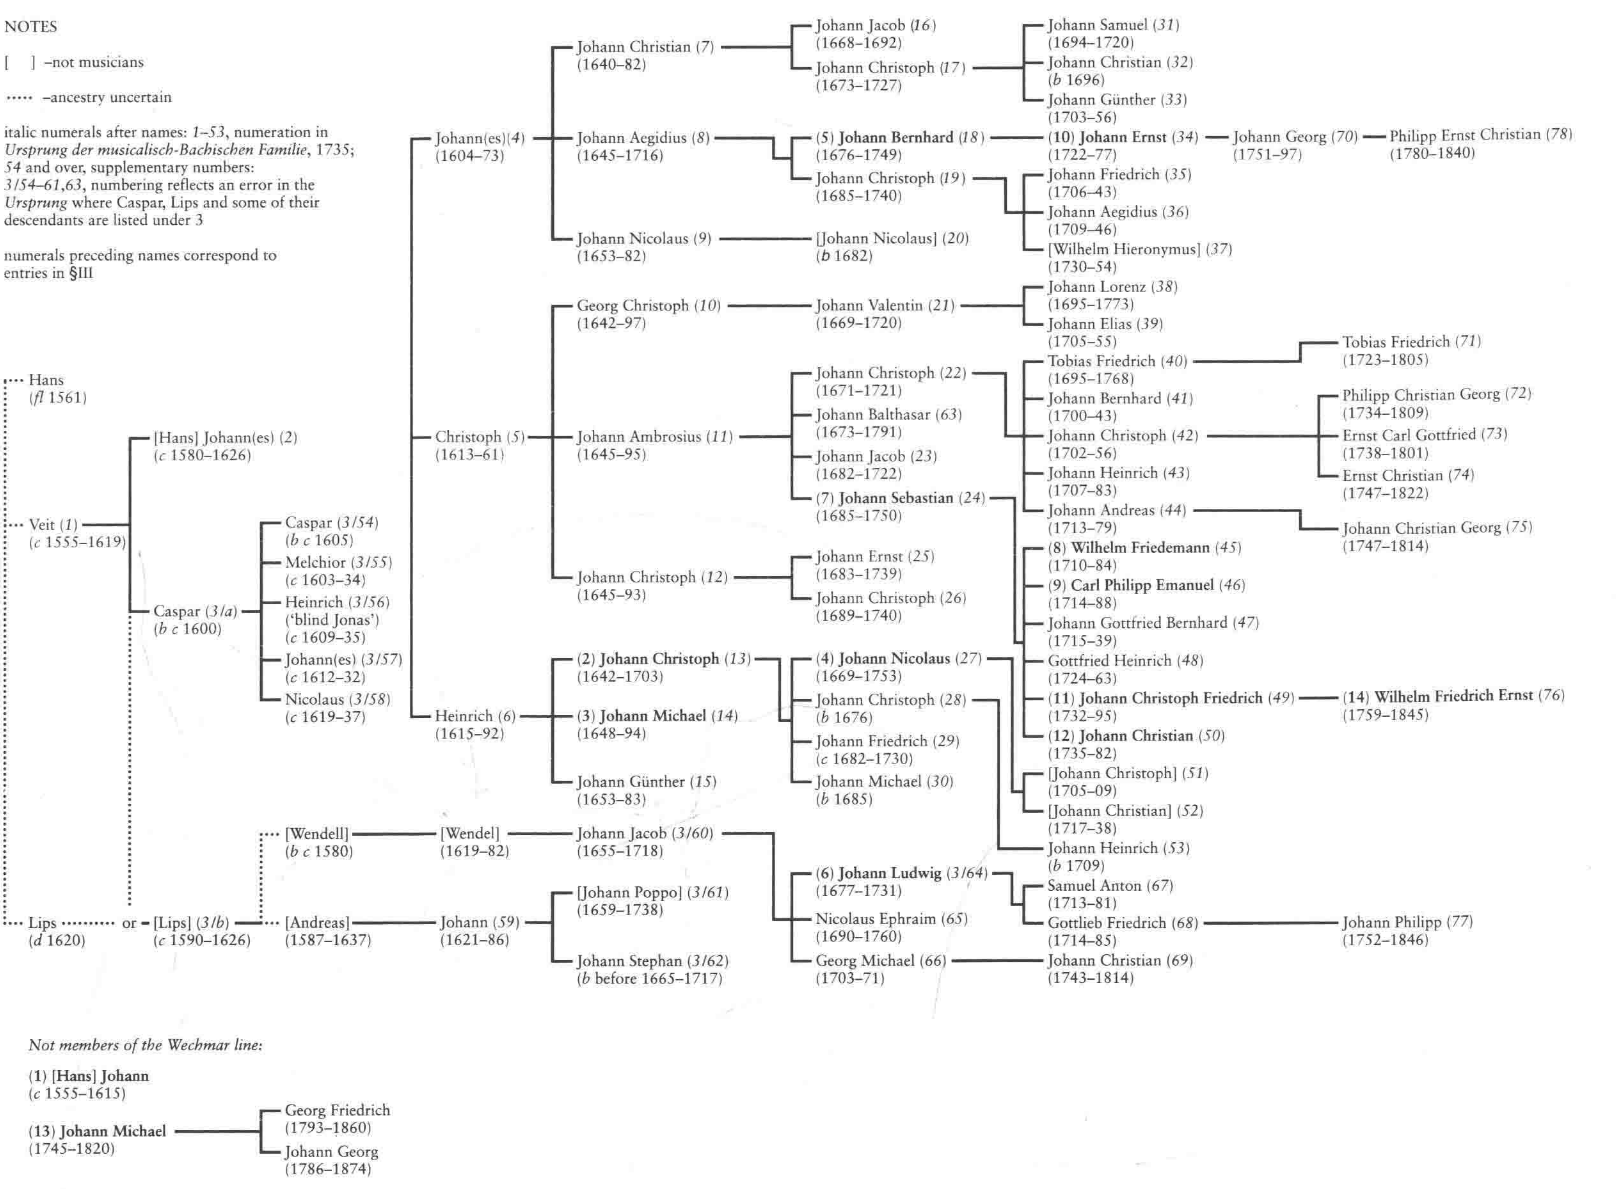
Caspar Bach (*3/a*) (*b* c1580; *d* ?Arnstadt, Sept 1642–1644). Son of Veit (*1*). He is mentioned as a Stadtpfeifer in Gotha in 1619 and as a court and town musician in Arnstadt from 1620; on 23 October 1621 he received the sum of 1 gulden to buy a bassoon ('Dulcian'). As Hausmann (director of the town music) he lived in the so-called Neideckturm (the tower of Schloss Neideck, Arnstadt). In 1633 he left the count's service (as a result of the Thirty Years War the court could no longer afford his salary) and bought a house in the Jacobsgasse. Nothing is known about his subsequent activities.

Caspar Bach (*3/54*) (*b* c1605). Son of Caspar (*3/a*). He was trained as a musician (violinist) at the courts of Bayreuth (1621–3) and Dresden (1623) at the expense of the Count of Schwarzburg-Arnstadt. In 1623 the court paid him 38 gulden for three months' educational and living expenses and for instruments, and on 11 October 1625 he signed a receipt in Arnstadt for the sum of 1 reichsthaler. He is thought to have gone to Italy, and from this point no more is known about him.

Christoph Bach (*5*) (*b* Wechmar, 19 April 1613; *d* Arnstadt, 12 Sept 1661). Son of Johann (2) and grandfather of Johann Sebastian Bach (*24*). He was in the princely service and a court musician in Weimar, then from 1642 a town musician in Erfurt and from 1654 court and town musician in Arnstadt. A musical entry by him in the album of Georg Friedrich Reimann, Kantor in Saalfeld, survives (*BJb 1928*, 175).

Ernst Carl Gottfried Bach (*73*) (*b* Ohrdruf, 12 Jan 1738; *d* Ohrdruf, 24 June 1801). Son of Johann Christoph (*42*). He was Kantor in Wechmar, 1765–72, then Kantor at the Michaeliskirche in Ohrdruf.

Ernst Christian Bach (*74*) (*b* Ohrdruf, 26 Sept 1747; *d* Wechmar, 29 Sept 1822). Son of Johann Christoph (*42*). He was Kantor in Wechmar, 1773–1819.



Georg Christoph Bach (*10*) (*b* Erfurt, 6 Sept 1642; *d* Schweinfurt, 27 April 1697). Son of Christoph (*5*). He was trained in music at Arnstadt , and was evidently academically gifted; he attended the Gymnasium Casimiranum in Coburg (1663–5) and Leipzig University (1665–6). In 1668 he became Kantor and organist in Themar, and from 1688 he was Kantor at St Johannis in Schweinfurt, where his uncles Johann (*4*) and Heinrich Bach (*6*) had been organists. A vocal concerto by him survives: *Siehe, wie fein und lieblich ist es* for two tenors, bass, violin, three gambas and continuo (ed. in EDM, 1st ser., ii (1935) and in Stuttgarter Bach-Ausgaben, ser. A.4 (Stuttgart, *c*1976)). It was composed on his 47th birthday, evidently for performance with his brothers, the twins Ambrosius (*11*) and Christoph (*12*), probably at some family gathering. A Schweinfurt inventory of 1689 (see Wollny, 1997) lists four other vocal works: *Gott ist unser Zuversicht*, *Meinen Jesum lass ich nicht*, *Wie lieblich sind auf den Bergen* and *Wohl her, lasset uns wohl leben.*

Georg Friedrich Bach (*b* Tann, 17 March 1793; *d* Iserlohn, 2 Oct 1860). Not a member of the Wechmar line, he was a son of Johann Michael (see §III (13) below). A flautist, he deserted from Napoleon's army and went to Sweden, where he became music teacher to the crown prince (later Oskar I). On returning to Germany he taught music in Elberfeld and Iserlohn. Several manuscript keyboard compositions and a harmony manual by him survive (*D-EIb*).

Georg Michael Bach (*66*) (*b* Ruhla, 27 Sept 1703; *d* Halle, 18 Feb 1771). Son of Johann Jacob (*3/60*). From 1732 he was Kantor at the Ulrichskirche in Halle, adn from 1747 he taught at the Lutheran Gymnasium.

Gottfried Heinrich Bach (*48*) (*b* Leipzig, 26 Feb 1724; *d* Naumburg, bur. 12 Feb 1763). Eldest son of Johann Sebastian (*24*) and Anna Magdalena Bach. Although he was mentally handicapped, he was evidently a good keyboard player and, according to his half-brother Carl Philipp Emanuel (*46*), showed 'a great genius, which however failed to develop'. From 1750 he lived with his brother-in-law J.C. Altnickol in Naumburg.

Gottlieb Friedrich Bach (*68*) (*b* Meiningen, 10 Sept 1714; *d* Meiningen, 25 Feb 1785). Son of Johann Ludwig (*3/64*). He was court organist and painter (*Kabinettsmaler*) in Meiningen.

1. *The Bach family tree*

Hans [Hanns, Johann] Bach (*b* Andelsbuch, Vorarlberg, *c*1555; *d* Nürtingen, 1 Dec 1615). Not a member of the Wechmar line; see §III(1) below.

Hans [Johann(es)] Bach (2) (*b c*1580; *d* Wechmar, 26 Dec 1626). Son of Veit (*1*). In the funeral sermon for his youngest son Heinrich (6) he is described as a 'musician and carpetmaker', and he was the earliest member of the family known to have been a professional musician. According to the *Ursprung*, he trained as a Stadpfeifer in Gotha and later settled in Wechmar, from where he travelled as a musician to various Thuringian towns, including Gotha, Arnstadt, Erfurt, Eisenach, Schmalkalden and Suhl. He married Anna Schmied of Wechmar in about 1602, and after his father's death took over his business and property. In the Wechmar register of deaths he appears as 'Hanss Bach ein Spielmann'.

Heinrich Bach (*3/56*) (*b* Gotha, *c*1609; *d* Arnstadt, bur. 27 May 1635). Son of Caspar (*3/a*). He is mentioned in the deaths register as blind, and is therefore probably the musician educated in Italy and mentioned in the *Ursprung* as 'blind Jonas' because of his adventurous experiences, in allusion to the biblical figure of Jonah.

Heinrich Bach (*6*) (*b* Wechmar, 16 Sept 1615; *d* Arnstadt, 10 July 1692). Son of Hans (2). He was taught music by his father and his eldest brother Johann (*4*); his first appointment as town musician and organist of St Johannis in Schweinfurt cannot be dated precisely, but was about 1629–34. In 1636 he went to Erfurt (probably to stay with his eldest brother; there is no evidence that he held any particular appointment there), and in 1641 he became a court and town musician in Arnstadt, where he was also organist of the Liebfrauenkirche. The printed funeral sermon delivered by J.G. Olearius (Arnstadt, 1692; the biographical sections repr. in *BJb 1995*, 101–2) describes him as an 'organist who touched the heart' and a '*musicus practicus* famous for his art', as well as a composer of 'chorales, motets, concertos, fugues and the like'. A vocal concerto, *Ich danke dir, Gott* (1681), for five voices, 2 violins, 2 violas and continuo (EDM, 1st ser., ii (1935)), three organ chorales (ed. D. Hellmann, *Orgelwerke der Familie Bach* (Leipzig, 1967)) and two sonatas for two violins, two violas and continuo (ed. in Stuttgarter Bach Ausgaben, ser. A.3 (Stuttgart, *c*1998)) are extant. The Lüneburg inventory of 1696 lists another vocal work, the ten-part *Als der Tag der Pfingsten erfüllet war*, now lost.

Johann(es) Bach (*3/57*) (*b* Gotha, *c*1612; *d* Arnstadt, bur. 9 Dec 1632). Son of Caspar (*3/a*). He was a town musician in Arnstadt.

Johann(es) Bach (*4*) (*b* Wechmar, 26 Nov 1604; *d* Erfurt, bur. 13 May 1673). Son of Hans (2). After spending five years as an apprentice and two years as a journeyman to the Stadtpfeifer Johann Christoph Hoffmann in Suhl, he became a town musician in 1633 and from 1634 was organist of St Johannis in Schweinfurt. In 1635 he was appointed town musician in Erfurt and on 16 April 1636 organist of the Predigerkirche there. In 1649, while he was still organist, the church acquired the largest and finest organ in Erfurt, built by Ludwig Compenius. Johann Bach's first wife, Barbara, was the daughter of his master Hoffmann; the marriage was childless and in 1639, after her early death, he married Hedwig Lämmerhirt, daughter of the prosperous and influential Erfurt councillor Valentin Lämmerhirt. Two motets have been ascribed to Johann Bach: *Unser Leben ist ein Schatten* for two sopranos, alto, two tenors and bass, with a three-part echo choir and *Sei nun wieder zufrieden* for double chorus, as well as an aria, *Weint nicht um meinen Tod*, for soprano, alto, tenor, bass and continuo (EDM, 1st ser., i (1935)). See S. Orth: 'Neues über den Stammvater der "Erfurter" Bache, Johann Bach' (*Mf*, ix (1956), 447–50); S. Orth, 'Johann Bach, der Stammvater der Erfurter Bache' (*BJb 1973*, 79–87); and Brück (1990).

Johann Bach (*59*) (*b* Themar, 1621; *d* Lehnstedt, 12 Sept 1686). Son of Andreas Bach, a councillor in Themar. He was Kantor in Ilmenau and a deacon there from 1668. In 1680 he became a pastor in Lehnstedt.

Johann(es) Bach: see also under Hans Bach above.

Johann Aegidius Bach (*8*) (*b* Erfurt, bap. 11 Feb 1645; *d* Erfurt, bur. 22 Nov 1716). Son of Johann (*4*). He was taught music by his father, and in 1671 was a violinist in the Erfurt town music, becoming its director in 1682. From 1674 he also held the post of organist at the Kaufmannskirche in Erfurt, and was appointed organist of the Michaeliskirche in 1690. His pupils, besides his sons and nephews, included J.G. Walther.

Johann Aegidius Bach (*36*) (*b* Erfurt, bap. 4 Aug 1709; *d* Gross-Monra, nr Kölleda, 17 May 1746). Son of Johann Christoph (*19*). He was Kantor of Gross-Monra.

Johann Ambrosius Bach (*11*) (*b* Erfurt, 22 Feb 1645; *d* Eisenach, 20 Feb 1695). Son of Christoph (*5*), twin brother of Johann Christoph (*12*) and father of Johann Sebastian (*24*). On 8 April 1668 he married Maria Elisabeth Lämmerhirt (*b* Erfurt, 24 Feb 1644; *d* Eisenach, 1 May 1694), daughter by his second marriage of the late Valentin Lämmerhirt, councillor of Erfurt. She was the half-sister of Hedwig, wife of Johann Bach (*4*). Ambrosius was first a Stadtpfeifer in Arnstadt, then from 1667 a violinist in the Erfurt town music, and from 1671 court musician and director of the town music in Eisenach. The town chronicler of Eisenach, Georg Dressel, said of this outstanding and versatile musician, 'In 1672 the new *Hausmann* [director of the town music] made music at Easter with organ, violins, voices, trumpets and kettledrums, something no Kantor or director is known to have done before in the history of Eisenach'. When, in1684, he was offered the post of director of the town music in Erfurt the Duke of Eisenach was unwilling to let him go, and he had to decline the offer. A portrait of Johann Ambrosius in oils, painted after 1671, is extant (*D-Bsb*). See F. Rollberg: 'Johann Ambrosius Bach, Stadtpfeifer zu Eisenach von 1671–1695', *BJb 1927*, 133–52; C. Freyse, 'Das Porträt Ambrosius Bach', *BJb 1959*, 149–55.

Johann Andreas Bach (*44*) (*b* Ohrdruf, 7 Sept 1713; *d* Ohrdruf, 25 Oct 1779). Son of Johann Christoph (22). He was an oboist in the military band in Gotha in 1733. From 1738 he was organist of the Trinitatiskirche in Ohrdruf, and from 1743 of the Michaeliskirche in the same town. He owned the so-called *Andreas Bach Buch* (see Johann Christoph Bach (22) below), one of the main sources for the early organ and keyboard works of Johann Sebastian (*24*).

Johann Balthasar Bach (*63*) (*b* Eisenach, 4 March 1673; *d* Eisenach, ?5 April 1691). Son of Johann Ambrosius (*11*). He was apprenticed to his father as a Stadtpfeifer. (Not included in the *Ursprung*.)

Johann Bernhard Bach (*18*) (*b* Erfurt, bap. 25 Nov 1676; *d* Eisenach, 11 June 1749). Son of Johann Aegidius (*8*); see §III (*5*) below.
